The results of the effluent and environmental monitoring programs at the three Knolls Atomic Power Laboratory (KAPL) sites are summarized and assessed in this report. Operations at the three KAPL sites resulted in no significant release of hazardous substances or radioactivity to the environment. The effluent and environmental monitoring programs conducted by KAPL are designed to determine the effectiveness of treatment and control methods, to provide measurement of the concentrations in effluents for comparison with applicable standards, and to assess resultant concentrations in the environment. The monitoring programs include analyses of samples of liquid and gaseous effluents for chemical constituents and radioactivity as well as monitoring of environmental air, water, sediment, and fish. Radiation measurements are also made around the perimeter of each site and at off-site background locations. KAPL environmental controls are subject to applicable state and federal regulations governing use, emission and/or disposal of solid, liquid and gaseous materials. Liquid effluents and air emissions are controlled and monitored in accordance with permits issued by the Connecticut Department of Environmental Protection for the Windsor Site and by the New York State Department of Environmental Conservation for the Knolls and Kesselring Sites. The liquid effluent monitoring data show that KAPL has maintained a high degree of compliance with permit requirements. When required, radionuclide air emission permits are issued by the Environmental Protection Agency (EPA). All air emissions conformed to applicable state and federal standards. 41 refs., 12 figs., 46 tabs.

34506 (OEVS-Mitteilung–1988, pp. 243-247) **Radiation exposition from radionuclides in ground water.** Paretzke, H.G. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Strahlenschutz); Proehl, G. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (In German). (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

A problem for the future is the possible leakage of radionuclides from radioactive wastes end storage. The paths to the population - drinking water, food, etc. - and the calculation scheme of doses for adults and infants respectively are presented. The doses for about 30 radionuclides are given in tables. Generally for adults the rain path is the most important. For infants, milk and drinking water are the most important paths. 8 refs., 1 fig., 2 tabs. (qui).

34507 (OEVS-Mitteilung–1988, pp. 761-764) **Tritium activity in precipitation and in tap water of nw Yugoslavia after the Chernobyl accident.** Krajcar-Bronic, I. (Institut Rudjer Boskovic, Zagreb (Yugoslavia)); Srdoc, D.; Obelic, B.; Hernaus, E. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Tritium activity of samples of precipitation collected daily at IAEA/WMO network station Zagreb, Yugoslavia was measured after the accident at the nuclear power plant Chernobyl in USSR. Tritium activity peak in rainwater was observed on May 2. The tritium activity of water supply of Zagreb and in several wells in Plitvice lakes area in nw Yugoslavia showed no increase after the accident. 7 refs., 1 fig., 1 tab.

34508 (SKI–86076(pt.1)) **Geochemical computer codes. A review. Final report.** Andersson, K. Swedish Nuclear Power Inspectorate, Stockholm (Sweden). 11 Aug 1987. 108p. (STUDSVIK-NP–87-86). Order Number DE89617981/JAW. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

In this report a review of available codes is performed and some code intercomparisons are also discussed. The number of codes treating natural waters (groundwater, lake water, sea water) is large. Most geochemical computer codes treat equilibrium conditions, although some codes with kinetic capability are available. A geochemical equilibrium model consists of a computer code, solving a set of equations by some numerical method and a data base, consisting of thermodynamic data required for the calculations. There are some codes which treat coupled geochemical and transport modeling. Some of these codes solve the equilibrium and transport equations simultaneously while other solve the equations separately from each other. The coupled codes require a large computer capacity and have thus as yet limited use. Three code intercomparisons have been found in literature. It may be concluded that there are many codes available for geochemical calculations but most of them require a user that us quite familiar with the code. The user also has to know the geochemical system in order to judge the reliability of the results. A high quality data base is necessary to obtain a reliable result. The best results may be expected

for the major species of natural waters. For more complicated problems, including trace elements, precipitation/dissolution, adsorption, etc., the results seem to be less reliable. (With 44 refs.)

34509 (SKI–86076(pt.2)) **PHREEQE Geochemical equilibrium code data base and calculations. Final report.** Andersoon, K. Swedish Nuclear Power Inspectorate, Stockholm (Sweden). 24 Aug 1987. 39p. (STUDSVIK-NP–87-91). Order Number DE89617982/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Compilation of a thermodynamic data base for actinides and fission products for use with PHREEQE has begun and a preliminary set of actinide data has been tested for the PHREEQE code in a version run on an IBM XT computer. The work until now has shown that the PHREEQE code mostly gives satisfying results for specification of actinides in natural water environment. For U and Np under oxidizing conditions, however, the code has difficulties to converge with pH and Eh conserved when a solubility limit is applied. For further calculations of actinide and fission product specification and solubility in a waste repository and in the surrounding geosphere, more data are needed. It is necessary to evaluate the influence of the large uncertainties of some data. A quality assurance and a check on the consistency of the data base is also needed. Further work with data bases should include: an extension to fission products, an extension to engineering materials, an extension to other ligands than hydroxide and carbonate, inclusion of more mineral phases, inclusion of enthalpy data, a control of primary references in order to decide if values from different compilations are taken from the same primary reference and contacts and discussions with other groups, working with actinide data bases, e.g. at the OECD/NEA and at the IAEA.

34510 (SNV–3497) **Cesium in perch in lakes from northern Sweden after Chernobyl. Present situation, relationships, trends.** Haakanson, L.; Andersson, T.; Nilsson, Aa.; Neumann, G.; Notter, M. Statens Natuurvaardsverk, Solna (Sweden). May 1988. 136p. (In Swedish). Order Number DE89618012/JAW. Available from NTIS (US Sales Only), PC A07/MF A01 - OSTI; INIS.

The aim of this project is to find measures to reduce the level of radioactive cesium in fish. 41 lakes in east central Sweden that received large amounts of cesium after the Chernobyl accident are studied. Most lakes have perch with cesium content for above the present maximum acceptable limit of 1500 Bq/kg wet weight. The median values for 1986 and 1987 were 3950 and 2650 Bq/kg respectively. The possibilities for speeding up the natural decrease of cesium 137 by liming (to counteract the acidification) and adding nutrient (N and P, to increase bioproduction and 'dilute' the cesium contents) are analyzed. 4-7000 lakes in Sweden are supposed to have fish with cesium levels above 1500 Bq/kg. A preliminary recovery prognosis is given. (12 p. English summary) (L.E.).

34511 **Radionuclide cycling in natural waters.** Santschi, P.H. (EAWAG, CH-8600 Dubendorf (CH)); Nyffeler, U.P.; Li, Y.H.; O'Hara, P. v.v of Sediments and water interactions. Sly, P.G. Springer-Verlag New York Inc., New York, NY (1986). (CONF-8408166–: 3. international symposium on interactions between sediments and water, Geneva, Switzerland, 28-31 Aug 1984).

Apparent sorption rate constants on oceanic particles were measured in batch experiments for a series of soluble and particle-reactive radionuclides. The authors have found that radionuclide uptake by natural particles is slow compared to adsorption rates onto defined oxide surfaces. Equilibrium is attained only at time scales of days. One reason for slow scavenging reactions is the coagulation of radioactively tagged colloidal particles onto larger (filterable) particles. This interpretation explains both the slow sorption (scavenging) kinetics and the dependence of the sorption rate and the distribution ratio (K_d) on the particle concentration. The sorption rate constants for Th isotopes calculated by this method are in good agreement with the rates determined by in situ measurements of the U/Th disequilibrium. In areas where particle residence times are shorter than the time scales of the sorption reactions, such as in shallow coastal marine ecosystems, radioisotope removal from the water column can become limited by the kinetics of sorption onto resuspended particles. If the authors use a simple box model, typical particle residence times, and rate constants for the sorption reactions of Th isotopes that depend on the particle concentration, they can predict residence times of Th isotopes for environments with particle fluxes varying over six orders of magnitude. The fact that these estimates are consistent with those measured directly by the U/Th disequilibrium method implies that Th isotopes might be natural coagulometers; that is, they might be good indicators of coagulation reactions of colloidal-sized particles in natural waters.

34514 (AD-A–201505/5/XAB) **Air Force ground-water contamination cleanup: an evaluation of the pump-and-treat method. Master's thesis.** Ammons, R.P. Air Force Inst. of Tech., Wright-Patterson AFB, OH (USA). Sep 1988. 134p. (AFIT/GEM/DEM–88S-01). Available from NTIS, PC A07/MF A01.

This thesis is an attempt to determine the effectiveness of the Air Force's use of pump-and-treat technology to remediate groundwater contamination. The study is divided into four major sections: (1) literature survey of ground-water contamination problems and remediation technology; (2) identification of bases where pump-and-treat technology has been employed; (3) collection of quantitative data from bases for analysis; (4) analysis of data and recommendations. Data were obtained from three Air Force installations, McClellan AFB, Wright-Patterson AFB, and Wurtsmith AFB. During remediation, contaminants in most cases show a significant decrease in concentration though levels are still well above regulatory agency requirements. Furthermore, it was found that the inconsistent timing of data sampling and the lack of standardized data storage procedures prevents reliable determination of remediation effectiveness. Conclusions of this study are that a standardized data collection system be created, under direct supervision of an air staff office, and that a centralized procedure be identified for evaluating the effectiveness of pump-and-treat programs. While the current remediation programs using pump-and-treat initially show large reductions in contaminant concentrations, continued application of this method produces only slight incremental improvements. It appears that decades may be required to meet existing regulatory limits.

34515 (AD-A–201586/5/XAB) **United States Air Force Installation-Restoration Program (IRP) strategies for investigating migrating contaminated ground-water. Master's thesis.** DeWall, M.L. Air Force Inst. of Tech., Wright-Patterson AFB, OH (USA). School of Systems and Logistics. Sep 1988. 128p. (AFIT/GEM/DEM–88S-4). Available from NTIS, PC A07/MF A01.

DOD IRP Remedial Investigations (RI) are often too long and drawn out. The goal of RI is to confirm and quantify soil and ground-water contamination. Often, RI costs exceed estimates and time schedules. Environmental regulators and local residents become distressed over the apparent lack of progress being made. Current RI strategies employed at most Air Force installations involve contamination-plume delineation. This strategy for investigation often does not reveal adequate information regarding movement of contaminants. A thorough understanding of the hydrogeological setting is essential to obtain maximum improvement of ground-water quality. An alternative strategy is Transport Quantification (TQ), a process that identifies and quantifies ground-water flow characteristics prior to, or during, contamination investigation. TQ emphasizes surficial and geological investigations and incorporates ground-water flow models. Preliminary investigations focusing on soil and ground-water characterization can greatly reduce the effort and expense of ground-water investigation and restoration. It was also found that a severe lack of manning within the environmental function exists. Without technical personnel administering the IRP, the program will continue to be run ineffectively. The study revealed a need for a better data transfer and communication between base level offices and higher headquarters, between headquarters, and between services. The AF Engineering and Services Center and USAF OEHL are working on solutions to these problems.

34516 RNA structure from A to Z. Tinoco, I. Jr. (Univ. of California, Berkeley (USA)); Davis, P.W.; Hardin, C.C.; Puglisi, J.D.; Walker, G.T.; Wyatt, J. pp. 12 of Cold Spring Harbor symposia on quantitative biology. Volume 52, Evolution of catalytic function. Cold Spring Harbor Laboratory, Cold Spring Harbor, NY (1987). From Cold Spring Harbor symposia on quantitative biology: evolution of catalytic function; Cold Spring Harbor, New York, USA; Jul 1987.

RNA performs a wide variety of known functions in biological systems, and it probably is involved in an even greater variety of as yet unknown functions. It is the genome in RNA viruses, virusoids, and viroids; in viroids, it sometimes catalyzes its own specific cleavage. The design and construction of proteins are controlled by messenger RNAs, ribosomal RNAs, and transfer RNAs. These RNAs are formed from their primary transcripts by a processing that can involve RNA enzymes and small nuclear RNAs. Catalytic RNAs (ribozymes) have been shown to operate on polynucleotides and polysaccharides. Intrinsic RNA components are involved in the signal-recognition particle, which mediates the extrusion of proteins through cell membranes. RNA also plays important roles in control of replication, transcription, and translation. All of these different RNA functions require different RNA structures. Here, they discuss a variety of structural elements that contribute to the secondary and tertiary structures of RNA.

34517 (DOE/ER/13461–3) **Active and passive calcium transport systems in plant cells: Progress report, January 1986–June 1989.** Sze, H. Maryland Univ., College Park, MD (USA). Dept. of Botany. 1989. 5p. Sponsored by DOE Energy Research. DOE Contract FG05-86ER13461. Order Number DE89014714/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The objectives of this proposal are to identify and characterize active (energy-dependent) and passive calcium transport systems that work together to regulate calcium levels in the cytoplasm of plant cells. Several different energy-dependent Ca transport systems have been identified and characterized from oat root tissue (a monocot tissue) and carrot suspension cells (a dicot tissue). They are described in more detail below. I also have included in this progress report our continuing studies to understand the mode of action of the Helminthosporium maydis T toxin. This study was initially supported by a preceding DOE grant. The time needed to complete the study overlapped partly with the present grant period.

34518 (INIS-mf–11980) **Investigations into the binding of ^{125}I-calmodulin to CA^{++} transport ATPase of human erythrocytes.** Sterk, V. Ulm Univ. (Germany, F.R.). Fakultaet fuer Theoretische Medizin. 1983. 81p. (In German). Order Number DE89783068/JAW. Available from NTIS (US Sales Only), PC A05/MF A01.

The study described was carried out in order to investigate the binding of ^{125}I-calmodulin to Ca^{++} transport ATPase using different Ca^{++} concentrations and temperatures. The data obtained from these experiments were subsequently analysed in such as a way as to yield meaningful information relating to the mechanisms underlying the attachment of calmodulin to Ca^{++} transport ATPase, the % proportion of membrane protein that was attributable to the enzyme as well as the number of calmodulin receptor sites on the individual erythrocytes, etc. Comparisons with data from the relevant literature permitted conclusions to be drawn concerning the mode of Ca^{++} transport at the level of the erythrocytes. A new methodology and processing technique had to be developed prior to the beginning of the experiments.

34519 Negative regulatory element associated with potentially functional promoter and enhancer elements in the long terminal repeats of endogenous murine leukemia virus-related proviral sequences. Ch'ang, L.Y. (Oak Ridge National Lab., TN (USA)); Yang, W.K.; Myer, F.E.; Yang, D.M. *Journal of Virology (USA),* 63(6): 2746-2757 (Jun 1989). DOE Contract AC05-84OR21400.

Three series of recombinant DNA clones were constructed, with the bacterial chloramphenical acetyltransferase (CAT) gene as a quantitative indicator, to examine the activities of promoter and enhancer sequence elements in the 5' long terminal repeat (LTR) of murine leukemia virus (MuLV)-related proviral sequences isolated from the mouse genome. Transient CAT expression was determined in mouse NIH 3T3, human HT1080, and mink CCL64 cultured cells transfected with the LTR-CAT constructs. The 700-base pair (bp) LTRs of three polytropic MuLV-related proviral clones and the 750-bp LTRs of four modified polytropic proviral clones, in complete structures either with or without the adjacent downstream sequences, all showed very little or negligible activities for CAT expression, while ecotropic MuLV LTRs were highly active. The MuLV-related LTRs were divided into three portions and examined separately. The 3' portion of the MuLV-related LTRs that contains the CCAAC and TATAA boxes was found to be a functional promoter, being about one-half to one-third as active as the corresponding portion of the ecotropic MuLV LTRs. A MboI-Bg/II fragment, representing the distinct 190- to 200-pb inserted segment in the middle, was found to be a potential enhancer, especially when examined in combination with the simian virus 40 promoter in CCL64 cells. A PstI-MboI fragment of the 5' portion, which contains the protein-binding motifs on the enhancer segment as well as the upstream LTF sequences, showed moderate enhancer activities in CCL6 cells but was virtually inactive in NIH 3T3 cells and HT1080 cells; addition of this fragment to the ecotropic LTR-CAT constructs depressed CAT expression.

In *Radiation technology for immobilization of bioactive materials. Proceedings of the final research*

co-ordination meeting held in Beijing, 15-18 June 1987. Order Number DE89617908/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

The research results which were done within two years in authors' Lab. will be reported as follows: (a) Radiation immobilization of horse radish peroxidase(HRP) by means of entrapping. (b) Immobilization of HRP on segmented polyetherurethane(SPEU) via radiation grafting and studies on properties of immobilized HRP. (c) Immobilization of catalase onto radiation-induced polyacrylamide(PAAM) particles by chemical binding and its application. (d) Initial study on immobilization of antibodies. (author). 9 refs, 11 figs, 1 tab.

34521 (IAEA-TECDOC–486, pp. 141-152) **Radiation immobilized monoclonal antibody for radioimmunoassay of circulating schistosome antigen.** Dessaint, J.P. (Institut Pasteur de Lille, 59 - Villeneuve d'Ascq (France)); Neyrinck, J.L.; Lutsch, C.; Capron, A.; Kaetsu, A.I.; Kumakura, M.; Sun, Y.H.; Hoffman, A.S. International Atomic Energy Agency, Vienna (Austria). Dec 1988. (CONF-8706397–: Final research co-ordination meeting on application of radiation technology in immobilization of bioactive materials, Beijing, China, 15-18 Jun 1987). In *Radiation technology for immobilization of bioactive materials. Proceedings of the final research co-ordination meeting held in Beijing, 15-18 June 1987.* Order Number DE89617908/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

The recognition of the diagnostic potential of circulating parasite antigen has prompted research on immunoassays using immunological reagents labelled by radioisotopes or other tags. Solid-phase immunoassays have generally been used. Yet the shelf-life of immobilized immunological reagents is usually short. By using radiation immobilized monoclonal antibody, a radioimmunoassay is described for detection of circulating cathodic (M) antigen. This assay has higher sensitivity and working range than the reference test using monoclonal antibody absorbed to microtitre plates and the immobilized reagent could be kept at room temperature for periods over one month. This should increase the practicability of monoclonal antibody-based immunoassays in endemic areas. (author). 10 refs, 7 figs, 3 tabs.

34522 (IAEA-TECDOC–486, pp. 113-127) **Immobilization of drugs and proteins by radiation polymerization and biomedical uses of this technique.** Kaetsu, I. (Japan Atomic Energy Research Inst., Takasaki (Japan). Takasaki Radiation Chemistry Research Establishment). International Atomic Energy Agency, Vienna (Austria). Dec 1988. (CONF-8706397–: Final research co-ordination meeting on application of radiation technology in immobilization of bioactive materials, Beijing, China, 15-18 Jun 1987). In *Radiation technology for immobilization of bioactive materials. Proceedings of the final research co-ordination meeting held in Beijing, 15-18 June 1987.* Order Number DE89617908/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

The author's group has studied and developed an immobilization technique of physical entrapping by means of radiation polymerization. This technique was generally applicable to various kinds of biofunctional materials such as drugs, proteins and cells for biomedical and biochemical uses. Three main types of immobilized composites have been developed, (1) needle form composite, (2) thin membrane composite, and (3) fine particle composites. The needle form composites were prepared by radiation cast polymerization and used for drug delivery systems to apply to hormone therapy and immuno-therapy by means of implantation and controlled release. The membrane form composites were prepared by radiation polymerization at low temperatures and used for immunodiagnosis materials. Recently another technique of preparation of immobilized membrane was developed by polymerization with low energy electron beam. The fine particles containing biofunctional components were obtained by suspension and emulsion polymerization. Also, a new technique of preparation of fine particles having a narrow size distribution was developed by precipitation polymerization in a specific solvent with gamma rays. These fine particles have been studied for various functional microspheres and drug targetting. (author). 33 refs, 4 figs, 1 tab.

34523 (IAEA-TECDOC–493) **Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.** International Atomic Energy Agency, Vienna (Austria). Jan 1989. 170p. Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

The IAEA has since 1982 supported two co-ordinated research programmes (CRP's) aimed at improving conventional radiotherapy by means of its combination with chemical sensitizers, protectors and hyperthermia. This is a final report on the two CRP's and combines the two final reports prepared by the participants of the two final research co-ordination meetings held in Istanbul and Madras. Refs, figs and tabs.

34524 (IAEA-TECDOC–493, pp. 7-17) **Optimization of the use of radiosensitizers and radioprotectors in clinical radiotherapy.** Awwad, H.K. (National Cancer Inst., Cairo (Egypt). Radiotherapy Dept.); El Badawy, S.; Ghoneim, M. and others. International Atomic Energy Agency, Vienna (Austria). Jan 1989. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

In order to optimize the use of chemical hypoxic cell radiosensitizers this should be limited to those tumours where there is evidence of clinically significant hypoxia. Intercapillary distance measurement in cervical cancer and carcinoma in the bilharzial bladder revealed that chronic hypoxia can interfere with the efficiency of radiotherapy. In two randomised clinical trials involving radical radiotherapy of bladder and cervical cancer, misonidazole in a daily dose of 0.5 g/m^2 (corresponding tumour concentration: 15 ug/g) failed to show a therapeutic gain. In order to optimize the use of the drug it was used in association with an accelerated fractionation scheme involving 3 fractions per day and a daily drug dose of 1.0 g/m^2 (corresponding tumour concentration: 20-30 ug/g). The application of this scheme in a controlled trial involving radical treatment of head and neck cancer and postoperative irradiation of bladder cancer did not result in a significant therapeutic gain. A fifth trial involved the application of a concentrated pre-operative irradiation in bladder cancer with the use of a daily drug dose of 1.5 g/m^2 (corresponding tumour concentration: 40-60 ug/g) did not also improve the local control rate. The 5 trials indicated that the tumour concentration levels attained were not adequate to achieve clinically effective sensitization. SR-2508 and Ro-03-8799 are two agents that are nearly as effective as MISO but are much less toxic and hence a larger total dose may be given with higher tumour concentration levels. The two drugs can be combined with no additive toxicity or drug interaction. In case of bladder cancer the high concentration of SR-2508 in urine may allow diffusion back into the tumour. The radioprotector WR-2721 has a potential of clinical application in association with hemibody irradiation (a large drug dose in association with a single radiation dose). (Abstract Truncated)

34525 (IAEA-TECDOC–493, pp. 19-36) **Radiation, pepleomycin and hyperthermia in the therapy of advanced oral carcinomas.** Krishnamurthi, S. (Cancer Inst., Madras (India)); Shanta, V.; Vasanthan, A.; Balakrishnan, I.S.; Reddy, N.M.S.; Gopalan, N.; Sharma, M.; Sastry, D.V.L. International Atomic Energy Agency, Vienna (Austria). Jan 1989. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

Oral squamous cell carcinoma is the commonest male (29%) and the second commonest female (18%) malignancy seen at the Cancer Institute, Madras. 93% of them are T_3 and T_4 at first attendance. They are essentially a loco-regional disease with little predilection for remote metastases (0.75%). Radiation per se yielded a dismally poor survival (19% 5 year NED). Clinical trials combining R.T. with sensitizers (Synkavit, Hbo., Metronidazole) or cytotoxic drugs (Methotrexate, Bleomycin, Pepleomycin, C.D.D.P., 5 FU, VCR) were conducted at the Institute since 1960. The best results were achieved by a combination of R.T. and BLM (C.R. of

70-80%, Recurrence free rate of 60-70% and 5 year NED of 50-60%). These results were consistent and reproducible in repeated trials and in unselected series. There was, however, a persistent failure in about 40% of cases. Adding, Hbo, 5 FU and VCR did not significantly improve results. Cis-platin + BLM + R.T., however, improved results significantly. (author). 11 refs.

34526 (IAEA-TECDOC–493, pp. 37-46) **Radiosensitization of hypoxic bacterial cells and animal tumors by membrane active drugs and hyperthermia.** Singh, B.B. (Bhabha Atomic Research Centre, Bombay (India). Molecular Biology and Agriculture Div.); Srinivasan, V.T.; Shenoy, M.A.; George, K.C.; Maniar, H.S.; Rawat, K.P. International Atomic Energy Agency, Vienna (Austria). Jan 1989. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

Phenothiazine derivatives, well known for their interaction with the cellular membranes has been found to radiosensitize hypoxic cells and radioprotect euoxic cells. They have also been observed to modify the microviscosity of the membrane which is partly responsible for these effects. Such drugs also protected normal mice against whole body exposures and at the same time enhanced the radiation response of animal tumors. The therapeutic effects of hyperthermia and some common anti-cancer drugs like cyclophosphamide (CY) and melphalan (MEL), were enhanced in the presence of phenothiazine derivatives. Among these, trimeprazine appeared to be most effective. Indomethacin, a non-steroidal anti-inflammatory drug which is also membrane active has also been found to exhibit radiosensitizing effect in animal tumors. Cell proliferation kinetics and morphological studies on animal tumors exposed to hyperthermia have yielded interesting results. (author). 18 refs, 2 tabs.

34527 (IAEA-TECDOC–493, pp. 47-58) **Sequencing, timing and doses with the combination of heat and radiation in the treatment of human tumors.** Arcangeli, G. (Istituto Medico e di Ricerca Scientifica, Rome (Italy)). International Atomic Energy Agency, Vienna (Austria). Jan 1989. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

The results from four different phase-II studies on more than 200 multiple superficial lesions treated confirms the experimental observations that hyperthermia enhances the radiation effects in both tumors and normal tissues. The best way to avoid the thermotolerance in tumors and the sensitization of the surrounding normal tissues is to apply hyperthermia once a week to a conventional radiation schedule. Only in particular clinical situations, such as melanoma, which has been found to respond well to radiotherapy given in large doses per fractions, can an attempt to exploit the radiosensitizing effect of heat be made by applying hyperthermia in combination with all radiation fractions every four or five days if the lesions can be preferentially heated with respect to the surrounding normal tissue. These treatment schedules are the basis of treatment protocols employed in multicentre phase-III clinical trials on advanced breast cancer, neck node metastases, and cutaneous and nodal metastases from malignant melanoma, currently underway within the framework of the European Society for Hyperthermic Oncology (ESHO). A careful quality assurance and a detailed guidance of how to measure temperature are "musts" for all studies. (author). 26 refs, 1 fig., 3 tabs.

34528 (IAEA-TECDOC–493, pp. 59-74) **Studies of the combined use of hypoxic cell sensitizers and hyperthermia with radiation in human cancer therapy.** Onoyama, Y. (Osaka City Univ. Medical School (Japan). Dept. of Radiology). International Atomic Energy Agency, Vienna (Austria). Jan 1989. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

Development of the combined use of hypoxic cell radiosensitizer and hyperthermia with radiation in cancer therapy in Japan was reviewed with special reference to the study at the Osaka City University Hospital. (author). 6 figs, 9 tabs.

34529 (IAEA-TECDOC–493, pp. 75-82) **Experimental and clinical studies on hyperthermia and chemical sensitizers in radio- and chemotherapy of cancer.** Sugahara, T. (Kyoto National Hospital Health Research Foundation (Japan)). International Atomic Energy Agency, Vienna (Austria). Jan 1989. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

The research field in the title of the present paper has been called in brief 'Radiosensitization" as has been the title of our Newsletter. Through studies for five years hyperthermia has been established an an effective radio- and chemosensitizing agent though heating techniques and thermometry still remain to be refined. During these five years, two different kinds of activities have been performed, i.e., (i) research works on individual agents such as PLDR inhibitors, radioprotector WR-2721, hyperthermia equipment and analysis of cell killing, and (ii) research promotion by publishing "Radiosensitization Newsletter" quarterly and organizing bilateral workshops such as China-Japan and USSR-Japan. (author). 14 refs, 1 fig., 1 tab.

34530 (IAEA-TECDOC–493, pp. 83-89) **Effect of hypoxic cell sensitizer in radiation therapy of nasopharyngeal carcinoma.** Hidayatalla, A. (Khartoum Univ. (Sudan). Radiation Oncology Unit); Rahman, E.; Hamad, M.M.A.; Sulieman, A.; Mohamed, K. International Atomic Energy Agency, Vienna (Austria). Jan 1989. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

At the Radiation and Isotopes Centre, Khartoum, (RICK) 171 cases of Nasopharyngeal Carcinoma (NPC) were randomised for radiation therapy with or without the radiosensitizer Metronidazole (MET) into four treatment cases as follows: A. Patients: 36; Radiation: 50Gy/L8F/6w; MET: 5-8g dose X6-9/6w; B. Patients: 41; Radiation: 55Gy/30F/6w; MET: 5-8 dose X6-9/6w; C. Patients: 44; Radiation: 50Gy/18F/6w; MET: Not given; D. Patients: 44; Radiation: 55Gy/30F/6w; MET: Not given. Moderately severe but acceptable gastro-intestinal and oropharyngeal mucosal reactions were prominent in cases A and B receiving MET as radiosensitizer than in cases C and D not receiving MET. On the other hand a therapeutic gain has been observed both in the two year survival and in the disease free survival in the treatment given MET in associations with 3F/W regimen with 277 cGy/F, whereas no benefit could be shown in the cases receiving 5F/W regimen with 183 cGy/F. 6 refs, 2 figs, 6 tabs.

34531 (IAEA-TECDOC–493, pp. 91-104) **Treatment of carcinoma of head and neck with a combination of conventional irradiation and methotrexate as radiosensitizer.** Puribhat, S. (National Cancer Inst., Bangkok (Thailand)); Chotigavanich, C.; Tangkaratt, S.; Bhumiswasdi, V.; Phanthumachinda, P. International Atomic Energy Agency, Vienna (Austria). Jan 1989. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

Between 6 February 1984 to 11 September 1986, 200 cases of cancer of head and neck were randomised into control group (105), i.e. conventional irradiation treatment and trial group (95), i.e. MTX 50 mg. i.v. on day 1 and followed by conventional irradiation. Early complications were tolerable as well as late complications. Good response rate in trial group was significant. One case in trial group developed a second primary. Long term benefit is to be documented. (author). 16 refs, 7 tabs.

34532 (IAEA-TECDOC–493, pp. 105-122) **Use of ornidazole as a radiosensitizer on fractionated irradiation: Results of clinical trials.** Okkan, S. (Istanbul Univ. (Turkey). Cerrahpasa Faculty of Medicine, Dept. of Radiotherapy); Uzel, R.; Turkan, S.; Yazici, Z.; Akcasu, A.; Turan, N.; Hacibekiroglu, M. International Atomic Energy Agency, Vienna (Austria). Jan 1989. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

In order to investigate the sensitizing effect of ornidazole, a double-blind randomized trial was devised, in patients with carcinoma of the cervix and larynx. Sixty-eight patients with carcinoma of the cervix and 42 patients with carcinoma of the larynx were randomized and followed-up from 6 to 56 months. All patients with cervical carcinoma first received external irradiation, followed by intracavitary application. Fifty-four patients received 7.5 Gy in two fractions in 1st and 3rd week. Conventional daily fractionation of 2 Gy was given in 2nd, 4th and 5th week. In the remaining 14 cases weekly dose of 7.5 Gy was given in 1st, 3rd and 5th week and conventional daily fractionation in 2nd and 4th week. Intracavitary brachytherapy followed, by giving 2 fractions of 10.83 Gy each, one week apart. The patients received ornidazole or placebo 3 h before the irradiation in a dose of 2.5 g/m^2 in 1st and 3rd (also in 5th for 14 patients) week and intracavitary treatment. In patients with laryngeal tumours conventional fractionation was used and 70 Gy was given in 7 weeks. Ornidazole or placebo were given two times weekly in 3rd, 4th and 5th week in a dose of 2.5 g/m^2. The results showed that there was no difference in local control and the survival rates in the ornidazole or placebo groups with carcinoma of the larynx. In patients with carcinoma of the cervix the local control rate seems somewhat better in the ornidazole group (71% versus 53%). Three-year survival rates amounted to 66 and 51% in the ornidazole and placebo groups, respectively. However, these differences are not statistically significant. Although, the local control rate of 62% for the ornidazole compared with 23% for the placebo in stage III_B cases seems statistically significant ($p<0.05$), its evaluation is obscure because of the small numbers. 19 refs, 13 figs, 11 tabs.

34533 (IAEA-TECDOC–493, pp. 123-135) **Combined modality approach: Radiotherapy plus hyperthermia in advanced and early human tumours.** Vazquez, T. (Universidad de la Republica, Montevideo (Uruguay). Facultad de Medicina); Kasdorf, P. International Atomic Energy Agency, Vienna (Austria). Jan 1989. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

Between March 1983 and April 1985, 214 patients with advanced head and neck cancers, recurrent breast tumours in the chest wall, malignant melanomas and secondary adenopathies from unidentified primary tumours, soft tissue sarcomas and non-Hodgkin's lymphomas were submitted to a combined treatment with conventional radiotherapy and hyperthermia (250 KeV, 4 Gy per fraction, 2 fractions per week). A total dose of 40 Gy was given in five weeks plus hyperthermia produced by external microwaves (2450 MHz), in 10 sessions of 1h. each following radiotherapy. Complete regression (CR), partial regression (PR), and non-responders (NR) were distributed according to the kind of tumour treated, as follows: head and neck cancers 78/127 (61.5%) CR, 37/127 (29.1%) PR, 12/127 (9.4%) NR; recurrent breast cancers 23/35 (65.7%) CR, 10/35 (28.6%) PR, 2/35 (5.7%) NR; soft tissue sarcomas 5/7 CR, 2/7 PR; non-Hodgkin's lymphomas 8/8 CR. Our results are similar to those reported by other investigators and confirm the need for continuing research in this field. Another group of 17 patients with early stage ENT tumours (7 mobile tongues, 6 supraglottis, 3 tonsils and 1 piriform sinus) was treated between December 1985 and June 1987. They received 60 Gy Co^{60} external radiotherapy conventionally fractionated plus 10 sessions of external 2450 Mhz microwave hyperthermia given twice a week. The results were compared to an historical control group treated with exclusive irradiation. Actuarial survival for 16 months was 87% for the radiotherapy plus hyperthermia group and 65% for the radiotherapy only group (non-significant). No differences were found in the complications rate and local control. Although follow-up is short, data suggest the validity of the association which allows to reduce the radiation dose. Association modality, radiotherapy plus hyperthermia in human cancers. (author). 27 refs, 1 fig., 11 tabs.

34534 (IAEA-TECDOC–493, pp. 137-145) **Implication of blood flow in sequencing hyperthermia and radiotherapy.** Song, C.W. (Minnesota Univ., Minneapolis (USA). Medical School); Rhee, J.G.; Patten, M.S.; Chelstrom, L.M. International Atomic Energy Agency, Vienna (Austria). Jan 1989. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

The factors which determine the effectiveness of the combined use of heat and radiation in the treatment of malignant tumors are studied. The combined effect markedly varied depending on the order and time interval between the two modalities. An application of heat prior to irradiation caused greater skin damage as compared with that after irradiation. Probably the oxygenation of skin was improved due to an increase in blood flow by heat applied before irradiation. By contrast, an application of heat prior to irradiation was less effective than that after irradiation for tumor control. It appeared that tumors become hypoxic as a result of vascular damage by the heat applied prior to irradiation. It was concluded that heat should be applied after irradiation for maximum control with minimal normal tissue damage. (author). 14 refs, 3 figs, 1 tab.

34535 (IAEA-TECDOC–493, pp. 147-161) **Clinical and experimental study of improvement of radiation therapy using hyperthermia and electron affinic compounds.** Cyb, A. In *Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987.* Order Number DE89618103/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

The results of clinical and experimental study conducted at the Research Institute of Medical Radiology of the Academy of Medical Science of the USSR are presented. The investigation of radiosensitizing and cytotoxic effect of microwave hyperthermia allowed to rationalize thermoradiation therapy for cancer. The results of clinical trials with metronidazole as radiosensitizer showed the efficacy of radiation therapy of some types of tumours. The early results of thermoradiotherapy of patients with radioresistant tumours were analysed. The data obtained showed substantial perspectivity of the method. (author). 6 figs, 4 tabs.

NEOPLASMS/head; NEOPLASMS/neck; CHEMOTHERAPY; NEOPLASMS; HEAD; NECK; RADIOTHERAPY; SURGERY

34554 (INIS-BR–1516, pp. 42) **Tracheostomy with cutaneous cancer.** Aquino, J.L.B. de; Aquino Netto, P.A. de; Antoniazzi, A.C. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

RADIOTHERAPY/neoplasms; RADIOTHERAPY; NEOPLASMS; SKIN DISEASES; SURGERY; TRACHEA

34555 (INIS-BR–1516, pp. 32) **Alternated chemotherapy in lung microcytic carcinoma. Preliminary results with Iphosphamide, doxorubicin, vincristine (IDV), alternated with carboplatine, cyclophosphamide, VP 16 (C-CF-VP).** Gonzalez B, M.; Vicente, J.; Martin, G.; Felin, J.; Garcia G, C.; Cebreiros, I.; Artal, A.; Ordonez, A. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

CARCINOMAS/lungs; ALKYLATING AGENTS; ANTINEOPLASTIC DRUGS; CARCINOMAS; LUNGS; CHEMOTHERAPY; RADIOTHERAPY

34556 (INIS-BR–1516, pp. 47) **Association of surgery and radiotherapy in the treatment of medulloblastoma. Results.** Perez T, A.; Zapatero, A; Dominguez, P.; Ramos, A.; Romasanta, P.; Manas, A.; Lanzos, E. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

NEOPLASMS/radiotherapy; NEOPLASMS/surgery; NEOPLASMS; RADIOTHERAPY; SURGERY; SPINAL CORD; VERTEBRAE

34557 (INIS-BR–1516, pp. 47) **Radiotherapeutic treatment of cervix carcinoma, stage III. Results.** Lanzos, E.; Bartolome, A.; Dominguez, P.; Miranda, P.; Perez T, A. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

CARCINOMAS/radiotherapy; CARCINOMAS/urogenital system diseases; BIOLOGICAL RADIATION EFFECTS; CARCINOMAS; RADIOTHERAPY; IRRADIATION

34558 (INIS-BR–1516, pp. 48) **Morphometric studies of areas of tumorous necrosis produced by radiotherapy, hyperthermia and its therapeutic combination.** Patricio, M.B.; Soares, J. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

HYPERTHERMIA/necrosis; NEOPLASMS/hyperthermia; NEOPLASMS/radiotherapy; RADIOTHERAPY/necrosis; BIOLOGICAL RADIATION EFFECTS; HYPERTHERMIA; NECROSIS; MICE; NEOPLASMS; RADIOTHERAPY

34559 (INIS-BR–1516, pp. 53) **Fundamental and strategy for the scientific treatment of cancer.** Marinello, Z. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

CHEMOTHERAPY/neoplasms; RADIOTHERAPY/neoplasms; SURGERY/neoplasms; BIOLOGICAL EFFECTS; BIOLOGY; CHEMOTHERAPY; NEOPLASMS; COMPARATIVE EVALUATIONS; RADIOTHERAPY; SURGERY

34560 (INIS-BR–1516, pp. 54) **Conservative treatment of breast neoplasm.** Motta, N.W. da; Lima Vargas, E. de; Barletta, A.; Sandri, A.; Schiemann, F.P.G.; Vauthier, G. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

RADIOTHERAPY/carcinomas; MAMMARY GLANDS; RADIOTHERAPY; CARCINOMAS; SURGERY

34561 (INIS-BR–1516, pp. 55) **Breast cancer locally advanced (T3/T4): treatment.** Galvez, C.A.; Bonamassa, M.; Garbovesky, C.; Galmarini, F.; Temperley, G.; Mendez, J. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

CARCINOMAS/mammary glands; RADIOTHERAPY/carcinomas; CARCINOMAS; CHEMOTHERAPY; RADIOTHERAPY; SURGERY

34562 (INIS-BR–1516, pp. 56) **Conservative treatment of breast cancrum.** Pereira, M.; Lassalete, P.; Silva, A. da; Alves, R.; Leal, C. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

RADIOTHERAPY/carcinomas; MAMMARY GLANDS; RADIOTHERAPY; CARCINOMAS; SURGERY

34563 (INIS-BR–1516, pp. 58) **Hidden cancer of breast, our experience.** Areco, A.S.; Mantoni, O.A.; Mantoni, G. Sociedade

Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

CARCINOMAS/mammary glands; CARCINOMAS/radiotherapy; CARCINOMAS; RADIOTHERAPY; CHEMOTHERAPY; SURGERY

34564 (INIS-BR–1516, pp. 59) **Thymus hormones in cancer. Experience hormones in cancer.** Mario, F.B. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

HORMONES/neoplasms; HORMONES/thymus; NEOPLASMS/therapy; HORMONES; NEOPLASMS; THYMUS; IMMUNITY; LYMPHOCYTES; THERAPY

34565 (INIS-BR–1516, pp. 60) **Fase II-Combined treatment of malignant gliomas by surgery + radiotherapy + chemotherapy.** Guzman M, C.A.; Claverie, S. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

GLIOMAS/radiotherapy; CHEMOTHERAPY; GLIOMAS; RADIOTHERAPY; SURGERY

34566 (INIS-BR–1516, pp. 61) **Tumours of posterior fossa. Revision of 38 patients.** Pinel, M.I.S; Campos, L.S. de; Mendes, M.C.R.; Vieira, F.R. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

NEOPLASMS/radiotherapy; CENTRAL NERVOUS SYSTEM; NEOPLASMS; RADIOTHERAPY; SKULL

34567 (INIS-BR–1516, pp. 68) **Medroxyprogesterone acetate: low x high dosis in advanced cancer of prostate (previously treated).** Guzman M, C.A. (Hospital Privado, Buenos Aires (Argentina). Inst. Medicos Antartida); Claverie, S. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

CARCINOMAS/prostate; CARCINOMAS/therapy; CARCINOMAS; PROSTATE; THERAPY; PROGESTERONE; SURGERY

34568 (INIS-BR–1516, pp. 70) **Assay in fase II with Iphosphamide. Results of 136 patients.** Gonzalez B, M. (Hospital La Paz, Madrid (Spain). Servicio de Oncologia Medica); Garcia G, C.; Jalon, J.I.; Paredes, M.L.G. de; Ordonez, A.; Felin, J.; Vicente, J.; Artal, A. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

CHEMOTHERAPY/neoplasms; CHEMOTHERAPY; NEOPLASMS; RADIOTHERAPY

34569 (INIS-BR–1516, pp. 72) **Carcinoma squamous-cell of lungs: results from combined treatment of cisplatine/vindesine/radiotherapy.** Cuevas, J. (Hospital General de Valencia (Spain). Seccion de Oncologia Medica); Soler, J.J.; Sales, J.; Campos, C. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

CARCINOMAS/lungs; CARCINOMAS; LUNGS; CHEMOTHERAPY; RADIOTHERAPY

34570 (INIS-BR–1516, pp. 79) **Prognostic factors in advanced cancer of breast. Uni and multivariables analysis.** Romero, A.; Rabinovich, M. and others. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

CARCINOMAS/mammary glands; CARCINOMAS; CHEMOTHERAPY; RADIOTHERAPY; SURVIVAL CURVES; SURVIVAL TIME

34571 (INIS-BR–1516, pp. 83) **Germinal tumours of testes.** Silva, E.; Campos, A.; Castro, T. de; Vilhena-Ayres, J.A.; Carvalho, V.; Vilhena, M. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

NEOPLASMS/testes; CHEMOTHERAPY; EXTERNAL IRRADIATION; NEOPLASMS; TESTES; RADIOTHERAPY; SURGERY

34572 (INIS-BR–1516, pp. 84) **Our experience and results in the treatment of seminona, stages I and II.** Perez T, A.; Dominguez, P. and others. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

NEOPLASMS/male genitals; NEOPLASMS/radiotherapy; NEOPLASMS; RADIOTHERAPY; SURGERY; UROGENITAL SYSTEM DISEASES

34573 (INIS-BR–1516, pp. 89) **Nasopharynx carcinoma. Revision of 79 cases treated by radiotherapy.** Neves, M. (Instituto Portugues de Oncologia, Lisbon); Catita, J. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

CARCINOMAS/pharynx; CARCINOMAS/radiotherapy; CARCINOMAS; PHARYNX; RADIOTHERAPY; EXTERNAL IRRADIATION; SURVIVAL TIME

34574 (INIS-BR–1516, pp. 91) **Malignant tumours of parotid gland and therapy.** Ramos, J.; Cunha, L. and others. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

NEOPLASMS/salivary glands; COMPARATIVE EVALUATIONS; NEOPLASMS; RADIOTHERAPY; SURGERY

34575 (INIS-BR–1516, pp. 92) **Results of 3 years of radiochemotherapeutic treatment in advanced tumours (O.R.L.).** Lanzos, E.; Pena, C.; Murillo, M.T.; Escutia, P.; Bartolome, A.; Perez T, A. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

NEOPLASMS/radiotherapy; CHEMOTHERAPY; NEOPLASMS; RADIOTHERAPY; SURGERY

34576 (INIS-BR–1516, pp. 98) **Melanoma: evaluation of 101 cases.** Bizzo, S. (Hospital de Oncologia, Rio de Janeiro, RJ (Brazil)); Buarque, E.J.; Guarischi, A.; Rondineli, R.; Kanashiro, P.; Mello, F.; Bezerra, F. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2.

Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

RADIOTHERAPY/melanomas; CHEMOTHERAPY; FRACTIONATED IRRADIATION; RADIOTHERAPY; MELANOMAS; SURGERY

34577 (INIS-BR–1516, pp. 8) **Intersitial irradiation in brain tumours.** Correia, A.; Veras, G.; Pereira, J.C.; Hunhevicz, S. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

RADIOTHERAPY/internal irradiation; RADIOTHERAPY/neoplasms; BRAIN; CESIUM 137; IRRADIATION CAPSULES; RADIATION SOURCE IMPLANTS; RADIOTHERAPY; NEOPLASMS

34578 (INIS-BR–1516, pp. 49) **^{192}Ir interstitial radiotherapy of carcinoma of inferior lip.** Ferreira, A.; Amaral, A.; Trindade, M.C.; Assuncao, D. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

RADIOTHERAPY/carcinomas; RADIOTHERAPY/oral cavity; EXTERNAL IRRADIATION; INTERNAL IRRADIATION; IRIDIUM 192; RADIOTHERAPY; CARCINOMAS

34579 (INIS-BR–1516, pp. 50) **^{192}Ir interstitial radiotherapy of movable part of the tongue.** Ferreira, A.; Amaral, A.; Trindade, M.C.; Assuncao, D. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

RADIOTHERAPY/carcinomas; RADIOTHERAPY/tongue; EXTERNAL IRRADIATION; INTERNAL IRRADIATION; IRIDIUM 192; RADIOTHERAPY; CARCINOMAS; TONGUE

34580 (INIS-BR–1516, pp. 120) **Operable breast carcinoma, mammary image techniques: sensitivity, specificity and prognostic value.** Spitalier, J.M.; Amalric, R.; Braudone, H.; Ayme, Y.; Giraud, D.; Marsella, L.T. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Spanish). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

IMAGES/diagnostic techniques; IMAGES/neoplasms; NEOPLASMS/mammary glands; COMPARATIVE EVALUATIONS; DIAGNOSIS; IMAGES; NEOPLASMS

34581 (INIS-BR–1516, pp. 125) **Breast cancer. Indicators of untouchable mammary lesions.** Kessler, Y. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

NEOPLASMS/diagnosis; NEOPLASMS/mammary glands; BIOMEDICAL RADIOGRAPHY; IMAGES; NEOPLASMS; DIAGNOSIS; ULTRASONIC WAVES

34582 (INIS-BR–1516, pp. 129) **Glucagonoma-about a case.** Moura, A.C. de (Instituto Nacional do Cancer, Rio de Janeiro, RJ (Brazil)); Piva, N.; Nascimento, A.G. do. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

NEOPLASMS/pancreas; ARTERIES; BIOMEDICAL RADIOGRAPHY; COMPUTERIZED TOMOGRAPHY; DIAGNOSIS; NEOPLASMS; PANCREAS

34583 (INIS-BR–1516, pp. 122) **Application of studies of liver perfusion in the diagnosis of secondary tumours of the liver.** Vieira, M.R.; Nogueira, A.R. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

NEOPLASMS/diagnosis; NEOPLASMS/liver; IMAGES; METASTASES; NEOPLASMS; DIAGNOSIS; LIVER; TECHNETIUM

34584 (INIS-BR–1516, pp. 123) **Diffuse hyperfixation in brainpain in bone scintigraphy in patients with breast carcinoma. Retrospective evaluation in 648 patients.** Rodrigues, M.; Salgado, L.; Dias, M.; Vieira, M.R. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

CARCINOMAS/mammary glands; SCINTISCANNING/skull; CARCINOMAS; DIAGNOSIS; METASTASES; SCINTISCANNING; SKULL

34585 (INIS-BR–1516, pp. 123) **Immunoscintigraphy with monoclonal antibodies antimelanoma. Evaluation of initial 5 cases.** Nogueira, A.R.; Vieira, M.R. and others. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

MONOCLONAL ANTIBODIES/melanomas; MONOCLONAL ANTIBODIES/scintiscanning; SCINTISCANNING/monoclonal antibodies; DIAGNOSIS; MELANOMAS; SCINTISCANNING; TECHNETIUM 99

34586 (INIS-BR–1516, pp. 124) **Value of CA 125 in diagnosis and evaluation of clinical evolution of ovary carcinoma. Comparison with results from CA 19-9 and CEA.** Rodrigues, M.; Ramos, M.G.; Vieira, M.R. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

ANTIGENS/comparative evaluations; CARCINOMAS/ovaries; ANTIGENS; CARCINOMAS; OVARIES; RADIOIMMUNOASSAY

34587 (INIS-BR–1516, pp. 100) **Radiotherapy in malignant melanomas (ORL) - Report of a case.** Jorge, L.; Trindade, M.C.; Patricio, M.B. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

MELANOMAS/nose; MELANOMAS/radiotherapy; COBALT; MELANOMAS; NOSE; RADIOTHERAPY; SURGERY

34588 (INIS-BR–1516, pp. 100) **Retrospective revision of melanomas treated at Radiotherapy Department of Lisboa Center of Instituto Portugues de Oncologia de Francisco Gentil (IPOFG), during 25 years.** Trindade, M.C.; Patricio, M.B.; Jorge, L.; Vilhena, M. de. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

MELANOMAS/radiotherapy; MELANOMAS; RADIOTHERAPY; SURGERY

34589 (INIS-BR–1516, pp. 101) **Ewing Sarcoma in infancy. The role of radiotherapy in the multidisciplinary treatment.** Gotardo, S.M.T.N.; Maia, M.A.C.; Novaes, P.E.R.S.; Trippe, N.; Peres, O.; Petrilli, A.S. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). In *Proceedings of the 2. Iberian-American Congress of Oncology*. Order Number DE89613927/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

SARCOMAS/radiotherapy; CHEMOTHERAPY; SARCOMAS; RADIOTHERAPY; SURGERY

34590 (INIS-BR–1516, pp. 101) **Multidisciplinary treatment of orbital sarcomas in childhood.** Novaes, P.E.R.S.; Gianotti, C.B.A.; Gotardo, S.M.T.N.; Melaragno, R. Sociedade Brasileira de Cancerologia, Salvador, BA (Brazil). 1988. (In Portuguese). (CONF-8810366–: 2. Iberian-American congress of oncology, Salvador, Brazil, 9-14 Oct 1988). 34607 (INIS-mf–11961) **Scintiscan studies as well as clinical and laboratory examinations to evaluate the therapeutic success achieved with gold salts and D-penicillamine in rheumatoid arthritis.** Doerwald, K. Kiel Univ. (Germany, F.R.). Medizinische Fakultaet. 25 Nov 1986. 52p. (In German). Order Number DE89783071/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

Comparative evaluations of findings revealed by semiquantitative scintiscanning using 99m-Tc pyrophosphate and the results of relevant clinical examinations and determinations of the blood sedimentation rate were carried out as part of a follow-up study in 35 patients treated for rheumatoid arthritis. Their reliability was judged as follows: (1) Inflamed joints were easily discernable on the scintiscans, which permitted a more accurate diagnosis to be made than the clinical findings. (2) The methods under investigation led to largely consistent results, as far as medical surveillance and predictions of patient outcome were concerned. (3) On the basis of a six-month observation period the therapeutic strategies followed (gold salts and D-penicillamine) were considered to be equally effective, the dose regimes being adapted to the individual requirements. (TRV).

34608 (INIS-mf–11962) **Radioimmunological determination of 5a-pregnane-3,20-dione and progesterone in arterial and venous blood from the umbilical cord.** Tannich, E. Tuebingen Univ. (Germany, F.R.). Medizinische Fakultaet. 1985. 59p. (In German). Order Number DE89783072/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

Radioimmunological investigations of arterial and venous blood from the umbilical cord for 5a-DHP and progesterone were carried out in 60 newly delivered infants using ^{3}H as a tracer substance. The following findings were revealed: (1) The correlation between progesterone and 5a-DHP was better in the venous blood than in the arterial blood from the umbilical cord and the concentrations measured for the two hormones were higher in the vein. (2) Both the umbilical vein and artery showed more elevated hormone levels in male infants as compared to female infants. (3) The duration of gestation, the concentration of hydrogen ions in the fetal plasma and various other maternal and fetal factors have an influence on the height of the 5a-DHP and progesterone levels in the umbilical blood. This was also concluded from the fact that the (arterial and venous) hormone concentrations measured in infants from primiparae were higher than those in infants from multiparae. The metabolisation of 5a-DHP varies between the sexes, which does not hold true for progosterone. (TRV).

34609 (INIS-mf–11963) **Role of scintiscan studies of the esophagus in the diagnosis of related functional disorders.** Seidl, I. Muenchen Univ. (Germany, F.R.). Fakultaet fuer Medizin. 14 Nov 1985. 164p. (In German). Order Number DE89783073/JAW. Available from NTIS (US Sales Only), PC A08/MF A01.

Radionuclide studies of the esophagus (by measuring the passage of a bolus of 99m-Tc DTPA and subsequent reflux tests) were carried out in a cohort of 248 patients, where the underlying pathological changes varied between individuals. In terms of sensitivity, this method was superior to mere reflux measurements and long-term pH determinations - just as well as to histological, endoscopic and simple X-ray examinations. Disorders of the esophageal function can mostly not be predicted from the clinical symptoms and signs alone. if esophageal function studies are combined with radionuclide examinations of gastric emptying, esophageal disorders are revealed in about 50% of cases showing deviations of the gastric emptying rate in either direction. It deserves to be mentioned here that this is quite independent of the level of gastric secretion. The results obtained have shown that esophageal function studies in combination with reflux tests are an invaluable technique of screening for esophageal function disorders. (TRV).

34610 (INIS-mf–11964) **Results achieved in the treatment of carcinomas of the thyroid gland. Case reports collected between 1951 and 1982 at the Radiological Institute of Tuebingen.** Ruhland, H. Tuebingen Univ. (Germany, F.R.). Medizinische Fakultaet. 1984. 83p. (In German). Order Number DE89783074/JAW. Available from NTIS (US Sales Only), PC A05/MF A01.

After statistical analysis of the results of treatment (drawn from case reports and data collected over 31 years, which were investigated for histological findings, five-year survival rates, sex and age distributions, formation of metastases), the author came to the following conclusions: (1) Total strumectomy was the most succesful method of treatment. (2) In papillary tumours, 131-radioiodine led to the best results that were quite independent of the patient's age. It is of particular note that no further metastases appeared in those cases where metastatisation could be kept under control for the first two years. (3) Controversial findings were revealed as to the therapeutic success in follicular carcinomas. (4) Huethle's oncocytoma rather appears to be of a benign nature, major therapeutic problems are posed by anaplastic tumours. Further surgical measures are

recommended to be taken especially in tumours showing structural differentiation. (TRV).

34611 (INIS-mf–11965) **Radioimmunological determination of plasma cortisol following application of a stomatic paste containing prednisolone (Dontisolon).** Stehn, H. Kiel Univ. (Germany, F.R.). Medizinische Fakultaet. 26 Feb 1985. 40p. (In German). Order Number DE89783075/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A radioimmunological method was used to determine the cortisol plasma levels of 69 patients, treated with a stomatic paste containing prednisolone. Significant changes in plasma cortisol were only established in connection with a dose regimen of 3 times 1.25 mg daily. In isolated cases, however, there were major decreases in response to exposure to prednisolone. Therefore, the anamnestic data of any one patient being prescribed corticoids must be examined with care. (TRV).

34612 (INIS-mf–11966) **Quantitative scintiscanning in the follow-up observation of carcinomas of the breast. A correlation of results thus obtained with X-ray and laboratory findings to evaluate the effects of local irradiation or cytostatics.** Bauer, U. Muenchen Univ. (Germany, F.R.). Fakultaet fuer Medizin. 14 Nov 1985. 64p. (In German). Order Number DE89783076/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

Scintiscan studies using 99m-Tc methylene diphosphonate and the region-of-interest technique were carried out in order to obtain additional quantitative data on bone metastases that had already been confirmed by X-rays. Different degrees of density allowed to calculate the quotient of the ratio between bones and soft tissues. Changes in the behaviour of this quotient were found to provide information relevant to the value of chemotherapy or irradiation. Reduced quotients were interpreted as being a sign of a favourable response to treatment. One major drawback of this quotient is that it cannot be used without restriction for all kinds of therapy of laboratory examinations to assess the progress or remission of bone metastases. Nevertheless, it seems a meaningful parameter in the surveillance of patients receiving cytostatics or radiotherapy. (TRV).

34613 (INIS-mf–11968) **Concentrations of testosterone, luteal hormone and prolactin in the serum as well as comparisons of sensitivity between radioimmunoassays and enzyme assays for the detection of acid prostate phosphatase in the presence of carcinomas of the prostate.** Vopelius-Feldt, F. von. Technische Univ. Muenchen (Germany, F.R.). Fakultaet fuer Medizin. 14 May 1986. 106p. (In German). Order Number DE89783078/JAW. Available from NTIS (US Sales Only), PC A06/MF A01.

The relationship between carcinomas of the prostate and the plasma levels of testosterone, luteal hormone and prolactin as well as the possible influence of these neoplasms on the testosterone binding capacity and free testosterone index are investigated for various tumour stages and degrees of histological differentiation, in connection with several forms of local therapy as well as a variety of contrasexual methods. The sensitivity of enzyme assays and radioimmunoassays for the detection of acid prostate phosphatase is evaluated within the framework of this study. (MBL).

34614 (INIS-mf–11969) **Beta-endorphin in the plasma: Radioimmunological determination and findings in patients showing disorders at the level of the hypothalamus-pituitary-adrenal axis.** Hoerl, A. Muenchen Univ. (Germany, F.R.). Fakultaet fuer Medizin. 19 Dec 1985. 70p. (In German). Order Number DE89783057/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

Beta-endorphin and adrenocorticotropic hormone (ACTH) were determined simultaneously in the plasma using a radioimmunological procedure. It was found that in patients showing imbalances within the hypothalamus-pituitary-adrenal system (Addison's disease, Cushing's Syndrome, Nelson's Syndrome) as well as elevated levels of beta-endorphin the values of ACHT invariably were also increased. The behaviour of the plasma levels of beta-endorphin and ACTH before, during and subsequent to hypophyseal surgery gives evidence to prove the close link between the two hormones. Tests performed to examine the function of the corticotropin releasing factor (CRF) both in healthy volunteers and patients suffering from endocrinological disorders likewise pointed to a parallel behaviour pattern of the two hormones in their responding or failure to respond to stimulation. The fact that a significant correlation was established between all measured values of beta-endorphin and ACTH is further evidence in confirmation of a parallel release of these two hormones in man. (TRV).

34615 (INIS-mf–11970) **On the prevention of cutaneous injuries caused by radiotherapy of carcinomas of the breast. Examinations in patients treated at the Robert Janker Hospital at Bonn.** Pischnamazzadeh-Hedjabi, M. Freie Univ. Berlin (Germany, F.R.). 30 Jun 1983. 68p. (In German). Order Number DE89783058/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

A longitudinal, randomised study was carried out to assess the efficacy of O-(beta-hydroxyethyl)-rutoside (HR), when used as a radioprotective substance in radiotherapy of carcinomas of the breast. A total of 62 patients were included in the study and randomly assigned to one treatment group and one control group, each of which consisted of 31 patients. Except for the use of HR, the therapeutic strategies followed in the two study groups were identical. The protective effect against radiation-induced cutaneous injuries seen under treatment with Venoruton attained statistical significance as proven by the Chi-square test. Undesirable manifestations attributable to the test substance could not be observed, the only exception being one allergic reaction. It is reasonably safe to assume that there are no further protective influences of the substance on the tumour tissue.

34616 (INIS-mf–11971) **12500 E heparin and 12500 E of a semisynthetic heparin analogue (SSHA) in preventing thrombosis during radiotherapy of gynaecological carcinomas.** Hilscher, T.M. Muenchen Univ. (Germany, F.R.). Fakultaet fuer Medizin. 6 Oct 1983. 107p. (In German). Order Number DE89783059/JAW. Available from NTIS (US Sales Only), PC A06/MF A01.

The effects of 12500 E calcium heparin given once daily were contrasted with those seen under daily treatment with 12500 E of a semisynthetic heparin analogue (SSHA) and evaluated using iodine-125-labelled fibrinogen. The study included 80 patients, who were randomly assigned to the two treatment groups on a 1:1 basis. The findings revealed here led to the conclusion that both drugs, administered once daily by the subcutaneous route, were effective in preventing the occurrence of thrombosis during radiation treatment of gynaecological tumours.

34617 (INIS-mf–11973) **Kinetic behaviour of radioiodines accumulating in recurrent thyroid carcinomas and their metastases and the role of substituted thyroid hormones during radioiodine treatment.** Ensle, W. Tuebingen Univ. (Germany, F.R.). Medizinische Fakultaet. 1986. 58p. (In German). Order Number DE89783061/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

The relationship between the kinetic behaviour of radioiodines accumulating in recurrent thyroid tumours or their metastases and the role of substituted thyroid hormones was examined in 2 groups of patients undergoing radioiodine treatment, one of which additionally received thyroid hormones, while no such treatment was carried out in the other one. Two computer-assisted, whole body scintiscan studies (days 2 and 4) were performed so as to permit quantitative evaluation of the region of interest. The effective half-lives derived from this this procedure were longer for the patients receiving no thyroid hormones, pointing to a more beneficial effect of radioiodine treatment in this group. This leads to the conclusion that in patients receiving radioiodine therapy in order to control the spread of thyroid carcinomas, thyroid hormones should not be substituted until the cessation of this treatment. (TRV).

34618 (INIS-mf–11974) **Steroid hormones and peptide hormones in atopic eczema. Radioimmunological determination of diurnal plasma level variations of testosterone, cortisol, prolactin and human growth factor in healthy volunteers and patients showing atopic eczemae.** Bock, B. Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.). Medizinische Fakultaet. 5 Jun 1986. 107p. (In German). Order Number DE89783062/JAW. Available from NTIS (US Sales Only), PC A06/MF A01.

An analysis of hormone measurements in sera from healthy volunteers and patients that was carried out on the basis of different criteria yielded the following results: (1) The testosterone levels determined in the patients sera were significantly lower than those of the healthy individuals and the daily rhythmic variations seen here did not attain statistical significance. (2) There were no statistically relevant differences in the serum concentrations of cortisol between healthy individuals and patients, nor was the amplitude of the daily variations observed to be changed in a consistent way. (3) In the patients, as compared to the healthy individuals, the prolactin level was considerably increased, as was the amplitude of the daily rhythmic variations. (4) The values determined for the human growth hormone (HCG) varied considerably between the individuals of either group. Since this held true for both the fluctuations with time and the height of the serum concentrations, a statistical analysis of the results appeared pointless. The results confirm that central and autonomous components have an important role in ectopic eczemae. (TRV).

34619 (INIS-mf–11975) **Comparative evaluation of two radioenzymatic procedures designed to determine noradrenaline in the plasma (COMT assay and PNMT assay).** Barth, A. Koeln Univ. (Germany, F.R.). Medizinische Fakultaet. 12 Apr 1984. 89p. (In German). Order Number DE89783063/JAW. Available from NTIS (US Sales Only), PC A05/MF A01.

A comparative evaluation of two radioenzymatic procedures to determine the concentration of noradrenaline in the plasma - with linearity, sensitivity, specifity and accuracy serving as test criteria - led to the following results: In view of a probability of error in the order of 2% both methods were judged to show a satisfactory sensitivity. The specific of the COMT assay, by contrast with that of the PNMT assay, was found to be wanting, as the noradrenaline measurements in the presence of other biogenic amines were biassed in such a way that the values determined were higher than the actual concentrations. During antihypertensive treatment even minimal changes in the noradrenaline concentration can be ascertained on a quantitative basis. If suitable hardware is available, the COMT assay permits up to 25 single determinations to be carried out per day, while the number of double determinations is restricted to 7 per day. One advantage, however, lies in the fact that several catecholamines in the plasma can be detected simultaneously, if required. In cases where the noradrenaline concentration alone is to be determined for clinical purposes, preference should be given to the PNMT assay, as both tests showed equal linearity and sensitivity. (TRV).

34620 (INIS-mf–11976) **Can the diagnostic accuracy of radionuclide ventriculography during exercise be improved by means of a step-up loading procedure?.** Ruegenberg, T. Frankfurt Univ. (Germany, F.R.). Fachbereich Humanmedizin. 17 Sep 1985. 37p. (In German). Order Number DE89783064/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

34 patients (31 of whom were coronary heart disease sufferers as proven by angiography) and further 3 patients failing to show symptoms of this disorder were subjected to radionuclide ventriculography carried out with the aid of ^{99m}Tc-labelled erythrocytes in such a way that examinations at rest were directly followed by maximum loading tests. In a second series of examinations a step-up procedure was adopted where initial recordings at rest were followed by preliminary exercise tests using only 25% of the maximum load. The parameters chosen to evaluate the results were heart rate, ejection fraction, maximum velocity of changes in volume, endsystolic and enddiastolic volumes (ESV and EDV) as well as cardiac output. In 23 patients the preliminary exercise test revealed an insufficient increase or even decrease of the ejection fraction that was associated with delayed volume changes, increases in ESV and EDV as well as reductions in cardiac output and in 21 patients it became evident during those examinations that the onset of stenocardiac complaints was preceded by markedly pronounced function disorders in the left ventricle. It was concluded from these findings that the step-up procedure followed here may in some patients provide additional information on the level of myocardial performance. It can thus be assumed to contribute considerably to higher diagnostic accuracy, although it requires no more time than conventional exercise tests and is not associated with additional radiation exposure. (TRV).

34621 (INIS-mf–11977) **Autoradiographic investigations of cells from the cerebrospinal fluid.** Thamm, W. Freie Univ. Berlin (Germany, F.R.). 29 Jun 1983. 83p. (In German). Order Number DE89783065/JAW. Available from NTIS (US Sales Only), PC A05/MF A01.

A total of 155 samples of cerebrospinal fluid obtained from 61 patients were subjected to cytological examination and incubated together with $_3{}^1$H-thymidine. Radioactive labelling was thus achieved for lymphocytes, monocytes and tumour cells. The highest contents of radioactivity were seen in tumour cells. To a lesser degree had the isotope become attached to the lymphocytes, while the tendency to take up radioactivity was lowest in cells from autochthonous tumours of the brain. In cerebral and meningeal metastases the labelling index rose proportionately to the progress of the disease. Autoradiography can be used to monitor cytostatic treatment carried out to control the spread of meningeal carcinoma cells. In non-inflammatory disorders, lymphocytes and monocytes of the cerebrospinal fluid only rarely show radioactivity. A suprisingly high labelling index was determined for lymphocytes and monocytes of cerebrospinal fluid from young children, which was considered to be attributable to the high proliferation rates to be expected here.

34622 (INIS-mf–11978) **Radioimmunological detection of vasopressin in urine extracts.** Buengner, R. Hamburg Univ. (Germany, F.R.). Fachbereich 4 Medizin. 4 Nov 1983. 74p. (In German). Order Number DE89783066/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

After initial measures had been taken to ensure that ion exchange chromatography would yield a sufficiently high recovery of labelled and non-labelled hormone as well as to eliminate all intervening factors it was possible to use the described extraction procedure in connection with the RIA introduced by Freisenhausen et al. At the clinical level, the technique was employed to assess the post-operative release of AVP (argenine vasopressin) in 24-hour urine samples obtained from patients subjected to hypophysectomy. In a total of 10 patients, where hypophysectomy had been performed for different clinical reasons, the AVP values were seen to be significantly decreased for the first three hours after surgical intervention. They recovered slightly during the following three hours to remain at an average level of 2 pg /400 μl urine. The extraction procedure described can be used to determine levels of AVP approaching the limit of detection - either due to large volumes of urine or very low concentrations of AVP.

34623 (INIS-mf–11979) **Echocardiography, ventriculography and coronary angiography in patients just recovering from acute myocardial infarction.** Goetz, S. Muenchen Univ. (Germany, F.R.). Fakultaet fuer Medizin. 13 Jan 1983. 85p. (In German). Order Number DE89783067/JAW. Available from NTIS (US Sales Only), PC A05/MF A01.

Comparative evaluations were carried out on the basis of ventriculography, echocardiography and corornary angiography that would permit to throw some light on the following issues: Can the changes in overall ventricular function occurring in response to the processes in the infarcted zone be visualised by means of M-mode scans. Which degree of accuracy can be achieved, if attempts are made to establish an echocardiographic diagnosis on the basis of M-mode scans in order to confirm regional contractility disorders revealed by ventriculography.

34624 (INIS-mf–11981) **Cardiac function studies. Refinement of a computer-assisted programme designed to be used on a routine basis in connection with the first-pass technique with 99m-Tc human serum albumin as tracer.** Horn, H.J. Tuebingen Univ. (Germany, F.R.). Medizinische Fakultaet. 1986. 54p. (In German). Order Number DE89783069/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

A total of 27 patients were subjected tointramyocardial sequential scintiscanning (first pass) using 99m-Tc human serum albumin. A refined method is described that is suitable to analyse clinically relevant parameters like blood volume, cardiac output, ejection fraction, stroke volume, enddiastolic and endsystolic volumes as well as pulmonal transition time and uses a complete camaracomputer system adapted to the requirements of a routine procedure. Unless there is special hardware available, the method does not yet appear mature

enough to be put into general practice. Its importance recently appeared in a new light due to the advent of particularly shortlived isotopes. For the time being, however, ECG-triggered equilibrium studies are to be preferred for cardiac function tests. (TRV).

34625 (NAC–88-01) **Neutron dosimetry measurements at the MRC cyclotron unit, Clatterbridge Hospital, U.K.** Jones, D.T.L.; Blake, S.W. Council for Scientific and Industrial Research, Faure (South Africa). National Accelerator Centre. 1988. 15p. Available from the CSIR, National Accelerator Centre, P.O. Box 72, Faure, 7131, South Africa.

A neutron dosimetry intercomparison study undertaken at the Medical Research Council's neutron therapy facility at Clatterbridge Hospital, Merseyside, U.K. is reported. Measurements were made with ostensible identical NAC and MRC tissue equivalent ionization chambers. For the NAC chamber used the photon calibration was essentially identical to the measurement made at NAC. In the p(62 MeV)/Be (36 MeV) neutron beam dose measurements made with the NAC ionization chamber were between 0.6% and 1.0% (average 0.8%) higher than those made with the MRC ionization chamber. The results are satisfactory and the differences are well within expected deviation specified in international protocols. The differences can possibly largely be ascribed to incorrect geometrical correction factors. Measurements of the ratio of the responses measured with tissue equivalent gas and air filling agree well with each other and with theoretical calculations.

34626 (NAC–88-02) **Neutron dosimetry intercomparison study with tissue equivalent ionization chambers: National Accelerator Centre and Universite Catholique de Louvain, Belgium.** Vynckier, S.; Jones, D.T.L. Council for Scientific and Industrial Research, Faure (South Africa). National Accelerator Centre. 1988. 30p. Available from the CSIR, National Accelerator Centre, P.O. Box 72, Faure, 7131, South Africa.

The results of a neutron dosimetry intercomparison study undertaken at the Universite Catholique de Louvain, Belgium are reported. The results show excellent agreement between the different tissue equivalent ionization chambers used. The photon calibration factors measured differ from those previously determined by a maximum of 0.14%. For the measurement of total dose in a p(65 MeV)/Be(35 MeV) neutron therapy beam the maximum deviation from the measured mean is 0.48% for all conditions. For the NAC chamber used the photon calibration differed by 0.11% from the measurement made at NAC, while the average deviation from the mean for the neutron beam measurements was 0.10%.

34627 (NAC-RR–664) **Comparison of the gamma component of two high energy neutron therapy beams.** Jones, D.T.L.; Vynckier, S.; Yudelev, M. Council for Scientific and Industrial Research, Stellenbosch (South Africa). National Accelerator Centre. Dec 1988. 22p. Available from the National Accelerator Centre, Foundation for Research Development, CSIR, P.O. Box 72, Faure, 7131, South Africa.

Reciprocal neutron dosimetry intercomparison have been undertaken between the National Accelerator Centre (NAC), South Africa and the Universite Catholique de Louvain (UCL), Belgium. A comparison of the gamma components measured in the respective therapy beams using the classic twin-detector method formed part of the study. The gamma component under various irradiation conditions was derived from pairs of measurements with tissue equivalent ionization chambers and Geiger-Mueller (GM) counters. The gamma component expressed as a fraction of the gamma dose relative to the total dose agreed within less than 0.01, with the measurements with the NAC GM counters being consistently higher than those with the UCL counter. These differences are attributed to errors in the measurement of the neutron sesnitivities of the GM counters. The results obtained are nevertheless highly satisfactory in view of the complexity and difficulty of the measurements.

34628 (NAC-RR–665) **Field factors for the NAC p(66 MeV)/Be neutron therapy beam.** Jones, D.T.L.; Yudelev, M. Council for Scientific and Industrial Research, Stellenbosch (South Africa). National Accelerator Centre. Feb 1989. 60p. Available from the National Accelerator Centre, Foundation for Research Development, CSIR, P.O. Box 72, Faure, 7131, South Africa.

Output factors have been measured for a range of field sizes and beam filter combinations in the NAC p(66)/Be neutron therapy beam. Polynomial functions were fitted to the square-field data and filter factors, wedge factors and backscatter factors were derived from the measured data by dividing the relevant fitted polynomials on a point-by-point basis.

34629 (PNL–6250) **Projection of needs for gamma radiation sources and other radioisotopes and assessment of alternatives for providing radiation sources.** Ross, W.A.; Jensen, G.A.; Clark, L.L.; Eakin, D.E.; Jarrett, J.H.; Katayama, Y.B.; McKee, R.W.; Morgan, L.G.; Nealey, S.M.; Platt, A.M. Pacific Northwest Lab., Richland, WA (USA). Jun 1989. 113p. Sponsored by DOE Nuclear Energy. DOE Contract AC06-76RL01830. Order Number DE89012874/JAW. Available from NTIS, PC A06/MF A01 - OSTI; GPO Dep.

Pacific Northwest Laboratory reviewed the projected uses and demands for a variety of nuclear byproducts. Because the major large-scale near-term demand is for gamma irradiation sources, this report concentrates on the needs for gamma sources and evaluates the options for providing the needed material. Projections of possible growth in the irradiation treatment industry indicate that there will be a need for 180 to 320 MCi of ^{60}Co (including ^{137}Cs equivalent) in service in the year 2000. The largest current and projected use of gamma irradiation is for the sterilization of medical devices and disposable medical supplies. Currently, 40% of US disposable medical products are treated by irradiation, and within 10 years it is expected that 90% will be treated in this manner. Irradiation treatment of food for destruction of pathogens or parasites, disinfestation, or extension of allowable storage periods is estimated to require an active inventory of 75 MCi of ^{60}Co-equivalent gamma source in about a decade. 90 refs., 7 figs., 25 tabs.

34630 **Recent developments in neutron capture therapy.** Fairchild, R.G. (Brookhaven National Lab., Upton, NY (USA)); Slatkin, D.N.; Coderre, J.; Micca, P.; Laster, B.; Som, P.; Wheeler, F.; Kahl, S.B.; Fand, I. *Strahlentherapie und Onkologie (F.R. Germany),* 165(4): 343-347 (Apr 1989). DOE Contract AC02-76CH00016. (CONF-8710474–: EORTC-Heavy Particles Therapy Group meeting, Muenchen, Germany, F.R., 16-17 Oct 1987).

The conditions for the possible initiation of clinical trials with neutron capture therapy at a number of locations in the U.S. is reviewed. There are several new technical developments or plans at the Brookhaven Medical Research Reactor (BMRR), the Power Burst Facility (PBF) at INEL, the Massachusetts Institute of Technology Reactor (MITR) and the Georgia Institute of Technology Research Reactor (GTRR). Emphasis is on the development of epithermal beams for the treatment of deepseated tumors with neutron fluxes in between 10^9 to 10^{10} n/cm^{2}s. Therapeutic dose gains, defined as the ratio of tumour dose to maximum normal tissue dose in the treatment volume are expected to be between 2 and 4, depending on the degree of suppression of fast neutron dose. Boron concentrations considered in this case in the tumour are around 35 μg ^{10}B/g and tumour/normal tissue concentrations are around 10. The compound development throughout three generations is discussed. The compound proposed nowadays, $Na_2B_{12}H_{11}SH$ (or BSH), employed in the treatments in Japan, will likely be replaced in the future by analogous of biomolecules being enriched in the tumour by physiological pathways. Examples are p-boronophenylalanine or boronated porphyrius. The most promising solution envisaged would be the employment of tumour cell specific boronated monoclonal antibodies. Finally the mode of therapy is discussed which will likely be based on a fractioned scheme, to achieve optimized results.

34631 (PB–89-139224/XAB) **NIOSH (National Institute for Occupational Safety and Health) testimony to DOL (Department of Labor) on the Occupational Safety and Health Administration's proposed rule on the control of hazardous energy sources (lockout/tagout) by R. W. Niemeier, September 8, 1988.** National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). 8 Sep 1988. 7p. Available from NTIS, PC A02/MF A01.

The testimony addressed the proposed rule on control of hazardous energy sources and was offered in support of the position of the Occupational Safety and Health Administration on this issue. Provisions already in existence for cranes, derricks, and power presses require lockout provisions for electrical connections. The proposed rule will extend these protections to nonelectric power sources and add a requirement for isolating nonelectric hazards. The new rule requires a written procedure and training program. NIOSH opposed the use of tags instead of locks, as tags only provide a warning and are subject to several abuses including removal before maintenance is complete and negligence in removing the tag by the service operator when maintenance is completed. Over 20 electrically related fatalities were noted where a deenergized locked-out electrical circuit would have prevented the fatality. In a review of 160 responses concerning injuries where the equipment was turned off, six indicated the equipment was tagged out. Concern was also expressed over the simple tagout permitted for mechanical power transmission systems. NIOSH recommends that each worker should apply and remove his or her own lock.

LEGUMINOSAE/plant breeding; LEGUMINOSAE; MUTAGENESIS; MUTANTS; PRODUCTIVITY; RESEARCH PROGRAMS

34663 (ISH–118) **Effects of ionizing radiation on food, compared to the effects of conventional food treatment: A literature study. Pt. 1.** Leister, W.; Boegl, K.W. Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene. Aug 1987. 131p. (In German). Available from Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene.

The extent and quality of changes due to irradiation is described and compared with conventional methods. Effects of radiation treatment on vegetable products as well as pork, beef, any type of fish and poultry product are compared with conventional thermic, microwave or smoke treatments, drying processes, ethylene oxide gas treatment, as well as effects from storage, temperature and sealed packaging. In this context the influences of the different treatment methods on various food components and on sensory, physical-chemical or biochemical characteristics were compared. The following tendencies were observed: conventional treatment methods produce partly more pronounced changes than irradiation with standard doses. Heat treatment, for instance, results in a greater weight loss, in altered sugar content, and in higher content of carbonyl and aldehyde releasing compounds. Gas treatment will cut the volatile oil content in half, while it remains nearly constant after irradiation. However, in some cases, an irradiation with standard doses may cause changes which should not be disregarded. In onions, for instance, irradiation is causing a stronger decomposition during storage than only cold storage.

34664 (PB–89-136493/XAB) **Radioactivity in foods grown on Florida phosphate lands. Final report.** Guidry, J.J.; Bolch, W.E.; Roessler, C.E.; McClave, J.T.; Moon, J.R. Post, Buckley, Schuh and Jernigan, Inc., Orlando, FL (USA). Mar 1986. 192p. Available from NTIS, PC A09/MF A01.

This study involved radioactivity in foods grown on Florida phosphate lands. More than 90 land parcels in central Florida were identified and evaluated for potential food production. Over 100 food samples were collected from 62 of these land parcels and subjected to radioassay for isotopes of radium, uranium, and thorium. Corresponding soil samples were also collected and analyzed for radium-226 and pH. Statistical analysis of the radium-226 data has shown that the average concentrations exhibited by foods grown on mined lands was significantly higher than the average concentrations exhibited by foods grown on unmined lands. Descriptive analyses of the other radionuclides support the conclusion. A hypothetical individual who obtains 100% of the foods sampled in the study from mined lands and the remainder of his diet from the general food pool is estimated to receive 4 microrems per year in committed effective dose equivalent from ingestion of the radionuclides reported in the study. This is 0.3 microrems (8%) per year more than a similar individual who obtains 100% of the food sampled in the study from unmined lands. These dose levels are quite low and are not considered to be a health hazard.

34665 (Zfl-Mitt–138) **Radiation treatment of onions.** Huebner, G. (ed.). Akademie der Wissenschaften der DDR, Leipzig (German Democratic Republic). Zentralinstitut fuer Isotopen- und Strahlenforschung. Jun 1988. 215p. (In German). Order Number DE89619877/JAW. Available from NTIS (US Sales Only), PC A10/MF A01 - OSTI; INIS.

The comprehensive report comprises 15 papers closely related to the leading article. The irradiation of onions (Allium cepa L.) serves to prevent sprouting associated with long-term storage or transport and storage of onions in climatic conditions which stimulate sprouting. The papers contain results of physiological investigations on the optimum conditions for onion irradiation, and technical and economic parameters of the process under national economy and business management aspects. For two different types of irradiation plants, a bulk-type plant and a multi-purpose large-scale irradiation plant, technical specifications and economic results in relation to product throughput, loading and price of ^{60}Co are presented.

34666 (AD-A–200645/0/XAB) **Opposite effects of WR-2721 and WR-1065 on radiation-induced hypothermia: possible correlation with oxygen uptake. Scientific report.** Kandasamy, S.B.; Kumar, K.S.; Hunt, W.A.; Weiss, J.F. Armed Forces Radiobiology Research Inst., Bethesda, MD (USA). 1988. 9p. (AFRRI-SR–88-15). Available from NTIS, PC A02/MF A01.

Pub. in Radiation Research, Vol. 114, 240-247(1988).

Ionizing radiation induces hypothermia in guinea pigs. While systemic injection of the radioprotectant S-2-(3-aminopropylamimo)ethylphosphorothioic acid (WR-2721) did not block hypothermia induced by exposure to 10 Gy of gamma radiation, central administration did attenuate it. The dephosphorylated metabolite of WR-2721, N-(2-mercaptoethyl)-1,3-diaminopropane

(WR-1065), accentuated radiation-induced hypothermia by both routes of administration. In brain homogenates, oxygen uptake was inhibited by WR-2721 but elevated by WR-1065. These results suggest that the antagonism of radiation-induced hypothermia found only after central administration of WR-2721 is due to its direct actions and not in its dephosphorylated metabolite, and that this effect may be correlated with the inhibition by WR-2721 of oxygen uptake.

34667 (AD-A-201373/8/XAB) **Absence of transient elevated UV resistance during germination of 'Bacillus subtilis' spores lacking small, acid-soluble spore proteins alpha and beta.** Setlow, B.; Setlow, P. Connecticut Univ. Health Center, Farmington, CT (USA). Dept. of Biochemistry. Jun 1988. 3p. Available from NTIS, PC A02/MF A01.

Pub. in Jnl. of Bacteriology, Vol. 170, No. 6, 2858-2859(Jun 1988).

Germinating spores of Bacillus subtilis mutants that lack small, acid-soluble spore proteins alpha and beta did not exhibit the transient elevated UV resistance seen during germination of wild-type spores. Dormant spores of various Bacillus species are much more resistant to UV irradiation than are the corresponding vegetative cells. This elevated spore UV resistance appears to have two causes. First, UV irradiation of spores does not produce the pyrimidine dimers formed in vegetative-cell DNA, but rather produces several other photoproducts, the most predominant of which is termed the spore photoproduct, a 5-thyminyl-5,6-dihydrothymine adduct (1, 10). Second, spores have at least two mechanisms that efficiently repair this spore photoproduct during spore germination, including one that monomerizes the adduct back to two thymines.

34668 (AD-A-201399/3/XAB) **Dose-dependent changes in the antigenicity of bacterial endotoxin exposed to ionizing radiation. Report No. 2, 1986-1987.** Csako, G.; Suba, E.A.; Tsai, C.M.; Mocca, L.F.; Elin, R.J. Naval Medical Research Inst., Bethesda, MD (USA). 1987. 7p. Available from NTIS, PC A02/MF A01.

Pub. in Jnl. of Clinical Laboratory Immunology, Vol. 24, 193-198(1987).

The antigenic properties of the highly purified US reference standard endotoxin (RSE) exposed to varying doses of ionizing radiation were studied with double immuno-diffusion, immunoelectrophoresis, and immunoblotting. Rabbit RSE antisera identified 2 distinct major antigenic components for untreated RSE: one related to the O-polysaccharide side chain (O-antigenic specificity), the other to the R-core. Based on a serologic cross-reactivity of R-core of RSE (Escherichia coli 0113) with the R-core of the lipopolysaccharide from E. coli 0111, the core type of E. coli 0113 was identified as coli R3. Increasing exposure of RSE to ionizing radiation progressively destroyed all antigenic reactivities; at lower doses of radiation the rate of elimination differed for the 2 antigen classes. The O-polysaccharide was more sensitive to gamma radiation than the R-core and the O-antigenicity was lost before that of the R-core. Endotoxin molecules containing incomplete R-core (radiation-induced or mutant) did not react with the RSE antiserum. Keywords: Antigenicity, Reprints. (KT/KR)

34669 (CFFTP-G-87026) **Metabolism of tritium uptake due to handling of metal surfaces exposed to tritiated hydrogen gas.** Johnson, J.R.; Peterman, B.F. Canadian Commercial Corp., Ottawa, ON (Canada). Aug 1987. 19p. (AECL-9518). Order Number DE89619832/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Hairless rats were exposed to tritium by rubbing HT contaminated stainless steel planchets on them. The pattern of tritium excretion in the urine (n=4), shows the OBT (organically bound tritium) retention curve to be approximated by the sum of 2 exponential curves, one with a half-life of 0.4 days and another with a half-life of 1.4 days. The retention of HTO fit a single exponential curve with a half-life of 3.1 days. Exposed skin, unexposed skin, liver, muscle and blood (n=6) were assayed for HBO, and free HTO. Highest activity was found in the exposed skin, other organs with high activity are the unexposed skin and liver. Examination of the exposed skin showed HTO to be concentrated in the uppermost layers. The distribution of OBT was similar but was incorporated at a faster rate. The basal layer is exposed to a tritium concentration between 70-90% of that of the surface. The two macromolecule fractions with the highest amount of radioactivity were lipid and insoluble protein (mainly collagen).

34670 (CONF-890517-2) **Calculations of physical and chemical reactions with DNA in aqueous solution from Auger cascades.** Wright, H.A.; Hamm, R.N.; Turner, J.E.; Howell, R.W.; Rao, D.V.; Sastry, K.S.R. Oak Ridge National Lab., TN (USA). 1989. 17p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From 10. symposium on microdosimetry; Rome, Italy; 21-26 May 1989. Order Number DE89013063/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Monte Carlo calculations are performed of the physical and chemical interactions in liquid water by electrons produced during Auger cascades resulting from the decay of various radionuclides. Estimates are also made of the number of direct physical and indirect chemical interactions that would be produced on DNA located near the decay site. 13 refs., 8 figs.

34671 (DOE/ER/60502-03) **The development of in vitro mutagenicity testing systems using T-lymphocytes: Research progress report: June 1, 1988-May 31, 1989.** Albertini, R.J. Vermont Univ., Burlington, VT (USA). May 1989. 29p. Sponsored by DOE Energy Research. DOE Contract FG02-87ER60502. Order Number DE89013800/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We will summarize our refinement of the methodology for cloning human T-lymphocytes and quantifying in vivo T-cell mutant frequencies at the hprt locus. The ability to maintain in vitro proliferation of these cells allows molecular characterizations, including analyses of hprt outlined elsewhere, the latter permits definitions of mutation frequencies which underlie the measured mutant frequencies. This unique aspect of the T-lymphocyte cloning assay is extremely important because it permits quantitation of in vivo mutational events, which are the events of public health interest. An increase in in vivo mutational events is only one of the causes of increased mutant frequencies, the other is in vivo clonal expansions of mutant cells. Clonal expansions have an importance of their own, but the implications are different than for increases in mutations. Several examples of in vivo clonal expansions will de detailed. The ability to maintain in vitro proliferation of T-cell colonies also allows molecular analyses of the mutations in the hprt gene. The results of both southern blot analyses for gene deletions and rearrangements and direct sequencing for smaller changes such as base substitutions will be given. A spectrum of hprt mutations is being developed both for unexposed, "normal" humans as well as for humans exposed to ionizing irradiation in the course of radioimmunoglobulin therapy (RIT) for hepatoma treatment. 11 figs., 4 tabs.

34672 (FRNC-TH-3471) **Procedures for expressing natural or induced variability in carnation (Dianthus Caryophyllus L.).** Simard, M.H. CEA Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Service de Radio-Agronomie; Paris-11 Univ., 91 - Orsay (France). Jan 1989. 250p. (In French). Order Number DE89781575/JAW. Available from NTIS (US Sales Only), PC A11/MF A01.

Mutagenesis (gamma rays) and in vitro organogenesis are used separately or both to diversify carnation varieties by revealing and creating variability. As regards to in vivo mutagenesis, an important diversification of the flower colour is obtained by applying a 60 Gray dose to two hundred rooted cuttings. The organogenesis ability has been tested among different types of explants. The petal of young floral bud shows the best caulogenesis capacities. The organogenesis region is located at the petal base. Histological studies reveal that neoformations are originated from epidermic and sub-epidermic cellular layers. The morphogenetic evolution of neoformations depends on growth factors imbalance. Isolated neoformations can grow in a vegetative way (vitrous plantlets) or in a reproductive one (petaloid structures). Modifications of the petal and neoformations culture conditions induce a normal development by preventing and suppressing vitrification. Histological studies show strong anatomic differences between vitrous and petaloid forms when compared to the normal ones. A method combining in vitro organogenesis and mutagenesis has been investigated. To avoid chimera, petals are irradiated the second day of culture (differentiated cells). A 20 or 40 Gray dose can be applied.

34673 (IAEA-R–3441-F) **Experiments on radionuclide accumulation by fishes from the Angra Dos Reis region of Brazil. Final report for the period 1 May - 15 September 1988.** Guimaraes, J.R.D. Instituto de Radioprotecao e Dosimetria, Rio de Janeiro, RJ (Brazil); International Atomic Energy Agency, Vienna (Austria). Nov 1988. 13p. Order Number DE89618008/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

To follow the bioaccumulation and tissue distribution of ^{137}Cs and ^{60}Co in fish from tropical waters near the Angra nuclear power station in Brazil, juvenile grouper (Epinephelus sp.) were exposed under laboratory conditions to Angra sea water containing the two radionuclides initially added in chloride form. During the 4-month exposure period, the sea water was not changed and the fish received regular rations of non-radioactive food. Following uptake, the fish were dissected and composite tissue samples monitored for radioactivity. ^{137}Cs concentration factors (CFs) were 3 and 5 in whole fish and muscle, respectively. The highest concentration of ^{137}Cs was found in the muscle which accounted for 66% of the total body burden. In contrast, the highest concentration and greatest fraction (19%) of ^{60}Co was located in the liver. Whole body and muscle CFs for ^{60}Co, 0.2 and 0.08 respectively, were much lower than those for ^{137}Cs. Compared with published data, only very small amounts of both radionuclides were taken up by bone in the present study. This observation and the fact that much higher ^{137}Cs CFs have been reported in fish from field studies suggests that uptake through the food chain is the principal pathway for bioaccumulation in nature. Elution of freshly-prepared and previously-used radioactive sea water through chelating resins indicated that ^{60}Co added in the cationic form was almost totally converted to neutral or anionic forms after four months. Additional experiments carried out with the previously-used experimental media demonstrated that the possibly ligand-bound ^{60}Co was approximately 2.5 times more available for uptake by grouper than the cationic forms initially present. It is concluded that the uptake of ^{60}Co by fish exposed to radioactive effluents would be a function of the different forms of ^{60}Co present.

(CONF-8706235–: 5. international conference on mechanical behaviour of materials, Beijing, China, 3-6 Jun 1987). In *Radiation technology for immobilization of bioactive materials. Proceedings of the final research co-ordination meeting held in Beijing, 15-18 June 1987.* Order Number DE89617908/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

An optimized polymerization in emulsion technique is described for producing microbeads that immobilize human red blood cells to allow formation of blood type antibody immunoadsorbents which can be used in an extra-corporeal circuit. Adsorption capacity and clinical compatibility of the immunoadsorbent were evaluated through three phases of experimentation: in vitro, in vivo on the pig and ex vivo with man. (author). 6 refs, 10 figs.

34675 (INFO–0260) **Catalogue of data on uranium intake, organ burden and excretion.** Atomic Energy Control Board, Ottawa, ON (Canada); Senes Consultants, Willowdale, ON (Canada). Nov 1987. 151p. Order Number DE89619828/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

The Atomic Energy Control Board is initiating the critical evaluation of current biokinetic and dosimetric models applicable to radiation workers exposed to the common chemical and physical forms of uranium that are encountered throughout the nuclear fuel cycle. The identification and location of the relevant sets of data are the first steps of this project. This report describes the collection methods used and presents catalogues of the data on human and animal studies that have resulted from exposures under controlled experimental conditions, chronic occupational or environmental situations and acute accidental conditions. The data was identified through the use of computerized literature searches of the BIOSIS, NTIS, MEDLINE and Occupational Safety and Health (NIOSH) data bases, library research and telephone contact with currently active researchers in the field. A table is presented which categorizes researchers in the field according to affiliation and country.

34683 (INIS-mf–11960) **Radiobiological examinations in ova of Carausius morosus (Indian stick insect) following exposurre to HZE-particles of technical origin. Results of radiation experiments performed by UNILAC (GSI, Darmstadt) and BEVALAC (Lawrence Laboratory, Berkeley, Cal./USA).** Hoeffken, H. Marburg Univ. (Germany, F.R.). Fachbereich Humanmedizin. 29 Mar 1985. 124p. (In German). Order Number DE89783070/JAW. Available from NTIS (US Sales Only), PC A06/MF A01.

Preliminary tests were carried out to determine the radiation sensitivity of embryos in the ovum, being exposed to 200 keV X-radiation as well as 12 MeV electron radiation. It was found that the sensitivity towards radiation varies with the stage of embryonic development, which takes about 3 months until maturity. The greatest sensitivity was determined for the period between days 22 and 28 of embryonic development. The hatching rates and time required for the embryos to mature were influenced less by the closely circumscribed action of the HZE-particles than by that of the X-rays, the energy of which is distributed over larger areas. In view of these deviating reaction patterns the 'dose' was preferred to be expressed as ions/cm^2. Quite irrespective of this fact, however, repair errors observed following the penetration of HZE-particles mostly led to much more serious malformations than those occurring in response to the influence of X-rays. Even low dosages were seen to be connected with considerable embryonic damage. HZE-particles particularly rich in energy appear to cause microlesions that are initially compensated for by egg membrane mechanisms, thus allowing embryogenesis to proceed undisturbed. As the lesions themselves remain unaltered, however, they have an inevitable effect at the larval stage. It was concluded from these experiments that simple comparisons with low-ion radiation do not provide an adequate basis to describe the biological role of HZE-particles. Thus, there is no global factor to yield useful information in such comparisons.

34684 (INIS-mf–11967) **Distribution of radioactively labelled myobacterium tuberculosis (^{65}Zn, ^{35}S-BCG) after injection into the anterior chamber. Studies in rabbits with and without anterior chamber sensitisation.** Tabillion, M. Kiel Univ. (Germany, F.R.). Medizinische Fakultaet. 20 Feb 1985. 64p. (In German). Order Number DE89783077/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

The rabbit model was used to study the behaviour of antigens in the eye as well as their spread to extraocular regions. Prior to the investigations, a test dose of ^{35}S-labelled and ^{65}Zn-labelled BCG (Bacille Calmette Guerin) had been injected into the anterior chamber of the eyes of sensitised and non-sensitised rabbits. The percentage of BCG escaping from the aqueous humor and iris was mostly not dependent of the test dose given, nor did the rate of its spread show any relation to the occurrence of an antigen-antibody reaction. On the 32nd day p.i., there were still acid-resisting rods in the uvea, which could be proven by histological examination. As shown by the levels of activity in the iris and ciliary body, the bacteria appear to migrate mostly to these organs and, in the second place, to the choroid membrane. The spread of bacteria in previously sensitised rabbits was not different from the observed in non-sensitised animals. Theories claiming that more antigens are formed in sensitised tissue as compared to non-sensitised tissue cannot be confirmed by the findings revealed here. (TRV).

34685 (INIS-mf–11972) **On the organ distribution of several ^{99m}Tc-labelled tetracyclines.** Weinhold, S.E.M. Freie Univ. Berlin (Germany, F.R.). 11 Feb 1983. 108p. (In German). Order Number DE89783060/JAW. Available from NTIS (US Sales Only), PC A06/MF A01.

Experiments in rats have pointed to a high stability of ^{99m}Tc-labelled tetracyclines, which are found in vivo in the form of chemically stable chelate complexes. Their biokinetic behaviour in most organs (the lungs) and the blood is predominantly determined by convection processes. In other organs (notably the kidneys and, to a lesser extent, the liver and spleen) their passage can be described in terms of influx and efflux, with accumulation, metabolisation and excretion of the drug administered being the main steps involved. ^{3}H-Labelled tetracyclines are chemically unchanged tetracyclines showing pronounced lipophilia that tend to be taken up and eliminated via influx and efflux processes in the large majority of organs. The highest blood levels were measured for $^{99m}TcO_4$, which is a hydrophilic substance. None of the substances tested appeared to be able to cross the blood-brain barrier. As far as their chemical structure and solubility in water is concerned, ^{99m}Tc-labelled tetracyclines occupy a position intermediate between the two comparative substances and the blood concentrations measured here were only moderately high. As they are accumulated to a considerable degree in the kidneys, the possibility of these substances' use in connection with renal scintiscans does not seem remote. In view of the fact that only one tenth of the dose of pertechnetate would be required for this purpose, radiation exposure could be reduced to a reasonable minimum. (TRV).

34686 (ISH–126) **Chromosome analysis for exposed and presumably exposed persons, 1985-1987.** Romm, H.; Stephan, G. Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene. Mar 1988. 39p. (In German). Available from Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene.

During the time from 1985 to 1987 chromosome analyses were performed for 85 exposed or apresumably exposed persons. The results of the analyses are presented in this report. The investigated blood samples originate primarily from workers employed in industrial and nuclear power facilities (n=44; 51.8%), in institutions of research and education (n=22, 14.1%) and institutions of public health (n=23, 27.1%). In 45 cases (52.9%) there was no indication of radiation exposure, in 12 cases (14.1%) the estimated equivalent whole body dose was below 0.08 Gy and in 16 within the range of 0.08 and 0.20 Gy. The highest dose estimate (>0.30 Gy) was derived from 4 cases of exposure during the radiation accident in Goiania, Brazil, in 1987. Furthermore, the situation of 14 workers is described who accidentially inhaled tritium gas.

34687 (NAC–88-07) **Radiobiological intercomparison: dosimetry aspects.** Yudelev, M.; Jones, D.T.L.; Vynckier, S. Council for Scientific and Industrial Research, Faure (South Africa). National Accelerator Centre. 1987. 10p. Available from the CSIR, National Accelerator Centre, P.O. Box 72, Faure, 7131, South Africa.

A radiobiological intercomparison study was performed on the neutron therapy facility at the National Accelerator Centre (NAC) in conjunction with personnel from the Universite Catholique de Louvain, Belgium. The relative biological effectiveness of the neutron beam with respect to ^{60}Co was determined. The biological criterion was the regeneration of mice intestinal crypts, 3.5 days after total body irradiation with a single dose. A physical dosimetry intercomparison was undertaken at the same time. Both biological and dosimetric intercomparison are an essential prerequisite for the comparison of clinical data. The dosimetry measurements for the radiobiological experiments are presented here.

34688 (OEVS-Mitteilung–1988, pp. 148-152) **New calculation methods for external radiation exposure.** Jacob, P. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Strahlenschutz); Paretzke, H.G. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (In German). (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Radiation exposure of human organs from chimney exhaust and from gamma radiation above contaminated soils have been calculated by the Monte Carlo method. A relatively simple calculation method is presented where the influence of the earth surface, the energy dependence of the gamma submersion factor and the geometry dependence of the organ conversion factor can be accounted for. 7 refs., 3 figs., 1 tab.

34689 (OEVS-Mitteilung–1988, pp. 263-290) **Hormesis - hypotheses and facts.** Feinendegen, L.E. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Medizin); Muehlensiepen, H. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (In German). (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Whereas in general the property of biologic systems to react to harming stimuli by changing in a way to immunize against later stimuli (hormesis), is well-known, the corresponding mechanism for low-dose ionizing radiation is doubtful. First, a short report is given of a conference on hormesis by ionizing radiation August 1985 in Oakland, Cal.. Second, own experiments on the immediate and delayed reaction of the cellular enzyme thymidine kinase in the marrow of mice after irradiation are presented. This enzyme is important for DNA synthesis. For several hours after a low dose irradiation the enzyme is inhibited and therefore the effect of a later second dose on the enzyme reduced. 10 refs., 9 figs. (qui).

34690 (OEVS-Mitteilung–1988, pp. 296-299) **Influence of time-projection models on estimates of cancer risk from radionuclides.** Schindel, F. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Strahlenschutz); Henrichs, K.; Paretzke, H.G. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (In German). (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Estimates of cancer risk obtained from epidemological data depend essentially on the time-projection model, i.e. a model where data from a time-limited observation are extrapolated on the whole lifetime risk. In the present contribution this dependence is quantified, with lung cancer as an example. The influence of the age at irradiation and the temporal pattern of radiation exposition are discussed. 1 ref., 5 figs., 2 tabs.

34691 (OEVS-Mitteilung–1988, pp. 304-307) **Radiation-induced thyroid carcinoma: is radioiodine less effective than X-rays?.** Schmitz-Feuerhake, I. (Bremen Univ. (Germany, F.R.)); Carbonell, P. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

The NCRP report No.80, 1985 states that iodine is at least 3 times less effective than X-rays. Data from about 20 sources are used to question this statement. 20 refs., 3 figs. (qui).

34692 (OEVS-Mitteilung–1988, pp. 320-332) **Small doses - are they really dangerous?.** Wachsmann, F. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (In German). (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Hormesis (benefical effects of low-level irradiation), linear extrapolation down to zero of dose-response relationships and the ALARA principle held by ICRP are the subject of this talk. 10 figs. (qui).

34693 (OEVS-Mitteilung–1988, pp. 343-347) **Comments on the dose-effect curve at low doses of inhaled alpha-emitters.** Hofmann, W. (Salzburg Univ. (Austria). Inst. fuer Allgemeine Biologie, Biochemie und Biophysik); Lettner, H. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Lung cancer incidence data on rats inhaling radon progeny and on beagle dogs inhaling $^{239}PuO_2$ particulates have been analysed and compared to human epidemiological data on radon-induced lung cancer risk. Differences in the dose-response curves are discussed in terms of modifications of the initial cellular response by different physical and biological parameters. 3 figs.

34694 (OEVS-Mitteilung–1988, pp. 414-418) **Estimation of lung dose from a fluorimetric determination of natural uranium in the lung tissue.** Beyer, D. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Abt. Sicherheit und Strahlenschutz); Biehl, R. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (In German). (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

A uranium miner died from lung cancer. To determine the cause of the cancer a tissue sample from the lung was investigated for uranium by fluorimetry. The uranium content of the whole lung was about 5μg. It is shown that a determination of uranium incorporation and therefore of the lung dose is doubtful when the interval between the intake and the tissue investigation is large, and an accompanying occupational monitoring was not done. This is because of the large variation of biological decay times even of identical uranium deposits in the organs. UO_2 and U_3O_8 have biological decay times in the lung between 50 and 5000 days. Correspondingly, when the uranium depositions are interpreted as rest burden of the occupational exposure, the lung dose varies between 0,02 and 5 Sv. 8 refs., 2 figs.

34695 (OEVS-Mitteilung–1988, pp. 480-487) **Metabolic models for the metabolism of plutonium and related elements.** Taylor, D.M. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Genetik und Toxikologie von Spaltstoffen). Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

This is a discussion of ICRP publication 1986, from a task group on the absorption of plutonium, neptunium and some other actinides from the gastrointestinal tract. A fractional absorption f_1 of 10^{-3} was adopted for all actinides, which is 10 times larger than the value currently recommended by the ICRP. For the first year of life, a value for f_1 of 10^{-2} is proposed. The relative percentage of deposition between the liver and the skeleton is discussed. A half-life of 8 years is suggested by the data. 7 refs. (qui).

34696 (OEVS-Mitteilung–1988, pp. 671-675) **Biochemical alterations as indicators of radiation exposure.** Hofmann, R. (Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene); Butkowskyj-Walkiw, T.; Stamm, A.; Pufal, D.; Spiegelberg, A.; Stanek, J.; Boegl, W.; Willich, N. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (CONF-860969–: 4. European congress and 13. regional congress

of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Three bioindicators of radiation injury in the 0,5 - 5 Gy range are discussed: enzyme activity of the α-amylase; electrophoretic mobility of erythrocytes; changes of thymidine concentration in serum. The most useful is registration of α-amylase in blood. However, analysis must be performed within three days after exposure and is only reliable when the salivary glands were directly irradiated. 11 refs., 5 figs. (qui).

34697 (OEVS-Mitteilung–1988, pp. 645-649) **Reference levels for the assessment of internal contamination.** Breuer, F. (ENEA, Rome (Italy)); Frittelli, L. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Reference levels for retention and excretion are evaluated, for the assessment of internal contamination, taking the monitoring frequency into account, for routine and special monitoring following the intake of a fraction of ICRP annual limits (ALIs) or of a unit activity. Methodologies are also suggested for taking into account the contribution by previous intakes to excretion or retention. 2 tabs.

34698 (OEVS-Mitteilung–1988, pp. 656-660) **Radiation exposure of the small intestine after ingestion of iron radioisotopes.** Werner, E. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Frankfurt am Main (Germany, F.R.). Abt. fuer Biophysikalische Strahlenforschung); Roth, P.; Hansen, C.; Henrichs, K. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (In German). (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Measurement of retention of ^{59}Fe in the small intestine made on 23 healthy persons and calculations of radiation dose for the duodenum, resulted in doses 20 times higher than those calculated from the ICRP model for the gastro-intestinal tract. 5 refs., 2 figs., 2 tabs.

34699 (OEVS-Mitteilung–1988, pp. 708-711) **Serum amylase as a semiquantitative indicator of an exposure to ionizing radiation.** Willich, N. (University of Munich, Clinic for Radiology, Klinikum Grosshadern, Munich (Germany, F.R.)); Matiske, E.; Hofmann, R.; Boegl, W.; Elsasser, U. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Quantitative aspects of amylase-activity increase in serum after a single irradiation of the salivary glands in man are considered. The threshold is about 0,4 Gy; in the range 0,4 - 5 Gy the dose can be estimated semi-quantitatively after 24 hours if the salivary glands were irradiated completely and homogeneously. To obtain a (pre-irradiation) reference level the 72-hour value is used. Non-complete and inhomogeneous irradiation of the glands and fractionated irradiation invalidate the dose assessment. It is concluded that at present serum amylase measurement is the only available biochemical indicator of irradiation dose in man. 7 refs., 2 figs. (qui).

34700 (OEVS-Mitteilung–1988, pp. 842-845) **After Chernobyl whole body measurements.** Hochmann, R. (International Atomic Energy Agency, Seibersdorf (Austria). Laboratories); Ouvrard, R. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Soon after Chernobyl accident announcement, the Health Physics Group of IAEA Laboratories at Seibersdorf (Austria) was sollicitated for helping in whole body measurements of individuals which could come back from Chernobyl region, from other parts of USSR or from other boundary countries. In addition, the group decided to intensify such mesurements among IAEA staff, in order to have a control of possible internal contamination, and to collect as much as possible data for further dose assessment to be done by other organizations. Four curves are extracted from the data: a best fitting linear regression line, with results obtained after the 15th Jun. This represents the average total activity present in the body (inhalation and ingestion) at the time of measurement; a decay curve of the mean inhalation value obtain from 'inhalation' group, assuming that no further incorporation occured, and using the ICRP retention scheme, with corrected parameters to take into account variability in individual potassium content; a theoretical 'ingestion' curve, obtained by difference of the two first one; an ingestion curve for the 'ingestion' group. Calculations show that average daily intakes obtained from either curve 3 or curve 4 are in good agreement and that a value of 15 Bq/d should be considered as representing the daily intake through the food chain, during the study period. 1 fig., 3 tabs.

34701 (ORNL/FTR–3051) **[Workshop on transfer of radionuclides to livestock, Christ Church College-University of Oxford, United Kingdom, September 5–8, 1988]: Foreign trip report.** Richmond, C.R. Oak Ridge National Lab., TN (USA). 30 Sep 1988. 12p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014753/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The traveler participated in the Workshop on the Transfer of Radionuclides to Livestock which was held at the Christ Church College-University of Oxford, September 5-8, 1988. The traveler was a member of the program committee that was made up of representatives from ten countries. In addition, the traveler presented a key invited paper entitled "Transfer of Radionuclides to Animals — An Historical Perspective of Work Done in the United States." The aim of the workshop was to review current information obtained from both observations and experimental studies on how various parameters can influence the mechanisms of transfer of radionuclides to human food stuffs. These parameters include source and composition of the diet, chemical form of radionuclides, season, agricultural practices, species, strain, and age. The importance and application of countermeasures for reducing the transfer of radionuclides to food stuffs was also considered. The last session of the meeting included summaries and presentations by each session chairman. This was followed by a general discussion by the attendees that was most profitable and stimulating.

34702 (ORNL/FTR–3260) **[ICRP Task Group meeting, Chiba-shi, Japan, May 22–26, 1989]: Foreign trip report.** Eckerman, K.F. Oak Ridge National Lab., TN (USA). 12 Jun 1989. 7p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014724/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The traveler participated in a meeting of the Task Group in Age-Dependent Dose-per-Unit Intake held at the National Institute for Radiological Sciences (NIRS) in Chiba-shi, Japan, on May 22-26, 1989. The Task Group is composed of Committee 2 members of the International Commission on Radiological Protection (ICRP). The traveler is a member of the Task Group as well as a member of Committee 2. The principle objectives of the meeting were to: (1) finalize the report entitled "Age-dependent Doses to Members of the Public from Intake of Radionuclides: Part 1" and (2) review information and data to appear in Part 2.

34703 (SSI–88-18) **Comparison of radiation and chemical risks.** Bengtsson, G. National Inst. of Radiation Protection, Stockholm (Sweden). 14 Sep 1988. 14p. Order Number DE89618006/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Injury to living cells is caused by mechanisms which in many cases are similar for radiation and chemicals. It is thus not surprising that radiation and many chemicals can cause similar biological effects, e.g. cancer, fetal injury and hereditary disease. Both radiation and chemicals are always found in our environment. One agent may strengthen or weaken the effect of another, be it radiation in combination with chemicals or one chemical with another. The implications of such synergistic or antagonistic effects are discussed. Intricate mechanisms help the body to defend itself against threats to health from radiation and chemicals, even against cancer risks. In a strategy for health, it might be worth to exploit actively these defense mechanisms, in parallel with decreasing the exposures. On particular interest are the large exposures from commonly known sources such as smoking, sun tanning and high fat contents of food.

34704 Life shortening in mice exposed to fission neutrons and gamma rays. VIII. Exposures to continuous gamma radiation. Thomson, J.F. (Argonne National Lab., IL (USA)); Grahn, D. *Radiation Research (USA)*, 118(1): 151-160 (Apr 1989).

Data are presented on the mean aftersurvival of male B6CF1 mice exposed for 22 h per day, 5 days per week, to ^{60}Co gamma radiation at dose rates of 1.36 to 12.64 x 10(-3) cGy/min for 23 weeks or 1.36 to 6.32 x 10(-3) cGy/min for 59 weeks. For deaths from all causes, linear dose-response curves were obtained with slopes (days of life lost/cGy) of 0.158 +/- 0.016 and 0.077 +/- 0.002 for 23- and 59-week exposures, respectively. These values were not significantly altered when the analysis was restricted to those mice dying with tumors (92% of the total) or to those presumably dying from tumors (82% of the total). Analysis of mortality rates showed that about 90% of the radiation-specific excess mortality was tumor related. The 59-week exposure series induced only a small increase in the number of days of life lost/cGy/weekly fraction over that induced by 23 weeks of irradiation, 4.53 +/- 0.15 compared to 3.64 +/ - 0.36 days lost/cGy/weekly fraction. This lower than expected value for 59 weeks of exposure may signal the approach to the final linear, additive, injury term postulated from earlier studies at this laboratory with low-dose-rate, daily, duration-of-life ^{60}Co gamma irradiation.

34705 Quiescence in 9L cells and correlation with radiosensitivity and PLD repair. Mendonca, M.S. (Lawrence Berkeley Lab., Berkeley (USA)); Rodriguez, A.; Alpen, E.L. *Radiation Research (USA)*, 117(3): 433-447 (Mar 1989).

The onset of quiescence, changes in X-ray sensitivity, and changes in capacity for potentially lethal damage (PLD) repair of unfed plateau-phase 9L44 cell cultures have been systematically investigated. The quiescent plateau phase in 9L cells was the result of nutrient deprivation and was not a cell contact effect. Eighty-five to 90% of the plateau-phase cells had a G1 DNA content and a growth fraction less than or equal to 0.15. The cell kinetic shifts in the population were temporally correlated with a developing radioresistance, which was characterized by a larger shoulder in the survival curve of the quiescent cells (Dq = 5.71 Gy) versus exponentially growing cells (Dq = 4.48 Gy). When the quiescent plateau-phase cells were refed, an increase in radiosensitivity resulted which approached that of exponentially growing 9L cells. Delayed plating experiments after irradiation of exponentially growing cells, quiescent plateau-phase cells, and synchronized early to mid-G1-phase cells indicated that while significant PLD repair was evident in all three populations, the quiescent 9L cells had a higher PLD repair capacity. Although data for immediate plating indicated that 9L cells may enter quiescence in the relatively radioresistant mid-G1 phase, the enhanced PLD repair capacity of quiescent cells cannot be explained by redistribution into G1 phase. When the unfed quiescent plateau-phase 9L cells were stimulated to reenter the cell cycle by replating into fresh medium, the first G1 was extended by 6 h compared with the G1 of exponentially growing or refed plateau-phase 9L cells.

34706 (CONF-881249–4) **Risk assessment and toxicology data bases: Maximizing resources through data evaluation.** Ensminger, J.T.; Lu, Po-Yung; Wassom, J.S. Oak Ridge National Lab., TN (USA). 1988. 20p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From National Governor's Association meeting: finding the future conference; Washington, D.C., USA; 12-14 Dec 1988. Order Number DE89013011/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The availability and use of reliable data is the key to any successful forecasting effort. The end product of scientific research and development is new data and information. Much of the scientific data being produced daily is stored in computers for subsequent analysis. This situation provides both an invaluable resource and an enormous challenge. With large amounts of government funds being devoted to health and environmental research programs and with maintenance of our living environment at stake, we must make maximum use of the data resulting from these programs to forecast and avert catastrophic effects caused largely by continuing technological developments. Along with the development of large data banks come variations in the levels of accuracy of the data. The data used in predictive studies must be accurate. Therefore, data evaluation should be the basis of predictive scientific efforts. To make the most of data that has already been prepared, attention and resources should be directed toward data evaluation projects similar to the US Environmental Protection Agency's Gene-Tox Program and the National Library of Medicine's Hazardous Substances Data Bank. These and other such data bases are discussed in this paper. Recommendations have been made for the readers use regarding those data and/or information files that provide the best means of accessing the toxicology literature. 14 refs., 1 fig., 4 tabs.

34707 (ORNL/TM–11195) **Chemical characterization and toxicologic evaluation of airborne mixtures: Chemical characterization of colored signal smokes: Final report.** Buchanan, M.V.; Ma, C.Y. Oak Ridge National Lab., TN (USA). Dec 1988. 95p. Sponsored by Department of Defense. DOE Contract AC05-84OR21400. Order Number DE89013731/JAW. Available from NTIS, PC A05/MF A01 - OSTI; GPO Dep.

The chemical compositions of four colored smoke mixes, red, violet, green, and yellow, have been characterized to assess possible changes in composition due to the combustion of these materials as smoke grenades. The smoke mixes and combusted products were fractionated using high performance liquid chromatography and then characterized using combined gas chromatography/mass spectroscopy, direct probe mass spectrometry and laser desorption Fourier transform mass spectroscopy. Structures were confirmed using ^{13}C nuclear magnetic resonance and Fourier transform infrared spectroscopy. The red and violet smoke mixes appeared to undergo more extensive chemical transformation than the green and yellow grenades. Two of the components in the combusted violet smoke mix have previously been shown to exhibit bacterial mutagenicity. 12 refs., 34 figs., 12 tabs.

34708 (PB–89-138838/XAB) **Health and Environmental Effects Profile for Phthalic Acids (o-, m-, p-).** Environmental Protection Agency, Cincinnati, OH (USA). Office of Environmental Criteria and Assessment. Aug 1986. 92p. (EPA–600/X-86/292). Available from NTIS, PC A05/MF A01.

The Health and Environmental Effects Profile for Phthalic Acids (o-, m-, p-) was prepared to support listings of hazardous constituents of a wide range of waste streams. Quantitative estimates have been presented provided sufficient data are available. p-Phthalic acid was determined to be a systemic toxicant. A Reference Dose (RfD), defined as an estimate (with uncertainty spanning perhaps an order of magnitude) of the daily exposure to the human population (including sensitive subgroups) that is likely to be without appreciable risk of deleterious effect during a lifetime, for p-phthalic acid is 1.4 mg/kg/day for oral exposure. Existing data are insufficient to determine a Reference Dose (RfD) or a carcinogenic potency factor for o- and m-phthalic acid. The Reportable Quantity (RQ) value of 1, 10, 100, 1000 or 5000 pounds is used to determine the quantity of a hazardous substance for which notification is required in the event of a release (as specified by CERCLA) based on chronic toxicity. The RQ value for p-phthalic acid is 1000. Existing data are insufficient to determine an RQ value for o- and m-phthalic acid.

34709 (PB–89-855811/XAB) **Vinyl chloride and polyvinyl chloride: toxicology. January 1978-February 1989 (Citations**

from the Life Sciences Collection data base). Report for January 1978-February 1989. National Technical Information Service, Springfield, VA (USA). Feb 1989. 165p. Available from NTISPC N01/MF N01.

Supersedes PB–88-857057.

This bibliography contains citations concerning the toxicity of vinyl chloride and polyvinyl chloride following short- and long-term exposures. Metabolism, carcinogenicity, and teratogenitic potential of these substances are considered. Methodology to quantitate their presence in atmospheric dust and body tissues are discussed. Occupational hazards are also noted. (This updated bibliography contains 338 citations, 11 of which are new entries to the previous edition.)

34710 (PB–89-856124/XAB) **Toxicity of pesticides. February 1987-February 1989 (Citations from the NTIS data base). Report for February 1987-February 1989.** National Technical Information Service, Springfield, VA (USA). Feb 1989. 157p. Available from NTISPC N01/MF N01.

Supersedes PB–88-860234.

This bibliography contains citations concerning occupational surveys, clinical investigations, and laboratory analyses pertaining to the toxic effects of pesticides. Topics include terrestrial and aquatic ecosystem responses, regulatory aspects, transport and metabolism, and registration standards and procedures. The detection of specific compounds and their effects on selected species are also discussed. (This updated bibliography contains 291 citations, 49 of which are new entries to the previous edition.)

5604 Other Environmental Pollutant Effects

34711 (AD-A–201254/0/XAB) **Effect of radiofrequency radiation on MRNA expression in cultured rodent cells.** Parker, J.E.; Kiel, J.L.; Winters, W.D. Texas Univ., San Antonio, TX (USA). Health Science Center. 1988. 6p. Available from NTIS, PC A02/MF A01.

Pub. in Physiological Chemistry and Physics and Medical NMR, Vol. 20, 129-13 (1988).

Radiofrequency radiation (RFR) has been reported to induce adverse effects in biological systems, such as teratogenic and embryo lethal effects in mammals particularly during exposures producing significant hyperthermia. Other studies have implicated microwave exposure with causing changes in chromosome number and structure, formation of cataracts in humans rabbits and dogs; and promoting malignant tumor formation in rats, as well as increasing tumor production and leukemias. In addition, microwave exposures have been reported to change the structure of purified double-stranded plasmid DNA, causing it to become nicked and increasing the proportion of relaxed to super coiled molecules. In view of these reports of changes at different levels of cellular function and structure of mammalian systems to microwaves, the authors asked themselves if changes at the level of mRNA expression could be detected after microwave exposure of cultured rodent cells. They chose to look at the mRNA expression of certain oncogenes known to show elevated levels during cell replication, at the heat shock proteins known to respond to stresses other than heat, and at the long terminal repeat (LTR) region of mouse mammary tumor virus in four rodent cell lines.

34712 (AD-A–201279/7/XAB) **Noise assessment of the rocket sled test track operation at Jolloman AFB, New Mexico. Final report.** Shaffer, W.J. Air Force Occupational and Environmental Health Lab., Brooks AFB, TX (USA). Oct 1988. 42p. (USAFOEHL–88-140EH0087JNA). Available from NTIS, PC A03/MF A01.

This report presents the results of noise data measurements of the Holloman AFB rocket-sled test-track operations. Impulse and community noise measurements were made to determine the impact of the rocket-sled noise on the surrounding community. A worst case sled run was measured and used to determine that the rocket sled has very little impact on the community for a worst-case rocket-sled run and little or no impact for the majority of the runs. Recommendations were made to limit the number of people exposed to the rocket sled noise and require test-track personnel to wear hearing protection. Sonic-boom measurement equipment should be purchased to document all sonic booms created by the rocket sled.

34713 (AD-A–201388/6/XAB) **Behavioral effects of chronic exposure to 0.5 mW/cm^2 of 2450-MHz microwaves. Interim report for period ending 1987.** DeWitt, J.R.; D'Andrea, J.A.; Emmerson, R.Y.; Gandhi, O.P. Utah Univ., Salt Lake City, UT (USA). 1987. 10p. Available from NTIS, PC A02/MF A01.

Pub. in Bioelectromagnetics, Vol. 8, 149-157(1987).

Adult male, Long-Evans rats were exposed 7 h a day for 90 days to continuous-wave (CW) 2,450-MHz microwaves at an average power density of 0.5 mW/sq cm. Exposures were in a monopole-above-ground radiation chamber with rats in Plexiglas cages. The resulting specific absorption rate (SAR) was 0.14 W/kg (+ or - 0.01 SEM). Additional rats served as sham-exposed and home-caged controls. All were evaluated daily for body mass and food and water intakes. Once each 30 days, throughout baseline and exposure phases of the experiment, rats in the sham- and microwave-exposed groups were tested for their sensitivity to footshock. After 90-days of exposure, the rats were evaluated on an open field, and active avoidance task and an operant task for food reinforcement. Performance of sham- and microwave-irradiated rats were reliably different on only one measure, the lever-pressing task. The general conclusion reached was that exposure to CW 2,450-MHz microwave radiation at 0.5 mW/sq cm was below the threshold for behavioral effects over a wide range of variables, but did have an effect on a time-related operant task, although the direction of the effect was unpredictable.

34714 (AD-A–201482/7/XAB) **1987 CRC (Coordinating Research Council) octane number requirement survey.** Coordinating Research Council, Inc., Atlanta, GA (USA). Aug 1988. 156p. (CRC–561). Available from NTIS, PC A08/MF A01.

In the forty-first annual statistical survey of current model vehicles conducted by the Coordinating Research Council, Inc., test data were obtained on 389 1987 model vehicles, including 300 passenger cars and 89 light-duty trucks and vans. Eighteen laboratories participated in this Survey. Maximum octane number requirements were determined by testing at maximum-throttle conditions, as well as at part-throttle. Requirements are expressed as the (R+M)/2 octane number, Research octane number, and Motor octane number of the reference-fuel producing knock which was recurrent and repeatable at the lowest audible level. The primary analyses used in this report are based upon (R+M)/2 octane number requirements, rather than upon Research octane number requirements as in Survey reports prior to 1985. Estimated octane number requirements for the total vehicles are weighted in proportion to the 1987 vehicle model production and/or sales figures.

34715 (DPSTOM–81) **Root cause analysis handbook.** Armstrong, M.E.; Cecil, W.L.; Taylor, K. Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab. Mar 1988. 196p. Sponsored by DOE Defense Programs. DOE Contract AC09-76SR00001. Order Number DE89013806/JAW. Available from NTIS, PC A09/MF A01 - OSTI; GPO Dep.

The root cause analysis system presented in this handbook is designed for use in investigating and categorizing the root causes of incidents in Savannah River non-reactor facilities. Root cause analysis is simply a tool designed to help incident investigators describe what happened during a particular incident, to determine how it happened, and to understand why it happened. Only when investigators are able to determine why a failure occurred will they be able to specify workable preventive measures.

34716 (DOE/ER/13796–2) **Three-dimensional computer analysis and modelling of remote sensing-structural geologic problems.** Thiessen, R.L.; Eliason, J.R.; Rieken, E.R. Washington State Univ., Pullman, WA (USA). Dept. of Geology. 1989. 5p. Sponsored by DOE Energy Research. DOE Contract FG06-87ER13796. (CONF-890768–2: International geoscience and remote sensing symposium, Vancouver, Canada, 10-14 Jul 1989). Order Number DE89010875/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Fault and fracture plane orientations and locations are vital for energy resource exploration and assessment, site stability evaluations, mineral exploration, earthquake hazard assessment, groundwater modelling, and basic geologic mapping. A package of geologic spatial analysis (GSA) computer programs designed to determine crustal fracture geometries is being generated. Crustal structures are determined from analysis of digital data bases developed from topography, lineaments from satellite imagery and radar data bases, faults and joints observed in the field, earthquake foci, gravity, magnetics, and borehole data. The unique power of the GSA techniques being developed are their three-dimensionality; older techniques looked at orientations of structures or their surface traces, but rarely both. 34 refs., 3 figs.

34717 (DOE/ER/13796–6) **Quantitative three-dimensional structural techniques.** Thiessen, R.L. Washington State Univ., Pullman, WA (USA). 1989. 57p. Sponsored by DOE Energy Research. DOE Contract FG06-87ER13796. (CONF-890784–: Quantitative three-dimensional structural techniques, Washington, D.C., USA, 15-16 Jul 1989). Order Number DE89010879/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

Quantitative three-dimensional structural analysis using computer-based techniques will be presented and demonstrated. These analyses will demonstrate the use of remote sensing, seismic, geophysical, and field data sets to develop three-dimensional digital structural and lithologic models. The course will include both lectures on the digital analysis techniques and demonstrations of the analyses on an interactive workstation. 18 refs.

34718 (GGU-R–134, pp. 5-18) **U-Pb and Rb-Sr age determinations on Caledonian plutonic rocks in the central part of the Scoresby Sund region, East Greenland.** Hansen, B.T. (Institut fuer Mineralogie, Westfaelische Wilhelms-Universitaet, Muenster (DE)); Borchardt, B.; Steiger, R.H.; Henriksen, N. Groenlands Geologiske Undersoegelse, Copenhagen (Denmark). 1987. In *Geochronological studies in central East Greenland.* Order Number DE89766847/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

Five new U-Pb age determinations on zircons and three new or reanalysed Rb-Sr age determinations of some of the late orogenic plutonic bodies from the Gaaseland - Stauning Alper migmatite and granite zone in the Scoresby Sund region, give Caledonian ages between 428 Ma and 352 Ma. Together with previously published age determinations they suggest a main intrusive epoch around 420 Ma with the last intrusive events as late as 390-350 Ma. In addition analytical data for six previously published Rb-Sr ages from the region are reassessed and presented in full. (author) 23 refs.

34719 (GGU-R–134, pp. 19-24) **Archaean U-Pb zircon ages from the Scoresby Sund region, East Greenland.** Hansen. B.T. (Institut fuer Mineralogie, Universitaet Muenster, Muenster (DE)); Borchardt, B.; Higgins, A.K. Groenlands Geologiske Undersoegelse, Copenhagen (Denmark). 1987. In *Geochronological studies in central East Greenland.* Order Number DE89766847/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

U-Pb analyses on zircons are reported for two rock collections from infracrustal complexes within the East Greenland Caledonian fold belt in the Scoresby Sund region. Calculated minimum ages range from 2800 to 2965 Ma, and are the oldest ages obtained in the region using this method. (author) 13 refs.

34720 (GGU-R–134, pp. 25-37) **Isotopic age dating in Liverpool Land, East Greenland.** Tauber Hansen, B. (Institut fuer Mineralogie, Westfaelische Wilhelms-Universitaet, Muenster (DE)); Friderichsen, J.D. Groenlands Geologiske Undersoegelse, Copenhagen (Denmark). 1987. In *Geochronological studies in central East Greenland.* Order Number DE89766847/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

In Liverpool Land in the eastern part of the Scoresby Sund region gneisses and migmatites were intruded by a number of intermediate plutonites and by younger granites. A number of K-Ar, Rb-Sr and U-Pb isotope age determinations indicate that: (1) the gneisses have a pre-Caledonian as well as a Caledonian history, (2) the migmatites were thoroughly reworked during the late part of the Caledonian orogeny, while (3) the plutonic rocks all seem to have been intruded during the Caledonian orogeny. (author) 19 refs.

34721 (GGU-R–134, pp. 39-51) **Rb-Sr and K-Ar Caledonian ages from the Upper Eleonore Bay Group and Cambrian metasediments of the East Greenland Caledonian fold belt.** Bonhomme, M.G. (Centre de sedimentologie et Geochimie de la Surface, CNRS, Inst. Geologie, Univ. L. Pasteur, Strasbourg (FR)); Caby, R. Groenlands Geologiske Undersoegelse, Copenhagen (Denmark). 1987. In *Geochronological studies in central East Greenland.* Order Number DE89766847/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

Fine sediment fractions $< 2\ \mu$ extracted from various formations of Upper Proterozoic and Cambrian age in Canning Land and Segelsaellskapet Fjord in East Greenland are anchimetamorphic to strongly diagenetic. Rb-Sr and K-Ar isotopic analyses indicate that the metamorphic and diagenetic changes correspond to the main Caledonian event at c. 450 Ma while some of the data are consistent with a younger event at nearly 400 Ma, possibly connected to late Caledonian tectonics. The study also shows the peculiar features of the isotopic diagrams often observed in such conditions: parallel isotopic lines, discordant behaviour of the Rb-Sr and K-Ar chronometers, and the necessity of collecting sets of samples from small homogeneous areas. (author) 36 refs.

34722 (INIS-BR–1536) **Geochronological dating in polycyclic rocks: alternative interpretation to data from Serido (RN-PB) Brazil.** McReath, I.; Sa, E.F.J. de. Sociedade Brasileira de Geologia, Recife, PE (Brazil). Nucleo do Nordeste. 1979. 9p. (In Portuguese). (CONF-7911203–: 9. symposium of geology in northeast, Natal, Brazil, Nov 1979). Order Number DE89619120/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Recent studies revealed a polycyclic history of deformation and metamorphism in the Serido, region, with a minimum of three regionally important events (F_{1-3}) the earliest of which is restricted to gneisses interpreted as basement (Caico Group). A relation between these phases and a complex series of granitic rocks is possible, the oldest generations (G_{1-2}) being gneissified. K/Ar ages normally reflect the regional uplift and other events toward the close of the Brasilian orogeny. Some of the older dates in the 700 - 1.400 m.y. range encountered in intrusives and metamophites may be due to parcial overprinting of earlier events. Reference Rb/Sr isochrons for widely dispersed G_3 granites need checking, but give creditable Brasilian ages. Rb/Sr studies of Serido Group metasediments show disequilibrium with a dispersion of points between a reference Brasilian isochron and one at 2.0 b.y. Parcial rejuvenation during the Brasilian orogeny of older rock series seems the best current explanation, although locally metasomatism may have had some influence, while some effect of initial disequilibrium may also be present. Gneisses yield Rb/Sr isochron ages of ca.2.7 and 1.9 b.y. Unpublished diagrams (B.B.B. Neves, written comm.) show a similar dispersion to that encountered for the Serido Group, and this might be explained in a similar fashion. It should be noted, however, that the distinction between high-grade cover, instrusive orthogneisses and basement is difficult, and that in these analyses some of the former gneisses could have been included. The possible existence of some event at ca.1.1 b.y needs verification.

34723 (INIS-BR–1537) **Chronostratigraphic recognition in Ceara northwest region.** Novais, F.R.G.; Kawashita, K.; Brito Neves, B.B. de. Sociedade Brasileira de Geologia, Recife, PE (Brazil). Nucleo do Nordeste. 1979. 18p. (In Portuguese). (CONF-7911203–: 9. symposium of geology in northeast, Natal, Brazil, Nov 1979). Order Number DE89619121/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

This paper reports a geochronological reconaissance through the K-Ar and Rb-Sr methods in a area northeast of the state of Ceara, aiming to suplement and assess the geological mapping 1/250.000.

Migmatitic rocks of the basement showed values within the span of the transamazonian cycle. The volcanic-sedimentary complex (Grupo Martinopole) showed pre-brazilian Rb-Sr conventional ages and isochronic ages compatible to the brazilian cycle. Likewise, regional metamorphism of brazilian age (c.a. 610 m.y.) was recorded for the clastic-carbonatic metassedimentary rocks of the Ubajara Group. Fissural intrusives cuts rocks of the Ubajara Group and yielded ages around 580 m.y. For the molasse-type sequence of the brazilian system (Massape and Pacuja formations), the age of the Cambrian regional metamorphism was adopted, 535±27 m.y., with late events in Ordovician times (Aprazivel Formation). The post tectonic granitic stocks of Meruoca, Mocambo and Serra da Barriga show problems of geochronological grounds, not solved at this stage. The interval between 540-580 m.y. for their emplacement is adopted in the light of the obtained data.

34724 (INIS-BR–1543) **Geology of Pedra Verde region, Ceara, Brazil.** Korpershoek, H.R.; Mendonca, J.A.C. de; Torquato, J.R. Sociedade Brasileira de Geologia, Recife, PE (Brazil). Nucleo do Nordeste. 1979. 15p. (In Portuguese). (CONF-7911203–: 9. symposium of geology in northeast, Natal, Brazil, Nov 1979). Order Number DE89619124/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The upper Proterozoic Mambira Formation ($\geq$ 1.1000 m.y.) consists of > 1000 m of micaschists with subordinate quartzites and limestones, its upper part, the "Pedra Verde Phyllite", is composed of phyelitic slump breccias, with abundance of pyrite. The Mambira formation crops out in the west flank of the tope Anticline, formed by ~ 600 m of quartzites with sillimanite and/or andalusite (Sao Joaquim Formation), underlain by granitoid gneisses, representing the amphibolite facies. The contact between the Sao Joaquim and Mabira Formations appears to be tectonic. The folding and the metamorphism of the latter date from the Brazilian Cycle, which also affected the gneisses, causing homogeneization of the whole-rock K/Ar ages around 500 m.y. After erosion of some 10.000 m of sedimentary re-activation of the faults, which may already have formed during the deposition of the Mambira Formation resulted in the development of the Ubari Graben. The above formations are unconformably overlain by 300-350 m of subhorizontal Shallow-Marine sandstones belonging to the Serra Grande Formation, of upper silurian to lower devonian ages.

34725 (SKB-TR–88-06) **Description of geological data in SKBs database GEOTAB.** Stark, T. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). 8 Apr 1988. 57p. Order Number DE89617978/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

Measurements for the characterization of geological, geophysical, hydrogeological and hydrochemical condition have been performed since 1977 in specific site investigation as well as for geoscientific projects. The database comprises four main groups of data volumes. These are: geological data, geophysical data, hydrogeological data, and hydrochemical data. In the database, background information from the investigations and results are stored on-line on the VAX 750, while raw data are either stored on-line or on magnetic tapes. This report deals with geological data and describes the dataflow from the measurements at the sites to the result tables in the database. All of the geological investigations were carried out by the Swedish Geological Survey, and since July 1982 by Swedish Geological Co, SGAB. The geological investigations have been divided into three categories, and each category is stored separately in the database. The are: surface factures, core mapping, and chemical analyses. At SGU/SGAB the geological data were stored on-line on-line on a PRIME 750 mini computer, on microcomputer floppy disks or in filed paper protocols. During 1987 the data files were transferred from SGAB to datafiles on the VAX computer. In the report the data flow of each of the three geological information categories are described separately. 34726 (AD-A–201531/1/XAB) **Large-scale, explicit wave simulations on the CRAY-2.** Wojcik, G.L.; Vaughan, D.K.; Barenberg, M.; Mould, J.; Hulit, M.B. Weidlinger Associates, Palo Alto, CA (USA). 1988. 25p. Available from NTIS, PC A03/MF A01.

Pub. in Applied Numerical Mathematics, Vol. 4, 47-70(1988).

Most time-domain, wave problems in geophysics are intractable by classical analysis methods, due principally to non-separability and to a lesser extent material nonlinearity. Therefore, discrete numerical solutions are often necessary for the simulation of realistic models. Applications in 2-D and 3-D geophysical modeling are the subject of this paper, particularly as solved on a CRAY-2 supercomputer. Implementation and performance differences between earlier CRAYs and the CRAY-2 are described, including the discrepancy between scalar fetch and vector processing speeds. Explicit finite element solvers are applied to applications involving 2-D simulation of a seismic refraction experiment across the state of Maine, 3-D simulation of near-source scattering experiments, and both linear and nonlinear axisymmetric source simulation. Results show that the CRAY-2 allows cost-effective 2-D simulations of truly large-scale models, but only begins to be effective in 3-D for models of interest in geophysics. The large memory (256 megawords) is adequate but a speed increase of at least an order of magnitude is necessary for cost-effective 3-D. True multiprocessor capability (rather than 'multi-computer') provides an alternative to raw speed but involves another set of difficulties.

34727 (CONF-890702–1) **Experimentally observed iron redox kinetics in silicic liquids: implications for Fe^{3+}/Fe^{2+} variations in rhyolite lava: implications for Fesup 3+/Fesup 2+ variations in rhyolite lava.** Naney, M.T.; Swanson, S.E. Oak Ridge National Lab., TN (USA). 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From 28. international geological congress; Washington, DC, US; July 9, 1989. Order Number DE89001521/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Iron redox kinetics in silicate liquids were investigated by melting 100 mg pellets of compacted rhyolite, pantelleritе, pantelleritic trachyte, and andesite rock powders at 1243 and 1343°C in a moderately reducing furnace atmosphere (log fO_2 = −7.83) for periods of 1 to 4320 minutes. The redox state of glasses produced by quenching these liquids was determined by colorimetric analysis of the ferrous iron and total iron content. Redox equilibrium, indicated by the attainment of a constant FeO/FeO_{tot} ratio, was observed for all temperature-composition conditions studied, except for 1243°C experiments with USGS rhyolite standard RGM-1. This is consistent with the low diffusivity of reacting components in high viscosity rhyolite liquids. In the 1243°C experiments with RGM-1, no change in the FeO/FeO_{tot} ratio was observed after 4320 minutes. This implies that redox equilibrium is not maintained in natural rhyolite lavas which erupt as significantly lower temperatures (720–850°C). We conclude that sluggish redox kinetics precludes major changes in the oxidation state of a rhyolite magma during the eruption process. If this is true, then the quenched magma, represented by glassy rhyolites, preserves the pre-eruption redox signature of the magma. 2 refs.

Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

The effect of the flexibility of the soil on the seismic response of structures has been a subject of considerable research and controversy in the last twenty years. This effect is important when dealing with very stiff and massive structures or relatively soft soils. It is not surprising therefore that the developments in the area of dynamic soil structure interaction were closely related and benefited greatly from the impetus at one time on the design and construction of nuclear power plants. A number of sophisticated mathematical techniques, elaborate computer codes and simpler engineering approximation have been developed through the years, and continue to be developed today, to solve the problem in a single step, considering the combined soil-structure system, or in three separate steps using substructuring techniques. There has been on the other hand relatively little experimental verification of the accuracy or reasonableness of different analytical techniques. A brief overview of seismic soil structure interaction, the research that has been performed in the past, its accomplishments and inherent problems, the various methodologies available, normal assumptions and their implications, sources of uncertainty and remaining issues are presented.

The analytical models developed for soil-structure interaction (SSI) analyses and the results obtained for the research project entitled, Analysis of Large-Scale Seismic Experiment in Lotung, Taiwan, sponsored by EPRI are presented. The objective of this research program was to evaluate the validities of the current industry SSI analysis methodologies and to quantify the conservatism and sensitivities of the SSI parameters and procedures, by using the forced-vibration test (FVT) data and the recorded actual earthquake response data obtained for the 1/4-scale containment model structure constructed in Lotung, Taiwan. The approach taken to achieve the objective of this research project was to conduct a series of SSI response prediction analyses, following the current industry SSI analysis practice, for both the forced-vibration tests and the earthquake-induced responses of the 1/4-scale containment model structure. The results of these prediction analyses were, then, systematically compared with the measured response data. The validities, conservatisms, and sensitivities of the SSI analysis methodologies and input parameters used in these analyses were finally evaluated and assessed through comparison and correlation of the analytically predicted results with the measured responses. The results of these analyses are presented.

Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

EPRI, in cooperation with the Taiwan Power Company, has constructed two (1/4 and 1/12) scale reinforced concrete containment models in Lotung, Taiwan, to obtain actual earthquake-induced data for evaluating the current soil-structure interaction (SSI) analysis methodologies. The scope of this work was to evaluate the adequacy of the direct method (finite element method) of SSI analysis by comparing the predicted responses to the measured responses of the 1/4-scale containment model and a piping-steam generator model built inside the containment model. There are various methods and computer programs that have been used in the past to perform the direct method of SSI for earthquake loading. However, the most common and recent finite element method is the analysis of a plane-strain, finite element model of soil and structure using computer program FLUSH. Based on this reason, FLUSH program was specified by EPRI for this study. Results of the study are presented.

34732 (EPRI-NP–6154-Vol.1, pp. 12.1-12.53) **Forced vibration and seismic analyses of Lotung Large Scale Experiment using the SASSI code.** Manrique, M.A. (Impell Corp., Walnut Creek, CA (USA)); Dermitzakis, S.N.; Allahabadi, R. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.1: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 1.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

Results are presented of the analytical investigation of the Lotung Large-Scale Experiment. The Electric Power Research Institute (EPRI) and the Taiwan Power Company (TPC) have constructed a one-quarter scale concrete containment structure in the seismically active region of Lotung, Taiwan. Extensive instrumentation was installed in the containment structure and on the field, which monitors the response of the soil and the containment to actual local earthquakes. The objective of the work was to correlate recorded data from forced vibration tests and actual earthquakes with results obtained from analytical investigations using state-of-the-art procedures for soil-structure interaction. In particular, soil-structure interaction (SSI) analyses of the soil-containment system are presented for three different input excitations to the containment: (1) forced-vibrations produced by rotating-mass vibration generators installed at the containment roof, (2) the May 20, 1986 Taiwan earthquake and, (3) the November 14, 1986 Taiwan earthquake. The computer program SASSI (System for Analysis of Soil-Structure Interaction) was used in the SSI analyses of the soil-containment system. A decoupled model of these components was developed and analyzed using the computer program SUPERPIPE. The input excitation to this model consists of the response time histories of the anchor points of the steam generator and the piping to the containment structure.

34733 (EPRI-NP–6154-Vol.1, pp. 13.1-13.44) **Analysis of large-scale containment model in Lotung, Taiwan: forced vibration and earthquake response analysis and comparison.** Johnson, J.J. (EQE Inc., San Ramon, CA (USA)); Maslenikov, O.R.; Mraz, M.J.; Udaka, T. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.1: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 1.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

The Electric Power Research Institute (EPRI), Palo Alto, CA, in cooperation with the Taiwan Power Co. (Taipower), has constructed two scale (1/4 and 1/12) reinforced concrete containment models in Lotung, Taiwan, a region where earthquakes occur frequently. The EPRI experiment is extensively instrumented in the free-field and in the structure. The goal of EPRI and Taipower is to measure the responses at instrumented locations due to vibration tests and actual earthquakes so that a valuable data base can be established to evaluate soil-structure interaction (SSI) analysis methodologies. The SMART-1 array will yield free-field ground motion data to help assess the effects of local site amplification on ground motion and free-field ground motion assumptions in SSI analyses. The entire process is documented. The elements of the substructure approach to SSI analysis as it pertains to the one-quarter scale structure and components is presented. The definition of the soil profile at low soil strain levels and at strain levels corresponding to the earthquake excitation level is described. The SSI parameters, the structure and

components and their dynamic models are presented. The response prediction and reconciliation for the Forced Vibration Test (FVT) and earthquakes is presented. Finally, observations and conclusions are discussed.

34734 (EPRI-NP–6154-Vol.1, pp. 2.1-2.9) **Prediction of strong ground motion for structural design.** Bolt, B.A. (Univ. of California, Berkeley (USA)). Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.1: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 1.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

The reliable prediction of ground shaking required detailed interpretation of the recorded ground motions. Methods for predicting strong ground motions as a basis for structural design are discussed under the following topics: use of strong-motion arrays, earthquake engineering applications, theory of wave coherence, the response of large rigid and flexible structures, and computational results for coherence.

34735 (EPRI-NP–6154-Vol.1, pp. 3.1-3.14) **EPRI/TPC large-scale seismic experiment at Lotung, Taiwan.** Tang, H.T.; Tang, Y.K.; Stepp, J.C.; Wall, I.B.; Lin, E.; Cheng, S.C.; Lee, S.K.; Hsiau, H.N. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.1: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 1.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

When seismic waves impinge on an embedded structure, two physical effects occur simultaneously: (1) seismic waves incident on the structure are diffracted and reflected back into the foundation medium, and (2) motion is transmitted to the structure. The first effect, referred to as kinematic interaction, is independent of the inertial properties of the structure. The second is the dynamic response of the coupled structure-foundation system which is governed by the inertial properties of the structure and foundation impedances. These two effects together are normally referred to as soil-structure interaction (SSI). EPRI and the Taiwan Power Company (TPC) jointly sponsored a large-scale SSI experiment in the field (Tang 1987) to obtain actual strong motion earthquakes induced SSI data. This was accomplished by collecting data from two instrumented, scaled down (1/4- and 1/12-scale) reinforced concrete containments sited in Lotung, a high seismic region in Taiwan, where a strong motion seismic array network is located. The objectives of the experiment were: (1) to obtain an earthquake database which can be used to substantiate SSI models and analysis methods; (2) to develop realistic SSI analysis guidelines and procedures based on experimental-analytical correlation; and (3) to quantify nuclear power plant reactor containment and internal component's seismic margin based on earthquake experience data. Results of the studies are presented.

34736 (EPRI-NP–6154-Vol.1, pp. 4.1-4.20) **Summary of soil characterization program for the Lotung large-scale seismic experiment.** Anderson, D.G. (Soil Dynamics Consultant, Bellevue, WA (USA)); Tang, Y.K. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 1.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

The Electric Power Research Institute (EPRI), in cooperation with the Taiwan Power Company (TPC), has constructed two model structures at a site near Lotung, Taiwan, a seismically active region in northeast Taiwan. The models are scaled to be one-quarter and one-twelfth the size of a typical reinforced concrete containment building. Each structure has been instrumented with accelerometers and total stress cells to record structural response during seismic events. Accelerometers have also been located in the free-field to record ground motions at depth as well as the ground surface. Data collected by these instruments will be used to evaluate and, if appropriate, refine procedures for predicting seismic soil-structure interaction. Details describing the design and instrumentation of the two models are discussed. A brief summary is presented of results from the field and laboratory testing programs. References providing detailed information about site conditions are also cited.

34737 (EPRI-NP–6154-Vol.1, pp. 5.1-5.10) **Validation of seismic soil-structure interaction analysis techniques using Lotung experiment data - EPRI program.** Tang, Y.K.; Tang, H.T.; Stepp, J.C. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.1: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 1.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

Essentials of the Lotung experiment, including model configuration, instrumentation setup, site soil characterization, and forced vibration tests are described. The objective, approach, and scope of the method validation program sponsored by EPRI are presented. Also described are the selected earthquakes for the analysis program.

34738 (EPRI-NP–6154-Vol.1, pp. 6.1-6.34) **NRC/ANL participation in the Lotung, Taiwan, large-scale soil-structure-interaction experiment - validation of analysis methods.** Kot, C.A. (Argonne National Lab., IL (USA)); Srinivasan, M.G.; Hsieh, B.J.; Costello, J.F. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.1: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 1.* Order Number DE89008767/JAW. As part of an overall effort to validate seismic calculational methods, the US Nuclear Regulatory Commission, is participating in a number of international cooperative experimental programs including the Large-Scale Soil-Structure-Interaction (SSI) Experiment conducted in Lotung, Taiwan, by the Electric Power Research Institute (EPRI) and the Taiwan Power Company (Taipower). Argonne National Laboratory (ANL) on behalf of NRC coordinates the EPRI-NRC collaboration in these experiments. The primary objective for both NRC and EPRI in the Large-Scale SSI experiment is the validation/evaluation of SSI analysis methods. In addition, NRC/ANL also sponsored and carried out the vibration testing of the 1/4-scale containment model. The highlights of the NRC/ANL program approach for the validation of SSI methods are presented. This approach differs slightly in its implementation details from the approach taken by EPRI. Also described are the vibration experiments of the 1/4-scale containment and the results of a modal analysis of the test data. Finally, an effort is outlined for determining the dynamic characteristics of the soil-structure system from the earthquakes response data, and preliminary results are discussed.

34739 (EPRI-NP–6154-Vol.1, pp. 7.1-7.10) **Guidelines for round-robin soil-structure interaction analysis working paper preparation.** Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.1: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 1.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

Each of the thirteen (13) research teams participated in the round-robin SSI method evaluation program was requested to prepare a working paper to summarize the blind prediction results and research findings for presentation and discussion at the Workshop. A total of twelve (12) working papers were submitted. The working papers covered the general description of the method and scope,

model development and description, forced vibration test (FVT) response prediction and result comparison, earthquake response prediction and result comparison, and method assessment and conclusion. In order to ensure the uniformity of the result presentation, a set of unified guidelines was developed. The guidelines established the following: data package with unified reference numbers, identification of analytical models, and specifications for result presentations and comparisons. Details of the guidelines are provided.

34740 (EPRI-NP–6154-Vol.1, pp. 8.1-8.55) **Prediction of the forced vibration and seismic response of the Lotung (Taiwan) large-scale containment model and comparison with observations.** Luco, J.E. (Univ. of California, San Diego, La Jolla (USA)); Wong, H.L. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.1: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 1.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

Comparisons of blind predictions and recorded data for the response of a large-scale containment model located in Lotung, Taiwan are presented. The comparisons include shaker induced vibrations as well as seismic response to the May 20, 1986 (M = 6.5) Taiwan earthquake. The predictions were made by use of the CLASSI substructure approach. Three sets of models (A, B and C) were considered. Model A was based on basic geotechnical data while Model B was based on more complete geotechnical and geophysical information. Model C based on knowledge of the forced vibration response data was used to give a third blind estimate of the seismic response. The differences between the vibration test data and the predictions of Model B fall within the error of the recorded response and of the input data.

34741 (EPRI-NP–6154-Vol.1, pp. 9.1-9.43) **Prediction of quarter scale model response using SIM code.** Miller, C.A. (City Univ. of New York, NY (USA)); Costantino, C.J.; Zerva, A. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.1: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 1.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

The Electric Power Research Institute (EPRI) and the US Nuclear Regulatory Commission (NRC) supported a research program where a quarter scale model reactor containment structure has been constructed in Lotung, Taiwan. This is a seismically active region and the same local as the strong motion SMART array supported by the National Science Foundation. Two types of experiments have been conducted by NRC/EPRI at the site. First, shaker tests have been conducted on the model. Second, instrumentation placed on the structure and in the free field has been set to be triggered by seismic motions occurring at the site. Predictions, in the blind, have been supported for both types of experiments. Work performed at the City College of New York (CCNY) in making the blind predictions is described.

Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.2: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 2.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

Under contract to the Taiwan Power Company (TPC) Eastern International Engineers, Inc. (EIE) has conducted extensive prediction and correlation analyses for the joint EPRI (Electric Power Research Institute)/TPC soil-structure interaction field test project involving the 1/4-scale containment structure, and associated steam generator system, located in Lotung, Taiwan. These analyses were carried out in eight stages. These stages are listed. In each case, the prediction analyses were carried out and reported to TPC prior to receiving the corresponding field test results. All prediction and correlation analyses were carried out using computer program HASSI-4. The results of the prediction analysis are discussed.

34743 (EPRI-NP–6154-Vol.2, pp. 15.1-15.47) **Predictive response computations for vibration tests and earthquake of May 20, 1986 using an axisymmetric finite element formulation based on the complex response method and comparison with measurements - a Swiss contribution.** Berger, E. (Basler and Hofmann, Zurich (Switzerland)); Fierz, H.; Kluge, D. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. A research project on the validation of current soil-structure interaction (SSI) methodologies has been under way since the beginning of 1986. Argonne National Laboratory (ANL) is coordinating the project on behalf of the USNRC and issued a Statement of work to participating universities and national laboratories in April 1986. The major findings and results presented form the four phases of this project. The analysis methods and the model sets used in the predictive response computations are described. A comparison of predictions with measurements for the forced vibration tests and for the earthquake of May 20, 1986 is presented. Finally, a section on conclusions is included.

34744 (EPRI-NP–6154-Vol.2, pp. 16.1-16.50) **Lotung SSI analysis using a 3-D harmonic Green's function method.** Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.2: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 2.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

Under the sponsor of Tokyo Electric Power Company (TEPCO), this analysis work was carried out following the EPRI's approach, which is divided into the 5 phases: Phase I: Construction of mathematical model denoted by Model B on a basis of the given structural and soil data and blind prediction of Model B subject to the forced vibration test (FVT); Phase II: Comparison of Phase I results with measured data and correlation analysis to construct the FVT correlated model denoted by Model C; Phase III: Blind prediction of Models B and C subject to the May 20, 1986 earthquake; Phase IV: Comparison of predicted responses to the May earthquake with measured data and blind prediction of Model C subject to the Nov. 14, 1986 earthquake; and Phase IV': Comparison of predicted responses to the Nov. earthquake with measured data. In each phase, the analysis results were reported to TEPCO and afterward the corresponding field test results were supplied. The entire process is described.

34745 (EPRI-NP–6154-Vol.2, pp. 17.1-17.51) **Soil-structure interaction analysis of quarter scale model using HYBAX code.** Mita, A.; Nakai, S.; Yamazaki, F.; Sato, T.; Ishii, T. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.2: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 2.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

The Lotung SSI research project was initiated by the Electric Power Research Institute (EPRI), the US Nuclear Regulatory Commission (NRC) and the Taiwan Power Company (TPC). Research results and findings obtained through the analysis using the computer code HYBAX (Hybrid Approach for Axisymmetric SSI

Problems) are presented. Another analysis method using the computer code AXERA was also employed. The detailed flow charts of the prediction and correlation studies for the forced vibration test (FVT) and the actual earthquake records (May 20, 1986 and November 14, 1986) are shown. A schematic view of the analysis method used is depicted. The analysis matrix of the work is summarized in which only the properties of the upper two layers of the nine-layered soil model and the backfill are depicted since those of the lower seven layers were not changed throughout the analysis. For FVT blind prediction two models, B1 and B2, were constructed based on the soil data packages. These two models are identical except for the properties of the backfill.

34746 (EPRI-NP–6154-Vol.2, pp. 18.1-18.52) **Soil-structure interaction analysis of quarter scale model using AXERA code.** Sato, T.; Nakai, S.; Yamazaki, F.; Mita, A.; Ishi,, T. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.2: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Proceedings: Volume 2.* Order Number DE89008767/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

Lotung SSI research project was initiated by the Electric Power Research Institute (EPRI), the US Nuclear Regulatory Commission (NRC) and the Taiwan Power Company (TPC). Research results and findings obtained through the analysis using the computer code AXERA (Axisymmetric Earthquake Response Analysis) are presented. Another analysis method using the computer code HYBAX was also employed. The detailed flow charts of the prediction and correlation studies for the forced vibration test (FVT) and the actual earthquake records (May 20, 1986 and November 14, 1986) are shown. A schematic view of the analysis method used is depicted. AXERA based on an axisymmetric finite element method can deal with both substructure and direct approaches. In the present study, the direct approach was chosen. AXERA is similar to ALUSH except that AXERA allows an introduction of viscous boundaries (dashpots) on the bottom surfaced. The analysis matrix of the current work is shown in which only the properties of the upper portion of the layered soil model and the backfill are depicted since the lower portion was not changed throughout the analysis. Based on the soil data packages, Model B was constructed for FVT blind prediction. Since the elastic wave velocities of the backfill are not given, they were assumed in the modeling. Through the comparison between the prediction and FVT measurement, Model C was constructed. Models B and C were used for the blind prediction of responses subjected to May 20, 1986 earthquake. In the earthquake response analysis the computer code SHAKE was utilized to obtain the free-field in-ground motion and to construct equivalent linear soil models. Model C' was further constructed through the comparison between the earthquake response prediction and recorded motions. The response prediction for November 14, 1986 earthquake was finally carried out using the model C'. Results of the analyses are presented.

34747 (EPRI-NP–6154-Vol.2, pp. 19.1-19.47) **Soil-structure interaction analyses of EPRI field test - forced vibration test and earthquake response.** Hanada, K. (Central Research Institute of Electric Power Industry (Japan)); Tohma, J.; Iwatate, T. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.2: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *Proceedings: EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Volume 2.* Order Number DE89008768/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

Electric Power Research Institute (EPRI) supported a research program where a 1/4 scale model of a reactor containment structure was constructed at Lotung in Taiwan. EPRI conducted two types of experiments at the site. First, the forced vibration test were carried out on the model. Second, the various typed instruments were placed on the model and in the field to observe the responses during earthquakes. In order to evaluate and validate the methodologies on SSI problem, EPRI sponsored Lotung Project consisting four phases. Central Research Institute of Electric Power Industry (CRIEPI) has participated in the project from phase III to validate the SSI program currently adopted in the simulation of the forced vibration tests and of the structural behaviors during earthquakes. In the framework of the study, a forced vibration test correlation study and a prediction of the structural responses during the designated earthquakes were performed. The prediction analysis based on the data packages without FVT response curves gave a good estimation for the responses of the model structure to FVT. Hence, the model of the structure and soil were not modified for improvement referring to the observed response curves of FVT and the model. The results of the analytical investigation of the Lotung Experiment are presented.

34748 (EPRI-NP–6154-Vol.2, pp. 20.1-20.21) **Ambient motions of quarter scale containment model in Lotung.** Chen, C. (National Taiwan Univ., Taipei); Tsai, I.; Yeh, C.; Cheng, S. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.2: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *Proceedings: EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Volume 2.* Order Number DE89008768/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

This study investigated the correlations between the results of ambient motion measurement and forced vibration test conducted on the quarter-scale nuclear power plant containment model built in Lotung, Taiwan. It was found that the natural rocking frequency of the containment model can be clearly identified, locating at frequency 3.8 Hz, from both the ambient motion records and forced vibration tests conducted. However, the torsional frequencies identified from these two results are not consistent because the associated amplitudes of vibration are too low to be very reliable. Results of the tests and conclusions are presented.

34749 (EPRI-NP–6154-Vol.2, pp. 21.1-21.26) **3-D soil-structure interaction analysis of Lotung containment model.** Yeh, C. (National Taiwan Univ., Taipei); Lin, T.; Lai, T.; Chen, C.; Cheng, S. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.2: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *Proceedings: EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Volume 2.* Order Number DE89008768/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

A three-dimensional soil-structure interaction analysis program SSIP3D is presented. It is based on the hybrid modeling approach. The entire soil-structure system was partitioned into a near-field and a far-field using a hemi-spherical interface passing through the soil region very close to the structure. The near-field was modeled by the finite element method while the far-field was represented by an impedance matrix obtained through the application of the Galerkin's method. For the calculations of the basis functions for the far-field impedance matrix, a very effective algorithm is also presented. Finally, the computer program SSIP3D was used to analyze the forced vibrations of the 1/4-scale containment model in Lotung. The analytical results obtained correlate very well with the field test data.

34750 (EPRI-NP–6154-Vol.2, pp. 22.1-22.20) **Variation and propagation of seismic strong motions across the SMART1-LSST array.** Wen, K. (Taiwan Power Co.); Yeh, Y.T.; Huang, W.; Cheng, S.C. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.2: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *Proceedings: EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Volume 2.* Order Number DE89008768/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

The accelerograms, recorded by the SMART1-LSST array of the 20th day of May, 1986 Taiwan earthquake (M_L = 6.5), were filtered in three frequency bands of 0.8-1.2 Hz, 1.2-2.4 Hz and 3.0-4.0 Hz. They show that the variation of peak ground acceleration of lower frequency band in the LSST array area was smaller than that of the higher frequency band. The difference of the recorded peak ground

acceleration of the same component motion can be as much as about 0.10 g within an area with radius of 55 meters. High resolution frequency-wavenumber analysis shows the direction of the wave approaching the array from the subsurface ranges from 10° to 16°. That is nearly normal incident. The dimension of the area in which the 1/4-scale containment model affects the ground motion is about 10 to 16 meters away from the center of the model. This was examined by analyzing the response spectra and cross-correlation coefficients of the recordings. The power spectra of the downhole and surface motions were also compared and shows that the frequency bands in which the ground motion has been amplified by the soil layers are 0.5-2.0 Hz for EW component and 0.5-2.0 Hz and 2.5-3.0 Hz for NS component. The frequency of peak amplification estimated by Haskell's method (1960) fit the observations quite well.

34751 (EPRI-NP–6154-Vol.2, pp. 23.1-23.27) **Wavetype identification and interpretation of the seismic data in SMART-1 array.** Wang, C.Y. (Taiwan Power Co.); Yeh, Y.T.; Cheng, S.C. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.2: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *Proceedings: EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Volume 2.* Order Number DE89008768/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

The seismic records of SMART-1 array were examined to study the types of waves traveling across the array. It is easy to identify the waveform variation by viewing all seismograms of the array in one seismic section. The complex trace analysis which measures the particle motion at each receiver site gives a convenient way to recognize the wavetype changes. The long wavetrain of 11/14 event is no doubt caused by the trapping of waves within the basin beneath the array. Taking this into consideration, a p-tau analysis of the deconvolved traces was performed in order to retrieve the dispersion properties pertaining to the upper shallow structure. A stochastic inversion incorporating with the surface wave theory was followed to invert the shear wave velocity structure. Low shear wave velocities were found for the upper 3 km. By adding the deeper structure from other studies, a crustal velocity model for the Lanyang area is proposed. The synthetic seismograms of this model have an interesting focusing phenomenon. The traveling time and waveform of theoretical waves agree surprisingly well with those of the observed data.

34752 (EPRI-NP–6154-Vol.2, pp. 24.1-24.42) **Dynamic characteristics of the measured seismic and structural responses data of Lotung 1/4-scale nuclear power plant containment model.** Cheng, S. (Taiwan Power Co., Taipei); Chen, Y.; Hsiau, H. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.2: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *Proceedings: EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Volume 2.* Order Number DE89008768/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

The purpose of this study was to evaluate the variation of the maximum responses of Lotung 1/4 scale containment model due to soil-structure interaction by systematic comparisons of the maximum responses at various locations, and to identify the predominant frequency adopting the power spectrum density and transfer function techniques. The recorded seismic and the containment model response data on May 20, July 30, and November 14, 1986 were used for this study. The following characteristics were obtained as results of the evaluation: (1) the characteristics of the maximum acceleration developed along the scaled model; (2) the characteristics of the maximum acceleration developed along the ground surface and the depth of the underground; (3) the dynamic characteristics of structural responses in relation to soil-structure interaction effect; and (4) the dynamic characteristics of soil responses in relation to soil-structure interaction effect.

34753 (EPRI-NP–6154-Vol.2, pp. 25.1-25.20) **Pore water pressure response measurements at Lotung site.** Shen, C.K. (Univ. of California (USA)); Chan, C.K.; Li, X.S.; Yang, H.W.; Ueng, T.S.; Wu, W.T.; Chen, C.H. Electric Power Research Inst., Palo Alto, CA (USA). Mar 1989. (CONF-871263–Vol.2: EPRI/NRC/TPC workshop on validation of seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan, Palo Alto, California, USA, 9-11 Dec 1987). In *Proceedings: EPRI/NRC/TPC workshop on seismic soil-structure interaction analysis techniques using data from Lotung, Taiwan. Volume 2.* Order Number DE89008768/JAW. Available from Research Reports Center, Box 50490, Palo Alto, CA 94303.

It has been observed many times in the field that ground movement in the form of settlement and/or flow can take place during an earthquake. For a saturated granular soil deposit of relatively low permeability, ground movement due to earthquake motion is often preceded by the buildup of excess pore water pressure in the soil. The amount of pore water pressure buildup thus has a direct bearing on the dynamic response of the soil. Since the behavior of soil is known to be strain and confinement dependent, it is essential that in analyzing the seismic response of a significant structure, such as the containment structure for a nuclear reactor, the non-linear response of the underlying soil layers should be considered. The Lotung model study site, with its extensive ground motion and structure response instrumentation and the deep soil deposits, presents an ideal and rare opportunity to study the pore pressure response and its effect on ground motion as well as soil-structure interaction during earthquake. The scope of the study is discussed. Since the summer of 1985, 4 tasks have been completed. Since the beginning of 1986, a number of significant earthquakes were felt at the Lotung site. Sixteen records from two major earthquakes have been obtained. The design of the pore water pressure sensors, the development of a data acquisition system, and finally a general discussion of the measured pore pressure response records are presented.

34754 (NUREG/CR–5257) **Further neotectonic studies of earthquake zones in the eastern United States.** Talwani, P.; Colquhoun, D.J.; Acree, S.D.; Muthanna, A. Nuclear Regulatory Commission, Washington, DC (USA). Div. of Engineering; South Carolina Univ., Columbia, SC (USA). Dept. of Geological Sciences. Jun 1989. 110p. Sponsored by Nuclear Regulatory Commission. Available from NTIS, PC A06/MF A01 - GPO - OSTI.

Shallow stratigraphic investigations based on borings and relative travel time residuals of teleseismic events were used to investigate geotectonic activity and its relationship to seismicity in South Carolina. Data from 103 wells resulted in a structural contour map of unconformity 8 in the Coastal Plain. Comparisons of the structural contours with magnetic and gravity maps and with epicenters in the Bowman and Charleston-Summerville areas showed that the regional northeast trend is interrupted by northwest trending features in the two seismic areas. The intersection of the northwest and northeast trends appears to be related to the recent seismicity, and basement tectonic activity seems to have influenced the structure of the overlying sediments. Travel times from 180 teleseismic events were normalized to a reference station and corrected for delays in the Coastal Plain sediments. Analysis of the residuals shows a systematic decrease in residuals with distance from the coast. Azimuthal variations at individual stations can be correlated with basement lithology as indicated by gravity and magnetic data. The postulated Ashley River fault coincides with a change in basement velocity structure. The travel time residuals, therefore, confirm the presence of this subsurface fault. 21 refs., 5 figs.

34755 (TAU–8805-2) **Determining geotechnical and hydrogeological parameters using downhole geophysics in the Canadian plains. Phase 2 report. Correlations of existing data.** TransAlta Utilities Corp., Calgary, AB (Canada). 1988. 247p. (MICROLOG–89-01733). Available from Canada Centre for Mineral and Energy Technology, Technical Information Division, 555 Booth St., Rm. 342, Ottawa, ON, Canada K1A 0G1; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

One objective of this work was to evaluate, through correlation, whether various geotechnical and hydrogeological parameters in both coal and oil sands mining operations could be obtained from downhole geophysics. Another objective was to review which tools, not currently in use in Alberta, might have potential to provide the desired parameters. The project used existing data that were

collected with normal industry practices to develop site-specific empirical correlations. The project has demonstrated that trends are present and correlations can be made, but the variance of data scatter makes the direct use of the correlations questionable without further study. At one coal mining operation, the geophysical logs that give the best correlations with geotechnical data are the neutron, density, and sonic logs. The data also show that good correlation was obtained between unconfined compressive strength and sonic transit time. At one oil sands mining operation, the geophysical logs that provided trends were the density and gamma logs when paired with different geotechnical parameters. All of the correlations have a wide scatter of data and could probably be improved by closer examination of the data. Based on this study, it appears that the hydraulic conductivity cannot be estimated from geophysical parameters. A specifically designed program is recommended to obtain detailed geotechnical, geophysical, and hydrogeologic data from a series of carefully cored and logged holes. Major problems were encountered in selecting and sorting of data; existing databases could not be easily related, and these problems are discussed in the report. 8 refs., 92 figs., 12 tabs.

5803 Mineralogy, Petrology, and Rock Mechanics

34756 (INIS-BR–1538) **Isotopic data revaluation from Cabo province, with base in Cabo granite petrographic studies.** Legrand, J.M.; Figueiredo Filho, O.A. Sociedade Brasileira de Geologia, Recife, PE (Brazil). Nucleo do Nordeste. 1979. 7p. (In Portuguese). (CONF-7911203–: 9. symposium of geology in northeast, Natal, Brazil, Nov 1979). Order Number DE89619122/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The Sto Agostinho's Cape granite (NE-Brazil) is formed by two successive instrusions: the first riolitic or migmatitic, replaced by the alkali granite. This process is indicated by the potassic feldspar phenocrystals porpliroblastic assimilation of the riolites, conglobating the re-cristalized matrix minerals. This two times formation is confirmed by geochronological studies in magmatic province. The diagram of the different rocks with alkaline differentiation is distributed in two isochrons. The first isochron age of 135 m.y $\pm$ 0,7 (λ=1,42x10^{-11}) with a Ri = 0,7023, the second determine to the Cape granite 104 m.y $\pm$ 0,7 (λ=1,42x10^{-11}) with a Ri=0,7058. The first pulsation value of 0,7023, indicate a crust origin to the granite. The more elevated value in the second magmatic dike can be explain by the mixture of more or less 99% of crust magma and 1% of plutonic rocks. (C.D.G.).

34757 (LA-UR–89-1791) **Volatilization and mixing in glasses of some Apollo 14 regolith breccias.** Vaniman, D.T.; Heiken, G.H. Los Alamos National Lab., NM (USA). 1989. 20p. DOE Contract W-7405-ENG-36. (CONF-8903111–2: Lunar planetary science conference, Houston, Texas, USA, 12-18 Mar 1989). Order Number DE89013456/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Three unique samples can be distinguished by analysis of all glass types, including devitrified glasses, in a suite of 26 Apollo 14 regolith breccias. These unique samples include the well-studied sample 14315, which has an abundance of anorthositic gabbro glasses and devitrified glasses; 14004,77, which has no glasses other than those that match the local soil; and 14076,5, which contains no glasses similar to the local soil or to LKFM. Sample 14076,5 is clearly exotic, for it contains devitrified glasses of anorthositic composition and of a silica-volatilized (HASP) trend that stems from anorthosite; these silica-volatilized glasses contain the new mineral yoshiokite. HASP glasses in this exotic sample and HASP glass spheres that stem from the Apollo 14 soil composition differ greatly from the HASP glasses at Apollo 16. The various HASP glasses can be just as useful as non-volatilized glasses in searching or major crustal or regolith lithologies. 18 refs., 2 figs., 2 tabs.

34758 (LBL–24914) **FMG, RENUM, LINEL, ELLFMG, ELLP, and DIMES: Chain of programs for calculating and analyzing fluid flow through two-dimensional fracture networks – theory and design.** Billaux, D.; Bodea, S.; Long, J. Lawrence Berkeley Lab., CA (USA). Feb 1988. 78p. Sponsored by DOE Radioactive Waste Management. DOE Contract AC03-76SF00098. Order Number DE89013409/JAW. Available from NTIS, PC A05/MF A01 - OSTI; GPO Dep.

This report describes some of the programs developed at Lawrence Berkeley Laboratory for network modelling. By themselves, these programs form a complete chain for the study of the equivalent permeability of two-dimensional fracture networks. FMG generates the fractures considered as line discontinuities, with any desired distribution of aperture, length, and orientation. The locations of these fractures on a plane can be either specified or generated randomly. The intersections of these fractures with each other, and with the boundaries of a specified flow region, are determined, and a finite element line network is output. RENUM is a line network optimizer. Nodes very close to each other are merged, deadends are removed, and the nodes are then renumbered in order to minimize the bandwidth of the corresponding linear system of equations. LINEL computes the steady state flux through a mesh of line elements previously processed by program RENUM. Equivalent directional permeabilities are output. ELLFMG determines the three components of the permeability tensor which best fits the directional permeabilities output by LINEL. A measure of the goodness fit is also computed. Two plotting programs, DIMES and ELLP, help visualize the outputs of these programs. DIMES plots the line network at various stages of the process. ELLP plots the equivalent permeability results. 14 refs., 25 figs.

5804 Geochemistry

34759 (INIS-BR–1545) **Delimitation of potential mineralized zones by regional geochemical prospecting - Brazilian semi-arid northeastern.** Lins, C.A.C. Sociedade Brasileira de Geologia, Recife, PE (Brazil). Nucleo do Nordeste. 1979. 14p. (In Portuguese). (CONF-7911203–: 9. symposium of geology in northeast, Natal, Brazil, Nov 1979). Order Number DE89619694/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Comprised an area bout 124.000 Km^2, a regional geochemical survey was executed with the colection of 2174 stream-sediment samples and 1225 pan-concentrate samples. The stream sediment samples were analysed by emission spectrography for 30 elements (CPRM pattern) and the pan-concentrate by heavy-minerals identification. The main results obtained were the definition of 8 anomalous zones, potencially mineralized in some ore deposits: I - Rio Jacurutu (Sn, Mo, W, Nb, Be), defined by some estaniferous granitic bodies; II - Serra do Gaviao - Serra do Ceu (Cu, Zn, Bi, V, Ni, Nb, La) - comprising the Itatira uraniferous ore deposits (NUCLEBRAS); III - Ceara Alkaline Province (Sr, Ba); IV - Solonopole-Mineirolandia (W,Sn,Be); V - Catole do Rocha (W,Mo,Nb,Sn,Ba, Pb, Cu); VI - Varzea Alegre (Pb,Au); Vii - Pedra Branca-Iapi (Cr,Ni,Co); and VIII - Inhamuns (W,Cu,Bi). Besides these results were obtained some important designs about the distribution and mobility of the trace-elements in this geochemical landscape characterized by a semiarid climate (Bshw - Koppen). The prodominance of clastic dispersion over hidromorphic dispersion causes modification in the homogeneity and consequently the anomaly tail is longer than the one normally expected.

34760 (INIS-BR–1546) **Geochemical orientation in drainage in northestern Scheelitiferous province, Brazil.** Lins, C.A.C.; Wanderley, A.A. Sociedade Brasileira de Geologia, Recife, PE (Brazil). Nucleo do Nordeste. 1979. 32p. (In Portuguese). (CONF-7911203–: 9. symposium of geology in northeast, Natal, Brazil, Nov 1979). Order Number DE89619695/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The sampling model adopted in this work consists in a plottage of 150 collection point, where two samples were taken (pan concentrate and stream sediment samples). In the stream sediment sample two granulometries were separated (minor 80 mesh and miro 40 mesh). Some samples were collected in profile begining at the Bodo and Cafuca Mines and some others collected at random in zones not mineralized. The samples were analysed for W, Cu, Zn, Mo, As, Sb, F, P, Au, and 30 trace-elements (pattern). In the pan concentrate samples the heavy-mineral fraction were identified too. The main conclusions obtained by this work were: in this area clastic dispersion predominates; the best means to be sampled for detection of mineralized skarn is the pan concentrate; the optimum

density for a regional search is 1/30 Km^2; the principal pathfinder elements for scheelite are Mo, F, and Cu; the principal geochemical landscape factor in the area is the relief; a regional geochemical survey through stream sediment and pan concentrate sampling is factible to detect scheelite ores and associated mineralizations. It was recommended to a geochemical regional survey, the following criteria: sampling density 1/30 Km^2; collection of 1 pan concentrate sample and 1 stream sediment sampe both in the same point; to thicken the sampling in areas of uneven refief; in the pan concentrate samples must be analysed W, Au, and 30 trace-elements (pattern) and the stream sediment samples must be analysed for W, F, Cu, Zn and 30 trace-elements (pattern).

34761 (LA-UR–89-645) **Lithologic controls on rock varnish formation as determined by SEM [scanning electron microscope].** Raymond, R. Jr.; Harrington, C.D. Los Alamos National Lab., NM (USA). 1989. 9p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-890748–1: Microbeam Analysis Society meeting, Asheville, North Carolina, USA, 16-21 Jul 1989). Order Number DE89008020/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Rock varnish is a ubiquitous, manganese- and iron-rich coating found on rock exposures in arid and semiarid regions. Recent work has demonstrated the potential for using rock varnish due geomorphic surfaces semi-quantitatively. Such dating relies on ratios of minor elements in the varnish [(Ca + K)/Ti] calculated for a specific geographic area. However, although cation-radio dating has empirically been shown to work, relationships between varnish mineralogies, varnish element contents, varnish diagenesis, and mechanism of vanish formation are not yet understood. In addition, it is not clear what effect these various varnish attributes have on the elemental ratios used in rock vanish dating. We do know, however, that the mineralogy, texture, and morphology of substrate lithologies may greatly affect initial varnish accretion. Understanding this effect may help to clarify uncertainties that now exist in the empirical varnish cation-ratio (VCR) dating technique. 8 figs.

34762 (LA-UR–89-646) **SEM analysis of rock varnish chemistry: A geomorphic age discriminator.** Harrington, C.D.; Raymond, R. Jr. Los Alamos National Lab., NM (USA). Jul 1989. 8p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-890748–2: Microbeam Analysis Society meeting, Asheville, North Carolina, USA, 16-21 Jul 1989). Order Number DE89008019/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Rock varnish, a manganese- and iron-rich coating commonly found on rock surfaces in arid and semiarid regions, has long been of interest as a potential age indicator. Rock varnish has been shown to be an effective medium for dating of geomorphic surfaces over a time range of several thousand to over a million years, utilizing a ratio among minor cations [(K + Ca)/Ti] for the total volume of rock varnish. We have recently, developed a technique using the scanning electron microscope (SEM) equipped with an energy dispersive x-ray analyzer (EDAX) to analyze the chemistry of rock varnish. This technique has several advantages over the earlier cation ratio technique.

The results of observations done, in the last eight years, of the Intermidiate Polars (IP): EX Hya, V1223 Sgr, FO Aqr and Ao Psc, are presented. The IP define a subclass of cataclysmic variable stars that present coherent oscillations in their optical and/or X-ray emission. The observations were done from Laboratorio Nacional de Astrofisica, in Itajuba (Brazil). The stability of oscillations in IP was analysed to study the nature of compact stars. (M.C.K.).

34765 (ACIESP–60(v.3), pp. 191-198) **New water masers in the Southern hemisphere.** Scalise Junior, E. (Instituto de Pesquisas Espaciais, Sao Jose dos Campos, SP (Brazil)); Vale, J.L.M. do. Academia de Ciencias do Estado de Sao Paulo, SP (Brazil). 1988. (CONF-8808156–: 6. Japan-Brazil symposium on science and technology, Sao Paulo, Brazil, 10-12 Aug 1988). In *Proceedings of the 6. Japan-Brazil Symposium on Science and Technology.* Order Number DE89612371/JAW. Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

A search for water vapor maser have been conducted in the direction of selected strong point sources detected by the Infrared Astronomical Satellite - IRAS. 325 points were observed and 18 water maser sources were detected. The detection rate was 5,6%. The new sources are discussed and compared with the known galactic masers.

34766 (AD-A–201456/1/XAB) **Studies of flares and disappearing magnetic flux. Final report, 1 October 1986-31 March 1988.** Martin, S.F. California Inst. of Tech., Pasadena, CA (USA). Solar Astronomy Group. 31 Mar 1988. 13p. (N–00014-86-K-0139). Available from NTIS, PC A03/MF A01.

Research accomplishments include: (1) Research on 'flaring arches'; (2) A collaborative paper on 'Anomalously Dense Flare Loops' was published; (3) The footprints of the 'giant arches' previously discovered by Z. Svestka were found in hydrogen-alpha observations from the Big Bear Solar Observatory and the Udaipur Solar Observatory; (4) Several sets of new observations showing a relationship between cancelling magnetic fields and flares were acquired and analyzed; and (5) A new hypothesis is advanced that cancelling magnetic fields are necessary condition for the energy build-up to solar flares.

34767 (CBPF-NF–058/88) **Is the number of photons conserved in an expanding universe.** Novello, M.; Oliveira, L.A.R. de; Salim, J.M. Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro, RJ (Brazil). 1988. 35p. Order Number DE89618836/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A Friedman - like scenario in which - due to gravitational interaction - the total number of photons existing in the Universe changes as the Universe expands, is described. The photon number distribution function, in thermal equilibrium, exhibits an explicit dependence on a non-vanishing chemical potential term. This non-null value for the chemical potential of the photon is due to the presence of tidal effects, arising from the direct coupling of the photons - which, in a gravitational field, should not be treated as idealized point-like objects - to the curvature of space-time. As a result, the ratio n_γ/n_B between the numbers of photons and baryons in the Universe is shown to be not a constat, but rather a function of cosmic time, vanishing when the singularity of the standard FRW model is

reached. In consequence, some of the supposed 'fundamental problems' of standard Cosmology (e.g., the explanation of the constancy of the ration n_γ/n_B and thus of the origin fo the total ammount of entropy observed today) are but apparent ones in the present scenario, and may be ipso facto solved.

34768 (CBPF-NF–059/88) **Quantum fields in cosmological space-times: a soluble example.** Costa, I.; Novello, M.; Svaiter, N.F.; Deruelle, N. Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro, RJ (Brazil). 1988. 49p. Order Number DE89618837/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The Klein-Gordon equation for a massive real scalar field in the Novello-Salim Eternal Universe, i.e., non singular spatial homogeneous and isotropic cosmological background which is tangent to Milne universes in the distant past and future (and hence asymptotically flat) and evolves between these two geometries via a phase of contraction to a point of maximum curvature followed by expansion is solved. This allows a computation of the Bogolyubov coefficients of the scalar field, usually interpreted as the rate of creation of matter by the time varying gravitational field, either when the vacuum is defined at the moment of maximum curvature (the false Big-Bang) or at the far beginning of the cosmic evolution. This new exact solution is compared to the results obtained when the geometry is that of the Milne universe.

34769 (CBPF-NF–064/88) **Dissipative effects in Friedmann universes.** Lima, J.A.S. de; Waga, I. Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro, RJ (Brazil). 1988. 27p. Order Number DE89618838/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The relationship between the the different temperatures present in a radiative plasma is examined. In particular, the physical and the operational meanings of Eckart's temperature are discussed. An entropy density formula for the radiative component and its fractional rate are derived. We have also suggested a reformulation of Weinberg's conditions for maximum entropy production. The effect of radiative bulk viscosity in diluting monopoles in the very early universe is estimated.

34770 (DOE/ER/40125–19) **Indiana University High Energy Physics Group, Task C: Technical progress report, December 1, 1988–December 31, 1989.** Bower, C.R.; Heinz, R.M.; Mufson, S.L. Indiana Univ., Bloomington, IN (USA). Dept. of Physics. 1989. 40p. Sponsored by DOE Energy Research. DOE Contract AC02-84ER40125. Order Number DE89013108/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The Indiana University High Energy Physics Group, Task C has been actively involved in the MACRO experiment at Gran Sasso during the current contract year. MACRO is a large US-Italian Monopole, Astrophysics, and Cosmic Ray Observatory being built under the Gran Sasso Mountain outside of Rome. Indiana University is in charge of organizing the United States software effort. We have contributed to the online event display software and the data analysis software. We are also doing development work on the MACRO liquid scintillator. We have set up a Liquid Scintillator Quality Assurance Laboratory in Frascati, Italy. We are producing vertical scintillator tank endplates and calibration boats in our machine shop. We have preliminary data from a test run of one MACRO supermodule. 14 figs.

34771 (ESA-SP–281, pp. 9-16) **Cataclysmic variables.** Cassatella, A. (European Space Agency, Madrid (ES). Villafranca Satellite Tracking Station); Selvelli, P.L. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

Important progress has been made in the last few years in the understanding of the complex phenomena occurring in cataclysmic variables. An outstanding contribution to these advances has been provided by observations with the International Ultraviolet Explorer. The most recent results obtained in the specific cases of classical nove, old novae and recurrent novae are reviewed.

34772 (ESA-SP–281, pp. 17-28) **White dwarfs.** Weidemann, V. (Kiel Univ. (DE). Inst. fuer Theoretische Physik und Sternwarte). European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

We exemplify how white dwarf research has profited during the first ten years of IUE. We discuss especially hot DA stars, calibration problems in the SWP range, the 1400/1600 A quasimolecular features in cool spectra, the helium-rich DB and DBA stars, cooler non-DA stars with UV carbon lines of type DQ and metal lines of type DZ. A rediscussion shows that carbon abundances are only weakly dependent on T(eff). For dredge-up this implies helium-layers of different thickness. Finally we mention hot white dwarfs with metal lines, especially the PG 1159 class.

34773 (ESA-SP–281, pp. 41-46) **IUE observations of planetary atmospheres.** Encrenaz, T. (Observatoire de Paris, Section de Meudon, 92 (FR)). European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

The UV observation of planetary atmospheres gives access to the upper parts of the atmospheres, below and above the homopause. IUE observations have significantly contributed to our knowledge of the aeronomy and photochemistry of planetary atmospheres. On Venus, SO_2 has been detected; ozone has been observed on Mars; C_2H_2 and NH_3 have been detected in the jovian upper atmosphere; acetylene has been detected also on Saturn and Uranus; aurorae have been detected and mapped on Jupiter and Saturn; the Lyα excess, later interpreted by Voyager as the "electroglow", has been observed on Uranus. The IUE can still be a useful tool for monitoring programs such as ozone on Mars and aurorae on giant planets.

34774 (ESA-SP–281, pp. 193-196) **Observations of galactic WC + O binary systems: HD 97152 and HD 152270.** Auer, L.H. (Los Alamos National Lab., NM (US)); Colome, C.; Koenigsberger, G. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

The IUE observations of the Wolf-Rayet binary systems HD 97152 and HD 152270 are presented. Both systems contain a WC7 component, and both have relatively small orbital inclinations. Weak atmospheric eclipses at emission line wavelengths are detected in HD 97152, the system for which a more suitable phase coverage is available.

34775 (ESA-SP–281, pp. 197-200) **Atmospheric eclipse effects in Wolf-Rayet binaries in the small Magellanic cloud.** Koenigsberger, G. (Universidad Nacional Autonoma de Mexico, Mexico City. Inst. de Astronomia); Moffat, A.F.J.; Auer, L. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

We present the results of IUE observations of three SMC W-R binary systems. Selective atmospheric eclipse effects are evident in HD5980 (WN4+06l:) and Sk 188 (W04+04V), and are very weak, or absent in Sk 108 (WN3+06l). The difference in heavy-metal content between the SMC and Galactic objects is clearly manifest in the lack of atmospheric eclipse effects in the wavelength range $\lambda\lambda$1360-1470 A in HD5980 and Sk 188.

34776 (ESA-SP–281, pp. 209-212) **Matter streams in semi-detached binary systems.** Wonnacott, D. (University Coll., London (UK)). European Space Agency, 75 - Paris (France). Jun 1988.

(CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

The gas stream between the two components of CX Draconis is observed in the UV and subsequently modelled using a simple ballistic code. To scale the model to the data, an inclination of 15^0 is required. A jet of high velocity material is also present but cannot be accounted for with the aforementioned model. It is conjectured that viscosity will cause the infalling stream to spread to the extent that it can avoid collision with the photosphere of the primary and escape from the system by a gravitational slingshot effect.

34777 (ESA-SP–281, pp. 233-236) **Model chromosphere and transition region for 56 Peg (K0 IIp + wd): A preliminary study.** Munday, M.G. (Oxford UNiv. (UK). Dept. of Theoretical Physics). European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

Observations of 56 Peg (K0 IIp + wd) have shown the presence of ultraviolet emission lines associated with warm (10^5 K) material. It has been suggested that this emission comes from an ionized region in a cool wind around the secondary. The characteristics of the emission, however, support the view that the lines are formed in a transition region around the late-type supergiant. A self-consistent model chromosphere and transition region are presented here as further evidence. A satisfactory model, taking into account the transition region material, the variable asymmetry in Mg II and the X-ray emission might be possible in terms if a hybrid supergiant with an X-ray illuminated cool wind.

34778 (ESA-SP–281, pp. 237-240) **Cepheid binaries with large mass ratios (M_1/M_2).** Evans, N.R. (Toronto Univ., Ontario (CA). Dept. of Astronomy). European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

Because of the temperature difference between Cepheids and their hot main sequence companions, the properties of both stars can be determined, even for mass ratios (M_1/M_2) larger than 3.0. IUE observations of 3 Cepheid systems (Polaris, FF Aql, and S Sge) are used to derive, or set limits on, the temperatures and masses of the companions. Light from the companions of FF Aql and S Sge from 1700 to 2000 A is consistent with an A5 to A7 main sequence companion for both Cepheids, with a mass of 1.8 solar mass. This mass for the companion of S Sge is smaller than required by the orbital mass function and an evolutionary mass of the Cepheid, suggesting that the companion may itself be a binary. For Polaris, the mass of the companion must be less than 1.8 solar mass.

34779 (ESA-SP–281, pp. 283-286) **On the flux-period and flux-flux correlations in late type stars.** Montesinos, B. (Oxford Univ. (UK). Dept. of Theoretical Physics); Jordan, C. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

The analysis of a wide sample of stars including both main-sequence and evolved stars shows that whilst flux-flux correlations are the same for the whole sample, the flux-period relations show a lower dependence on period for evolved stars. A gravity dependence also enters the flux-period relation for evolved stars. The flux-flux and flux-period relations are combined with coronal parameters to express P_c, T_c and B_c in terms of the period. All increase with decreasing period, as expected if dynamo action controls activity. Some specific relations between observable quantities are found which could be tested from further observations. Exploratory calculations of the convective zone fields in midly evolved stars suggests that a larger convective zone field results which could explain the greater emission from evolved stars for a given period.

34780 (ESA-SP–281, pp. 295-298) **Doppler imaging of a Lacertae at three epochs.** Walter, F.M. (Colorado Univ., Boulder (US)); Neff, J.E.; Linsky, J.L.; Rodono, M. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

Doppler imaging analysis allows use of the information contained in a time sequence of spectral line profiles to deduce the size, location, and surface flux of regions of contrasting brightness on rotating stars. We have used IUE observations to study the structure of the lower chromosphere of AR Lacertae in the light of Mg II k. We have obtained sequences of LWR/P-HI images distributed around the binary period at three epochs. We have identified discrete plage-like regions of enhanced Mg II surface flux in this system. There are temporal variations in the Mg II flux on timescales of hours as well as substantial changes in chromospheric morphology on timescales of years. Even with the limited S/N attainable with the IUE, one can map the gross structures of active stellar atmospheres. With such information, one can begin to study the true 3-D structure of the atmospheres of late-type stars.

34781 (ESA-SP–281, pp. 299-302) **Rotational modulation of hydrogen Lyman alpha flux from 44i Bootis.** Vilhu, 0. (Helsinki Univ. (FI). Observatory and Astrophysics Lab.); Neff, J.E.; Rahunen, T. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

We present IUE observations that cover the entire 6.4 hour orbital cycle of the late-type contact binary 44i Bootis. The intrinsic stellar hydrogen Lyman alpha emission flux was determined from low-resolution IUE spectra, compensating for geocoronal emission and for interstellar absorption. The variation of the stellar Lyman alpha emission flux correlates well with the variation of the CII and CIV emission fluxes, and it shows orbital modulation in phase with the visual light curve. The ratio of Lyman alpha to CII flux (15 to 20) is similar to that observed in solar active regions. Hydrogen Lyman alpha emission is thus one of the most important cooling channels in the outer atmosphere of 44i Boo. We obtained a high-resolution spectrum of the Lyman alpha line between orbital phases 0.0 and 0.6. The integrated flux in the observed high-resolution Lyman alpha profile is consistent with the fluxes determined using low-resolution spectra, and the composite profile indicates that both components of this binary have equally active chromospheres and transition regions. The uncertainty in the interstellar hydrogen column density cannot mimic the observed variation in the integrated Lyman alpha flux, because the stellar line is very much broader than the interstellar absorption.

34782 (ESA-SP–281, pp. 303-306) **Mapping of surface activity on the W UMa-type system VW Cephei.** Guinan, E.F. (Villanova Univ., PA (US). Dept. of Astronomy); Bradstreet, D.H. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

MUltifilter photometry of the W UMa-type contact binary VW Cep (P = 6.67 hr; G5V + K0V) in 1986/87 revealed large asymmetries in the light curves believed to be caused by large, cool starspot regions on the surface of the larger star. In April 1987 we observed VW Cep with IUE to study the chromospheres and transition regions of the components. During one complete orbital cycle 3 SWP and 4 LWP low dispersion spectra were obtained including and then

excluding the suspected active region. For the first time, phase dependent TR line emission strengths were found, most notably CIV, which was 50% stronger when the spot region was most visible. These results could be important because VW Cep represents an extreme case for studying stellar dynamo theory and observations can play a crucial role in the understanding of magnetic fields and activity cycles in rapidly rotating solar-like stars.

34783 (ESA-SP–281, pp. 307-310) **Ultraviolet flares on II Peg.** Doyle, J.G. (Armagh Observatory (IE)); Byrne, P.B. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

IUE observations of the RS CVn star II Peg in the upper chromospheric and transition regions lines MgIIk, CIV and HeII in February 1983 shows evidence for flare activity. The electron pressure derived from the mean of two different line ratios produce good agreement between the allowed and intersystem lines in the differential emission measure curves. The total radiative losses from the chromosphere and transition region for the first flare on Feb. 2 is 2.46 10^{35} erg and at least 1.91 10^{34} erg for the flare on Feb. 4.

34784 (ESA-SP–281, pp. 311-314) **Chromospheric mass motions during a flare on UV Ceti.** Phillips, K.J.H. (Appleton Lab., Chilton (UK)); Bromage, G.E.; Dufton, P.L.; Keenan, F.P.; Kingston, A.E. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

Simultaneous optical and IUE observations of a flare on UV Ceti in 1980 are reported. The IUE spectra show only slight increase of C IV line emission. The optical spectrophotometric observations show, from Balmer line profiles, some turbulent broadening in quiescent and flare spectra, and downward-directed flow (of 100 $km.s^{-1}$) during the flare. The latter is particularly reminiscent of solar flares, and probably arises from the formation of a chromospheric condensation, as modelled for solar flares.

34785 (ESA-SP–281, pp. 319-322) **Transition regions of dM stars.** Byrne, P.B. (Armagh Observatory (IE)); Doyle, J.G. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

We have observed weak upper-chromospheric and transition region (TR) emission from two dM stars (G1784 and G1825) using deep IUE SWP exposures. In addition to the usual TR lines, Lyα fluxes for the two stars were also determined for the first time. In this paper we discuss the relative importance of Lyα and MgII as chromospheric coolants in the M dwarfs and the status of the X-ray/ HeII (1640A) relationship in the light of these results.

34786 (ESA-SP–281, pp. 327-330) **Line formation of cool carbon star chromospheres.** Luttermoser, D.G.; Johnson, H.R.; Avrett, E.H. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

Based on adopted photospheric plus chromospheric models, we generate synthetic fluxes of the C II (UV 0.01) and both fluxes and profiles for the Mg II (UV 1) lines in both complete (CRD) and partial (PRD) redistribution and compare them to IUE spectra of the carbon star TX Psc. Non-LTE calculations with the program, PANDORA are made for H, C, Na, Mg, and Ca. For CRD and a well constrained chromospheric model, the best fit to the Mg II line profiles gives a flux in the C II lines (produced surprisingly, at the same depth as the Mg II lines) 2.6 times too great and produces too much emission in the Mg II line wings. PRD in the Mg II h and k lines in an expanding chromosphere with an adjusted temperature structure produces the observed Mg II emission. The reduction in temperature produces C II fluxes that match the IUE low resolution spectra.

34787 (ESA-SP–281, pp. 339-342) **Discovery of a co-rotating magnetosphere in a helium weak star: HD 5737=α Scl.** Shore, S.N. (New Mexico Inst. of Mining and Technology, Socorro (US). Dept. of Physics); Brown, D.N.; Sonneborn, G. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

Previous work on the sn stars has demonstrated the existence of magnetically controlled mass outflows in several stars. Here we report the discovery, using combined IUE spectroscopy and Zeeman polarimetric magnetic field measurements, of the first bona fide example of a magnetosphere in a helium weak star. HD 5737=α Scl is one of the extreme He weak stars in its He deficiency, but is otherwise quite similar to the other sn stars HD 21699 and HD 79158. We report a unique period for the magnetic and C IV and Si IV variations of 21.65 days, about a factor of 10 longer than the other variable sn stars. The effective (longitudinal) field nulls correspond extremely well to C IV line strength maxima. The magnetic field and equatorial magnetosphere are highly oblique (about 70^0) and the line variations appear to be stable.

34788 (ESA-SP–281, pp. 357-360) **FeII level population in luminous variable stars.** Viotti, R. (Consiglio Nazionale delle Ricerche, Frascati (IT). Lab. di Astrofisica Spaziale); Rossi, C.; Muratorio, G.; Friedjung, M.; Baratta, G.B. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

We have derived the overall FeII level population in the luminous variable stars KQ Pup and AG Car using the Self Absorption Curve method of analysis of the optical and UV FeII emission lines. We found that most levels are nearly populated according a Boltzmann-type law with excitation temperatures of 6500 and 7500 K for KQ Pup and AG Car respectively. For KQ pup there is evidence of selective excitation processes and dielectronic recombination in the level population. The importance of the study of the FeII spectrum as diagnostics of the physical processes in astrophysical objects - from stellar chromospheres to distant galaxies - is finally discussed.

34789 (ESA-SP–281, pp. 365-368) **Periodic modulation of the atmosphere of alpha Orionis.** Dupree, A.K. (Harvard-Smithsonian Center for Astrophysics, Cambridge, MA (US)); Baliunas, S.L.; Hartmann, L.; Nassiopoulos, G.E.; Guinan, E.F.; Sonneborn, G. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

Alpha Orionis (Betelgeuse; M2 Iab) has been monitored with IUE since 1984. Discovery of a 420-day periodic modulation of the flux in the optical and ultraviolet continua, and in the Mg II h and k line emission cores suggested that periodic photospheric pulsations were present from 1984-1986. This behavior continues through 1987. However, the general flux level of the ultraviolet continuum and the Mg II lines is decreasing, and the amplitude of the variation may be reduced. These decreases may be the emerging signature of an additional longer period. The density sensitive C II diagnostic, λ2325.4/λ2328.1, indicates the chromospheric densities range between log N_e (cm^{-3}) = 8.7 and 9.5, but periodicities are not yet evident.

34790 (ESA-SP–281, pp. 308-372) **MG II line profiles of the Mira S Carinae.** Brugel, E.W. (Colorado Univ., Boulder (US). Dept. of Astrophysical Science); Bookbinder, J.A.; Brown, A. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

A series of high-dispersion IUE observations obtained to investigate the evolution of the shock structure of the Mira S Carinae (S Car) have produced - despite very limited phase coverage - a set of five exceptionally interesting spectra of the Mg II h and k lines. The two primary findings of these observations are (1) there is significant emission from both the h and k lines at velocities of -150 $km.s^{-1}$ relative to the stellar photosphere and (2) the h-to-k ratio of the Mg II doublet remains below the theoretically predicated values of 2:1 to 1:1, and shows a smooth dependence on the optical phase. Archival studies of other Miras (e.g. R Car) indicate that S Car is not unique in possessing unusual and highly variable Mg II h and k line profiles.

34791 (ESA-SP–281, pp. 373-376) **Variability of the UV spectrum of the symbiotic star BF Cygni.** Gonzalez-Riestra, R. (European Space Agency, Madrid (ES). Villafranca Satellite Tracking Station); Cassatella, A.; Fernandez-Castro, T. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

In this work we present the preliminary results of our monitoring of the symbiotic star BF Cygni. We have been carrying out regular observations of this system, both in low and high resolution, since July 1986 with the aim of covering a full photometric period. In order to study the long-term UV variability of the system, we have used our spectra together with archive data taken during the period 1979-1981. During the IUE lifetime, BF Cygni has undergone dramatic changes in the UV continuum and emission line fluxes. Most of the emission lines vary in phase with the continuum with deep eclipses near photometric phase 0. All the observational evidences support a model in which the variability of the system could be mainly due to occultations of the different emitting regions during the orbital motion.

34792 (ESA-SP–281, pp. 377-380) **Abundance and f values needed to interpret adequately the high resolution I.U.E. spectra.** Freire Ferrero, R. (Institut d'Astrophysique Spatiale, 91 - Verrieres-le-Buisson (FR)). European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

The IUE satellite has supplied several thousands of high resolution stellar spectra which has only partially been interpreted in terms of synthetic spectra of relevant wavelength intervals. In many cases the comparison between observed and computed spectra gives poor results. To establish the real needs to interpret correctly a high resolution IUE spectrum we perform a rough estimation of what would be the abundance or the f minimal values that correspond to isolated lines in the limit of detection given by instrumental resolution. In this way, we stress the need to develop the determination or calculation of atomic data concerning very weak spectral lines. Thus, with more complete and reliable atomic data, systematic synthetic spectra calculations could lead to better understand the physical conditions of stellar atmospheres.

34793 (ESA-SP–281, pp. 389-392) **IUE spectral atlas of two normal B stars: πCet and νCap (125-200 nm).** Artru, M.C. (Observatoire de Paris, Section de Meudon, 92 (FR)); Borsenberger, J.; Lanz, T. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A18/MF A01.

An atlas for two normal B stars, πCet (HD17081, B7V) and νCap (HD192432, B9.5V) is prepared in the range 125-200 nm. By means of an improved software to process the IUE images and by the coaddition of about ten available high-resolution images, the best possible resolution and signal/noise ratio are obtained. The identification of the lines is based on updated laboratory lists with a selection of the dominant contributors for each absorption line. About 80% of the measured lines have a definite identification.

34794 (IC–89/2) **Studying shocks in model astrophysical flows.** Chakrabarti, S.K. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 9p. Order Number DE89618786/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

We briefly discuss some properties of the shocks in the existing models for quasi two-dimensional astrophysical flows. All of these models which allow the study of shock analytically have some unphysical characteristics due to inherent assumptions made. We propose a hybrid model for a thin flow which has fewer unpleasant features and is suitable for the study of shocks. (author). 5 refs.

34795 (INIS-BR–1548) **Photographic surface photometry of NGC 2855 and NGC 6771 galaxies.** Schroeder, M. de F.S. Rio Grande do Sul Univ., Porto Alegre (Brazil). Inst. de Fisica. 1984. 139p. (In Portuguese). Order Number DE89618825/JAW. Available from NTIS (US Sales Only), PC A07/MF A01 - OSTI; INIS.

Photographic surface photometry in the BV system was carried out two Southern SO's galaxies, NGC 2855 and NGC 6771. B and V isophote maps were obtained as well as geometric and integrated parameters as position angles, inclination, diameters, magnitudes and integrated colors. Each luminosity profile was decomposed into bulge and disk contributions, each component being fitted to convenient laws. For NGC 2855 de Vaucouleurs law described well the bulge whereas the disk showed an exponential distribution. For NGC 6771 the barred nuclear bulge as well as the disk was best fitted by exponential laws. Additional luminosity components due to an inner fragmented ring were identified in NGC 2855 and due to both a quite prominent lens and well defined ring in NGC 6771. In this galaxy the minor axis, oriented almost edge-on, present clues of another luminosity component besides the bulge and the thin disk. For both galaxies the disk central surface brightness was found to be fainter than the standard value observed by Freeman. The fitting parameters were used to determine the bulge-to-disk luminosity ratios as well as their contribution to total luminosity. The domination by the bulge light over the disk light was clear in both galaxies. From the B and V luminosity profile the color gradients were estimated. For both objects the local color indices decreased from inner to outer regions, this effect being relatively smooth in NGC 2855 and more prominent in NGC 6771.

34796 (INIS-mf–11450) **Astrophysics. Proceedings. Vol. 5.** Harmanec, P. (ed.). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. 341p. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Volume 5 of the proceedings contains 62 papers of which 61 have been incorporated in INIS. They are divided by subject into several groups: early-type stars, late-type stars, binaries and multiple systems, theoretical considerations, ultraviolet stellar spectra, high energy astrophysics and binary stars. Many papers dealt with variable stars, star development and star models. (M.D.). 200 figs., 38 tabs., 1189 refs.

34797 (INIS-mf–11450, pp. 13-20) **Time-scales and physical processes.** Baglin, A. (Observatoire de Nice, 06 (France)). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Following general remarks, a few observed timescales in stars discussed at this colloquium are presented. Characteristic times in stellar models for the internal structure and the outer layers are reviewed. Examples of mode identification are discussed. In the low frequency domain, the situation is quite simple. But the high frequency region is more difficult to decipher as many phenomena occupy the same domain: orbital motion, rotation of a non-uniform body, spheroid g modes and Rossby waves. The linear framework is not always relevant and the nonlinear dynamics is more difficult to characterize. In general, timescales alone cannot permit a mode identification. Additional information on energy content, amplitudes, coherence, multiplicity, stationarity is necessary for discrimination of the various possibilities. (author). 15 figs., 2 tabs., 20 refs.

34798 (INIS-mf–11450, pp. 25-32) **Evidence of rapid variability in early-type stars.** Koubsky, B. (Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Though evidence of rapid variability in early-type stars is rather old there is more recent information on this subject. This information explosion started with the introduction of new detectors capable of detecting even very subtle variations. Old evidence based on important changes remains. Different types of rapid variability in O, B, WR and CP2 stars, and their relations are discussed. (author). 85 refs.

34799 (INIS-mf–11450, pp. 33-35) **Incidence of absorption line profile variability among the O stars.** Fullerton, A.W. (Toronto Univ., ON (Canada)); Bolton, C.T.; Gies, D.R. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Preliminary results are presented from a spectroscopic survey for absorption line profile variations among the O stars. Data consist of more than 1000 high quality spectra of 46 bright O stars witch were obtained with sufficient time resolution to sample variations with timescales of hours to days. Most spectral types and luminosity classes are represented. About 31% of these stars exhibit photospheric variability which probably arises from organized velocity fields. The remaining stars are either constant (31% of the sample) or possess variability associated with their winds (43% of the sample, including 2 of the photospheric variables). Examples are presented illustrating each of these classes of behavior, and preliminary implications and future directions of this work are discussed. (author). 4 figs., 11 refs.

34800 (INIS-mf–11450, pp. 39-41) **Variability in the stellar wind of 68 Cygni - not "shells" or "puffs", but streams.** Prinja, R.K. (University Coll., London (UK). Dept. of Physics and Astronomy); Howarth, I.D. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Results are presented from a study of variability in the stellar wind of 68 Cygni [O7.5 III((f))], based on 33 International Ultraviolet Explorer high resolution spectra taken over $\sim$ 7 days. Significant changes are evident in the Si IV resonance line profiles on timescales as short as $\sim$ 1 hour, characterized by broad absorption enhancements at relatively low velocity (0.5 to 0.7 of the terminal velocity, v_∞) which evolve into high velocity discrete absorption components (at $\geq 0.8\ v_\infty$) over a period of $\sim$ 1 day. The recurrence timescale for the appearance of the broad features is $\sim$ 15 to 20 hours. Three well monitored consecutive sequences of progressive opacity enhancements are described. Their properties are parameterized and incorporated into a self-consistent phenomenological model where the opacity enhancements and "underlying" wind are radiatively coupled. The model results show that the absorption enhancements do not propagate from the photosphere in any simple way, and are not due to spherically symmetric phenomena. We conclude that the discrete absorption variability in 68 Cyg is not due to "shells" or "puffs" of matter, but instead arise from material passing through perturbations in the flow, which may be illustrated in terms of spirally wound-up streams. (author). 6 figs., 9 refs.

34801 (INIS-mf–11450, pp. 45-48) **Short-time scale variability in some Be stars.** Hubert, H. (Observatoire de Paris, Section de Meudon, 92 (France)); Dagostinoz, B.; Hubert, A.M.; Floquet, M. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The short-time scale spectroscopic variability of some Be stars was investigated with an optical fiber spectrograph and a CCD camera. The following findings were made on the timescale of hours and days: (1) weak changes in the Hα emission line profile of γ Cas; (2) changes in the structure and the intensity of the Hα emission line core and sometimes in the wings of the HeI λ 6678 of phi Per; (3) notable variations in the HeI photospheric line profile λ 6678 and in the core of the Hα absorption line of o And, which do not seem correlated with the photometric period of 1.57 days given by Harmanec (1984). (author). 5 figs., 9 refs.

34802 (INIS-mf–11450, pp. 49-52) **Analysis of nonradial oscillations of rapidly rotating δ Scuti stars.** Walker, G. (British Columbia Univ., Vancouver, BC (Canada). Dept. of Geophysics and Astronomy); Yang, S.; McDowall, G.; Fahlman, G. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The authors reported elsewhere the discovery of apparently high-degree nonradial oscillations for the four rapidly rotating ($\sim$120 kms^{-1}) δ Scuti stars: 21 Mon, κ^2 Boo, ν UMa, and o^1 Eri. Here some of the techniques are discussed which were used to isolate and to analyze the time varying components ($\sim$1% continuum) of the line profiles. They are best seen after subtraction of an average, filtered spectrum. For the δ Scuti stars, periodograms of the residual spectra show several peaks, some of which can be identified with the degrees of oscillation found in the authors' preliminary analysis. In the latter, values of /m/were estimated from the sub-feature accelerations and delay in transit of the features. While one mode tends to dominate it is clear that often more than one is present. The sub-features are not always equally spaced and they can show phase changes and doubling. While nonradial pulsation provides an adequate, general description of the phenomena, probably only part of something more complex is being seen. The immediate challenge is to combine the results from many lines plus higher spectral resolution to improve the visibility of the time varying features by at least an order of magnitude. (author). 6 figs., 1 tab., 19 refs.

34803 (INIS-mf–11450, pp. 53-57) **Variability of the runaway star 53 Arietis.** Sterken, C. (Brussels Univ. (Belgium). Inst. d'Astronomie et d'Astrophysique). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Photometric and spectrographic observations of the runaway star 53 Ari confirm that the star does not exhibit detectable light- and radial velocity variations. The star is definitely not a beta Cephei star. (author). 6 figs., 12 refs.

34804 (INIS-mf–11450, pp. 59-61) **Searching relativistic stars among O-B runaways I: V568 Cyg = HD 197419.** Blanco, C. (Catania Univ. (Italy). Osservatorio Astrofisico); Mammano, A.; Baratta, G.; Coluzzi, R.; Croce, V.; Margoni, R.; Stagni, R.; Munari, U.; Dalmeri, I. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings.*

Vol. 5. Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

V568 Cyg was observed photometrically, spectroscopically and photographically during a campaign on O-B runaways. These may contain either postsupernova binaries or stars dynamically ejected from young associations. Whereas even its variability was doubtful, photometric minima deeper from V to U as well as strong inversion of color indexes were recorded, the star becoming redder as the minimum got deeper. New transient H_α emission episodes were observed. The equivalent widths of absorption lines of hydrogen, except H_α, change in a correlated way reaching their lowest value sometimes at photometric minima. Eclipse of a hot object with a possible disk, by a late type giant in an eccentric orbit, seems the most viable explanation. The ephemeris J.D. 2446641.5+152.12 days may help the search for further primary minima. (author). 3 figs., 6 refs.

34805 (INIS-mf–11450, pp. 63-65) **13-color photometry of HD 184279.** Alvarez, M. (Instituto de Astronomia, Ensenada (Mexico)); Ballereau, D. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

From the analysis of the 13-color photometry and spectroscopy of HD 184279 (V 1294 Aql), it was found that for the last 10 years, this star presents a pseudo period of 5.0 years both in light and radial velocity. There is a phase difference of 0.148 P (8.9 months) between the maximum of light and the minimum of radial velocity. The magnitude of the star changes by 0.4 mag. and the radial velocity shows a range of 185 km/sec. A comparison with theoretical models gives a $T_{eff} \leq 28{,}700$ K with log $g \leq 4.0$ in agreement with spectroscopic determinations. The star is reaching the maximum of light and some shell features are decreasing, a probable indication that the star may return to a quiescent stage on its evolution, or it will continue the cyclic behavior that has characterized it for the last 10 years. Its observation in UV and IR wavelenghts should be very important to measure the wind that may be present in the well developed shell surrounding the star. (author). 3 figs., 1 tab., 18 refs.

34806 (INIS-mf–11450, pp. 67-68) **Photometric and spectroscopic study of AZ Canis Minoris.** Bakos, G.A. (Waterloo Univ., ON (Canada). Dept. of Physics); Tremko, J. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Photometric and spectrographic observations of this δ Sct variable are presented. A comparison of photometric data over a period of 17 years indicates a binary nature of this variable. A tentative period of seven years was derived. Applying relations applicable to this group of stars shows that this variable is a giant star with a radius of about 2.6 R_{Sun} pulsating in its first overtone. (author). 2 figs., 2 tabs., 3 refs.

34807 (INIS-mf–11450, pp. 69-70) **Multifrequency analysis of the short-term variable Be star KY And.** Pavlovski, K. (Zagreb Univ. (Yugoslavia)). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Broad-band UBV light and color observations of KY And obtained in September 1982 at the Hvar Observatory were analyzed. It was found that no single frequency satisfied the data well enough, hence, a multifrequency fit was determined. (author). 2 figs., 12 refs.

34808 (INIS-mf–11450, pp. 71-74) **Search for rapid variability in spectrum of Alpha Andromedae. (Progress report).** Zverko, J. (Slovenska Akademia Vied, Skalnate Pleso (Czechoslovakia). Astronomicky Ustav); Ziznovsky, J.; Zboril, M.; Hric, L.; Polosukhina, N.; Malanushenko, V.; Bychkov, V.; Iliev, I. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Radial velocities of Hγ - H9 and CA II K lines on 27 high dispersion (0.27 nm/mm)spectrograms of the HgMn-star Alpha Andromedae were measured. While radial velocities of Balmar lines show no significant changes, radial velocities,of the Ca II K line vary in the limits from 5 to 13 km/s. A frequency analysis of the Ca II K radial velocity values leads to two different frequencies of 27.86 and 35.20 c/d. Their superposition results in a 196 min beat-phenomenon period. Halfwidth of the calcium line varies in the way which could be explained by nonradial oscillations. (author). 3 figs., 1 tab., 8 refs.

34809 (INIS-mf–11450, pp. 77-87) **Variability in chromospherically active stars - at all time scales.** Hall, D.S. (Vanderbilt Univ., Nashville, TN (USA)). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Chromospheric activity is found in ten types of stars, both single and binary. Variability at many time scales is reviewed, from minutes to centuries. The emphasis is on what is not understood, incorrectly understood, and understood but not appreciated. Observational results in hand include photometry, spectroscopy, spectrophotometry, speckle interferometry, magnetic fields, and orbital period variations. Certain physical mechanisms responsible for variability are discussed, making the distinction between the well-established, the suspected, and the possible. Specific topics include flares, rotation, differential rotation, synchronization, circularization, starspots, spot models, migration periods, spot cycles, magnetic activity cycles, sector structure, Maunder minima, pulsation, light curve solutions, convective envelope changes, mass transfer, mass loss, and orbital period variations. Specific directions for future research are identified. (author). 2 tabs., 97 refs.

34810 (INIS-mf–11450, pp. 89) **Stellar activity.** Rodono, M. (Catania Univ. (Italy). Osservatorio Astrofisico). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

STELLAR ACTIVITY/stellar atmospheres; ROTATION; STARS

34811 (INIS-mf–11450, pp. 91-94) **Rapid time variability in the short-period RS CVn-type binary SV Camelopardalis.** Scaltriti, F. (Osservatorio Astronomico di Torino, Pino Torinese (Italy)); Busso, M.; Corcione, L. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The eclipsing binary SV Cam shows photometric features that suggest its membership of the RS CVn group. The existing light curves (covering the period 1947-1986) were analyzed in order to isolate the contribution of the wave-like distortion; all the observations support the presence of an activity cycle, with a duration of about 10 years. By suppressing the contribution due to stellar activity an "average" light curve was derived cleaned from the effects of spots; this light curve was analyzed by the Wood computer code to get the physical parameters of the system. (author). 2 figs., 3 tabs., 15 refs.

34812 (INIS-mf–11450, pp. 95-98) **Starspot proper motion in HK Lac.** Olah, K. (Konkoly Observatory, Budapest (Hungary)); Holl, A.; Gesztelyi, L. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

A recent paper (Olah et al., 1985) showed that the active areas of HK Lac exhibited sometimes small and sometimes large scale motions. In the case of the Sun it is well known that new spots exhibit large proper motions while the old ones move almost together with the surrounding photosphere. On HK Lac both a newly formed active area and an existing old one showed concurrent rapid motions. A possible interpretation of this phenomenon is that new spots appeared in both the new and the old active areas simultaneously. This time coincidence may be accidental but if spots originate in deeper layers, then spots of common deep origin may appear in remote places of the stellar surface at the same time. Similar phenomena are seen on the Sun when there is simultaneous emergence of new flux in various parts of an extended active region (Zirin, 1983). The distribution of the active areas on the surface of HK Lac during the past eight years is discussed. (author). 3 figs., 10 refs.

34813 (INIS-mf–11450, pp. 99-101) **Energy distribution monitoring of the T Tauri are RU Lupi.** Giovannelli, F. (Consiglio Nazionale delle Ricerche, Frascati (Italy). Lab. di Astrofisica Spaziale); Vittone, A.A.; Errico, L.; Rossi, C. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Within the framework of a large campaign of coordinated multifrequency observations of the T Tauri star RU Lupi, simultaneous UV, optical and IR energy distributions secured in the years 1984-86 are presented. The observations were carried out with the International Ultraviolet Explorer satellite and European Souther Observatory optical and IR telescopes. Strong variations on different timescales were detected in UV and optical regions. On June 30, 1986 a large flare was observed. An analysis of the different energy distributions indicates that the variability of RU Lupi is mainly due to a strong activity in the surface layers of the star. (author). 1 fig., 14 refs.

34814 (INIS-mf–11450, pp. 103-105) **Search of tidal interaction in the binary system λ And.** Glebocki, R. (Gdansk Univ. (Poland)); Bielicz, E.; Pastuszka, Z.; Sikorski, J. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

31 UV spectra obtained with the LWR camera of the International Ultraviolet Explorer satellite in the period 1978-83 were analyzed. Changes of Mg II h and k emissions are evident but there is no evident correlation between emission intensity of Mg II and orbital or photometric phase. Using three various methods of analysis of possible periodicity in variations of Mg II h and k emission intensities real changes were found in h+k fluxes with periods equal to the half of the orbital one, 0.5 P_{orb}=10.2606 d. This effect is interpreted as being evidence of the direct influence of tidal interaction of secondary component on the chromospheric structure of the primary. An evident minimum of the Mg II h and k intensity is observed when the tides are on the line of sight and a maximum when both tidal bulges are visible. The difference between maximum and minimum of total k line flux is equal to about 20%, while the shape of the profile is practically unchanged. (author). 4 figs., 1 tab., 6 refs.

34815 (INIS-mf–11450, pp. 107-109) **Flare activity on HD 12211.** Rovithis, P. (Astronomical Institute, National Observatory of Athens (Greece)); Rovithis-Livaniou, H. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The flare-like phenomena observed in the eclipsing binary star HD 12211 are presented. (author). 2 figs., 15 refs.

34816 (INIS-mf–11450, pp. 113) **Fast variability in low-mass X-ray binaries.** Paradijs, van J. (Amsterdam Univ. (Netherlands)). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

BINARY STARS/cosmic x-ray sources; COSMIC X-RAY BURSTS; OSCILLATIONS

34817 (INIS-mf–11450, pp. 115-120) **Is Omicron Andromedae a quadruple or even quintuple system?.** Harmanec, P. (I656500CS); Hill, G.M.; Walker, G.A.H.; Dinshaw, N.; Yang, S. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

A historical survey is presented on observations of the Omicron Andromedae star and varous theories presented explaining its spectral variations. Extensive spectroscopic measurements were made. The main lines in the spectra were Fe II 4233, C II 4267, Hγ 4340, a mixture of lines Fe II and Mg II 4385, He I 4388 and Mg II 4391, He I 4471 and Mg II 4481 A. All radial velocities of the stronger Mg II component were analyzed. It was proved that a companion to Omicron Andromedae is a double-line spectroscopic binary with an orbital period of 33.085 days. Multiplicity of paticular Be stars can be responsible for some of the spectral variations observed and for the formation of the Be envelope via interaction between the stars. (M.D.). 4 figs., 4 tabs., 44 refs.

34818 (INIS-mf–11450, pp. 121-126) **Rapid spectral variability of massive X-ray binaries and runaways.** Aab, O.E. (AN SSSR, Nizhnij Arkhyz (USSR). Spetsial'naya Astrofizicheskaya Observatoriya). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

During 1976-1986, spectral investigations of the X-ray binary A0535+26=HDE 245770 and the runaway supergiant HD 188209 were carried out with a 6 m telescope. The probable orbit of the Be star HDE 245770 with P=35.1 d is suggested. P. Harmanec has also found a period of 0.187 d in radial velocities. At times of ∼1h H_β emission profiles are variable. A search for pulsar period (P=104 s) in positional and photometric parameters of H_α emission has given no positive results. H_α profiles of the runaway HD 188209 vary from night to night. An orbit of P=18.84 d was found together with probable nonradial pulsations at intervals of ∼1 day. (author). 6 figs., 2 tabs., 29 refs.

34819 (INIS-mf–11450, pp. 127-129) **Duplicity of the Be-star 59 Cyg.** Tarasov, A.E. (AN SSSR, Crimea (USSR). Krymskaya Astrofizicheskaya Observatoriya); Tuominen, I. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

High resolution and high signal to noise ratio CCD observations of 59 Cyg show periodic variations in the radial velocities of the components of the H_α line, i.e., of the absorption component, and of the intensity ratio of the blue and red emission components. The period of 29.14 d suggests duplicity of this star. (author). 2 figs., 1 tab., 5 refs.

34820 (INIS-mf–11450, pp. 133-144) **Theoretical aspects of nonradial pulsations.** Noels, A. (Liege Univ. (Belgium). Inst. d'Astrophysique). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

An introduction to the theory of nonradial modes of oscillations is presented. Evidence of such pulsations can be found in numerous variable stars. Some new results are discussed obtained in stars varying in periods of the order of or more than one hour, namely β

Cep stars, line profile variable stars and WR stars. (author). 11 figs., 72 refs.

34821 (INIS-mf–11450, pp. 145-147) **Some characterization of a nonlinear dynamic in variable stars.** Auvergne, M. (Observatoire de Nice, 06 (France)); Baglin, A. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Ways are sought for determining the number and properties of differential equations describing a simple model of a variable star. The white dwarf PG 1351+489 was chosen for non linear modelling. The trajectory is reconstructed in phase space. The trajectory projections on different planes are presented graphically. (M.D.) 3 figs., 13 refs.

34822 (INIS-mf–11450, pp. 149-152) **Possible explanation of the occurrence of irregularities in pulsating stars.** Goupil, M.J. (Observatoire de Nice, 06 (France)); Buchler, J.R.; Kovacs, G. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

4 models are presented of one of the sequences exhibiting a tangential bifurcation with effective temperature as the variable parameter. The stellar parameters of these models are presented in solar units: 0.4 for mass, 400 for luminosity and X=0.65, Z=0.05 for chemical composition. Effective temperatures for the four different models are 5960 K, 5950 K, 5940 K and 5890 K. The first model is periodical. In the other three, oscillation changes from periodical to chaotic. The importance is again underlined of identifying the possible chaotic nature of the variability of a star as only a small number of revelant independent variables are needed for modelling its dynamic behavior. (M.D.). 4 figs., 15 refs.

34823 (INIS-mf–11450, pp. 153-156) **Discussion of nonlinear interaction models for stellar pulsations.** Verheest, F. (Ghent Rijksuniversiteit (Belgium)). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Recent studies have shown interest in the evolution to steady nonlinear pulsation in stellar models. The simplest description is nonresonant interaction between the fundamental and one of its overtones, if one is only interested in the behavior of a few longlived modes. The generic form of coupled-mode equations is not dependent upon a particular stellar model, although the precise determination of the coupling constants for a given stellar model will ultimately be very involved. Qualitative ideas about the eventual evolution of the mode energies give different scenarios, depending mainly on the nonlinear coupling constants and the linear growth rates, if the latter are both positive. According to one scenario, a double-mode pulsator is possible. It is not necessary that all coupling constants be negative, if only the model is well behaved enough to exclude unbounded solutions. With a linearly stable fundamental and a stable overtone another scenario shows a further possibility for a double-mode pulsator, if one of the cross coupling constants is positive, so that the overtone nonlinearly grows before saturating. Such findings show the need for additional theoretical and numerical modelling and a cautious discussion thereof. (author). 13 refs.

34824 (INIS-mf–11450, pp. 157-160) **Radial pulsations and vibrational instability of massive stars.** Kirbiyik, H. (Middle East Technical Univ., Ankara (Turkey)). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The radial vibrational stabilities have been investigated of some evolutionary models of an initially 60 M_{Sun} star. These models, evolving with mass loss, are in an advanced stage of evolution and burn He in their cores. Calculations were performed for the first and second harmonics as well as for the fundamental mode; some of these models were found to be vibrationally unstable in the fundamental mode. (author). 2 figs., 2 tabs., 33 refs.

34825 (INIS-mf–11450, pp. 161-164) **Smoothing the "smoothing" cubic spline functions.** Andronov, I.L. (2578450DD). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

A new method to investigate periods and their variations is proposed. The phase curve is approximated with the cubic spline function with a fixed number of characteristic points equidistantly distributed phase. Because such a smoothing function depends on the value of the initial epoch it is proposed to use the mean of some spline curves corresponding to various initial epochs for the approximation. The mean quadratic deviation of observations from this best fit curve serves as the test function. The best fit phase deviations of the "season sets" of observations are used to study period variations. (author). 3 figs., 16 refs.

34826 (INIS-mf–11450, pp. 171-175) **Introductory comments to the panel discussion on discrimination between various possible causes of rapid variability in stars.** Harmanec, P. (Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The table summarizes briefly the character of luminosity and spectral variability of several different star categories. The possibilities are demonstrated of using the binary star model for interpreting the rapid variations observed. Three principal causes are explained of rapid variability, namely the binary model, the oblique rotator model and the model of radial and nonradial pulsations. (M.D.) 1 fig., 1 tab., 22 refs.

34827 (INIS-mf–11450, pp. 185-192) **UV-stellar spectra - some basic achievements.** Boyarchuk, A.A. (AN SSSR, Moscow (USSR). Astronomicheskij Sovet). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Observations of stellar spectra in the UV region performed during twenty years are briefly reviewed. Basic achievements have been made in the investigation of interstellar absorption, effective temperatures scale, mass loss, stellar chromospheres and non-stationary stars. (author). 14 figs., 34 refs.

34828 (INIS-mf–11450, pp. 193-198) **Ultraviolet spectra of Algol binaries.** Plavec, M.J. (California Univ., Los Angeles (USA). Dept. of Astronomy). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

A systematic study of the ultraviolet spectra of the Algol-like semidetached binary stars is described. Revision of the traditionally accepted spectral types was found necessary, in most cases toward earlier spectral types. Superionized emission lines seen at total eclipses show interesting differences in intensities. (author). 12 figs., 15 refs.

34829 (INIS-mf–11450, pp. 199) **Far-ultraviolet astronomical observations with the Voyages I and 2 spacecraft.** Polidan, R.S.

(Arizona Univ., Tucson (USA)). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

ULTRAVIOLET SPECTROMETERS/astronomy; ASTRONOMY; VOYAGER SPACE PROBES

34830 (INIS-mf–11450, pp. 201-205) **Ultraviolet spectroscopy of the symbiotic star AG Pegasi.** Chochol, D. (Slovenska Akademia Vied, Skalnate Pleso (Czechoslovakia). Astronomicky Ustav); Komarek, Z.; Vittone, A. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

High resolution UV spectroscopic observations of the binary symbiotic star AG Peg obtained with the International Ultraviolet Explorer satellite in the period 1978-81 are analyzed. The variability of the fluxes and the radial velocities of emission lines according to orbital phase are presented. The observations support a binary model with mass transfer from a hot rotationally unstable subdwarf to a cool M giant. (author). 5 figs., 2 tabs., 20 refs.

34831 (INIS-mf–11450, pp. 207-210) **Stellar winds in A-type supergiants.** Talavera, A. (IUE Observatory, E.S.A., Madrid (Spain)); Gomez de Castro, A.I. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

In a previous study of the A type supergiants observed with International Ultraviolet Explorer, these stars were divided into two groups: the most luminous ones which showed clear evidence of stellar wind and mass loss in their line profiles, and the less luminous ones which did not show these characteristics. New observations of some A supergiants confirm the difference between these two groups. Moreover the less luminous (Ib) A type supergiants do show weak signs of wind and mass loss compared with the most luminous A supergiants and their variation is more spectacular. (author). 3 figs., 3 tabs., 5 refs.

34832 (INIS-mf–11450, pp. 211-214) **Calibrated IUE LWR low resolution spectra of G-type stars.** Malagnini, M.L. (Astronomical Observatory, Trieste (Italy)); Morossi, C.; Valente, T.; Rossi, L. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

An example is presented of the main features of the Atlas of calibrated IUE LWR low resolution spectra of non-supergiant G type stars whose preparation is now in progress. The source of references for the relevant astrophysical data is the Set of Identifications, Measurements and Bibliography for Astronomical Data (SIMBAD), available through the C.D.S. (Strasbourg, France). (author). 1 fig.

34833 (INIS-mf–11450, pp. 223-226) **Is the Vela pulsar associated with the Vela SNR?.** Bignami, G.F. (Consiglio Nazionale delle Ricerche, Milan (Italy)); Caraveo, P.A. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Optical data taken in Jan 87 from La Silla compared with the discovery plate of 1975.2 show no proper motion for PSR 0833-45 while a very significant one was expected if the pulsar originated in the center of the Vela SNR which had so far been associated with it. Data yield a good estimate of the position of the parent SN event, highly assymetric with respect to the present SNR and incompatible with all the Vela "centers" considered so far at various wavelengths. If the PSR/SNR association is to be maintained there must either be an extreme asymmetry of the SNR or both objects are much older than has been believed so far. Both alternatives, however, doubts on the reality of this classic SNR/pulsar association. (author). 2 figs., 27 refs.

34834 (INIS-mf–11450, pp. 227-237) **Search for linear polarization in gamma-ray sources: possible evidence for the Vela pulsar.** Caraveo, P.A. (Consiglio Nazionale delle Ricerche, Milan (Italy)); Bignami, G.F.; Vacanti, G.; Mitrofanov, I. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The azimuthal distribution of planes containing e^+/e^- pairs from high-energy photon materialization is reminiscent, through a quadrupole anisotropy, of the degree and position angle of linear polarization of the incident photons. Data on open pairs in the COS-B spark chamber are used in a search for such an effect in >50 MeV photons from bright sources, such as Vela, Crab, Geminga and a reference galactic plane region in Cygnus. After a description of the method and the related simulations and tests, the analysis of available data shows no anisotropy for the other sources but for the Vela pulsar a low-chance-probability effect is found apparently implying a high (~100%) degree of linear polarization fot the Vela photons. This is discussed in light of the physics of the production mechanisms as well as of their geometry. (author). 8 figs., 1 tab., 24 refs.

34835 (INIS-mf–11450, pp. 239-240) **Search for optical flashes from gamma-ray burst sources.** Hudec, R. (Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav); Borovicka, J.; Peresty, R.; Valnicek, B. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Preliminary results of an extended program of examination of the Ondrejov and Sonneberg plate collections for possible optical counterparts to gamma-ray bursters are presented. One optical image was found on 3 different plates in the same position suggesting it may be related to the 25 B March 1979 gamma-ray burster. Results of both archival and time-correlated searches are discussed for GRBS and for the Perseus Flasher. (author). 13 refs.

34836 (INIS-mf–11450, pp. 251-261) **Binary evolution.** Loore, C. de (Brussels Univ. (Belgium). Inst. d'Astronomie et d'Astrophysique). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Consideration of mass transfer and mass loss processes allows the explanation of the existence of well determined groups of binaries, such as Algols, cataclysmic variables, massive and low-mass X-ray binaries. The characteristics of these groups are briefly outlined, and evolutionary scenarios are discussed. The importance of detailed observations for advances in evolutionary computations are stressed. It is argued that, although the links between the mentioned groups of binaries and their progenitors is rather well known, the situation is completely different if the detailed evolutionary history for a given system is required. (author). 99 refs.

34837 (INIS-mf–11450, pp. 241) **Optical study of X-ray sources and search for optical counterparts of gamma-ray burst sources at Sonneberg Observatory.** Goetz, W. (Akademie der Wissenschaften der DDR, Sonneberg (German Democratic Republic). Zentralinstitut fuer Astrophysik). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. 34838 (INIS-mf–11450, pp. 263-266) **Model atmospheres of binary components.** Hadrava, P. (Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Models of stellar atmospheres are based on the assumption of their plane-parallel or spherical symetry. Violation of this assumption by tides and rotation in close binaries leads to incompatibility of hydrostatic and radiative equilibria. Improvement of model atmospheres in this respect is desirable for simulation of light curves and line profile changes. Moreover, atmospheres of contact components of interacting binaries determine initial conditions of the dynamics of gaseous streams and thereby influence the behavior of the binary system. (author). 5 figs.

34839 (INIS-mf–11450, pp. 267-269) **UBV light curve solutions of TT Her.** Barone, F. (Naples Univ. (Italy). Dipt. di Fisica Nucleare); Mancuso, S.; Milano, L. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

A new method is introduced for solving the light curves of eclipsing binaries based on the Wilson and Devinney (1971) Roche model. An interesting application is made of the method to binary system TT Her. (author). 2 tabs., 14 refs.

34841 (INIS-mf–11450, pp. 273-276) **Spectral investigation of eclipsing binary stars at the stage of mass exchange.** Karetnikov, V.G. (Odesskij Gosudarstvennyj Univ., Odessa (Ukrainian SSR)). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

From spectrograms with dispersion 9-37 A/mm the spectral characteristics of eight eclipsing binary stars were studied showing the effects of mass exchange. Spectral types of stars were determined as were temperatures of excitation, parameters of damping, turbulent velocities, electron number densities, chemical composition of stellar atmospheres and displacements of lines in radiation and absorption, variations in characteristics of lines, as a function of phase. It is shown that appreciable deviations of physical conditions from normal ones were not observed. Schemes-models of studied stellar systems are presented and discussed. (author). 4 figs., 1 tab., 28 refs.

34842 (INIS-mf–11450, pp. 277-279) **TW Cassiopeiae - an Algol-type binary.** Horak, T.B. (Institute for Information and Management of Culture, Bratislava (Czechoslovakia)); Chochol, D. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Photometric light curves of TW Cas do not exhibit any apparent complications. However, careful analysis of the light conditions in the system yielded some contradictory results. An untraditional explanation is suggested. (author). 3 figs., 10 refs.

34843 (INIS-mf–11450, pp. 281-284) **Some methods for solving visual double star orbits with inclination equal to 90 degC.** Abad, A. (Zaragoza Univ. (Spain). Facultad de Ciencias); Elipe, A.; Docobo, J.A. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Two different analytical techniques are given for solving visual double star orbits with inclination equal to 90 degC. The first is based on Docobo's method, and the second is derived by using the Fourier transform for angular distances. Both techniques are applied to the pairs 19192S2442 and 19338S2339. (author). 10 refs.

34844 (INIS-mf–11450, pp. 285-287) **Statistical properties of visual and eclipsing binaries.** Paolicchi, P. (Pisa Univ. (Italy)); Alongi, M.; Fofi, M.; Scardia, M. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The catalogues of visual and eclipsing binaries were analyzed by means of a multivariate statistical method, with the purpose of putting into evidence mutual relations between the observed quantities and clustering properties in multi-dimensional space. Preliminary results of the analysis show several interesting features, and a physical interpretation can be attempted. Nevertheless, observational selection effects play an important role. The way back to understanding the formation and evolutionary properties is extremely difficult and unbiased conclusions about fundamental parameters such as the initial period and mass ratio distributions cannot be obtained. (author). 2 figs., 7 refs.

34845 (INIS-mf–11450, pp. 289-291) **Role of angular momentum transfer to determine the mass ratio of binaries.** Paolicchi, P. (Pisa Univ. (Italy)); Bellesi, M.; Ferrini, F.; Bossi, M. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

A thermodynamical approach to the problem of star formation, presented in a previous paper shows how the characteristics of the outcome depend on the initial conditions (thermal and rotational energies) and on the distribution of the angular momentum among the various parts of the system when the last stages of collapse are assumed as adiabatic. In case of a binary outcome the distribution can be expressed in terms of two parameters roughly corresponding to (a) the spin ratio as function of the mass ratio and (b) the fraction of angular momentum involved in the orbital motion. A systematic exploration of these parameters allows to analyze the different types of results. Some preliminary results are presented assuming that both single and binary outcomes have an equilibrium McLaurin ellipsoidal shape not, however, taking into account the possible formation of a system star+protoplanetary disc. (author). 3 figs., 4 refs.

34847 (INIS-mf–11450, pp. 295-300) **Models of accretion disks in interacting binaries.** Kriz, S. (Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The properties of a standard accretion disk are summarized. Recent models of steady and time dependent disks are discussed. The two-dimensional calculations of accretion flows are examined. (author). 6 figs., 90 refs.

34848 (INIS-mf–11450, pp. 215-219) **Interstellar UV lines.** Harris, A.W. (Rutherford Appleton Lab., Chilton (UK)). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The use of different types of star as background sources for UV absorption line studies of the interstellar medium is reviewed in the context of selected recent investigations of the local interstellar medium, interstellar gas in the galactic disk in general and halo gas. Problems associated with the analysis and interpretation of interstellar absorption lines are highlighted. (author). 3 figs., 30 refs.

34849 (INIS-mf–11450, pp. 301-305) **On the nature of the component stars in Beta Lyrae.** Plavec, M.J. (California Univ., Los Angeles (USA). Dept. of Astronomy). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

An attempt was made to determine the continuous flux distribution separately for the two components of β Lyrae, first from optical spectrophotometric scans, then from ultraviolet spectra. Both components have anomalous flux distribution not matching any standard star. For the primary this is probably due to its Roche lobe filling; the secondary is a disk. (author). 7 figs., 7 refs.

34850 (INIS-mf–11450, pp. 307-310) **On the non-LTE analysis of He I lines in the atmosphere of β Lyr.** Dimitrov, D.L. (Prague Observatory (Czechoslovakia)); Kubat, J. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Some effects are presented of an increasing He abundance in the stellar atmosphere. The run of b-factors with depth for various He abundances is given as are the theoretical equivalent widths of He I and Balmer lines. The appearance of certain shell lines suggests strong influence from a circumstellar envelope. (author). 2 figs., 3 refs.

34851 (INIS-mf–11450, pp. 311-316) **UV spectra of cataclysmic and symbiotic variables.** Selvelli, P.L. (Osservatorio Astronomico di Trieste (Italy)); Viotti, R. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

UV observations of cataclysmic and symbiotic variables with the International Ultraviolet Explorer (IUE) satellite are making fundamental contribution to our knowledge of the nature of these objects. The study of UV resonance and intercombination lines of the most abundant elements was used to diagnose the physical conditions in the disk, circumstellar region, and ejecta. Most objects display a strong UV continuum which is usually attributed to emission from the hot component and/or from the accretion disk. The exceptionally long lifetime of IUE has allowed the study of these objects during different activity phases. In the recurrent nova T Cr B, dramatic UV variations were observed during phases of optical quiescence. The UV study of the recent outbursts of the symbiotic stars AG Dra, Z And, and PU Vul, and that of CH Cyg during the activity phases associated to the formation of a jet were of particular interest. The results of multi-frequency observations (from ratio to x-rays) of some symbiotic variables, and their implications for the models are also discussed. (author). 57 refs.

34852 (INIS-mf–11450, pp. 317-320) **Radiation of the symbiotic star CH Cygni in the period 1982 -July 1984.** Skopal, A. (Slovenska Akademia Vied, Skalnate Pleso (Czechoslovakia). Astronomicky Ustav); Mikolajewski, M.; Biernikowicz, R. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Spectroscopic behavior is described of the symbiotic star CH Cygni in the period of the activity 1982 - July 1984. Observed variations of the intensities of the emission lines and absorption shell lines are discussed. An analysis of these lines supports the idea that a few different regions of radiation exist in CH Cygni. Drop in brightness and development of jets are interpreted as the consequence of an accretion disk evolution. (author). 4 figs., 10 refs.

34853 (INIS-mf–11450, pp. 321-324) **Chemically peculiar binary ω UMa with elliptical orbit.** Hric, L. (Slovenska Akademia Vied, Skalnate Pleso (Czechoslovakia). Astronomicky Ustav). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Results or radial velocity measurements from spectrograms and orbital elements with elliptical orbit computed from them and published data, are presented. It is suggested that light variations could be explained by the eclipsing nature of UMa. Changes of equivalent widths of some lines are interpreted by rotation. (author). 2 figs., 1 tab., 19 refs.

34854 (INIS-mf–11450, pp. 325-329) **On the possibility of taking into account the electromagnetic radiation in the atmospheres of close binary stars.** Kudzej, I. (Humenne People Observatory, Humenne (Czechoslovakia)). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

The calculation procedure of optical characteristics of stellar atmospheres is described for the model of homogeneous partially ionized nonrelativistic isotropic plasma with regard to individual particles collision. Progress is described in the calculation of the refracted electromagnetic radiation of an eclipsed component in the atmosphere of an eclipsing component in the close binary system during total eclipse. The frequencies of the incident electromagnetic wave and the characteristics of the atmosphere layer are indicated in which to real refraction effect in the latter may generate some additional radiation throughout the total eclipse observed in twelve close binary system. (author). 3 figs., 1 tab., 10 refs.

34855 (INIS-mf–11450, pp. 331-332) **Spectroscopic binary XI Cygni.** Onderlicka, B. (Universita J.E. Purkyne, Brno (Czechoslovakia)); Handlirova, D. Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

Radial velocity variations of the K supergiant Xi Cygni are investigated on the basis of published as well as new values from spectrograms in the visual and near infrared region obtained in the years 1977-1984 at the Ondrejov, Shemakha, and Crimea observatories. A circular orbit (P=113.3873 days, Tmax=2430214.33 HJD, K1=3.47 km/s, Vo=-20.0 km/s), seems to confirm the period derived

by Parsons (1983). More accurate data are needed and problem of the long period (Reimers 1981) should be investigated. (author). 1 fig., 1 tab., 12 refs.

34856 (INIS-mf–11450, pp. 333-335) **Binary model of HD 94033 and the physical nature of dwarf cepheid.** Jiang, S.Y. (Beijing Astronomical Observatory). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

HD 94033 was discovered by Przybylski in 1975 as a dwarf cepheid with a pulsation period of 86 min. Between 1981 and 1984, it was observed, many times, and its (O-C) values of the time of maxima exhibiting regular variation with a long period of about 9 years were found. Recent observation, to 1987 still fits this variation very well. It is believed to be due to the light-time effect in a binary system. Some physical characteristics of the dwarf cepheid and δ Scuti stars are discussed. (author). 1 fig., 1 tab., 4 refs.

34857 (INIS-mf–11456, pp. 43-50) **Physical and chemical properties of Halley comet.** Vanysek, V. (Karlova Univ., Prague (Czechoslovakia). Fakulta Matematicko-Fyzikalni). Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

The importance is explained of comets for the indepth study of processes which preceded the development of the solar system. Briefly summed up is known data on the structure and chemical composition of these bodies on the basis of the complex study of Halley comet. (author). 14 refs.

34858 (INS–721) **Solution of strong CP problem in baby universe theory.** Nielsen, H.B.; Ninomiya, Masao. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Nov 1988. 12p. Order Number DE89778087/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The strong CP problem is solved by use of quantum gravity. It is argued that the coherent state parameters α_i describing the effect of wormholes (baby universes) adjust themselves so as to make the strong interactions CP-invariant. There remains though a small CP breaking so that θ-bar is not exactly zero. The main prediction is that we do not need the axion proposed by Peccei and Quinn.

34859 (INS–727) **Baby universes, fine tuning problems. A theory of everything robbing the throne by killing the rivals.** Nielsen, H.B.; Ninomiya, Masao. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Dec 1988. 41p. Order Number DE89778131/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We review the recently popular 'theory of baby universes' put forward by Banks, Coleman and Hawking. We then derive the strong CP breaking coefficient θ-bar to be very small, in a similar manner to the derivation of the cosmological constant being zero. A solution for an old controversy concerning the entropy creation in black holes is also discussed. We finally confront the baby universe theory with random dynamics. We conclude that the theory of baby universes is so successful that the essential features are likely true and might have to go into a right theory even if with some troubles at first.

34860 (LAPP-EXP–88-01) **New ideas on the detection of low energy solar neutrinos.** Gonzalez-Mestres, L.; Perret-Gallix, D. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules. Mar 1988. 7p. (CONF-880173–: 22. Moriond workshop on neutrinos and exotic phenomena in particle physics and astrophysics, Les Arcs, France, 23-30 Jan 1988). Order Number DE89781536/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

^{115}In provides an extremely interesting target for real time solar neutrino detection [1]. Its use was proposed by Raghavan [2], based on the reaction: $\nu(E>128keV) + {}^{115}In \rightarrow {}^{115}Sn^{**} + e^-(E_\nu\text{-}128keV)$ where the $^{115}Sn^{**}$ decays to the ground state of ^{115}Sn with a lifetime of 3.3 μS emitting two γ rays (497 keV and 116 keV)[3]. The delayed coincidence should provide a specific signature of solar neutrino events, sharp enough to overcome background problems related to ^{115}In β radioactivity. Real time detection of solar neutrinos with ^{115}In has been proposed by several techniques [4]. We discuss here the possibility of performing such an experiment, focusing on superconducting granules and special scintillators. The concept of 'localized micro-avalanche' should introduce crucial improvements in superheated superconducting granules (SSG) devices and, eventually, make feasible a 4 ton In solar neutrino experiment. The possible use of dedicated scintillating crystals of In compounds is also dealt with, as feasibility studies are under way.

34861 (LAPP-EXP–88-04) **New ideas on the detection of cold dark matter and magnetic monopoles.** Gonzalez-Mestres, L.; Perret-Gallix, D. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules. May 1988. 9p. (CONF-8803113–: 8. Moriond astrophysics meeting on dark matter, Les Arcs, France, 6-13 Mar 1988). Order Number DE89781539/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

Superheated superconducting granules (SSG) provide several interesting targets for cold dark matter detection, not only through coherent scattering off nuclei, but also for Majorana fermions through spin-spin interactions. The concept of 'localized micro-avalanche' should introduce crucial improvements in SSG devices and, eventually, make feasible a cold dark matter detector based on nucleus recoil. Recent results on the metastability of very large granules also suggest that a SSG large area monopole detector may be feasible, if the theoretically conjectured detection principle (destruction of the superheated state by two injected flux quanta) is checked experimentally. We also consider the use of special crystal scintillators to detect Majorana fermions through inelastic scattering.

34862 (LAPP-TH–206-87) **Cosmions and Stars.** Salati, P.; Bouquet, A.; Kaplan, J. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules. 1987. 9p. (CONF-8707174–: Rencontre on the hidden mass and the dark matter, Annecy, France, 8-10 Jul 1987). Order Number DE89781499/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

Hypothetical particles such as the heavy neutrino, the photino anti γ, or the sneutrino anti ν -generically called cosmions- may solve the so called missing mass problem. If they exist, the cosmions may close the Universe. In addition to their gravitational effect on cosmological scales, the cosmions may also be captured by stars and concentrate in their cores. Since cosmions are able to transport heat outside stellar cores much more efficiently than photons, they may seriously affect the thermodynamics of the inner layers of stars. We have done an exact calculation of the accretion rate of cosmions by main sequence stars and we have studied the suppression of their central convection. We concluded that central convection inside stars between 0.3 solar mass and 1 solar mass is broken in the presence of cosmions.

34863 (LAPP-TH–215-88) **Wimps and stellar structure.** Bouquet, A.; Kaplan, J.; Martin, F.; Salati, P. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules. 1988. 4p. (CONF-8803113–: 8. Moriond astrophysics meeting on dark matter, Les Arcs, France, 6-13 Mar 1988). Order Number DE89781533/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

We present the results of an analytic approximation to compute the effects of WIMPs on stellar structures in a self-consistent way. We examine in particular the case of the Sun and of horizontal branch stars.

34864 (LA-UR–89-1593) **The magnetic topology of the plasmoid flux rope in a MHD simulation of magnetotail reconnection.** Birn, J.; Hesse, M. Los Alamos National Lab., NM (USA). 1989. 17p. Sponsored by DOE/ER;NASA. DOE Contract W-7405-ENG-36. (CONF-8903131–2: Chapman conference on the physics of magnetic flux ropes, Hamilton, Bermuda, 27-31 Mar 1989). Order Number DE89012621/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

On the basis of a three-dimensional MHD simulation we discuss the magnetic topology of a plasmoid that forms by a localized reconnection process in a magnetotail configuration including a net dawn-dusk magnetic field component B_{yN}. As a consequence of b_{yN}

≠ 0 the plasmid gets a helical flux rope structure rather than an isolated island or bubble structure. Initially all field lines of the plasmid flux rope remain connected with the Earth, while at later times a gradually increasing amount of flux tubes becomes separated, connecting to either the distant boundary or to the flank boundaries. In this stage topologically different flux tubes become tangled and wrapped around each other, consistent with predictions on the basis of ad-hoc plasmid models. 10 refs., 8 figs.

34865 (PB–89-139943/XAB) **Solar-Geophysical Data Number 531, November 1988. Part 1 (prompt reports). Data for October, September 1988, and late data.** Coffey, H.E.; McKinnon, J.A. National Geophysical Data Center, Boulder, CO (USA). Nov 1988. 150p. (SGD–531-PT-1). Available from NTIS, PC A07/MF A01.

See also Part 2, PB–89-139950, and PB–89-109904.

Contents include: detailed index for 1988: data for October 1988 (IUDS alert periods (advance and worldwide), solar-activity indices, solar flares, solar radio emission, Stanford mean solar magnetic field); data for september 1988 (solar-active regions, sudden ionospheric disturbances, solar radio spectral observations, cosmic-ray measurements by neutron monitor, geomagnetic indices, radio-propagation indices); late data (Pioneer XII interplanetary magnetic field magnitudes december 1987, cosmic-ray measurements by neutron monitor July-August 1988, radio-propagation indices August 1988).

34866 (RRK–88-33) **Cosmic microwave anisotropies and large scale velocity fields in isocurvature hot dark matter models.** Sugiyama, Naoshi; Sasaki, Misao; Tomita, Kenji. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. Nov 1988. 15p. Order Number DE89778050/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We investigate the evolution of isocurvature density perturbations in a universe dominated by hot dark matter (HDM), and evaluate anisotropies in the cosmic microwave background and large scale peculiar velocity fields. We find isocurvature HDM models are more viable than adiabatic HDM models in that the former can account for relatively large velocity fields on large scales while keeping the cosmic microwave background anisotropies below the observational upper limits as compared to the latter. However isocurvature HDM models would still have difficulties if the actual velocity fields on scales > approx $50h^{-1}$Mpc were confirmed to be substantially greater than ~400km/sec.

34867 (RRK–88-35) **Stochastic approach to chaotic inflation and the distribution of universes.** Nambu, Yasusada; Sasaki, Misao. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. Nov 1988. 15p. Order Number DE89778051/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Using the Fokker-Planck equation derived from stochastic approach to inflation, we investigate the dynamics and global structure of the chaotic inflationary universe. We take full account of the difference in the physical volume of each horizon size region in the Fokker-Planck equation. We find that the modified Fokker-Planck equation admits a normalizable stationary solution, contrary to the original equation. We evaluate the approximate form of the solution and argue that it describes both the distribution of quantum universes out of which our universes was born and that of large classical (grow-up) universes like ours. In particular, for λphi^4-theory, the distribution of classical universes has a power-law spectrum. Thus there appears no characteristic scale and the distribution of classical universes has a fractal structure.

34868 (RRK–88-36) **Gravitational lens effect on anisotropies of cosmic microwave background.** Sasaki, Misao. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. Nov 1988. 10p. Order Number DE89778049/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

We discuss the general feature of gravitational lens effect on anisotropies of cosmic microwave background radiation. Contrary to previous studies, we find that small angle anisotropies can be enhanced if the characteristic angular scale associated with the gravitational lens effect is comparable to the correlation angle of the cosmic microwave anisotropy. That this conclusion is physically reasonable can be rather easily understood.

34869 (TRITA-EPP–88-04) **Astrophysics in a nutshell from the telescope to the sputnik.** Alfven, H.; Faelthammar, C.G. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics. Mar 1988. 18p. Order Number DE89617764/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Progress in astrophysics - as well as in many other sciences - is not only due to new ideas but also to the introduction of new methods of observation. The 'Copernican revolution' was more due to the introduction of the telescope than to the heliocentric model which had been invented 2000 years earlier. Further, the decisive importance of electromagnetic effects in astrophysics originated from Langmuir's invention of the plasma probe and from Birkeland's terrella experiment and his observations of plasma in space (aurora). A similar revolution has now been introduced by space research which has made possible in situ measurements in cosmic plasmas and has opened the X-ray and γ-ray regions to observation. The result is a drastic revision of essential parts of astrophysics (including cosmology) leading to the 'Plasma Universe' model. (authors).

34870 (TRITA-EPP–88-07) **Has the universe an origin?.** Alfven, H. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics. Jul 1988. 13p. Order Number DE89617765/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In the cosmological discussion it has during the last few decades been taken for granted that the Lemaitre-Gamov cosmology - usually referred to as the Big Band is the only acceptable one. The Universe must have been created ex nihilo in a singular point. Criticism of the Big Bang hypothesis is usually answered by: And how do you create the Universe? Most people seem to be so ignorant of the history of science and philosophy that they do not remember that most scolars have considered the Universe to be 'ungenerated and indestructable'. The only exceptions seem to be some Christian theologicans in the first centuries AD and their school, to which Lemaitre and Gamov and their Big Bang hypothesis belongs. It is demonstrated that there are no observational facts which unquestionable speak in favour of the Big Bang hypothesis. The 'Sputnik revolution' makes it necessary to revise important parts of astrophysics, and is also fatal to the Big Bang. It seems necessary to turn back to the view of an 'ungenerated' (and indestructable) Universe.

34871 (UCRL–101129) **Use of the EGRET [Energetic Gamma-Ray Experiment Telescope] instrument in studies of the origin of the cosmic radiation.** Dermer, C.D. Lawrence Livermore National Lab., CA (USA). 19 May 1989. 7p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-8904216–4: Gamma ray observatory science workshop, Greenbelt, Maryland, USA, 10-12 Apr 1989). Order Number DE89013785/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The Energetic Gamma-Ray Telescope (EGRET) onboard the Gamma Ray Observatory will provide the first detailed map of the galaxy showing both intensity and spectral variations at >20 MeV gamma-ray energies. Possible reasons for gamma-ray spectral variations are considered under the hypothesis that point sources of cosmic rays exist. We show how the spectrum and intensity of cosmic rays in the vicinity of such objects can depend on propagation effects, injection conditions and model geometry in a number of special cases. 21 refs., 4 figs.

34872 **Limits on reheating in inflationary cosmology models.** Barr, S. (Department of Physics, Bartol Research Institute, University ofp Delaware, Newark, Delaware 19716(US)); Segre, G. *Physical Review Letters (USA),* 62(24): 2781-2784 (12 Jun 1989).

We show that the decay of a scalar particle into ordinary matter particles is restricted by the mass and by the vacuum expectation value of the scalar field. If this scalar field is responsible for inflation, difficulties with reheating the Universe may ensue. For the case of induced-gravity models, where the magnitude of the vacuum expectation value is of order the Planck mass, the scalar field decays predominantly into gravitons and adequate reheating does not occur in the usual slow rollover scenario. We also discuss the effect of the energy stored in the scalar-field oscillations.

34873 **Neutrino oscillations and uncertainty in the solar model.** Dearborn, D. S. (Institute of Geophysics and Planetary Physics, University of California, Lawrence Livermore National Laboratory, Livermore, California 94550(US)); Fuller, G. M. *Physical*

Review [Section] D: Particles and Fields (USA), 39(12): 3543-3548 (15 Jun 1989). DOE Contract W-7405-ENG-48.

The Mikheyev-Smirnov-Wolfenstein (MSW) resonant neutrino oscillationmechanism is investigated for the Sun using a detailed numerical solar modeland a modified version of the Parke-Walker technique for following the neutrinophases through the oscillation resonance. We present overall solar-neutrinospectra and the associated expected neutrino count rates for the^{37}Cl, ^{71}Ga, and Kamiokande detectors for rangesof masses and vacuum mixing angles for two neutrino species. We alsoinvestigate the effects of uncertainties in the solar model. In particular, weexamine the effect of opacity changes on the expected solar-neutrino spectrumand resulting parameter space for the MSW mechanism. We find that plausibleuncertainties in the standard solar model, and in particular the opacity,translate into significant expansion in the constraints on neutrino masses andvacuum mixing angles from neutrino experiments. It is shown, however, thatforthcoming results from the Kamiokande solar-neutrino experiment could putstringent constraints on even the expanded MSW parameter space.

34874 Formation of topological defects in phase transitions. Hodges, H. M. (Physics Department, The University of Chicago, Chicago, Illinois 60637(US)). *Physical Review [Section] D: Particles and Fields (USA),* 39(12): 3557-3567 (15 Jun 1989).

We argue, and find through numerical work, that the results of nondynamicalMonte Carlo computer simulations cannot be applied to describe the formation oftopological defects when the correlation length at the Ginzburg temperature issignificantly smaller than the horizon size, the case which was originallyconsidered. To test the current hypothesis that "infinite" strings atformation are essentially described by Brownian walks of size the correlationlength at the Ginzburg temperature, we examine equilibrated fields at theGinzburg temperature. We find that no "infinite" structure exists inequilibrium for reasonable definitions of the Ginzburg temperature, and thathorizons must be included in a proper treatment. A phase transition, fromsmall-scale to large-scale string or domain-wall structure, is found to occurvery close to the Ginzburg temperature, in agreement with recent work. We alsoinvestigate the formation process of domain walls and global strings throughthe breaking of initially ordered states. To mimic conditions in the earlyUniverse, cooling times are chosen so that horizons exist in our sample volumewhen topological structure formation occurs. The classical fields are evolvedin real time by the numerical solution of Langevin equations of motion on athree-dimensional spatial lattice. Our results indicate that it is possible formost of the string energy to be in small loops, rather than in long strings, atformation.

34875 Quantum probability distributions in the early Universe. IV. Stochastic dynamics in de Sitter space. Graziani, F. R. (School of Physics and Astronomy, University of Minnesota, Minneapolis, Minnesota 55455(US)). *Physical Review [Section] D: Particles and Fields (USA),* 39(12): 3630-3641 (15 Jun 1989).

Using the Smoluchowski equation, we investigate the stochastic evolution ofthe horizon-averaged or coarse-grained scalar field (inflaton) in a pure deSitter background. We clarify the effect quantum fluctuations have on theclassical dynamics of relaxation. We consider two types of nonlinear potentials[$V(\phi)=(1/2\gamma\phi^2+ 1) /4\ g\phi^4$ and $V(\phi)=-(1/2\lambda\phi^2+ 1) /4\ g\phi^4$] with inflaton probability distributions initially displaced from equilibrium. In the former case quantum fluctuations have only a minor effect on the classical inflaton dynamics. In the latter case the situation is different. Quantum fluctuations play a crucial part in the early-time behavior of the inflaton probability distribution. Using techniques borrowed from nonequilibrium statistical mechanics, we show how [for $V(\phi)=-(1/2\lambda\phi^2+ 1) /4\ g\phi^4$] macroscopic (classical) order originates from stochastic (quantum) initial conditions. We estimate the time scale at which this transition takes place. The work here extends and validates the conclusion of Guth and Pi that the long-time behavior of $f(\phi;t)$ can be described by a classical probability distribution.

The status of knowledge concerning energetic electron precipitation at the South Atlantic Magnetic Anomaly (SAMA) is presented. The main purpose is to place recent results in context with the long standing problems about energetic electron precipitation at the SAMA region. A synopsis of results achieved in the last two decades related to several physical mechanisms responsible for precipitating energetic electrons are also presented. The major uncertainties in the understanding of the energetic electron precipitation at the SAMA include: (1) temporal and spatial precipitation changes from magnetically quiet to disturbed periods; and (2) the role of wave induced precipitation process.

34878 (ACIESP–60(v.3), pp. 209-212) **Measurements of VLF-particle interactions at the South Atlantic Magnetic Anomaly on board a Brazilian geophysical satellite.** Gonzalez, W.D. Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

A summary of the proposal for measurements of VLF wave-particle interactions, expected to occur at the South Atlantic magnetic anomaly, to be carried out on board a Brazilian geophysical satellite, will be presented. The expected domain of such interactions refers to electromagnetic VLF waves and to energetic-relativistic inner belt electrons, pitch angle diffusing into the atmosphere via cyclotron resonances. The detectors involve a triaxial search coil magnetometer and a surface barrier silicon telescope. A modified and preliminary version of this proposed experiment will be carried out on board long duration balloon flights, well before the beginning of the intended satellite measurements. For the ballon flights the particle detector will be replaced by an x-ray detector, which can also monitor parameters related to the electron precipitation.

Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

The ionosphere, at lower regions, behaves differently during sunrise and sunset times compared to the others day times. The E layer which is well formed during the day, almost disappears at these times and the effect of solar presence or absence at these altitudes is well evidenced immediately after sunrise or sunset. In the South Atlantic anomaly region, the energetic particle precipitaton complicates the phenomenon comprehension in these times. The carried out studies on presunrise and presunset absorption effects in the period from May to July, 1986, in order to understand the ionization processes in the lower ionospheric regions at these times. (M.C.K.).

(Instituto de Pesquisas Espaciais, Sao Jose dos Campos, SP (Brazil)); Clemesha, B.R.; Batista, P.P.; Sahai, Y. Academia de Ciencias do Estado de Sao Paulo, SP (Brazil). 1988. (CONF-8808156–: 6. Japan-Brazil symposium on science and technology, Sao Paulo, Brazil, 10-12 Aug 1988). In *Proceedings of the 6. Japan-Brazil Symposium on Science and Technology.* Order Number DE89612371/JAW. Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

One of the most useful techniques to observe neutral atmosphere temperature in the mesopause region, between 80 to 100 km, is to measure the molecular rotational temperature of the oxygen emission, O_2 (0,0) atmospheric band at 762.0 nm and the OH vibration-rotation band, for example OH (8,3) band at 732.0 nm. Ground based observations in these emissions have been carried out from various stations around the globe and their nocturnal and seasonal variations have been studied. Photometers on board a rocket, measuring in situ the emission spectra makes it possible to observe the height profile of the emissons and their rotational temperatures. The scientific background for carrying out these measurements from an equatorial and/or mid-latitude region and instrumentation to be used will be discussed.

34885 (IC–88/399) **Relationship between the current and the width of the POGO electrojet during the solstices.** Ozoemena, P.C.; Onwumechili, C.A. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 20p. Order Number DE89619725/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A detailed study of the POGO data, obtained in the northern winter and summer seasons, all over the earth, has elucidated the relationship between the width and current intensity of equatorial electrojet. By employing regression and correlation analysis to these data, we find that, the width and current intensity of the equatorial electrojet are inversely correlated in such a manner that constriction in the width occurs whenever the current is highly intense. This therefore, demonstrates qualitatively that the solstitial electrojet is (a) wider in the morning hours when it is less intense (b) narrower around local noon when it is most intense and (c) broader again in the afternoon and evening hours when it is decaying. For this inverse relationship, we present an argument in favour of 'channelling' arising from differences in conductivities at various local times, winds and pinch effects among other factors. (author). 13 refs, 7 figs, 2 tabs.

Streaming of plasma along field lines after an impact - even without any energy supply.** Woyk-Chvojkova, E. (Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Astronomicky Ustav). Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav. 1987. (CONF-8708269–: 10. European regional astronomy meeting of the IAU, Prague, Czechoslovakia, 24-29 Aug 1987). In *Astrophysics. Proceedings. Vol. 5.* Order Number DE89617701/JAW. Available from NTIS (US Sales Only), PC A15/MF A01 - OSTI; INIS.

A particle path formula was derived for charged particles spiralling in extended magnetic and gravity fields. In part I, a stationary dipole-like magnetic field was considered in which particles of the highest energies slowly but continuously diffuse upwards and fill the tops of highly extended field lines, while underescape charged particles diffuse downwards disengage from its top-trapped high-energy part. Under the impact which squeezes the magnetic tubes, field strength H decreases less than before and in this region even grows with altitude r. Consequently the pitch angle of all downwards spiralling particles increases less and vice versa: The plasma shifts

downwards, it streams downwards even without having gained any energy surplus. The bottom of the Van Allen belt shifts downwards and rises as soon as the impact has ceased. This explains the occurrence and disappearence of aurorae. When the H(r)-variation changes so that H=const is passed without gravity the magnetic mirror will immediately switch from the bottom on the top. In the gravity field a "hole effect" gradually reverses the path - between H=const and $H \sim r^{-1}$. Phenomena occurring apparently do not comply with some basic physical laws. (author). 6 figs.

34889 (TRITA-EPP–88-02) **Influence of conductivities consistent with field-aligned currents on high-latitude convection patterns.** Blomberg, L.G.; Marklund, G.T. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics. Feb 1988. 19p. Order Number DE89617990/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The influence on the high-latitude ionospheric convection of conductivities associated with upward field-aligned currents is investigated. Potential patterns are calculated from a given distribution of field-aligned currents and a conductivity model. The resulting patterns are shown to be modified considerably by including a coupling term between the conductivity and the field-aligned current in the conductivity model. The clockwise rotation of the entire potential pattern is reduced when the conductivity enhancement coincides with the regions of upward field-aligned current. Also, the electric field within these regions turns out to be rather insensitive to change in the magnitude of the current. In regions of downward current or when the current-dependent conductivity is excluded there is on the other hand an almost linear relationship between current and electric field. Although the particles producing the conductivity enhancement may not be the same as those carrying the major part of the field-aligned current it is clear from observations that there is a positive correlation between upward current conductivity. Therefore, the simple relationship used in this study is believed to reflect rather well the principal features of the current-conductivity coupling, which is of im- portance to the modelling of ionospheric electrodynamics. (With 26 refs.) (authors).

34890 (TRITA-EPP–88-03) **Numerical model of ionospheric convection derived from field-aligned current and the corresponding conductivity.** Blomberg, L.G.; Marklund, G.T. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics. Mar 1988. 21p. Order Number DE89617991/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A numerical model for the calculation of ionospheric convection patterns from given distributions of field-aligned current and ionospheric conductivity is described. The model includes a coupling between the conductivity and the field-aligned current, so that the conductivity peaks in regions of upward current, as usually observed by measurements. The model is very flexible in that the input distributions, the field-aligned current and the conductivity, have been parameterized in a convenient way. From the primary model output, namely the ionospheric electrostatic potential (or convection) in the corotating frame, a number of other quantities can be computed. These include: the potential in a Sun-fixed frame, the distribution of ionospheric (horizontal) current, and the Joule heating in the ionosphere. This model has been used together with input data inferred from satellite measurements to calculate the high-latitude potential distribution prevailing during a particular event. The model potential variation along the satellite orbit was found to be in excellent agreement with the measured electric field. The model has also been used to study some fundamental properties of the electrodynamics of the high-latitude ionosphere. The results of these different applications of the model have been published separately. (With 23 refs.) (authors).

34891 Ion conics and counterstreaming electrons generated by lower hybrid waves in the Earth's magnetosphere. Chang, T. (Massachusetts Institute of Technology Center for Space Research, Cambridge, MA (US)); Crew, G.B.; Retterer, J.M.; Jasperse, J.R. *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA),* 17(2): 186-195 (Apr 1989).

The exotic phenomenon of energetic ion-conic and counterstreaming electron formation by lower hybrid waves along the discrete auroral field lines in the Earth's magnetosphere is considered. Mean particle calculations, plasma simulations, and analytical treatments of the acceleration processes are described.

34892 A new model for auroral breakup during substorms. Rothwell, P.L. (Air Force Geophysics Lab., Hanscom Air Force Base, Bedford, MA (US)); Block, L.P.; Falthammar, C.G.; Silevitch, M.B. *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA),* 17(2): 150-157 (Apr 1989).

A model for substorm breakup is developed, based on the relaxation of stretched (closed) dipolar field lines, and the formation of an incipient current wedge within a single arc structure. It is argued that the establishment of a coupled current structure within a single arc leads to a quasi-stable system; i.e., the pre-breakup regime. Perturbation of the pre-breakup structure leads to an instability criterion. It is found, consistent with observations, that narrower auroral arcs at lower L shells undergo the most explosive poleward expansion. According to this model, the precise location at which breakup occurs depends on the O^+ density in the plasma sheet, the level of magnetic activity (K_p), and the intensity of the substorm westward electrojet in the ionosphere. An enhancement of any of these features will cause breakup to occur at lower L shells. Comparison of our model with the Heppner-Maynard polar-cap potential model indicates that breakup is restricted to the west of the Harang discontinuity consistent with recent observations from the Viking satellite.

34893 Numerical simulation of coastal flows when solar radiation is blocked by smoke. Molenkamp, C. R. (Atmospheric and Geophysical Sciences Division, Lawrence Livermore National Laboratory, University of California, Livermore, California(US)). *Journal of Applied Meteorology (USA),* 28(5): 361-381 (May 1989). DOE Contract W-7405-ENG-48.

Smoke from fires ignited in a large-scale nuclear exchange would greatly reduce the flux of solar radiation at the ground and lead to rapid cooling over continental regions. Because of its large heat capacity, the ocean would cool more slowly so that a thermal gradient would tend to develop at the continental coastlines. In order to investigate the hypothesis that these thermal gradients would lead to zones of persistent precipitation along the coastlines, a modified version of the Colorado State University Mesoscale Model has been used to simulate the evolution of atmospheric flows for both West and East coasts assuming a moderate westerly synoptic flow of 5 m s^{-1}. In both cases a layer of fog forms over the ground, effectively limiting the rate of cooling over land. This fog layer grows in height as the atmosphere aloft cools, forming a stratus cloud. Moisture from the ocean surface, mixed vertically into a radiatively cooled atmosphere, causes a cloud layer to form over the ocean as well. With both land and sea covered by clouds, there is no differential cooling, anomalous flow fields, or enhanced precipitation. These simulations also demonstrate the important role of moisture in moderating the initial rate of atmospheric cooling when solar radiation is blocked by smoke.

34894 (AD-A–201328/2/XAB) **Photodissociation of triatomic hydrogen.** Cosby, P.; Helm, H. SRI International, Menlo Park, CA (USA). 18 Jul 1988. 5p. Available from NTIS, PC A02/MF A01.

Pub. in Physical Review Letters, Vol. 61, No. 3, 298-301(18 Jul 1988).

The unstable ground-state potential surface of triatomic hydrogen has served as prototype for the development of bimolecular reaction-rate theory, and is still largely territory only of theoretical chemistry. While the ground electronic state of H_3 is dissociative, electronically excited states of this molecule are tightly bound. These states are described in terms of a Rydberg electron bound by the field of the stable, triangular $H_3(+)$ core. The authors report the first observation of photodissociation of H_3. Predissociation of the optically prepared 3s(2) A1 and 3d(2)E states by the X(2)E' ground state is detected by monitoring of the production of vibrationally excited diatomic hydrogen molecules and H atoms. Product excitation is found to be highly dependent on H_3 electronic and nuclear configuration.

34895 (CONF-890586–1) **Resonantly enhanced multiphoton ionization of molecules.** Dehmer, P.M.; Dehmer, J.L.; Pratt, S.T.; Tomkins, F.S. Argonne National Lab., IL (USA). 1989. 5p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. From Workshop on advanced laser technology for chemical measurement; Argonne, Illinois, USA; 9-11 May 1989. Order Number DE89014634/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We present a brief overview of recent work then concentrate on new studies of the mechanisms of energy and angular momentum exchange among electronic and nuclear modes during autoionization of quasi- bound Rydberg states of small molecules. 4 refs., 2 figs.

34896 (CONF-890703–7) **Beam emittance measurements of ORNL negative ion sources.** Tsai, C.C.; Akerman, M.A.; Becraft, W.R.; Dagenhart, W.K.; Haselton, H.H.; Schechter, D.E.; Stirling, W.L.; Whealton, J.H.; Donaghy, J.J. Oak Ridge National Lab., TN (USA). 1989. 16p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From International conference on ion sources; Berkeley, California, USA; 9-15 Jul 1989. Order Number DE89014774/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The emittances of hydrogen and deuterium negative ion beams produced by volume ion sources have been measured in a transverse plane normal to the beam trajectory. The extraction voltage was varied from 10 to 40 kV, and the transverse magnetic field in the Penning discharges was varied from 0.1 to 0.2 T. Measurements were made on beams with current densities up to 60 mA/cm^2 at Oak Ridge National Laboratory with an emittance scanner originally developed at Los Alamos National Laboratory. The beam profile at the scanner can be used to improve the accuracy of the emittance measurements. Other factors affecting emittance measurements are discussed. This analysis may be applicable to other ion sources. 6 figs.

34897 (DOE/ER/13243–5) **Multilevel relaxation phenomena and population trapping: [Progress report], July 1, 1988–June 30, 1989.** Saint John Fisher Coll., Rochester, NY (USA). Apr 1989. 5p. Sponsored by DOE Energy Research. DOE Contract FG02-84ER13243. Order Number DE89013114/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This report summarizes the new results obtained in the past nine months from July 1, 1988, and the research work in progress. Our work deals with various aspects of multiphoton absorptions and radiations when a multilevel quantum system interacts with an intense laser field. We shall report in particular some exciting new developments on what we called the "counter-intuitive" way of exciting a three-level system, and a new theoretical prediction giving the conditions for lossless propagation of simultaneous solitary optical pulses through an atomic medium. 12 refs.

34898 (DOE/ER/13394–4) **Studies of autoionizing states relevant to dielectronic recombination: Progress report, July 1, 1988–April 1, 1989.** Gallagher, T.F. Virginia Univ., Charlottesville, VA (USA). Dept. of Physics. Apr 1989. 4p. Sponsored by DOE Energy Research. DOE Contract FG05-85ER13394. Order Number DE89013022/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

During the period July 1, 1988 to April 1, 1989 we have been working on four projects. We have completed an analysis of autoionization rates of Ba 6pnk states in time varying microwave fields, carried out experiments on the Ba 6pnf states, analyzed our spectra of the Ba 5dnd states, and begun the study of the Mg 3pnl states. These projects are described in this paper.

34899 (DOE/NV/10571–T2) **Measurement of the time-dependent distribution of ionization states in an argon plasma from a Mach-10 jet: Final report.** Filbert, P.C.; Fisher, T.R.; Kohler, D.; Perez, J.D.; Walton, R.A.; Dahlbacka, G. Lockheed Missiles and Space Co., Inc., Palo Alto, CA (USA). Research and Development Div. 28 Sep 1988. 49p. Sponsored by DOE Defense Programs. DOE Contract AC08-86NV10571. Order Number DE89014699/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

Results from experiments designed to measure the time-dependent distribution of ionization states in an argon plasma produced by laser irradiation of a high-Mach-number gas jet are presented. The gas valve/nozzle target system was designed for nominal Mach-10 performance and produced a jet of neutral gas several centimeters long from a nozzle exit of 1.5 mm diameter. The jet was irradiated at a position having an approximate atomic density of 1 x 10^{18}/cm^3 by 500 J of 351-nm laser light with a pulse width of 600 ps at the NLUF's OMEGA laser facility. It was found necessary to pre-ionize the gas in order to couple-in sufficient laser energy to produce a plasma. An argon plasma was then created that was dominated by charge states of Ar VIII through Ar XI. Comparison with a theoretical model which solved the time-dependent rate equations indicates that a plasma temperature of approximately 70 eV was achieved. A subsequent development effort carried out at the Lockheed Palo Alto Research Laboratory (LPARL) to improve the gas jet target system is also described. This work indicated that by increasing the pressure in the valve by a factor of 5 increased the coupling to the laser and produced significantly larger signals and higher plasma temperatures. 7 refs., 21 figs., 1 tab.

34900 (GANIL-P–88-05) **Ambiguities in the estimate of hard photon production in intermediate energy nucleus-nucleus collisions.** Bonasera, A.; Gregoire, C. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). 1988. 24p. Order Number DE89781541/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We point out some ambiguities in numerical simulations of intermediate energy heavy ion collisions, as far as hard photon production is concerned. This emission process involves edges of available phase space; therefore it is quite sensitive to the particular approximate solution of the Landau-Vlasov (or VUU, BUU) equation which is considered for simulating the reaction. We have analyzed convergency of solutions as a function of the numerical accuracy defined by the number of test-pseudoparticles, the time step and the approximations for estimating the collision integral. We show also what is the role of the Coulomb and mean field-interaction and of the nuclear surface upon the hard photon component of the gamma spectra. A comparison with some available experimental data shows that the gamma yields calculated from our approximate solutions are smaller than the data for $E_\gamma > 100$ MeV.

34901 (GANIL-T–87-03) **Impact Parameter Dependent light Particle Correlations for ^{40}Ar induced reactions on ^{197}Au at E/A=60 MeV.** Kyanowski, A. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). May 1987. 107p. Order Number DE89781504/JAW. Available from NTIS (US Sales Only), PC A06/MF A01.

The determination of the space-time extent of a particle-emitting system with the help of two-particle correlations is based on the Hanbury-Brown and Twiss effect and its application to nuclear physics for protons or composite charged particles. On the basis of these models, light charged particle correlations at small relative momentum were measured for ^{40}Ar induced reactions on ^{197}Au at E/A=60MeV. The temperature of the emitting system was determined from the population ratios of particle-unbound states of composite systems. The space-time extent deduced from the d-α correlation function is 5.8 fm, which is larger than the root mean square radius of the composite system of all incoming nucleons at normal nuclear density if one assumes a negligeable lifetime of the system. Simulation indicates a broad distribution of the observed multiplicity over the different impact parameters, but the extreme cases of peripheral and central collisions can be separated. Peripheral collisions give rise to enhanced correlations, whereas the correlation function is strongly reduced for central collisions. Supposing that the spatial extent is independent of the impact parameter (except for very peripheral collisions) the observed variation of the correlation function could indicate a variation of the emission time for light particles rather than a spatial evolution. The temperature, determined equally after an event-type selection with the observed multiplicity, shows no variation with the impact parameter. This could indicate that a limiting temperature is reached at a value at which the emission of particles is faster than the temporal development of the temperature.

34902 (IC–88/227) **On superfluorescent generation of coherent radiation in a paramagnet.** Turaev, M.T.; Shumovsky, A.S. International Centre for Theoretical Physics, Trieste (Italy). Aug

1988. 12p. Order Number DE89618514/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

An exact definition is given of a superradiation intensity for a free system and for a system in cavity. The superradiant generation of the Zeeman transitions in proton paramagnet is described. (author). 7 refs, 2 figs.

34903 (IC–88/425) **Resonance fluorescence of atom in a strong magnetic field.** Peng Jinsheng. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 11p. Order Number DE89617587/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A theory of resonance fluorescence of atom in a strong magnetic field is presented. A general expression for resonance fluorescence distribution is obtained, and the relation between the intensity of magnetic field and the fluorescence spectra is also analyzed. (author). 13 refs, 2 figs.

Jr.; Worth, G.T.; Stutzin, G.C.; Young, A.T.; Schlachter, A.S.; Leung, K.N.; Kunkel, W.B. Los Alamos National Lab., NM (USA). 1989. 17p. Sponsored by DOD;DOE/ER. DOE Contract W-7405-ENG-36;AC03-76SF00098. (CONF-890703–1: International conference on ion sources, Berkeley, California, USA, 9-15 Jul 1989). Order Number DE89013463/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Using vacuum ultraviolet laser-absorption spectroscopy, the H° density and temperature are measured as a function of discharge current and H_2-gas flow in both the plasma column and the drift region between the plasma column and the emitter in the 4X source. For typical source operating parameters, the atom temperature is 1.5 eV in the plasma column and 0.6 eV in the drift region; the atom density, 7×10^{14} cm^{-3} in the plasma column and 4×10^{14} cm^{-3} in the drift region. Separate measurements give 2% for the ratio of H_2 molecules in the first vibrational level to the total H_2 density. 8 refs., 6 figs., 1 tab.

34907 (LBL–25423) **The atomic physics facility at the LBL ECR Source.** Clark, D.J.; Lyneis, C.M.; Prior, M.H.; Stokstad, R.G.; Chantrenne, S.; Egan, P.O. Lawrence Berkeley Lab., CA (USA). Apr 1989. 8p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-881151–63: International conference on the application of accelerators in research and industry, Denton, Texas, USA, 7-9 Nov 1988). Order Number DE89012976/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A low energy beam line facility for atomic and surface physics research has been added to the injection line of the ECR source at the LBL 88-Inch Cyclotron. Beams throughout the periodic table can be delivered to 3 beam line stations at energies up to 15 Q keV. Experiments using this facility include forbidden line emission from the ion beam, ion-atom collisions, merged electron-ion beams and sputtering by highly charged ions. 9 refs., 4 figs.

34908 (LBL–26259) **A preliminary report on x-ray photoabsorption coefficients and atomic scattering factors for 92 elements in the 10–10,000 eV region.** Henke, B.L.; Davis, J.C.; Gullikson, E.M.; Perera, R.C.C. Lawrence Berkeley Lab., CA (USA). Nov 1988. 373p. Sponsored by DOD;DOE/ER. DOE Contract AC03-76SF00098. F49620-87-K-0001. Order Number DE89013392/JAW. Available from NTIS, PC A14/MF A01 - OSTI; GPO Dep.

Based on currently available photoabsorption measurements and recent theoretical calculations by Doolen and Liberman, a revised best-fit determination of the photoabsorption cross sections is presented here for the elements Z = 1 to Z = 92 in the 10–10,000 eV range. The photoabsorption data used include those described in the Lockheed and DOE listings of research abstracts for the past ten years and those which have been recently added to the comprehensive NBS Measured data Base. The best-fit curves are compared with both the compilation of measurements and the calculations by Doolen and Liberman. Using the photoabsorption curves, the atomic scattering factors have been calculated for the energy range 50–10,000 eV and are also presented in this report.

34909 (LBL–26900) **Multiple-electron processes in fast ion-atom collisions.** Schlachter, A.S. Lawrence Berkeley Lab., CA (USA). Mar 1989. 29p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-890387–6: Workshop on highly charged ions: new physics and advanced techniques, Berkeley, California, USA, 13-15 Mar 1989). Order Number DE89012982/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Research in atomic physics at the Lawrence Berkeley Laboratory Super-HILAC and Bevalac accelerators on multiple-electron processes in fast ion-atom collisions is described. Experiments have studied various aspects of the charge-transfer, ionization, and excitation processes. Examples of processes in which electron correlation plays a role are resonant transfer and excitation and Auger-electron emission. Processes in which electron behavior can generally be described as uncorrelated include ionization and charge transfer in high-energy ion-atom collisions. A variety of experiments and results for energies from 1 MeV/u to 420 MeV/u are presented. 20 refs., 15 figs.

34910 (LYCEN–87-47) **Studies of non-nuclear physics at Ganil.** Remillieux, J. Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire. Oct 1987. 14p. (CONF-8710159–: 12. international conference on atomic collisions in solids, Okayama, Japan, 12-16 Oct 1987). Order Number DE89781495/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The experimental programs at GANIL using GeV heavy ions to investigate problems in solid state physics, atomic physics, and channeling are reviewed. There are: (1) The mechanism of defect creation by electronic excitation which has been studied in different classes of materials; non linear effects have been observed and structural phase transformations are shown to happen above a given electronic stopping power threshold. (2) High resolution spectroscopy of hydrogen- and helium- like ions which has been made to test QED and relativistic corrections in heavy atomic systems; the study of high energy collisions has also been performed, excitation mechanisms are observed to be different in gas and solid targets. (3) Channeling of heavy ions which allows the detailed study of radiative electron capture in solids.

34911 (ORNL/FTR–3265) **[First international symposium on Swift Heavy Ions in Matter (SHIM '89), Caen, France, and visits to Villigen, Zurich, and Geneva, Switzerland, May 8–19, 1989]: Foreign trip report.** Vane, C.R. Oak Ridge National Lab., TN (USA). 1 Jun 1989. 7p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014180/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The traveler visited the Paul Scherrer Institute in Villigen, located outside Zurich, Switzerland, May 8, 1989, and presented an

informal seminar on high-resolution x-ray spectroscopy in heavy ion-atom collisions. He visited the EN tandem accelerator facility at ETH-Honngerberg in Zurich, Switzerland, on May 9, 1989, and presented a colloquium on x rays emitted by heavy ions in crystals. The traveler then visited CERN in Geneva, Switzerland, May 11–12, 1989, where discussions were carried out with CERN staff and others on ORNL proposed experiments, and especially on equipment requirements for these measurements. He then traveled to Caen, France, to attend the First Symposium on Swift Heavy Ions in Matter (SHIM'89), May 16–19, 1989, where he presented a paper on "Radiative Electron Capture by Bare- and One-Electron Ions Channeled in Silicon Crystals."

34912 (RISO-M–2740) **PATFIT-88. A data-processing system for positron annihilation spectra on mainframe and personal computers.** Kirkegaard, P.; Pedersen, N.J.; Eldrup, M. Risoe National Lab., Roskilde (Denmark). Feb 1989. 131p. Order Number DE89617595/JAW. Available from NTIS (US Sales Only), PC A07/MF A01 - OSTI; INIS.

A data processing system has been developed for analyzing positron annihilation lifetime and angular correlation spectra on mainframe and Personal Computers (PCs). The system is based on the PATFIT programs previously developed for use on mainframe computers. It consists of the three fitting programs POSITRONFIT, RESOLUTION and ACARFIT and three associated programs for easy editing of the input data to the fitting programs, as well as a graphics program for the display of measured and fitted spectra. They can be used directly on any IBM-compatible PC. The PATFIT-88 software is available from Risoe National Laboratory. (author) 5 ills., 46 refs.

34913 (UCRL–101134) **Molecules in intense laser fields.** Dixit, S.N.; McKoy, V. Lawrence Livermore National Lab., CA (USA). May 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-8810376–1: NATO advanced study institute on atoms in strong fields, Kos, Greece, 9-21 Oct 1988). Order Number DE89013807/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In this paper, we will present some thoughts on the dynamics of interaction of molecules with intense laser fields. We will discuss the possible role of dissociation and autoionization in influencing the overall REMPI dynamics. Our arguments are of a speculative and qualitative nature and the hope is to stimulate the reader in the complex issues related to the intense field molecule interaction. It is hoped that carefully controlled experiments and new developments in theoretical techniques will help unravel the underlying details of the REMPI dynamics. 19 refs.

34914 Projection-operator approach to the unified treatment of radiative and dielectronic recombination. Haan, S. L. (Department of Physics, Calvin College, Grand Rapids, Michigan 49506(US)); Jacobs, V. L. *Physical Review [Section] A: General Physics (USA),* 40(1): 80-94 (1 Jul 1989).

A formalism that is based on projection operators is employed to obtain ageneral recipe for constructing matrix elements of the transition or *T*operator for electron-ion photorecombination processes in model systemsfeaturing a limited number of discrete states and continua. Theprojection-operator formalism allows for a natural separation of the totaltransition operator into a direct, or radiative recombination, contribution anda resonance, or dielectronic recombination contribution. Implementation of thegeneral recipe is discussed, and expressions for matrix elements of neededpropagators in the combined Hilbert space of electron and photon continua arederived for model systems in which one makes the pole approximation on thephoton continua, but not on the electron continua. The simplifications thatoccur when the pole approximation is made on all continua are presented.Finally, the recipe is employed to describe photorecombination for two modelsystems that feature an isolated autoionizing state. One model includes anarbitrary number of possible final-state photon continua, and the second modelincludes an arbitrary number of possible final-state electron continua. For theformer model, it is shown how the various terms entering into the expressionfor the recombination transition amplitude can be obtained from a perturbationseries and interpreted in terms of Feynman-like diagrams.

34915 Theoretical Penning electron-energy distributions for alkali-metal atoms: He(2 ^{1,3}S) collisions with sodium and potassium. Padial, N. T. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545(US)); Cohen, J. S.; Martin, R. L.; Lane, N. F. *Physical Review [Section] A: General Physics (USA),* 40(1): 117-124 (1 Jul 1989).

Penning electron-energy distributions are calculated for collisions ofHe(2 ^{1}S) and He(2 ^{3}S) with sodium and potassiumatoms. The formulation is in terms of quantum-mechanical wave functions, whichare determined using previously published complex potentials for the initialstates and available experimental or presently calculated Hartree-Fockpotential curves for the final state. Sensitivities to these potentials aretested. The mechanisms for the observed energy structure are analyzed, and theeffects of experimental finite energy resolution and collisional velocityspread on the structure are shown.

34916 Measurement of *K* x rays from muonic helium formed in a low-density target in an intense pulsed muon beam. Blaer, A. (Nevis Laboratories, Department of Physics, Columbia University, Irvington, New York 10533(US)); French, J.; Sachs, A. M.; May, M.; Zavattini, E. *Physical Review [Section] A: General Physics (USA),* 40(1): 158-162 (1 Jul 1989). DOE Contract AC02-76CH00016.

An experiment was constructed to measure the contribution of vacuumpolarization [in quantum electrodynamics (QED)] to the 3*d*-3*p* energydifference in muonic helium. Major features of the experimental apparatusincluded design and construction of a pulsed beam of stopping muons with thehighest instantaneous intensity available, a laser system producing multijoulepulses from doubly isotopic CO_2 gas, a cavity to trap the laserlight in 3 atm of helium, and Si(Li) detectors to measure the helium x rays.The number of stimulated x rays accumulated was not sufficient to permit astatistically significant QED measurement, but the results demonstrate thefeasibility of laser spectroscopy in a pulsed muon beam. The intensities ofseparate *K* x-ray lines in muonic helium were measured at 1 and 3 atm forcomparison with recent theories of pressure effects on the muon cascade.

34917 Auger-electron emission from collisionally excited 3.4-MeV/u Na-like Ti ions. Schneider, D. (Department of Physics, V-Division, University of California, Lawrence Livermore National Laboratory, Livermore, California 94550(US)); Beiersdorfer, P.; Chen, M.; Walling, R.; Molitoris, J. D.; De Witt, D. *Physical Review [Section] A: General Physics (USA),* 40(1): 181-186 (1 Jul 1989).

L Auger-electron emission following selective excitation ofautoionizing states in 3.4-MeV/u Na-like Ti ions by He and Ar has beeninvestigated using the technique of 0° electron spectroscopy. The electronemission has been compared to model spectra based on oscillator strengths,transition energies, and transition rates from multiconfigurational Dirac-Fockcalculations as well as on collision strengths from the literature. It wasfound that monopole, dipole, and quadrupole excitation of Auger states with anexcited-state configuration $2p^5 3snl$ (n=3,4)causes the dominating structure in the spectrum where He was used as anexciter.

34918 Jellium-model calculation for monomer and dimer decays of some potassium clusters. Saito, Susumu (California Univ., Los Angeles (USA). Dept. of Physics); Cohen, M.L. *Zeitschrift fuer Physik D: Atoms, Molecules and Clusters (F.R. Germany),* 12(1-4): 205-208 (Jun 1989). DOE Contract AC03-76SF00098. (CONF-8807155–: 4. international symposium on small particles and inorganic clusters (ISSPIC-4), Aix-en-Province, France, 5-9 Jul 1988).

We have studied several decay processes of potassium clusters and found that a dimer-decay mechanism can explain the observed lowest abundance of K_{10} in the K_n mass spectra. Total-energy curves for decay processes are calculated using a jellium-background model for positive-ion cores and the local-spin-density-functional approximation for valence electrons. The energy-barrier height for a dimer decay of K_{10} from the energy-minimum point is found to be 0.18 eV, which is a reasonable magnitude for the decay to take place thermally in the experiment. The monomer decay of K_9 and the dimer decay of K_{11}, which are expected to be the most favorable decays of K_9 and K_{11}, are found to have high barriers. Monomer and dimer decays of K_8 are also studied and the monomer decay is found to be more favorable, in accord with the high-nozzle-temperature mass spectrum.

34919 A comprehensive table of atomic fluorescence detection limits and experimental conditions. Smith, B. W. (Department of Chemistry, University of Florida, Gainesville, Florida 32611(US)); Glick, M. R.; Spears, K. N.; Winefordner, J. D. *Applied Spectroscopy (USA)*, 43(3): 376-414 (Mar 1989).

A comprehensive table of atomic fluorescence spectrometry results has been compiled and arranged by element. Data tabulated include excitation and fluorescence wavelengths, atom reservoir, excitation source, limits of detection, and comments concerning experimental peculiarities and types of samples analyzed.

34920 Laser-induced fluorescence spectroscopy of NCS in a free jet expansion. Northrup, F. J. (Department of Chemistry, Brookhaven National Laboratory, Upton, New York 11973(US)); Sears, T. J. *Journal of Chemical Physics (USA)*, 91(2): 762-774 (15 Jul 1989). DOE Contract AC02-76CH00016.

Laser-induced fluorescence excitation spectra have been recorded for many vibronic transitions of the $A(^2\Pi)$–$X(^2\Pi)$ and $B(^2\Sigma+)$–$X(^2\Pi)$ systems of NCS under supersonic free jet expansion conditions. New assignments have been made for many of these bands and several of the assignments from previous work have been revised. Vibronic energies have been determined for levels involving excitation of all three vibrational modes in the ground electronic state and both excited electronic states. A detailed rotational and vibrational analysis has been carried out for levels involving excitations of the two stretching modes and the many rotational and potential function constants have been determined for the *A* and *X* states. The variation of the spin–orbit constant with vibrational level has also been investigated. Results of this paper provide the ground work for a detailed analysis of the Renner–Teller effect in the bending vibrational mode of this radical for both the $X^2(\Pi)$ and $A(^2\Pi)$ states to appear in a forthcoming paper. They also provide a spectroscopic database for future dynamical and kinetics studies of processes involving this radical.

34921 State-to-state integral cross sections for the inelastic scattering of CH($X\ ^2\Pi$)+He: Rotational rainbow and orbital alignment. Macdonald, R. G. (Gas Phase Chemical Dynamics Group, Chemistry Division, Argonne National Laboratory, Argonne, Illinois 60439(US)); Liu, K. *Journal of Chemical Physics (USA)*, 91(2): 821-838 (15 Jul 1989). DOE Contract W-31-109-ENG-38.

The state-to-state integral cross sections for the inelastic scattering of CH($X\ ^2\Pi$) with He were measured in a newly constructed crossed molecular beam machine. Use of laser-induced fluorescence in an unconventional flux mode of detection provided single fine-structure state specific detection of the products. Two types of measurements were performed to further our understanding of the collision dynamics of open shell systems: (1) the product state distribution at a fixed and well-defined collision energy and (2) the dependence on collision energy of product state-resolved cross sections. A qualitative understanding of the collision dynamics can be obtained by properly factoring out features dependent on the fine-structure states, i.e., effects involving individual Λ-doublet states and features dependent on the rotational level alone, i.e., effects remaining after summing over all four fine-structure states associated with a given rotational quantum number. As for the fine-structure effects, a preferential population of product Λ-doublet states with reflection symmetry $\Pi(A'')$ was observed. The physical origin of this observed electronic orbital alignment can be attributed to a quantum interference phenomenon, as detailed in the accompanying paper. At the rotational level, the dominance of rotational rainbow scattering is unambiguously identified from both the existence of dynamical thresholds and a strong correlation between rotational level distributions at fixed translational energy and level specific excitation functions. These effects combined with other experimental observations lead us to visualize the CH+He scattering dynamics in a novel fashion. The collision can be regarded as a series of approximately independent sequential events each mediated by different regions of the interaction potential during the course of the whole encounter.

34922 The inelastic scattering of $^2\Pi$ [case (b)] molecules and an understanding of the differing Λ doublet propensities for molecules of π vs π^3 orbital occupancy. Dagdigian, P. J. (Department of Chemistry, The Johns Hopkins University, Baltimore, Maryland 21218(US)); Alexander, M. H.; Liu, K. *Journal of Chemical Physics (USA)*, 91(2): 839-848 (15 Jul 1989).

The quantum formalism for the scattering of a diatomic molecule in a $^2\Pi$ electronic state which is well described by Hund's case (b) limit is investigated here. For a particular $JF_i \rightarrow J'F'_1$ transition, quantum interference effects will lead to preferential population of one of the final state Λ doublet levels. The nonstatistical population of final state Λ doublet levels arises from an interference between terms in the expansion of the two electrostatic potential energy surfaces, of A' and A'' reflection symmetry, which describe the interaction between a molecule in a Π electronic state and a closed-shell partner. The particular Λ doublet level preferred is opposite for molecules of π^1 vs π^3 electron occupancy. The physical origin of this reversal in the Λ doublet propensity is a direct reflection of the fact that for the former the A' potential surface is more repulsive since the sole π electron lies in the triatomic plane in this case, whereas for molecules of π^3 electron occupancy the A' surface is less repulsive than the A'' surface since for the A' surface only one of the three π electrons lies in the triatomic plane. The magnitude of these Λ doublet propensities is illustrated by calculated cross sections for the CH($X\ ^2\Pi$)–He system using the *ab initio* potential energy surfaces calculated by the Argonne theoretical group, and these cross sections are compared to those of the crossed molecular study of Liu and Macdonald [J. Chem. Phys. **91**, xxxx (1989)]. A similar analysis is carried out for collisions of a molecule of π^3 electron occupancy and is illustrated by inelastic collisions of OH($X^2\Pi$).

34923 New oxide cathode assembly for a duoplasmatron. Massoletti, D. J. (Lawrence Livermore National Laboratory, Livermore, California 94550(US)). *Review of Scientific Instruments (USA)*, 60(5): 960-961 (May 1989). DOE Contract W-7405-ENG-48.

An oxide cathode assembly has been designed for long life and serviceability in a duoplasmatron ion source using deuterium gas; with cathode lifetimes on the order of 250 h with an arc discharge power of 5 kW.

34924 The emittance characteristics of a gallium liquid-metal ion source. Alton, G. D. (Oak Ridge National Laboratory, P. O. Box 2008, Oak Ridge, Tennessee 37831-6368(US)); Read, P. M. *Journal of Applied Physics (USA)*, 66(3): 1018-1022 (1 Aug 1989). DOE Contract AC05-84OR21400.

First measurements have been made of the emittances of momentum-analyzed $^{69}Ga^+$ ion beams extracted from a liquid-metal ion source. Comparisons of the emittances of beams extracted and postaccelerated with conical and planar geometry electrode systems indicate that the planar geometry system is less aberrant. Space-charge effects and other sources of energy spread lead to increases in the emittances in the energy-dispersion plane of the momentum-analysis system (*x* direction) over their *y*-direction counterparts. The energy spread increases rapidly with beam intensity. Brief descriptions are provided of the experimental apparatus and procedures used during these investigations, and emittance and brightness data measured for ion beams accelerated by the two electrode systems are presented.

34925 *Ab initio* calculation of the hyperfine coupling constants in B_2. Carmichael, I. (Radiation Laboratory, University of Notre Dame, Notre Dame, Indiana 46556(US)). *Journal of Chemical Physics (USA)*, 91(2): 1072-1078 (15 Jul 1989).

Hyperfine coupling constants for the ground electronic state of the B_2 molecule, $[^3\Sigma^-_g]$, are computed using correlation procedures based on spin-unrestricted wave functions. Two distinct methods have been employed. Firstly, a variational configuration mixing approach with all configurations arising from single and double replacements in the reference wave function has been augmented by an approximate size-consistency correction. Secondly, a many-body perturbation theory procedure based on the coupled–cluster expansion with infinite-order doubles has been approximately corrected for single and triple excitations through fourth order. Both isotropic and dipolar coupling constants have been obtained as expectation values over the appropriate wave functions for the unrestricted Hartree–Fock (UHF) and the variational configuration-interaction (CI) methods. The anisotropic coupling is already satisfactorily accounted for at the UHF level, while even with the approximate correction for the effect of higher excitations, the variational CI approach still underestimates the isotropic splitting by a factor of 2. The origin of this deficiency is traced using the other correlation

method in which the isotropic coupling is derived from the normalized spin density at the nucleus, obtained by finite-field perturbation theory. The effect of the inclusion of triple excitations from the UHF wave function is seen to contribute about one third of the observed value. Such excitations are not accounted for in the size-consistency corrected variational CI approach. This conclusion is confirmed by a similar finding in a full fourth-order Moller–Plesset (MP) calculation.

34926 Theory for first super-strong liquid-crystalline polymers. Dowell, F. (Theoretical Division, Los Alamos National Laboratory, University of California, Los Alamos, New Mexico 87545(US)). *Journal of Chemical Physics (USA)*, 91(2): 1316-1325 (15 Jul 1989). DOE Contract W-7405-ENG-36.

This paper presents a unique microscopic molecular theory for liquid-crystalline polymers (LCPs). In the following paper, this theory is used to predict and design (atom by atom, bond by bond) the first super-strong (SS) LCPs. This paper here compares the results calculated from this theory with available experimental data for different kinds of existing LCPs. The theory presented in this paper treats backbone LCPs, side-chain LCPs, combined LCPs, and low-molecular-weight LC materials in the isotropic liquid phase, in the nematic LC phase, and in multiple smectic-A LC phases. In this paper here, we see that results calculated using this theory are in *very* good agreement with available experimental data for various existing LCPs. Specifically, the relative deviations between the theoretical and experimental results presented here vary from 0% to less than 6.2%. This agreement gives us considerable confidence in the use of this theory in the following paper to predict and design the first SS LCPs.

34927 Prediction and design of first super-strong liquid-crystalline polymers. Dowell, F. (Theoretical Division, Los Alamos National Laboratory, University of California, Los Alamos, New Mexico 87545(US)). *Journal of Chemical Physics (USA)*, 91(2): 1326-1338 (15 Jul 1989). DOE Contract W-7405-ENG-36.

This paper presents the details of the theoretical prediction and design (atom by atom, bond by bond) of the molecule chemical structures of the first candidate super-strong liquid-crystalline polymers (SS LCPs). These LCPs are the *first* LCPs designed to have good compressive strengths, as well as to have tensile strengths and tensile moduli significantly larger than those of existing strong LCPs (such as Kevlar). The key feature of this new class of LCPs is that the exceptional strength is three dimensional on a microscopic, *molecular* level (thus, on a macroscopic level), in contrast to present LCPs (such as Kevlar) with their one-dimensional exceptional strength. These SS LCPs also have some solubility and processing advantages over existing strong LCPs. These SS LCPs are specially-designed combined LCPs such that the side chains of a molecule interdigitate with the side chains of other molecules. This paper also presents other essential general and specific features required for SS LCPs. Considerations in the design of SS LCPs include the spacing distance between side chains along the backbone, the need for rigid sections in the backbone and side chains, the degree of polymerization, the length of the side chains, the regularity of spacing of the side chains along the backbone, the interdigitation of side chains in submolecular strips, the packing of the side chains on one or two sides of the backbone, the symmetry of the side chains, the points of attachment of the side chains to the backbone, the flexibility and size of the chemical group connecting each side chain to the backbone, the effect of semiflexible sections in the backbone and side chains, and the choice of types of dipolar and/or hydrogen bonding forces in the backbones and side chains for easy alignment.

34928 Lifetimes of two-photon-emitting states in heliumlike and hydrogenlike nickel. Dunford, R. W. (Physics Division, Argonne National Laboratory, Argonne, Illinois 60439(US)); Hass, M.; Bakke, E.; Berry, H. G.; Liu, C. J.; Raphaelian, M. L. A.; Curtis, L. J. *Physical Review Letters (USA)*, 62(24): 2809-2812 (12 Jun 1989). DOE Contract FG05-88ER13958.

We report measurements of the lifetimes of the 2^1S_0 state of heliumlike Ni^{26+} and the $2^2S_{1/2}$ state of hydrogenlike Ni^{27+}, both of which decay predominantly by two-photon emission. Our method differs from previous measurements of the lifetimes of similar states in that we require a coincidence between the two photons. Our lifetime of 217.1(1.8) ps for the hydrogenlike decay is in agreement with the theoretical value of 215.45 ps. The heliumlike decay lifetime of 156.1(1.6) ps is in fair agreement with the theoretical value of 154.3(0.5) ps.

6404 Fluid Physics

34929 (AD-A–201263/1/XAB) **MPD (magnetoplasmadynamic) thrust-chamber flow dynamics. Annual technical report, 1 October 1987-30 September 1988.** R and D Associates, Alexandria, VA (USA). 30 Sep 1988. 28p. (RDA-TR–144200-002). Available from NTIS, PC A03/MF A01.

Magnetoplasmadynamic (MPD) arcjet thrusters inherently involve close coupling of the electromagnetic discharge structure and the flow field in the thrust chamber. The discharge and internal flow-field structures are not simply determined by the arcjet geometry, but depend on the values and partitioning of injected mass flow for each operating-current condition. In order to understand the internal flow dynamics of an MPD arcjet, experiments are performed in which electromagnetic fields and flow properties are measured within the thrust chamber. Electric and magnetic field probes are used to obtain the electromagnetic structure, while spectroscopic techniques are used to estimate particle velocities and densities.

34930 (CONF-8810118–9) **Momentum distributions in liquid helium.** Sokol, P.E.; Sosnick, T.R.; Snow, W.M. Argonne National Lab., IL (USA). 1988. 19p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. From Workshop on momentum distributions; Argonne, Illinois, USA; 24-26 Oct 1988. Order Number DE89014679/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The appearance of the superfluid phase, with its unique macroscopic properties, and the success of the 'two-fluid' model in describing the transport properties are intimately linked to the Bose statistics obeyed by ^4He atoms. The most direct signature of the Bose condensate is in the single particle momentum distribution n(p). In the normal liquid the momentum distribution has a broad Gaussian shape, as predicted for classical systems, with a width determined by the quantum zero point motion. In the superfluid phase a new feature appears, the Bose condensate. The condensate appears as a δ-function singularity in n(p) with an intensity proportional to n_0, the condensate fraction. There has been extensive experimental work attempting to verify the existence of the condensate. Hohenberg and Platzman originally suggested that inelastic neutron scattering at high momentum transfer Q, where the Impulse Approximation IA can be used to directly relate the observed scattering to n(p), could provide a means of directly observing the condensate. In this review we will concentrate on recent experimental studies that utilize the large flux of high energy neutrons available at spallation neutron sources. These sources, which have become available only recently, have made it possible to make detailed measurements at large enough momentum transfers that the conditions for the Impulse Approximation are approximately satisfied. While deviations from the IA are still present at these higher Q's, they are more amenable to theoretical treatment and detailed predictions are available. Thus, even though no distinct condensate peak is observed, for the first time excellent agreement with the theoretical predictions for n(p) can be obtained. 50 refs., 12 figs.

34931 (IC–88/413) **Symmetry breaking phenomena in liquid Helium-4.** Ahmad, M.; Tikoo, S.K.; Raina, T.K. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 50p. Order Number DE89618886/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Salient features of liquid Helium II are being analysed in the light of symmetry breaking mechanism. The excitation spectrum is derived by scaling transformation. A relation between roton excitation and Bogoliubov's quasi particles has been established by giving different structures to the roton operators, similar to quasi boson approximation for phonon-like spectrum. This structure of the roton operators enables us to study the low temperature behaviour of superfluid Helium-4 by introducing the idea of pairing for roton-like excitation for the on set of energy-gap. Superfluid He_4 is divided into the states of condensed bosons, oscillating condensed bosons,

phonons, maxons, rotons and the states of vortices. We consider the transition probabilities between these various states. Coherent states of various superfluid regions of He II are being obtained and consistently analysed which have deep inter-relationship. As higher excitations have also a group structure and their coherent behaviour has been seen, this formalism seems to be more appropriate to deal with such an interesting problem. (author). 108 refs.

34932 (INIS-mf–11456, pp. 383-386) **Superfluid ^{3}He phases in rotation.** Skrbek, L. (Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Fyzikalni Ustav). Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

The behavior is described of quantized vortices in superfluid phases of ^{3}He. In the world there exist but two apparatur which can be used for such experiments. The following methods were used for the study of superfluid ^{3}He in rotation: NMR, the method of persisting currents and the method of negative current pulses. In the nuclei of vortices in ^{3}He-B there exists a phase transformation. The critical velocity has been measured for quantized vortices formation. In phase A singular vortices may exist as well as vortices with two nuclei. (M.D.). 4 figs., 15 refs.

34933 (KEK–88-3, pp. 8-24) **What can ultra cold neutrons tell us about superfluid ^{4}He?.** Griffin, A. (Kyoto Univ. (Japan). Dept. of Physics). National Lab. for High Energy Physics, Oho, Ibaraki (Japan). Jun 1988. (CONF-8803216–: 1. KEK symposium on ultra cold neutrons (UCN), Tsukuba, Japan, 10 Mar 1988). In *1st KEK symposium on ultra cold neutrons (UCN).* Order Number DE89012146/JAW. Available from NTIS (US Sales Only), PC A08/MF A01.

In this informal review, we discuss what are the current ideas about the nature of excitations in superfluid ^{4}He and some remaining puzzles. We emphasize the complementary roles of inelastic scattering of thermal neutrons and upscattering of UCNs. We briefly discuss the possible usefulness of UCNs in studying some of the consequences of the existence of a Bose condensate as well their interaction with second sound excitations.

34934 (UCRL–100203) **Numerical studies of shock wave structure sensitivity to interactions with turbulent fields.** Buckingham, A.C. Lawrence Livermore National Lab., CA (USA). Apr 1989. 10p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890752–3: 6. international conference on numerical methods in laminar and turbulent flows, Swansea, UK, 11-15 Jul 1989). Order Number DE89012288/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper concerns the observed random changes to velocity, density, temperature, and pressure distributions induced in shock waves when weak shocks interact with relatively intense turbulence. Here numerical procedures are applied in order to examine this interaction process and to simulate its influence on turbulence. This interaction may be used as a diagnostic for ascertaining the distribution of interaction energy between competitive acoustic, entropy and vortical modes. Numerical procedures used here are supplements to physical experiments for tracking the dynamical mechanisms which may control the evolution of shock-turbulence interaction. The results are intended to provide assistance in the development and refinement of compressible turbulent closure models. They are obtained from use of a mixed Eulerian-Lagrangian semi-continuous rezoning finite difference method, a hybrid Euler/Lagrange pseudospectral method, and a Monte-Carlo random-choice procedure. The latter effectively magnifies the shock front region through use of finite range shock-transition integrals generating simulated interactive transition profiles. 11 refs., 6 figs.

34935 (UCRL–101020) **Computer experiments on LP jet injection stability and incipient breakup.** Buckingham, A.C.; Coffee, T.P. Lawrence Livermore National Lab., CA (USA). Apr 1989. 17p. Sponsored by Department of Defense. DOE Contract W-7405-ENG-48. (CONF-8905134–2: JANNAF propulsion meeting, Cleveland, Ohio, USA, 22-25 May 1989). Order Number DE89012967/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A hybrid Lagrangian (computational mesh moving with the center of mass of the fluid element) Eulerian (stationary, laboratory-frame computational mesh) fast Fourier transform (FFT) procedure and a continuously rezoned Lagrangian-Eulerian finite-difference procedure are modified here for study and analysis of LP jet injection dynamics. Specific attention is on development, test, and application of computer models which will predict influences of chamber pressure, jet-injection velocity and combustion energy release on the LP jet injection-flow configuration. The injection flow changes of particular interest are those which might signify tendencies for either jet stream segmentation and breakup or intact jet stream penetration of the entire combustion chamber in LP gun propulsion. Information also is sought on fuel segment size distribution following jet stream breakup, and the steady-state or oscillatory parameter changes that seem to most influence LP fuel segmentation. The initial studies emphasize the role of flow instabilities in forming or suppressing fuel-stream breakup and, perhaps, influencing subsequent segment or droplet-size distribution tendencies. Attention is focused, at present, on the primary Rayleigh-Taylor density penetration instability growth and secondary Kelvin-Helmholtz shear instability growth patterns. Response to naturally developed or forced, narrow-band oscillatory changes in the more influential parameters will be analyzed subsequently. 12 refs., 8 figs.

34936 Evaluation of the filtered leapfrog-trapezoidal time integration method. Roache, P.J. (Ecodynamics Research Associates, Inc., Albuquerque, NM (US)); Dietrich, D.E. *Numerical Heat Transfer (USA),* 14(2): 149-164 (1988).

An analysis and evaluation are presented for a new method of time integration for fluid dynamic proposed by Dietrich. The method, called the filtered leapfrog-trapezoidal (FLT) scheme, is analyzed for the one-dimensional constant-coefficient advection equation and is shown to have some advantages for quasi-steady flows. A modification (FLTW) using a weighted combination of FLT and leapfrog is developed which retains the advantages for steady flows, increases accuracy for time-dependent flows, and involves little coding effort. Merits and applicability are discussed.

34937 Hele-Shaw scaling properties of low-contrast Saffman-Taylor flows. DiFrancesco, M. W. (Department of Physics and Astronomy, University of Pittsburgh, Pittsburgh, Pennsylvania 15260(US)); Maher, J. V. *Physical Review [Section] A: General Physics (USA),* 40(1): 295-304 (1 Jul 1989).

We have measured variations of Saffman-Taylor flows by changingdimensionless surface tension *B* alone and by changing *B* inconjunction with changes in dimensionless viscosity contrast *A*. Ourlow-aspect-ratio cell permits close study of the linear- and earlynonlinear-flow regimes. Our critical binary-liquid sample allows study of verylow values of *A*. The predictions of linear stability analysis work wellfor predicting which length scales are important, but discrepancies areobserved for growth rates. We observe an empirical scaling law for growth ofthe Fourier modes of the patterns in the linear regime. The observed frontpropagation velocity for side-wall disturbances is constantly 2±1in dimensionless units, a value consistent with the predictions of Langer andof van Saarloos. Patterns in both the linear and nonlinear regimes collapseimpressively under the scaling suggested by the Hele-Shaw equations. Violationsof scaling due to wetting phenomena are not evident here, presumably becausethe wetting properties of the two phases of the critical binary liquid are sosimilar; thus direct comparison with large-scale Hele-Shaw simulations shouldbe meaningful.

34938 Generalization of the density-functional theory with application to three-body interactions in classical fluids. Iyetomi, H. (Materials Science Division, Argonne National Laboratory, Argonne, Illinois 60439(US)); Vashishta, P. *Physical Review [Section] A: General Physics (USA),* 40(1): 305-310 (1 Jul 1989). DOE Contract W-31-109-ENG-38.

An external field coupled with the two-body density distribution functionleads to a generalization of the density-functional theory in which the freeenergy is regarded as a functional not only of the density but also of thetwo-body distribution function. The generalized formalism is applied to theliquid-structure theory in the

presence of a weak three-body potential. In thefirst-order calculation, the three-body effects are fully taken into accountthrough modification of the pair potential; the structure of the pair-potentialtheory remains intact. Such a renormalizability, which was provendiagrammatically, is ascribed to the variational property of the free-energyfunctional. An approximate expression for the nonadditive correction which isamenable to the numerical computations is obtained within the hypernetted-chaintheory.

34939 Avalanches near a solid insulator in nitrogen gas at atmospheric pressure. Mahajan, S. M. (Department of Electrical Engineering, Tennessee Technological University, Box 5004, Cookeville, Tennessee 38505(US)); Sudarshan, T. S. *Journal of Applied Physics (USA),* 66(3): 1095-1102 (1 Aug 1989).

The pulsed Townsend (PT) technique was used to record the growth of avalanches near a solid insulator in nitrogen gas at 0.1 MPa. Several other nonconventional techniques for releasing initiatory electrons at the cathode are discussed. In this paper, experimental results of avalanches initiated by illuminating a fast (0.6-ns) nitrogen laser onto the cathode triple junction are presented. Data were recorded with plexiglas, Teflon, high-density polyethylene, low-density polyethylene, Delrin, etc. Effect of surface condition, variation of the distance between insulator surface and the avalanche initiation region, and the effect of a large number of previous avalanches on the avalanche characteristics at a particular voltage were studied. The Townsend primary ionization coefficient, hereafter referred to as growth coefficient (α), and drift velocity (V_e) were evaluated through the PT technique. Results indicate that the avalanche growth in the vicinity of a solid insulator is less than that in an identical plain gas gap. Existence of a nonuniform field as a result of surface charges on the insulator and/or field modifications due to the avalanche space charge are believed to be responsible for this behavior.

34940 Cathode ions from microsecond aluminum vacuum arcs. Miller, H. C. (General Electric Neutron Devices, Largo, Florida 34649(US)). *Journal of Applied Physics (USA),* 66(3): 1107-1112 (1 Aug 1989).

A triggered vacuum gap with a 1.25-mm-diam aluminum cathode, a nickel mesh anode, and a separate two-terminal gold trigger, were used to generate vacuum arcs of 60–90 A, 6–40 μs in duration. A retarding potential analyzer was used to investigate the cathode ion flux. A typical ion signal showed an initial peak about 10–20 μs after arc initiation, followed by a rapid decay, then the signal leveled off at about 30–35 μs to a fairly constant signal (plateau), which persisted until a few microseconds after the arc current was cut off; finally the ion signal decayed to zero. The initial peak was primarily composed of ions produced during the initial stage of the vacuum arc. The plateau represented ions produced after the arc settled down to a reasonably steady state. Conclusions were as follows: (1) The cathode ions produced during the initiation stage of such vacuum arcs are more energetic than those produced after the arc has settled down to a steady state, and (2) after this steady state has been reached, the cathode ion flux still appears somewhat more energetic than the cathode ion flux from dc vacuum arcs, although this may be because of the higher arc voltage caused by the relatively small ratio of electrode diameter to gap length in these experiments.

34941 Nonlinear evolution and breaking of interfacial Rayleigh–Taylor waves. Oron, A. (Center for Nonlinear Studies, Los Alamos National Laboratory, Los Alamos, New Mexico 87545(US)); Rosenau, P. *Physics of Fluids A: Fluid Dynamics (USA),* 1(7): 1155-1165 (Jul 1989). DOE Contract W-7405-ENG-36.

The nonlinear evolution of interfacial waves separating liquids of differentviscosity and density (Rayleigh–Taylor instability) in a 2-D channel isstudied. Using a new approach, which accounts for large gradients, the nonlinearevolution of the interface, $y=\epsilon A(\tau,\xi), \epsilon \ll 1$, is shown tobe governed by the regularized Kuramoto–Sivashinsky equation $A_\tau+\beta AA_\xi+\{\alpha A+\gamma A_{\xi\xi}/(1+\epsilon^4 A^2_\xi)^{3/2}\}_{\xi\xi}=0$,where the constants α,β, and γ are determinedat equilibrium, ξ is the slow coordinate along the channel,$\xi=\epsilon(x-c_0 t)$, and $\tau=\epsilon^2 t$. It is shownnumerically that for $\epsilon^2 \geq 0.1\beta$ linearly unstable waves (while alwaysof finite amplitude) are propelled by convection toward breaking in a finitetime.

6450 High Energy Physics

34942 (ANL-HEP-CP–89-50) **Portable parallel programming in a Fortran environment.** May, E.N. Argonne National Lab., IL (USA). 1989. 16p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-890415–3: Computing in high energy physics, Oxford, UK, 10-14 Apr 1989). Order Number DE89014670/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Experience using the Argonne-developed PARMACs macro package to implement a portable parallel programming environment is described. Fortran programs with intrinsic parallelism of coarse and medium granularity are easily converted to parallel programs which are portable among a number of commercially available parallel processors in the class of shared-memory bus-based and local-memory network based MIMD processors. The parallelism is implemented using standard UNIX (tm) tools and a small number of easily understood synchronization concepts (monitors and message-passing techniques) to construct and coordinate multiple cooperating processes on one or many processors. Benchmark results are presented for parallel computers such as the Alliant FX/8, the Encore MultiMax, the Sequent Balance, the Intel iPSC/2 Hypercube and a network of Sun 3 workstations. These parallel machines are typical MIMD types with from 8 to 30 processors, each rated at from 1 to 10 MIPS processing power. The demonstration code used for this work is a Monte Carlo simulation of the response to photons of a "nearly realistic" lead, iron and plastic electromagnetic and hadronic calorimeter, using the EGS4 code system. 6 refs., 2 figs., 2 tabs.

34943 (DOE/ER/40319–3-Pt.1.) **[High energy particle physics]: Progress report covering the five year period from August 1, 1984 to May 31, 1989 with special emphasis for the period of August 1, 1988 to May 31, 1989: Part 1.** Florida State Univ., Tallahassee, FL (USA). Dept. of Physics. 1989. 128p. Sponsored by DOE Energy Research. DOE Contract FG05-87ER40319. Order Number DE89013020/JAW. Available from NTIS, PC A07/MF A01 - OSTI; GPO Dep.

In this document the High Energy Physics group reviews its accomplishments and progress during the past five years, with special emphasis for the past year and presents plans for continuing research during the next several years. During the last few years the effort of the experimental group has been divided approximately equally between fixed target physics and preparations for future collider experiments. The main emphasis of the theory group has been in the area of strong and electroweak phenomenology with an emphasis on hard scattering processes. With the recent creation of the Supercomputer Computations Research Institute, some work has also been done in the area of numerical simulations of condensed matter spin models and techniques for implementing numerical simulations on supercomputers.

34944 (ISN–87-97) **European hadron facility.** Scheck, F.; Bradamante, F.; Richard, J.M. Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires. May 1987. 11p. (CONF-8705378–: Erice school on physics witts low-energy antiprotons, Erice, Italy, May 1987). Order Number DE89781513/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

In this contribution we survey the physics potential of a facility such as EHF in somewhat general terms. In other words, we outline some fundamental questions in nuclear physics and low energy particle physics to whose advancement EHF can and will make substantial contributions, without going into specific experiments needed to answer them. It is the role of the case studies, presented in the EHF proposal(1), to illustrate the kind of experimental effort (typical beam requirements, characteristic detectors, size of experiments, etc.) needed at EHF for the physics one wishes to clarify.

34945 (LBL–26466) **Physics Division activities report, 1986–1987.** Lawrence Berkeley Lab., CA (USA). 1987. 137p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. Order Number DE89013351/JAW. Available from NTIS, PC A07/MF A01 - OSTI; GPO Dep.

This report summarizes the research activities of the Physics Division for the years 1986 and 1987. Areas of research discussed in this paper are: research on e^+e^- interactions; research on $p\bar{p}$ interactions; experiment at TRIUMF; double beta decay; high energy

astrophysics; interdisciplinary research; and advanced technology development and the SSC.

34946 (ANL-HEP-CP–89-40) **Electron identification in the CDF [Collider Detector at Fermilab] central calorimeter.** Proudfoot, J. Argonne National Lab., IL (USA). 1989. 8p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-890379–8: Workshop on calorimetry for the SSC, Tuscaloosa, Alabama, USA, 13-17 Mar 1989). Order Number DE89014672/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Efficient identification of electrons both from W decay and QCD heavy flavour production has been achieved with the CDF Central Calorimeter, which is a lead – scintillator plate calorimeter incorporating tower geometry. The fine calorimetry granularity (0.1 x 0.26 in η, ϕ space) allows identification of electrons well within the typical jet cone and is wholly sufficient for the measurement of the isolation of electrons from W decay. With minor improvements, such a detector is a realistic option for electron identification in the central rapidity region at the SSC. 1 ref., 7 figs.

34947 (CRN-HE–8608) **Background estimates and limits on compositeness at LEP $Z^0 \rightarrow \gamma\gamma\ \gamma$ and e^* search.** Bloch, D. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1986. 18p. (CONF-8609223–: ECFA workshop: LEP 200, Aachen, Germany, F.R., 29 Sep - 1 oct 1986). Order Number DE89781502/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Background is computed and limits are presented at LEP I and LEP II energies on processes characteristic for Compositeness: rare Z^0 boson decay into 3 photons; excited electron e^* production in single mode; and virtual e^* exchange.

34948 (CRN-PN–88-22) **Study of meson production in 200 A. GeV Ion collisions using decay muons.** NA38 Collaboration. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1988. 9p. (CONF-880280–: International conference on physics and astrophysics of quark-gluon plasma, Bombay, India, 8-12 Feb 1988). Order Number DE89781488/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

The like-sign muon pairs copiously recorded in the high luminosity NA38 experiment are interpreted as resulting from decays of π and K mesons. It is shown that the muon properties reflect the pion and kaon ones. The average transverse momentum is found to be similar for p-U,O^{16}-U and S^{32}-U reactions. The K/π ratio, which indicates strangeness production, is also the same for the three reactions. Both measurements increase slightly with E_T.

34949 (DOE/ER/40125–17) **Indiana University high energy physics, Task A: Technical progress report, December 1, 1988–December 31, 1989.** Blockus, D.; Brabson, B.B.; Crittenden, R.R.; Dzierba, A.R.; Hanson, G.; Martin, H.J.; Marshall, T.; Ogren, H.O.; Rust, D.; Snyder, A. Indiana Univ., Bloomington, IN (USA). Dept. of Physics. 1989. 59p. Sponsored by DOE Energy Research. DOE Contract AC02-84ER40125. Order Number DE89013106/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

This paper discusses the following topics: meson spectroscopy; hybrid search; mesons with unusual quantum numbers; hadronic jets; high mass dimuons; DO collider detector; High Resolution Spectrometer; B factory; Mark II Z^0 physics; and SLAC polarization.

34950 (INIS-mf–11456, pp. 405-408) **Experimental results from Europhysics conference in Uppsala.** Cvach, J. (Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Fyzikalni Ustav). Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

A survey is given of experimental results which were presented at the Europhysics conference on high energy physics in Uppsala in 1987. The experiments concerned the measurement of neutrino mass, the flow of solar neutrinos, neutrino oscillations, proton life, top quark rest energy and tests of the standard model of electroweak and strong interactions. (Z.J.). 2 figs., 1 tab., 8 refs.

34951 (IPNO-TH–87-83) **New heavy quark physics in the strongly Yukawa coupled standard model.** Soni, V.; Moussallam, B.; Hadjitheodoris, S. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Aug 1987. 26p. Order Number DE89781492/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We show that for strong enough Yukawa coupling and weak gauge coupling the electroweak standard model quark finds it energetically advantageous to transform itself into a bound state in a Skyrme background. The mass of such a 'heavy' quark as also the heavy nucleon (a three quark color singlet composite) then decreases with the Yukawa coupling resulting in a maximum for the quark (nucleon) of 2 TeV (3 TeV). The three quark bound state, that is the nucleon, can be very strongly bound in this sheme in contrast to the weak binding mediated by QCD gluon exchange. As a candidate for new phenomenology at the SSC we find that the decay of a Δ like excited state of the heavy nucleon into W_L plus heavy nucleon could provide an experimental signature of this scheme.

34952 (JINR-D–1-88-368) **Observation of narrow baryoniums in the experiment BIS-2. 1. Strange baryoniums.** Aleev, A.N.; Aref'ev, V.A.; Balandin, V.P. and others. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 8p. Order Number DE89618956/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to the 24-th International Conference on High Energy Physics, FRG, August, 1988, and to International Conference Quarks-88, Tbilisi, May 1988.

The search has been performed for baryoniums decaying into the Λ,p-bar (or Λ-bar,p) and pions in the experiment carried out by the BIS-2 collaboration at the Serpukhov accelerator. In seven invariant mass spectra of the different final states near the same mass value of 3050 MeV/c^2, narrow peaks are seen, which indicates the existence of baryoniums with negative and positive strangenesses and charged states: +2, +1, 0, -1 and -2. The mean mass value of the baryoniums equals: 3050$\pm$10 (stat.) $\pm$30(syst.). MeV/c^2. The width of the baryoniums does not exceed 30 MeV/c^2. The presence of the double charged states of the baryoniums shows that their isotopical spin is $\geq$3/2. This indicates to their multiquark structure. The indication to the existence of a narrow baryonium with the mass of 2400 MeV/c^2 in the Λ-barp system was obtained also. 11 refs.; 4 figs.; 2 tabs.

34953 (JINR-D–1-88-369) **Observation of narrow baryoniums in the experiment BIS-2. 2. Baryoniums with hidden strangeness.** Aleev, A.N.; Aref'ev, V.A.; Balandin, V.P. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 6p. Order Number DE89618957/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to the 24-th International Conference on High Energy Physics, FRG, August, 1988, and to International Conference Quarks-88, Tbilisi, May, 1988.

In the experiment carried out by the BIS-2 collaboration at the Serpukhov accelerator the search has been performed for baryonium with hidden strangeness, decay products of which are containing baryon-antibaryon pair, and also particles with opposite strangenesses. In eight different invariant mass spectra of the neutral and charged final states, the narrow peaks are observed at one and the same mass value. This indicates the existence of the non-strange baryonium in three charged states: +1,0 and -1. The mass of the resonance is equal to 3255$\pm$10 (stat.)$\pm$30(syst.) MeV/c^2. The width of the resonance does not exceed 30 MeV/c^2. 7 refs.; 3 figs.; 1 tab.

34954 (UEF–02-88) **Backward particles in ^{4}Hep reactions.** Glagolev, V.V.; Lebedev, R.M.; Pestova, G.D.; Shimansky, S.S.; Seman, M.; Sandor, L.; Hlavacova, J.; Martinska, G.; Patocka, J.; Urban, J. Slovenska Akademia Vied, Kosice (Czechoslovakia). Ustav Experimentalnej Fyziky. Aug 1988. 15p. Order Number DE89617840/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The invariant differential cross sections were investigated as functions of different backward particle momenta in ^{4}Hep interactions. Two data samples were used at the ^{4}He incident momenta 8.6 GeV/c and 13.6 GeV/c. The data were obtained by means of a 1-m hydrogen bubble chamber at Joint Institute for Nuclear Research Dubna. The spectra for nuclei showed a monotonous exponentially falling trend at both momenta. Some irregularities were observed in the nucleon and P^+ spectra and these were especially visible at a lower beam momentum. The experimental data were satisfactorily reproduced by taking into account the Fermi motion and intermediate Δ-isobar states. (author). 7 figs., 2 tabs., 22 refs.

34955 Production of meson resonances as leading particles in jets in proton-proton collisions at $\sqrt{s}$=62 GeV at the CERN ISR. Breakstone, A. (Ames Lab., IA (USA)); Crawley, H.B.; Firestone, A.; Gorbics, M.; Isenhower, D.; Lamsa, J.W.; Meyer, W.T.; Skeens, J.; Campanini, R.; Cuffiani, M. *Zeitschrift fuer Physik [Sektion] C: Particles and Fields (F.R. Germany)*, 43(2): 185-192 (Jun 1989). DOE Contract W-7405-ENG-82;AC03-76SF00098.

The production of rho(770)^0, K*(892)^0, anti K*(892)^0 and f_2(1270) mesons as leading particles in hadron jets ($\langle z \rangle \simeq 0.7$) has been measured in deep inelastic pp interactions at the CERN ISR at $\sqrt{s}$=62 GeV. The comparison of vector and pseudoscalar meson production at the same transverse momentum provides a rather model independent way to determine the fragmentation parameter V/P. We determine $(V/P)_{u,d}$=1.66±0.18±0.63 from the rho/π ratio and $(V/P)_s$=0.90±0.13±0.27 from the K*/K ratio. For the f_2(1270) production we find f_2/rho^0=0.30±0.08.

34956 Search for free quarks produced at 800 GeV/c using a new concentration technique. Matis, H.S. (Nuclear Science Division, Lawrence Berkeley Laboratory, 1 Cyclotron Road, Berkeley, California 94720); Pugh, H.G.; Bland, R.W.; Calloway, D.H.; Dickson, S.; Hodges, C.L.; Joyce, D.; Lindgren, M.A.; Palmer, T.L.; Savage, M.L.; and others. *Physical Review [Section] D: Particles and Fields (USA)*, 39(7): 1851-1860 (1 Apr 1989).

A high-sensitivity experiment was performed to detect free quarks produced in collisions of 800-GeV/c protons with a heavy target at Fermilab. Two quite different, high-concentration methods were used to obtain a small drop of Hg containing any produced quarks which stopped in a large amount of material. Using a new technique, secondaries were stopped in Hg tanks and the Hg was then distilled to small drops. In a second method, secondaries were stopped in liquid-nitrogen tanks, and charged atoms were collected electrostatically on Au-coated electrodes. The Au coatings were dissolved in Hg. The Hg drops from both techniques were then tested for quarks in the San Francisco State University automated Millikan apparatus. These results show that charged 1/3 quarks are produced below levels of 1.2×10^{-10} at 90% C.L. for both methods. Upper limits are also presented for charged 2/3 quarks. The distillation technique should prove useful in performing high-sensitivity quark searches in future beam-dump experiments.

34957 Dijet angular distributions from $p\bar{p}$ collisions at $\sqrt{s}$=1.8 TeV. Abe, F. (Argonne National Laboratory, Argonne, Illinois 60439(US)); Amidei, D.; Apollinari, G.; Ascoli, G.; Atac, M.; Auchincloss, P.; Baden, A. R.; Barbaro-Galtieri, A.; Barnes, V. E.; Bedeschi, F.; and others. *Physical Review Letters (USA)*, 62(26): 3020-3023 (26 Jun 1989).

We have measured dijet angular distributions at $\sqrt{s}$ =1.8 TeV with the Collider Detector at Fermilab and the Tevatron $\bar{p}$ Collider and find agreement with leading-order QCD. By comparing the distribution for the highest dijet invariant masses with the prediction of a model of quark compositeness, we set a lower limit on the associated scale parameter Λ_c at 330 GeV (95% C.L.).

34958 Spin-correlation parameter $A_{nn}(\theta)$ for *n-p* elastic scattering at 790 MeV. Nath, S. (Texas A&M University, College Station, Texas 77843-3366(US)); Glass, G.; Hiebert, J. C.; Holt, J. A.; Kenefick, R. A.; Northcliffe, L. C.; Grosnick, D. P.; Lopiano, D.; Ohashi, Y.; Shima, T.; and others. *Physical Review [Section] D: Particles and Fields (USA)*, 39(11): 3520-3523 (1 Jun 1989). DOE Contract AS05-76ER04449;W-31-109-ENG-38;FG05-88ER40399.

The spin-correlation parameter A_{nn} for free *n*-pelastic scattering has been measured for the first time forincident-neutron-beam energy E_n=790 MeV and c.m. angles$48° \lesssim \theta^* \lesssim 149°$. The data are compared with thewidely differing predictions of several phase-shift analyses, clearly favoringone of them. They also are compared with recently published quasifreeA_{nn} data for the more limited c.m. angular region$98° \lesssim \theta^* \lesssim 122°$.

My research in lattice gauge theory during the past year is described. Several projects were completed dealing with QCD simulations including dynamical fermions. The phase diagram for QCD with four quark flavors was studied using a finite size scaling analysis at intermediate quark mass. With two light quark flavors, a study of the hadron spectrum was completed. These results, when combined with an earlier study of the finite temperature chiral symmetry restoration transition, determine the transition temperature in MeV. The transition temperature is seen to be ≈130 MeV, which makes it more accessible to observation at a relativistic heavy-ion collider than previously expected. Studies of hadronic screening lengths and the quark number susceptibility at zero chemical potential provide further probes of the high temperature phase of QCD. In the pure gluon theory, claims that the finite temperature deconfinement transition is second order, rather than first order, were investigated using a finite size scaling analysis. Finally, work was done to port computer code to new environments in order to pursue more ambitious calculations on more powerful hardware than the ST-100 used for the calculations reported here.

34961 (DOE/ER/40319–3-Pt.2) **[High energy particle physics]: Progress report covering the five year period from August 1, 1984 to May 31, 1989 with special emphasis for the period of August 1, 1988 to May 31, 1989.** Florida State Univ., Tallahassee, FL (USA). This report summarizes the research done. One may identify the following mainlines: finite size scaling and non-Abelian gauge theories in finite volumes; random surfaces; quantum gravity; and algorithms, statistical and computational methods. A short account of each topic (and their interrelations) is given.

34962 (FNAL/C–89/26) **Structure functions and parton distributions.** Tung, Wu-Ki; Morfin, J.G.; Schellman, H.; Kunori, S.; Caldwell, A.; Olness, F. Fermi National Accelerator Lab., Batavia, IL (USA). Jan 1989. 49p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-8806243–40: DPF summer study: Snowmass '88: high energy physics in the 1990s, Snowmass, Colorado, USA, 27 Jun - 15 jul 1988;ANL-HEP-CP–89-01). Order Number DE89014215/JAW. Available from NTIS, PC A03/MF A01 - OSTI.

Parton distributions play an essential role in the QCD parton model in studies of all high energy processes in physics of the 1990's. The primary source of information on parton distributions is from structure functions measured in deep inelastic scattering experiments. In this report we: review the current status of deep

inelastic scattering experiments; closely examine the efficacy of currently used parton distribution parametrizations; report on our efforts to compile an extensive database on structure functions and to initiate a comprehensive study of the extraction of parton distributions from them; present preliminary results and conclusions from this study; and discuss the important roles that current and near-future experiments (especially at the colliders) can play in the complete determination of parton distributions. Particular attention is placed in the gluon distribution and on the small-x extrapolation problem. A concise summary of precise definitions of parton distributions and QCD parton model formulas are included in the introductory section to meet the increasing need of next-to-leading order applications of QCD. 47 refs.

34963 (HD-THEP–88-5) **CP violating mixings of toponium states.** Loew, U. Heidelberg Univ. (Germany, F.R.). Inst. fuer Theoretische Physik; Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet. 1988. 78p. (In German). Available from Heidelberg Univ. (Germany, F.R.). Inst. fuer Theoretische Physik.

In the present thesis the possibility of an admixture chi of the 2^1P_1 toponium state which has the CP quantum number -1 to the 2^3S_1 toponium state with CP quantum number +1 is discussed. The value of chi was estimated in 3 different models of the electroweak interaction. In the standard model the lowest contribution to chi is of 6th order in the weak coupling g or of 4th order in g and of 2nd order in the strong coupling g_S. The Feynman diagrams which contribute to chi contain 2 loops. According to a crude estimate of these diagrams it is expected that they yield a contribution smaller than 10^{-10}. In the model with extended Higgs sector - for a top-quark mass of 45 GeV - a value of $7x10^{-4}$ resulted for chi. For a top-quark mass of 100 GeV it is expected that chi is even of the order of magnitude of 10^{-2}. The large contributions originate from CP violating coupling neutral Higgs particles. In the right-left symmetric model two contributions to chi were calculated. The first one results from the exchange of the right- and left-handed W bosons. For a mass m_R=500 GeV this contribution lies at chi $\simeq 10^{-14}$. The second contribution is again based on the exchange of two neutral CP violating coupling Higgs particles. It lies in the order of magnitude at 10^{-8}. Possibilities were indicated to find the estimated admixture chi in an experiment. A correlation in the 3-gluon decay of toponium and the decay of toponium into exclusive decays was discussed. (orig./HSI).

34964 (IC–88/344) **Extraction of higher twist contribution from large P_T rho photoproduction processes.** Hu Tong; Kong Fanmei; Ma Luo. International Centre for Theoretical Physics, Trieste (Italy). Nov 1988. 12p. Order Number DE89617793/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We propose a method by using cross section differences to extract higher twist contributions from large P_T-photoproduction processes. The calcuation shows that this method can obtain a clear higher twist signature and can be carried out under the present available laboratory conditions. In this paper, we have compared several rho meson wave functions, and indicated that the different results of the combination of the cross sections have been given for different rho meson wave functions. (author). 7 refs, 3 figs, 1 tab.

34965 (IFUSP-P–723) **Gentileons of the first kind.** Cattani, M.S.D. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Jul 1988. 27p. Order Number DE89618942/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Fundamental aspects of the gentilionic theory are reanalyzed and significant modifications are introduced in this approach. It is shown that the state vector of three gentileons has a spinor character and that its basic symmetry properties are described by the intermediate S_3 and SU(3) groups. As an intermediated and natural result of the oretical analysis, it is shown how essential observed properties of composed can be predicted from first principles assuming quarks as gentileons.

34966 (IFUSP-P–729) **40 years of meson pi.** Hamburger, E.W. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Aug 1988. 10p. (In Portuguese). Order Number DE89618891/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The history of meson pi discovery and, its consequences for the development of elementary particle physics are presented. (M.C.K.).

34967 (IFUSP-P–734) **Heavy lepton production through vector boson fusion in e^+ e^- collisions at high energies.** Eboli, O.J.P.; Marques, G.C.; Novaes, S.F. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Sep 1988. 17p. Order Number DE89618910/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The production of heavy leptons belonging to a fourth generation, through the vector boson fusion mechanism in e^+e^- collisions at CLIC energies is studied. Lepton production through photon fusion is a more efficient mechanism since the total cross section is larger for a considerable range of lepton masses. Only for very high masses the fusion of longitudinally polarized bosons becomes competitive with photon fusion.

34968 (IFUSP-P–752) **Superheavy quarkonium decays with two higgs doublets.** Eboli, O.J.P.; Natale, A.A.; Simao, F.R.A. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Nov 1988. 38p. Order Number DE89618943/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The decay modes of a S-wave superheavy quarkonium, formed by a possible fourth generation quark in two Higgs doublets models are studied. Due to the enhacement of Yukawa couplings and longitudional weak bosons the main decays of these superheavy states will be into neutral scalar bosons, $H^0_iH^0_j$, and a charged scalar plus a W boson. If the $H^{-+}W^{\pm}$ channel is open for the psi(1^{--}) superheavy quarkonium provide a quite clean signal for a charged Higgs boson. The decay of the pseudoscalar quarkonium eta(O^{-+}) into a zeta boson and one of the scalars will also be present in a large amount.

34969 (IFUSP-P–755) **S-> dγ contribution to hyperon radiative decays: a QCD sum rule approach.** Goldman, C.; Escobar, C.O. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Nov 1988. 25p. Order Number DE89618944/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Using the method of the QCD sum rules, the short distance contribution s-> dγ to the hyperon radiative decays, $\Sigma^+ \to p\gamma$ and $\gamma^- \to \Sigma^-\gamma$ is analysed. A more reliable estimate of this contribution is obtained, giving branching ratios that are larger than obtained before for the same process, although still small compared with experimental data. The asymmetric parameter α turns out to depend on the decay considered and surprising is equal to -1 for $\Sigma^+ \to p\gamma$, for dynamical reasons which will discuss.

34970 (INFN-LNF–89-008(PT)) **Model of diffraction scattering with unitary corrections.** Etim, E.; Malecki, A.; Satta, L. Istituto Nazionale di Fisica Nucleare, Rome (Italy). 1989. 14p. (CONF-8906125–: Workshop on multiparticle dynamics, Perugia, Italy, 21-28 Jun 1989). Order Number DE89612645/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The inability of the multiple scattering model of Glauber and similar geometrical picture models to fit data at Collider energies, to fit low energy data at large momentum transfers and to explain the absence of multiple diffraction dips in the data is noted. It is argued and shown that a unitary correction to the multiple scattering amplitude gives rise to a better model and allows to fit all available data on nucleon-nucleon and nucleus-nucleus collisions at all energies and all momentum transfers. There are no multiple diffraction dips.

34971 (INIS-mf–11456, pp. 35-42) **Old and new problems in the neutrino physics.** Gmitro, M. (Ceskoslovenska Akademie Ved, Rez (Czechoslovakia). Ustav Jaderne Fyziky). Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). A survey is presented of the present state of the physics of the neutrino. Attention is centred on the determination of the neutrino mass, neutrino-free double beta decay, neutrino oscillation, the mystery of solar neutrinos and the Supernova 1987 explosion. (Z.J.). 2 tabs., 14 refs.

34972 (INIS-mf–11456, pp. 51-58) **New ideas on space-time and particles.** Niederle, J. (Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Fyzikalni Ustav). Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

The present state of the theory of superstrings is described. Their priciple is explained and a survey given. It is pointed out that the theories of superstrings are the only theories which consistently link the gravitation theory with quantum theory and allow to describe all known subnuclear particles and their interactions. (Z.J.). 9 figs., 3 tabs., 10 refs.

34973 (INIS-mf–11456, pp. 419-422) **Is there an experimental proof that nucleons in nuclei are substantially different from free ones?.** Formanek, J. (Karlova Univ., Prague (Czechoslovakia). Fakulta Matematicko-Fyzikalni). Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

The deep inelastic scattering of muons on atomic nuclei is discussed. Main attention is focused on the interpretation of experimental data measured in CERN by the European Muon Collaboration (EMC effect). There does not appear to exist experimental evidence that nucleons in nuclei substantially differ from free nucleons. (Z.J.). 3 figs., 4 refs.

34974 (INIS-mf–11456, pp. 409-412) **Topical problems of the standard model.** Fischer, J. (Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Fyzikalni Ustav). Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

The present state is described of the standard model and some of its topical problems are discussed, this namely the number of free parameters, the existence and properties of Higgs bosons, the possible existence of right-spin calibration bosons W^{+}_{R}, W^{-}_{R}, Z_R and the top quark. (Z.J.). 12 refs.

34975 (JINR-E–2-88-395) **Extra Z'-boson in elastic and diffractive neutrino scattering.** Bednyakov, V.A.; Kovalenko, S.G. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1988. 21p. Order Number DE89618894/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the journal Yad. Fiz.

The contribution of the extra Z' boson to elastic νN or (ν-barN), νe or (ν-bare) scattering, coherent neutrinoproduction of π^0 mesons on nuclei, diffractive neutrino reactions with rho^0-and and $A_1{}^0$ mesons produced have been studied within the superstring inspired E_6 model. Some combinations of charged and neutral current cross sections weakly depending on the nucleon and nuclear structure have been analyzed. The conclusion that it is reasonable to study experimentally the Z' contribution not only in deep inelastic processes but also in the above ones is substantiated. Possibilities of carrying out these investigations at relatively low energies are discussed. 16 refs.; 10 figs.; 3 tabs.

34976 (JINR-E–2-88-428) **Spin effects in QCD at large distances.** Goloskokov, S.V. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 12p. Order Number DE89618912/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the journal Yad. Fiz.

The high-energy quark-quark scattering is investigated without using the QCD perturbative theory. It is shown that the two-gluon-object exchange in the t-channel leads to the helicity-flip amplitude growing as S which contains the constituent quark mass as a dimensional parameter. The existence in some diagrams of perturbative theory of QCD. 13 refs.; 4 figs.

34977 (JINR-E–2-88-460) **About a possibility for observation of CP-violation in B-meson decays in fixed target experiments.** Kekelidze, V.D. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 12p. Order Number DE89618913/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the journal Z. Phys., C.

An approach to rhe detection of CP-violation tn the decays of neutral B mesons at fixed target accelerators is suggested. This approach is feasible in experiments with high intensity hadron beams and, thus, allows one to employ one of the main advantages of fixed target accelerators. Possible systematic errors of the CP asymmetry measurement are also discussed. The B^o decays into J/psi+K_s and J/psi+K_l are considered as an optimum for the detection of CP-violation. 14 refs.

Lab. of Theoretical Physics; Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1988. 14p. Order Number DE89618914/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the journal Czech. J. Phys.

Possible productions of scalar gluonium candidates in the radiative J/PSI decays are discussed. 27 refs.; 2 figs.

34979 (JINR-E–2-88-519) **Polarizability of π-mesons in the quark confinement model.** Avakyan, E.Z.; Avakyan, S.L.; Efimov, G.V.; Ivanov, M.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 16p. Order Number DE89618915/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to Yad. Fiz.

The electric α_π and magnetic β_π polarizabilities are calculated in the Quark Confinement Model (QCM). The diagrams with vector, scalar and axial intermediate states are taken into account. It is found that intermediate scalar mesons give an essential contribution to electric and magnetic polarizabilities of pions. The following values for α_π and β_π are obtained: $\alpha_{\pi(\pm)}=4.06\text{x}10^{-43}$ cm^3; $\beta_{\pi(\sup\pm)}=-3.84\text{x}10^{-43}$; $\alpha_{\pi(\sup 0)}=-0.18\text{x}10^{-43}$ cm^3; $\beta_{\pi(\sup 0)}=1.92\text{x}10^{-43}$ cm^3. The widths of strong ($\alpha_0(980)$ -> πeta, $f_0(975)$ -> $\pi\pi$, $\epsilon(730)$ -> $\pi\pi$) and radiative ($\alpha_0(980)$, $f_0(980)$, $\epsilon(730)$ -> $\gamma\gamma$) decays are calculated. The results are obtained to be in satisfactory agreement with expermental data. 19 refs,; 8 figs.; 4 tabs.

34980 (JINR-E–4-88-610) **Three-dimensional relativistic equations for $\pi\pi$, πN and NN scattering.** Machavariani, A.I. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 12p. Order Number DE89618916/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Different Low-type equations for the $\pi\pi$, πN and NN scattering t-matrices are considered. Their connection with the Lippmann-Schwinger equation with the relativistic kinematics is analyzed and the comparison with the corresponding quasipotential equations is made. 16 refs.

34981 (JINR-R–1-88-327) **Analysis of inclusive characteristics of hadron interactions from 4 to 360 GeV/c momentum by the Lund model.** Batyunya, B.V.; Grishin, V.G.; Didenko, L.A.; Grishina, O.V.; Metreveli, Z.V. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 18p. (In Russian). Order Number DE89618917/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the journal Yad. Fiz.

Data on the inclusive characteristics of secondary particles produced in soft p-barp-, pp- and π^-p interactions over 4 to 360 GeV/c momentum range have been analyzed in the framework of the Lund model (LM) which considers these collisions as a result of parton interaction (quark and gluons). The results obtained with large bubble hydrogen and propane bubble chamber at the Dubna and Serpukhov accelerators and the results for other energies were used in the analysis. The comparison of the calculated results with the data on the multiplicity, cross sections and inclusive momentum characteristics of secondary particles shows that a part of data from 4 to

360 GeV/c is satisfactorily described by the LM. The regions of the LM applicability in the used versions for soft π^-p and pp interactions in this energy region have been obtained. 18 refs.; 13 figs.; 4 tabs.

34982 (JINR-R–2-88-364) **Additional Z'-boson in ν-barN elastic and quasielastic scattering.** Bednyakov, V.A.; Kovalenko, S.G. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1988. 10p. (In Russian). Order Number DE89618895/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to the journal Phys. Lett., B.

Contribution of an extra Z'-boson to the elastic ν-barp scattering, π^0 neutrino-production on nuclei and some diffractive reactions is calculated in the frame of superstring inspired E_6-model. We give quantitative estimations of this contribution and its dependence on model parameters. 11 refs.; 4 figs.; 1 tab.

34983 (JINR-R–2-88-501) **On the value of isolated dibaryon resonance decay width.** Bazhanskij, I.I.; Reznik, B.L.; Luk'yanov, V.K.; Titov, A.I. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 18p. (In Russian). Order Number DE89618918/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Width of decay Γ of isolated dibaryon into nucleon-nucleon channel is calculated. Dependence of Γ on basic parameters determining the dynamics of interaction in multiquark systems is investigated. It is shown that its magnitude for typical values of these parameters is limited: $\Gamma<=40$ MeV. 18 refs.; 1 fig.

34984 (JINR-R–2-88-556) **Approximation of hadron interactions by Regge diagrams with multipomeron exchange.** Barashenkov, V.S. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation. 1988. 6p. (In Russian). Order Number DE89618919/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

A good agreement of hadron diffraction interaction total cross section and their elastic scattering at small angles calculated by summarizing Regge multipomeron exchange diagrams with experiment mentioned by a number of authors results from the fitting of a great variety of the parameters contained in the formulas. The agreement of the other hadron characteristcs with experiment is worse. Distribution of hadron interactions over the number of fragmenting quark-gluon strings calculated by utilizing Regge diagrams is discussed. 10 refs.; 2 figs.; 3 tabs.

34985 (KEK–88-3, pp. 25-35) **DEMON and high energy theory.** Lim, Chong-Sa (National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan)). National Lab. for High Energy Physics, Oho, Ibaraki (Japan). Jun 1988. (CONF-8803216–: 1. KEK symposium on ultra cold neutrons (UCN), Tsukuba, Japan, 10 Mar 1988). In *1st KEK symposium on ultra cold neutrons (UCN)*. Order Number DE89012146/JAW. Available from NTIS (US Sales Only), PC A08/MF A01.

A study is carried out to examine several appealing gauge models to accomodate CP violation. There are two sources of DEMON (dipole electric moment of neutron): so-called theta vacuum of QCD, and CP violating weak interaction. The presence of the first source is rather suprising since it is usually considered that the strong interaction, which is well described by QCD, conserves T and CP exactly. Investigation is made of these issues. Another investigation is made of DEMON due to Weak CP violation. It is found that the models examined predict quite different values of the coupling constant (DEMON). In particular, the most popular standard model by Kobayashi and Maskawa seems to give a value of the constant far below the present upper bound. It is interesting to note that both the left-right symmetric and spontaneous CP violation models have the tendency to predict values of the constant not so far from the experimental bound. The spontaneous CP violation model, in particular, appears to be the most promising candidate to give a value of the constant very close to the upper bound. Thus, the improvement of upper bound or measurement of DEMON by ultra cold neutron experiments is very desirable and will shed much light on the mechanism of CP violation. (N.K.).

34986 (KEK–88-3, pp. 111-129) **Ultra-cold anti-neutrons (UCN-bar).** Golub, R. (National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan)); Yoshiki, H. National Lab. for High Energy Physics, Oho, Ibaraki (Japan). Jun 1988. (CONF-8803216–: 1. KEK symposium on ultra cold neutrons (UCN), Tsukuba, Japan, 10 Mar 1988). In *1st KEK symposium on ultra cold neutrons (UCN)*. Order Number DE89012146/JAW. Available from NTIS (US Sales Only), PC A08/MF A01.

Since the suggestion of Mohapatra and Marshak concerning the possibility of n-n-bar oscillations there has been a growing interest in the experimental observation of such oscillations in free neutrons. The neutron is in fact a neutron-antineutron two particle system according to this interpretation. The idea of carrying out such a search using ultra-cold neutrons (UCN) has been rejected by most workers in this field because of the phase shifts and associated loss of coherence of the n-bar-wave function as a result of collisions with the walls of the UCN container. However one of the present authors has pointed out that it would be possible to compensate the n-bar-n relative phase shift caused by wall collisions with an opposite phase shift produced by an external magnetic field if coherence could be maintained. In the present work, theoretical consideration is made of a system which is free but under a magnetic field, assuming that δm is the $\Delta B = 2$ transition mass where B is the barionic number. Reflection of the system from a wall is analyzed. Two model potentials are used to give some idea of the sensitivity of the results to the shape of the n-bar-nucleus potential. It may be possible eventually to use observation of UCN to obtain a high precision determination of the n-bar-matter interaction. (N.K.).

34987 (LBL–26669) **Teachers' resource book on fundamental particles and interactions.** Quinn, H.R.; Dorfan, J.; Barnett, R.M.; Cahn, R.N.; Goldhaber, G.; Aubrecht, G.J. II. Lawrence Berkeley Lab., CA (USA). c 31 Jan 1989. 144p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098;AC03-76SF00515. PHY83-18358. Order Number DE89013418/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

People have long asked "What is the world made of?" and "What holds it together?" Particle physics seeks to answer these questions. Over the past ten years a clear consensus has evolved. Down to the smallest scales studied experimentally, these questions are answered by a theory that particle physicists call "the Standard Model." The purpose of this book is to summarize this theory in a form suitable for presentation to beginning physics students.

34988 (LU-TP–88-5) **ARIADNE - A Monte Carlo for QCD cascades in the colour dipole formulation.** Pettersson, U. Lund Univ. (Sweden). Dept. of Theoretical Physics. Apr 1988. 14p. Order Number DE89618922/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We present a Monte Carlo program for generating QCD cascades, based on the colour dipole approximation. In this formulation the gluons are radiated from dipoles that are stretched from one colour charge to the corresponding anti-charge. The subsequent emission of gluons thus corresponds to the dipoles being split into smaller and smaller dipoles. This formulation automatically takes into account the angular ordering and the ordering in transverse momenta, and it also gives some nontrivial azimuthal effects.

34989 (LU-TP–88-14) **Coherence effects in deep inelastic scattering.** Andersson, B.; Gustafson, G.; Loennblad, L.; Pettersson, U. Lund Univ. (Sweden). Dept. of Theoretical Physics. Sep 1988. 26p. Order Number DE89618920/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We present a framework for deep inelastic scattering, with bound state properties in accordance with a QCD force field acting like a vortex line in a colour superconducting vacuum, which implies some simple coherence effects. Within this scheme one may describe the results of present energies very well, but one obtains an appreciable depletion of gluon radiation in the HERA energy regime. (authors).

34990 (LU-TP–88-15) **ARIADNE 2. A Monte Carlo for QCD cascades in the colour dipole formulation. An update.** Loennblad, L.; Pettersson, U. Lund Univ. (Sweden). Dept. of Theoretical Physics. Sep 1988. 15p. Order Number DE89618921/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We present a Monte Carlo program for generating QCD cascades, based on the colour dipole approximation. This version is an extension of the program ARIADNE. A parton cascade is generated

by emitting gluons from colour dipoles that are stretched from a colour charge to the corresponding anti-charge. New features include option for strict ordering in transverse momenta, different choices of giving recoils to the colour charges and supression of radiation from dipoles with extended colour fields (relevant to deep inelastic scattering). (authors).

34991 (USIP–88-04) **Hilbert space of closed bosonic string.** Nilsson, M. Stockholm Univ. (Sweden). Inst. of Physics. Mar 1988. 29p. Order Number DE89617825/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We know from the bosonic particle that the Hilbert space comes from the quantized constraints. The constraints lead to a field equation defined on spacetime. For a string the constraints will be functional equations after quantization. We reduce the Hilbert space of the closed bosonic string to that of a field theory defined on spacetime. Using the mode expansion the dependence of the Fourier components with mode number different from zero can be solved for and extracted from the dependence of the zero mode. The zero mode can be indentified with spacetime. With mode expansion and standard unification of constraints we arrive at two sets of Virasoro conditions. Treating these conditions as a sum of differential operators we reduce the two sets of Virasoro conditions to two sets of differential equations. Discussing the properties of the solutions to these equations we show that the two set of Virasoro conditions can be reduced to a set of field equations for the spacetime mode. We derive all the field equations, thus we reduce the Hilbert space of the closed bosonic string to that of a field theory defined on spacetime. Thus we arrive at a string field theory. We also see that the field equations automatically relate fields of the same mass.

34992 **Inelastic lepton-deuteron scattering: Possible coherent effects.** Yen, G. D. (Physics Department, Iowa State University, Ames, Iowa 50011(US)); Vary, J. P. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 16-18 (Jul 1989).

Electron-deuteron data exhibit some unusual secondary peaks in the plots of νW_2 versus Bjorken x. It is our spectulation that these peaks are evidence of interference between three-quark and the six-quarkcluster contributions to the inclusive data.

34993 **Diquark production in ep collisions.** Rizzo, T.G. (Ames Lab., IA (USA)). *Zeitschrift fuer Physik [Sektion] C: Particles and Fields (F.R. Germany),* 43(2): 223-227 (Jun 1989). DOE Contract W-7405-ENG-82.

We examine the production of single diquarks (D) and diquark pairs (Danti D) in ep collisions using the effective photon approximation. Cross-sections for both mechanisms are found to be quite sensitive to the assumed charges of the diquark but can lead to significant production rates in all cases at HERA and future ep colliders. Backgrounds from QCD jet production are found to be potentially significant in the case of single D production where the signal to background is approximately one-to-one whereas the production of Danti D pairs is relatively background free.

34994 **Observations in particle physics from two neutrinos to the Standard Model.** Lederman, L. M. (The Fermi National Accelerator Laboratory, Batavia, Illinois 60510(US)). *Reviews of Modern Physics (USA),* 61(3): 547-560 (Jul 1989).

The lecture delivered on the presentation of the 1988 Nobel Prize in Physics is reprinted. The author describes the development of the standard Model of elementary particles through a series of experiments studying leptons. (AIP)

34995 **Heavy top-quark mass predictions.** Marciano, W. J. (Brookhaven National Laboratory, Upton, New York 11973(US)). *Physical Review Letters (USA),* 62(24): 2793-2796 (12 Jun 1989). DOE Contract AC02-76CH00016.

Renormalization-group equations and asymptotic conditions are used to obtain top-quark mass predictions. In the standard model with an explicit Higgs mechanism, our analysis becomes identical to the Kubo-Sibold-Zimmermann coupling-reduction approach. Refining their prediction, we find $m_t \cong 95$ GeV. In the simplest case of self-consistent dynamical symmetry breaking, we obtain $m_t \cong 115$ GeV. An illustration of how short-distance new physics can alter these predictions is given.

34996 **Annihilation of heavy-neutral-fermion pairs into monochromatic γ rays and its astrophysical implications.** Rudaz, S. (School of Physics and Astronomy, University of Minnesota, Minneapolis, Minnesota 55455(US)). *Physical Review [Section] D: Particles and Fields (USA),* 39(12): 3549-3556 (15 Jun 1989).

We present estimates for the rates of the processes $\chi\chi \to \gamma\gamma$ and $\chi\chi \to V\gamma$, where χ is a heavy-neutral-fermion candidatefor galactic cold dark matter and V is a vector quarkonium state $J/\psi(3097)$ or $\Upsilon(9460)$. A discrepancy with a previous estimate of the rate of the photino pair annihilation process $\tilde{\gamma}\tilde{\gamma} \to \gamma\gamma$ is uncovered and its origin discussed. We explorethe possibility that some of the processes considered may be astrophysicallysignificant sources of monochromatic γ-ray lines, in the energy rangeof a few to a few tens of GeV, for which theoretical estimates of thebackground γ-ray flux are unfortunately subject to large uncertainties.

The inverse scattering method is used in order to get solutions of a nonrelativistic and nonlinear model exhibiting spontaneous breakdown of symmetry. Explicit expressions for multiple soliton solutions were developed. The one soliton solution exhibits some interesting properties. In particular, they interpolate between two different vacua of the theory differing by a phase which is related to the soliton velocity.

34998 (IFUSP-P–739) **Local bosonic symmetries in the string's action.** Gamboa, J. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Sep 1988. 6p. Order Number DE89618507/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The string action enjoys Sierra's bosonic local symmetry on which Siegel's k-symmetry closes. This bosonic symmetry is analyzed in Dirac's Hamiltonian formalism and its generators are identified.

34999 (INIS-SU–90) **Introduction to Moufang symmetry.** Paal, Eh.N. AN Ehstonskoj SSR, Tallin (USSR). 1987. 59p. (In Russian). Order Number DE89618508/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

In the present paper, the differential equations of a local analytical (l.a.) Moufang loop are established which turn out to be a natural generalization of the Lie and Maurer-Cartan equations from the Lie groups theory. By using the triality-property of the generalized Maurer-Cartan equations the Sagle-Yamaguti identity (equivalent to the Malcev one) is proved to hold in the tengent space T_e of the identity element e of the l.a. Moufang loop. Also, the commutation relations of the most important Lie algebras associated with a given l.a. Moufang loop are established. Preprint F–42; 41 refs.

35000 (INS–720) **Hosotani model in closed string theory.** Shiraishi, Kiyoshi. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Nov 1988. 33p. Order Number DE89778086/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Hosotani mechanism in the closed string theory with current algebra symmetry is described by the (old covariant) operator method. We compare the gauge symmetry breaking mechanism in a string theory which has SU(2) symmetry with the one in an equivalent compactified closed string theory. We also investigate the difference between Hosotani mechanism and Higgs mechanism in closed string theories by calculation of a fourpoint amplitude of 'Higgs' bosons at tree level.

Submitted to the journal Mat. Sb.

Equations of the static model with the crossing symmetry matrix A(1,1) in their famous formulation as a system of nonlinear difference equations are investigated. The geometric interpretation of these equations as quadratic Cremona transformations is given. Using the properties of the latter the functional equation on the invariant algebraic curves is obtained, the investigation of which enables one to find three invariant algebraic curves and to assert that except for them only the invariant nonalgebraic curve possibly exists. Using invariant polynomials found the quadratic Cremona transformation is constructed, which transforms the initial equations to a very simple form, which enables one to find an invariant nonalgebraic curve and to investigate its properties. These equations interpreted as the mapping with a fixed hyperbolic point have the Jacobian not equal one. The invariant measure and the Cremona transformation casting these equations into the form of area-preserving mapping are found. Using the results of Birkhoff and Moser for the mapping the outhers transform the initial difference equations into an easily integrable form. Two types of the general solution for the initial equations are obtained. 26 refs.; 3 figs.

35002 (LAPP-TH–217-88) **Unitarity polygons and CP violation areas and phases in the standard electroweak model.** Jarlskog, C.; Stora, R. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules. Apr 1988. 17p. Order Number DE89781485/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A geometrical interpretation of CP violation in terms of areas of unitarity triangles is presented, in the Standard Electroweak Model with three families of quarks. The extension of the results to the case of four families is investigated. A special case is worked out in detail where it is shown how one determines the CP violating invariant phases and the areas of the CP violation triangles as functions of the moduli of the elements of the quark mixing matrix. For the most general four family case, which is found to be rather involved, the necessary formulae, for determining the invariant phases and the CP violation areas, are given.

The variational methods of classical field theory may be applied to any theory with an action which is invariant under local gauge transformations. What is the significance of the resulting Noether current? This paper examines such currents for both Abelian and non-Abelian gauge theories and provides an explanation for their form and limited range of physical significance on a level accessible to those with a basic knowledge of classical field theory. Several of the more subtle aspects encountered in the application of the residual local gauge symmetry found by Becchi, Rouet, Stora, and Tyutin are also considered in detail in a self-contained manner. 23 refs.

The Dirac equation in four dimensions has an intimate connection with the representations of the group SU(4). This connection is shown in detail and subsequente properties are displayed in the continuum as well as in the lattice description.

35005 (IC–89/5) **Study of W-boson in a magnetic field based upon both mass operator and effective potential.** Skalozub, V.V.; Vanyashin, V.S. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 16p. Order Number DE89618461/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A review of W-boson properties in a constant magnetic field is given. The one-loop radiative corrections to the W-boson mass operator and to the effective potential are taken into account simultaneously. The external field mass-shell equation and the Lorentz condition, which follows from it, has also been considered with radiation effects included. The mass operator on the mass-shell in the weak and critical field limits is found and discussed. The critical field tachyon problem is invesigated with regard to the radiative corrections. It is argued that the consistent treatment of the W-boson in an external magnetic field crucially depends upon the value of the Higgs particle mass. The self-consistency argument, related to the zero-charge situation in the critical field region, leads to an upper bound on the Higgs mass approximately equal to 260 GeV. (author). 37 refs.

35006 (IC–89/9) **Effective actions for gauge theories with Chern-Simons terms - I.** Bambah, B.A.; Mukku, C. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 22p. Order Number DE89618462/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The effective Lagrangian for a three-dimensional gauge theory with a Chern-Simons term is evaluated upto one-loop effects. It is shown to be completely finite. It also does not exhibit any imaginary part. The calculation is carried out in a background field analogue of the Feynman gauge and gauge invariance is maintained throughout the calculation. In an appendix an argument is presented as to why this Feynman gauge may be a 'good' gauge for our results to be applied to high temperature QCD and in particular to the quark-gluon plasma. (author). 12 refs.

35007 (IC–89/38) **Superfiled formulation of Chern-Simons supersymmetry.** Birmingham, D.; Rakowski, M. International Centre for Theoretical Physics, Trieste (Italy). Mar 1989. 10p. Order Number DE89618459/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

We discuss an extra supersymmetry present in the covariantly quantized Chern-Simons action within the superfield formalism. By introducing scalar superfields we show how the component transformations are naturally reproduced from the superfield transformation. When the superspace is extended to include an additional odd coordinate for the BRST symmetry, the entire theory is described by a single odd scalar superfield. The implications of this supersymmetry for the renormalized theory are also discussed. (author). 9 refs.

35008 (IC–89/47) **General action for topological quantum field theories.** Dayi, O.F. International Centre for Theoretical Physics, Trieste (Italy). Mar 1989. 18p. Order Number DE89618460/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Topological field theories can be formulated by beginning from a higher dimensional action. The additional dimension is an unphysical time parameter and the action is the derivative of a functional W with respect to this variable. In the d = 4 case, it produces actions which are shown to give topological quantum field theory after gauge fixing. In d = 3 this action leads to the Hamiltonian, which yields the Floer groups if the additional parameter is treated as physical when W is the pure Chern-Simons action. This W can be used to define a topological quantum field theory in d = 3 by treating the additional parameter as unphysical. The BFV-BRST operator quantization of this theory yields to an enlarged system which has only first class constraints. This is not identical to the previously introduced d = 3 topological quantum field theory, even if it is shown that the latter theory also gives the theory which we began with, after a partial gauge fixing. (author). 18 refs.

35009 (IFUSP-P–741) **Spin and paramagnetism in classical stochastic electrodynamics (SED).** Barranco, A.V.; Brunini, S.A.; Franca, H.M. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Sep 1988. 31p. Order Number DE89618463/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The statistical properties of the spin $S^{->}$ and magnetic dipole μ^{-} of a particle with two constituents bounded by a harmonic force are studied. The relation between $\mu^{->}$ and $S^{->}$ and also conclude that $< S^{->2} >$ ~ Planck constant^2 is found. The giromagnetic factor can assume any value depending on the charges and masses of the constituents. In another example, the case of a permanent magnetic dipole moving in an external magnetic field, under the

influence of the fluctuations associated with the zero-point and thermal radiations characteristic of SED is considered. It is concluded that the system presents paramagnetism and comparison with the experimental data shows excellent agreement with SED.

35010 (IFUSP-P–746) **On the λ 'phi'^{4} - O(N) model at finite temperature.** Silva, A.J. da. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Nov 1988. 19p. Order Number DE89618464/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The λPHI^4-O(N) model is analyzed, in the leading 1/N approximation at finite temperature, with the conclusion that it is unstable above a certain temperature. The different scaling of the effective coupling of the effective coupling constant in p^2 and T, and the behavior of the mass and of the bound state with T is also discussed.

35011 (IFUSP-P–757) **Numerical simulations of the O(3) and CP^1 models using the Langevin equations and the Metropolis algorithm.** Abdalla, E.; Abdalla, M.C.B.; Alves, N.A.; Carneiro, C.E.I. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Dec 1988. 47p. Order Number DE89618465/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The O(3) model, the pure CP^1 model and the CP^1 model minimally coupled to fermions are numerically simulated. The equivalence between the O(3) and the bound state of the pure CP^1 model is investigated. It is shown that: the relations $g_{O(3)} = 2\ g_{CP(sup1)}$ and $E_{O(3)} = 2E_{CP(sup1)} + 2$, for the coupling constants and energies hold beyond the classical level; the mass gap as a function of the coupling is the same for both models. The mass gap for the CP^1 minimally coupled to fermions is also calculated. The calculations are performed using different techniques. The proposal by Namiki and colaborators to enforce constraints on Langevin equations and Parisi's technique to calculate correlation functions via Langevin equations is tested. The results are compared with those obtained using the multi-hit Metropolis algorithm.

35013 (IPNO-TH–87-81) **Particle-particle and hole-hole RPA correlations at finite temperature and the temperature dependence of the level density parameter.** Vinh Mau, N. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Nov 1987. 30p. Order Number DE89781493/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The pp-hh RPA equations obtained by summing the infinite series of ladder, upwards and backwards going diagrams in the temperature two particle Green's functions are derived at finite temperature. The contribution to the thermodynamic grand potential due to pp-hh RPA correlations is calculated simultaneously to that of ph RPA correlations. A schematic model is constructed which shows that, as for ph RPA states, the energies of pp and hh RPA states have no temperature dependence at not too high temperature. Within the same model, the temperature dependence of the level density parameter is discussed.

Lab. of Theoretical Physics. 1988. 8p. Order Number DE89618466/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to the journal Phys. Lett., B.

The contributions of electric and magnetic modes to some thermodynamic functions in SU(2)-gauge theory on the lattice $4x12^3$ were calculated. It is shown that the behaviour of the chromoelectric part of energy E_E can be interpreted within the Ising-type model in agreement with the universality hypothesis. At the same time the behaviour of the magnetic parts of the internal energy and pressure (i.e. E_M and P_M) differs drastically from that of E_E and P_E. The character of the temperature dependence of E_M and P_M exhibited here testifies to the presence of a highly nonidentical properties of electric and magnetic modes of chromoplasma and maybe sheds light on the role of unstable modes in gauge theories. 24 refs.; 3 figs.

35015 (JINR-E–2-88-474) **On sigma model formulation of Green-Schwarz superstring.** Isaev, A.P.; Ivanov, E.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 10p. Order Number DE89618467/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to the journal Modern Phys. Lett., A.

The Green-Schwarz covariant superstring action is consistently deduced as the action of the Wess-Zumino-Witten σ-model defined on the direct product of two N=1, D=10 Poincare supertranslation groups. N=2 supersymmetry of the action is shown to be related to a specific choice of the target manifold. We propose a zero curvative representation for the GS superstring field equations and interpret the local fermionic supersymmetry of the GS action as a gauge symmetry preserving this representation. 12 refs.

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 20p. Order Number DE89618468/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to Z. Phys., C.

A new approach to relativization of the potential model, which allows one to describe the spectra of light and heavy mesons and their interaction, is proposed. This approach is based on application of the principles of "minimal" quantization of the gauge theories (with explicit solutions of the Gauss equation) and choice of the quantization axis (by setting one parallel to the vector of differential with respect to the total bound state coordinate) which are used in QED for describing the relativistic atoms. We have obtained the Dyson-Schwinger equation describing the spectrum of quarks and generation of their dynamical masses and derived a new relativistic covariant form for the Salpeter equation for light and heavy meson spectra. To describe the interactions of mesons we have proposed to use the S-matrix formalism with the asymptotical states of quarkonia which are the solutions to the Salpeter equation. It is shown that the relevant in the limit of a small transfer momentum bilocal Lagrangian of the interactions (in the colourless channel), for light mesons, tends to the phenomenological chiral Lagrangians, and, for heavy mesons, it corresponds to the QED Lagrangian for interacting atoms. 21 refs.; 1 fig.

35017 (JINR-E–2-88-655) **Non-perturbative field theory/field theory on a lattice.** Ambjorn, J. Joint Inst. for Nuclear Research, Dubna (USSR). 1988. 42p. Order Number DE89618469/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The connection between the theory of critical phenomena in statistical mechanics and the renormalization of field theory is briefly outlined. The way of using this connection is described to get information about non-perturbative quantities in QCD and about more intelligent ways of doing the Monte Carlo (MC) simulations. The (MC) method is shown to be a viable one in high energy physics, but it is not a good substitute for an analytic understanding. MC-methods will be very valuable both for getting out hard numbers and for testing the correctness of new ideas. 33 refs.; 11 figs.

35018 (LAPP-TH–210-88) **On the construction of convex effective potentials at zero and finite temperature.** Eliashvili, M. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules. Feb 1988. 9p. Order Number DE89781486/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

It is argued that the convexity property imposed on the effective potential can be satisfied only with a precise specification of the boundary conditions in the functional integral representation of the generating functionals. A procedure is established which leads to convex effective potentials at zero and finite temperatures.

35019 (LAPP-TH–221-88) **On infrared and mass singularities of perturbative QCD in a quark-gluon plasma.** Altherr, T.; Aurenche, P.; Becherrawy, T. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules. Jul 1988. 33p. Order Number DE89781487/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We discuss the radiative corrections to the production of lepton pairs in a quark-gluon plasma at finite temperature. The real-time formalism is used throughout the calculations. We show that both infrared and mass singularities cancel in the final result. In contrast to the zero-temperature case, no factorization theorem is required to deal with mass singularities.

35020 (LYCEN–8767) **Wigner - Kirkwood Planck constant - expansion of the linear response function.** Chanfray, G.; Schuck, P. Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire. Dec 1987. 30p. Order Number DE89781497/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

For the treatment of inhomogeneous Fermi systems we derive a semi-classical expansion of the linear response function in powers of Planck constant (up to Square Planck constant) for the interacting (RPA) and non-interacting (Lindhardt function) case. We find that the series is rapidly converging and that the semi-classical result compares very well with exact model calculations for cases where the response does not exhibit narrow resonances (e.g. the quasielastic peak region) otherwise it still represents the average value.

35021 (NBI-HE–89-18) **Fermionized spin systems and the boson-fermion mapping in 2+1 dimensional gauge theory.** Ambjoern, J.; Semenoff, G.W. Niels Bohr Inst., Copenhagen (Denmark); British Columbia Univ., Vancouver, BC (Canada). Dept. of Physics. 1989. 12p. Order Number DE89783577/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A generalization of the Jordan-Wigner transformation is used to present 2 dimensional quantum spin systems with s=1/2 as particular lattice gauge theories with spinless Fermionic variables. It is argued that for magnetically ordered phases the large wavelength limit produces a concrete physical realization of continuum topologically massive electrodynamics in 2+1 dimensions with Fermionic matter. We also give an explicit example of transmutation from Fermi to Bose statistics in 2+1 dimensional gauge theory with a Chern-Simons term.

35022 (NBI-HE–89-19) **Vortices and the phase structure of the multiply-charged U(1) Higgs model.** Damgaard, P.H.; Heller, U.M. Niels Bohr Inst., Copenhagen (Denmark); California Univ., Santa Barbara, CA (USA). Inst. for Theoretical Physics. Mar 1989. 16p. (FSU-SCRI–89-39). Order Number DE89783578/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We discuss the phase diagram for the U(1) Higgs model with a variable-length Higgs field of charge Qnot =1. Monte Carlo methods are used to map out in detail the phase structure for Q=2 and 6, and for selected values of the scalar self-coupling λ. When an external electromagnetic field is coupled to this model we observe the appearance of a vortex populated type-II phase, as well as a region with magnetic flux expulsion.

35023 Embedding and breaking of gauge symmetries. Baluni, V. (Stanford Linear Accelerator Center, CA (USA)). *Physics Letters [Section] B (Netherlands),* 222(1): 103-109 (11 May 1989). DOE Contract AC03-76SF00515.

The effective potential of "weak" interactions of a gauge group R is studied in the framework of models whose global symmetry group G is dynamically broken down to its subgroup H. The properties of its critical points on the double coset Rinverse slantG/H and their dependence on the embeddings Ris contained inG, His contained inG are investigated. All critical points with a nontrivial residual gauge symmetry H_w=RintersectionH are identified in the series of models SU(n)inverse slantSU(N)/SO(N), n<N≤6 and SU(n)inverse slantSU(2N)/Sp(N), n<2N≤6 with n=2, 3. Examples of degenerate hessians i.e. potentials with flat directions both neutral and charged under H_w are presented and their physical implications are briefly discussed.

35024 String field theory on the conformal plane. Pt. 1. Kinematical principles. Leclair, A. (Harvard Univ., Cambridge, MA (USA). Jefferson Lab. of Physics); Peskin, M.E.; Preitschopf, C.R. *Nuclear Physics [Section] B (Netherlands),* 317(2): 411-463 (1 May 1989). DOE Contract AC03-76SF00515.

We formulate string field theory geometrically by writing each term in the field theory action as an expectation value in the 2-dimensional conformal field theory on the world surface. We show how the symmetries of the theory can be analyzed and the gauge invariance demonstrated from this point of view. As an application, we give a complete proof of the gauge invariance of Witten's open string field theory.

35025 String field theory on the conformal plane. Pt. 2. Generalized gluing. Leclair, A. (Harvard Univ., Cambridge, MA (USA). Jefferson Lab. of Physics); Peskin, M.E.; Preitschopf, C.R. *Nuclear Physics [Section] B (Netherlands),* 317(2): 464-508 (1 May 1989). DOE Contract AC03-76SF00515.

In our previous paper, we defined multistring vertices by conformally mapping string states onto the complex plane. In this paper, we prove the combination rules for these vertices. The contraction of two vertices by the natural inner product on the string Hilbert space yields just the composite vertex which would have been obtained by gluing together the two world sheets in an appropriate fashion.

35026 Gauge invariance in Chern-Simons theory on a torus. Hosotani, Y. (Institute for Advanced Study, Princeton, New Jersey 08540(US)). *Physical Review Letters (USA),* 62(24): 2785-2788 (12 Jun 1989).

In the Chern-Simons gauge theory on a manifold $T^2 \times R^1$ (two-torus x time) the unitary operators, which induce large gauge transformations shifting the nonintegrable phases of the two distinct Wilson-line integrals on the torus by multiples of 2π, do not commute with each other unless the coefficient of the Chern-Simons term is quantized. In U(1) theory this condition gives the statistics phase $\theta=\pi/n$ (n an integer). The condition coincides with the one previously derived on a manifold S^3 (three-sphere) for SU($N\geq3$) theory but differs by a factor 2 for SU(2) theory. The requirement of the Z_N invariance in pure SU(N) gauge theory imposes a stronger constraint.

35027 The δ expansion for stochastic quantization. Bender, C. M. (Department of Physics, Washington University, St. Louis, Missouri 63130(US)); Cooper, F.; Milton, K. A. *Physical Review [Section] D: Particles and Fields (USA),* 39(12): 3684-3689 (15 Jun 1989).

Using a recently proposed perturbation expansion called the δ expansion, we show how to solve the Langevin equation associated with a $g\phi^4$ field theory. We illustrate the technique in zero- and one-dimensional space-time, and then generalize this approach to d dimensions.

35028 Conformal properties of the superstring-ghost Thirring model: Short-distance structure and bosonization. Freedman, D. Z. (Department of Mathematics and Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139(US)); Gath, E.; Pilch, K. *Physical Review [Section] D: Particles and Fields (USA),* 39(12): 3703-3712 (15 Jun 1989).

It is known that the free theory of superstring-ghost fields can be extended by adding the superconformal-invariant quartic interaction QJJ^- where $J=bc+\beta\gamma$ is the total ghost number current. We use functional techniques to compute correlation functions of the elementary fields and currents of the theory to all orders in the coupling constant Q, and we use these to obtain the important operator products. The model is then shown to bosonize in terms of the same fields used for the free system, and we obtain bosonization formulas such as $c(z,z^-)=:\exp[a_1 c\phi_1(z) + a_2 c\phi_2(z) + b_1 c\tilde{\phi}_1(z^-) + b_2 c\tilde{\phi}_2(\bar{z})]:$, where a_i and b_i are algebraic functions of Q, such that a_2, b_1, and b_2 vanish in the free limit. The model thus exhibits the nonholomorphic behavior characteristic of the Thirring model as well as novel mixing of the scalar fields $c\phi_1$ and $c\phi_2$. It does not seem possible to construct an operator in the interacting theory with the properties of the Becchi-Rouet-Stora-Tyutin current.

35029 Genus-2 free energy of the closed bosonic string. Leblanc, Y. (Center for Theoretical Physics, Laboratory for Nuclear

Science dge, Massachusetts 02139(US)). *Physical Review [Section] D: Particles and Fields (USA),* 39(12): 3731-3744 (15 Jun 1989).

Making use of the recently developed real-time finite-temperature formalism for string theory, we obtain an explicit expression for the Helmholtz free energy of a closed-bosonic-string gas in the genus-2 approximation. Our computation takes advantage of the modern Becchi-Rouet-Stora-Tyutin-invariant operator formalism for multiloop amplitudes and can be readily extended to arbitrary genus. We find some disagreement with previous results obtained through the imaginary-time (compactification) technique extended to higher-genus Riemann surfaces. Our comparison with the imaginary-time formalism is based on the McClain-Roth theorem. We mention a possible remedy to the latter technique in order to get correct results.

35030 Effective one-loop Lagrangian for gauged *scrH/scrK* σ models. Gaillard, M. K. (Department of Physics, University of California and Theoretical Physics Group, Physics Division, Lawrence Berkeley Laboratory, 1 Cyclotron Road, Berkeley, California 94720(US)); Jain, V. *Physical Review [Section] D: Particles and Fields (USA),* 39(12): 3755-3765 (15 Jun 1989). DOE Contract AC03-76SF00098.

We determine the divergent one-loop contributions to the effective action for a gauged nonlinear σ model in which the scalars are valued on the coset space *scrH/scrK* of a noncompact group *scrH*, with *scrK* its maximally compact subgroup. We focus especially on the scalar+Yang-Mills sector of a class of no-scale supergravity models suggested by superstrings. The formalism developed should be applicable to a broader class (with compact or noncompact *scrH*) of interesting models.

Experiments are discussed carried out on the electrostatic accelerator AN-2500 of the Nuclear Centre of the Charles University in Prague. Basic research is oriented to the study of the spin dependence of nuclear forces of n-p scattering at low energies, on determining averaged effective neutron cross sections and on the study of the (p,gamma) reaction at low energies. Applied research is oriented to the analysis of the surface of solids and to the calibration of semiconductor detectors. (Z.J.). 3 figs., 4 refs.

Energy dependence of effective neutron cross-sections of Si, Ge, and ^{74}Ge monocrystals, the effect of the block structure of crystal and its orientation to the neutron beam on the cross-section are given in this paper. It is shown that the silicon crystal filter of thermal neutrons does not change its facility at the fluence of fast neutrons up to 10^{19} n/cm^2. 4 refs.; 2 figs.

35036 (INS–723) **Superconducting spectrometer for the study of hypernuclei via (π, K$^+$) reactions.** Hashimoto, O.; Nagae, T.; Shintomi, T. and others. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Dec 1988. 14p. Order Number DE89778088/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A superconducting kaon spectrometer (INS-SKS) is under construction at Institute for Nuclear Study, University of Tokyo. The spectrometer, with 1/1000 momentum resolution and 100 msr acceptance, has been designed for intensive study of hypernuclei via (π, K$^+$) reactions. It is to be installed in a new experimental hall of the KEK 12 GeV proton synchrotron and is scheduled to be ready for experiments by the end of 1990.

35037 (IPNO-TH–88-3) **Swelling of nucleons in nuclei and the Roper resonance.** Desplanques, B. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Jan 1988. 16p. Order Number DE89781489/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Conditions where some swelling of the nucleon occurs, and, in particular the relation of this effect with the attractive character of the force acting on it, are studied. It is found that short range repulsive correlations can turn the swelling into a shrinking, in spite of a globally attractive interaction, whereas repulsive velocity dependent forces can lead to some swelling. The role of the Roper resonance in this nucleon change of size is considered in some detail.

35038 (JINR-E–7-88-650) **Observation of the new neutron-rich nuclei ^{29}F, ^{35,36}Mg, ^{38,39}Al, ^{40,41}Si, ^{43,44}P, ^{45,46,47}S, ^{46,47,48,49}Cl and ^{49,50,51}Ar by means of a 55 MeV/u ^{48}Ca beam.** Guillemaud-Mueller, D.; Anne, R.; Penionzhkevich, Yu.Eh. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions. 1988. 10p. Order Number DE89619054/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Using magnetic separation and identification through time of flight and ΔE,E measurements, the new neutron-rich nuclei, ^{29}F, ^{35,36}Mg, ^{38,39}Al, ^{40,41}Si, ^{43,44}P, ^{45,46,47}S, ^{46,47,48,49}Cl, ^{49,50,51}Ar have been observed from interactions of ^{48}Ca beam of 55 MeV/u with tantalum targets. 18 refs.; 5 figs.; 1 tab.

35039 (LBL–27144) **Fission throughout the periodic table.** Moretto, L.G.; Wozniak, G.J. Lawrence Berkeley Lab., CA (USA). Apr 1989. 18p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-890406–21: Fifty years with nuclear fission conference, Gaithersburg, Maryland, USA, 25-28 Apr 1989). Order Number DE89012990/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The dualistic view of fission and evaporation as two distinct compound nucleus processes is substituted with a unified view in which fission, complex fragment emission, and light particle evaporation are seen as different aspects of a single process. 47 refs., 22 figs.

35040 (ORNL/FTR–3266) **[US-Japan workshop on fusion neutronics at Osaka University, Osaka, Japan, May 25–26, and visits to Savar, Bangladesh, April 20–May 19, Beijing, China, May 21–24, and Tokai, Japan, May 29–30]: Foreign trip report.** White, J.E. Oak Ridge National Lab., TN (USA). 15 Jun 1989. 25p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014731/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This trip was initiated by a request from IAEA for USA expert assistance in Bangladesh. The Bangladesh Atomic Energy Commission (BAEC) had acquired a 3MW TRIGA MARK-II research reactor and their specialist needed help in the development of computer codes and data for the effective utilization and analysis of their reactor. Nuclear data recognized as an international standard was installed on a BAEC computer at Savar. The traveler was invited to China (PRC) to discuss multigroup cross section processing methods used at ORNL. Also, the traveler participated in a US-Japan workshop on fusion neutronics at Osaka University where he discussed the activities of RSIC. An orientation visit to JAERI resulted in the collection of information of potential use in US DOE programs, a better understanding of their research activities, and an opportunity to develop personal relationships with JAERI staff.

6511 Experimental Techniques

35041 (IPNO-DRE–88-03) **Δ excitation by charge exchange reactions with heavy ions.** Boyard, J.L. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Oct 1987. 9p. (CONF-8710373–: Riken-IN2P3 symposium on heavy-ion collisions, Shimoda, Japan, 11-15 Oct 1987). Order Number DE89781600/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

Δ excitation resonance is observed with heavy ions. It can be very strong in the two mirror charge exchange reactions. Δ excitation strength depends on the projectile ejectile system, on the target recoil nuclei and on the incident energy. The peak for the Δ in nuclei is energy shifted from the free Δ peak.

35042 (ANU-P–994) **Experimental investigations and R-matrix analysis of low-lying levels in ^{5}He and ^{5}Li.** Woods, C.L.; Barker, F.C.; Catford, W.N.; Fifield, L.K.; Orr, N.A. Australian National Univ., Canberra (Australia). Dept. of Nuclear Physics. Feb 1988. 39p. Order Number DE89619056/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The particle-unstable nuclei ^{5}He and ^{5}Li have been studied via the ^{4}He(^{7}Li, ^{6}Li)^{5}He and ^{4}He(^{7}Li, ^{6}He)^{5}Li stripping reactions at beam energies of 50 MeV and the ^{6}Li(^{12}C, ^{13}N) ^{5}Li pickup reactions at 90 MeV. The experimental data clearly demonstrate a dependence of the lineshapes on the method of production of the mass-5 nuclei (in this case pickup or stripping). The observed lineshapes were analysed using the R-matrix formalism in a two-level approximation for each J^{π} value, with parameter values deduced from fits to the available ^{4}He+nucleon scattering data. Properties of the lowest $3/2^-$ and $1/2^-$ states of ^{5}He and ^{5}Li, observed via direct reactions, are deduced from the parameter values. These properties; are compared with results from earlier experimental analyses and the inferred properties of positive-parity states are compared with the results of recent shell-model calculations.

35043 (CEA-CONF–9663) **Nucleons in nuclei (II).** Laget, J.M. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Physique Nucleaire. 1988. 21p. (CONF-8806236–: 1. European workshop on hadronic physics in the 1990's with multi-GeV electrons, Seillac, France, 27 Jun - 1 jul 1988). Order Number DE89781570/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

This summary is a review of our understanding of nuclei in terms of hadrons exchanging mesons. The open problems are: the determination of the high momentum components of nuclear systems, the role of the three-body forces and the nature of the short range correlations. The ways of studying these problems are discussed.

35044 (INS–724) **Reaction mechanism of ^{4}He(γ, pn)X at E_γ = 0.17 - 0.27 GeV.** Endo, I.; Harada, M.; Hisadomi, A. and others. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Dec 1988. 17p. Order Number DE89778089/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We measured the ^{4}He(γ, pn)X reaction for the first time in a wide kinematical region with a π sr spectrometer TAGX. From the missing mass spectrum of the detected proton and neutron, the ratio of final states pnd/pnpn is obtained to be 0 ± 9 %. The measured momentum spectra and angular correlations of the proton and neutron are compared with predictions of some photo-absorption mechanisms. Different from the conclusion obtained in the existing experiments, we could not find any kinematical reasoning in favor of the dominant two-nucleon absorption.

35045 (INS–729) **Σ hypernuclear bound state observed in stopped K^- reaction on ^{4}He.** Hayano, R.S.; Ishikawa, T.; Iwasaki, M.; Outa, H.; Takada, E.; Tamura, H.; Sakaguchi, A.; Aoki, M.; Yamazaki, T. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Dec 1988. 12p. Order Number DE89778133/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Results are presented of inclusive measurements of $\pi^{\pm}$ momentum spectra from K^- absorption at rest in liquid helium. We found a peak in the π^- spectrum. The (K^-, π^+) spectrum does not exhibit a clear peak in the Σ^- bound region. Comparison of these two spectra suggests that the peak in the π^- spectrum is due to the formation of the S = 0, I = 1/2 ground state of Σ-nucleus bound state. (J.P.N.).

35046 (JINR-R–1-88-393) **Momentum distributions of nucleons flying out at large angles in ^{4}He-p-collisions.** Sobczak, T.; Stepaniak, J.; Glagolev, V.V. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 5p. (In Russian). Order Number DE89619057/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The experiment has been performed on the 1 m HBC LHE JINR exposed in beams of ^{4}He nuclei at 8.6 GeV/c and 13.6 GeV/c momenta. Invariant differential cross sections of nucleons flying at large angles with respect to ^{4}He rest frame have been analyzed. There are some differences in the shapes of differential cross sections of the protons and neutrons between reactions with meson production and without it. These differences decrease with increasing nucleon momenta. The observed effects are connected with excited intermediate states. 16 refs.; 4 figs.

35047 (JINR-R–1-88-443) **Spectra of protons emitted at large angles in dp->pX reaction at 3.3 GeV/c.** Shimanskij, S.S.; Balgansuren, Ya.; Buzdavina, N.A. and others. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 3p. (In Russian). Order Number DE89619058/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Data on the inclusive inelastic differential cross sections are presented for the dp->pX reaction at 3.3 GeV/c. The ratio of the cross sections for dp->pX and dp->ppn reactions are presented. All the data are given for protons emitted in the interval cos(Θ): (-1,0,-0,66). 5 refs.; 2 figs.; 2 tabs.

35048 (JINR-R-1-88-592) **Total desintegration of helium nuclei in ^{3}Hep-interactions at 13.5 GeV/c.** Glagolev, V.V.; Lebedev, R.M.; Pestova, G.D. and others. Joint Inst. for Nuclear Research, Dubna (USSR). 1988. 7p. (In Russian). Order Number DE89619059/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The experiment has been carried out on JINR phasotron of LHE by means of 100 cm liquid hydrogen chamber. Total cross section of the reaction of nonmesonic breakup of ^{3}He nuclei has been determined: $\sigma_{^3Hep->pppn}$=(6.73±0.15) mb. Mechanism of this reaction was analysed. It is shown that along with the mechanism of single scattering the interaction of nucleon-spectators (proton and neutron) in the final state is essential which inities their coalescence into deuteron and transition to ^{3}Hep -> dpp channel. 13 refs.; 3 figs.; 1 tab.

35049 Binding of hydrogen and helium in silicon, the mass difference between ^{3}H and ^{3}He, and the mass of ν_e. Redondo, A. (Mechanical and Electronic Engineering Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545(US)); Robertson, R. G. H. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 368-373 (Jul 1989).

Precision measurements of the ^{3}H–^{3}He atomicmass difference afford a means for assessing the reliability of measurements ofthe electron antineutrino mass from tritium β decay. We show that along-standing discrepancy between measurements of the^{3}H–^{3}He mass difference obtained withtritium-implanted silicon detectors and those obtained by other techniques isdue to neglect of chemical binding effects in the former experiments. Thecorrection reconciles the silicon-detector results with modern determinationsmade by mass spectrometry and by β spectrometry. With this and othernew data, a revised average value for the ^{3}H–^{3}Hemass difference of 18 591(2) eV is found. The scatter in the extant datasuggests the presence of systematic errors in some of the modern measurements,and at present there seems to be no compelling basis for a model-independentlower limit on the mass of ν_e. .AE

35050 (IFUSP-P–730) **Fission-like decay of ^{20}Ne: eccentric behavior in the B+B fusion processes.** Toledo, A.S. de; Coimbra, M.M.; Added, N.; Anjos, R.M.; Carlin Filho, N.; Fante Junior, L.; Figueira, M.C.S.; Guimaraes, V.; Szanto, E.M. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Aug 1988. 17p. Order Number DE89619060/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Cross sections for the fusion of^{10,11}B+^{10,11}B have been measured in the energy range from 1.5 MeV/A to 5 MeV/A. The ^{10}B+^{10}B system unexpectedly presents a hindered fusion cross section when compared to the ^{10}B+^{11}B and ^{11}B+^{11}B reactions and to standard model predictions. The missing fusion cross section was diverted the ^{10}B exit channel with a total kinetic energy characteristic of strongly damped collisions. Q-values and kinematical analysis together with angular distributions suggest a binary symmetric decay of the composite ^{20}Ne system.

35051 (IFUSP-P–758) **Total reaction cross section and foward glory for ^{12}C + ^{16}O.** Villari, A.C.C.; Lepine-Szily, A.; Lichtenthaler Filho, R.; Portezan Filho, O.; Obuti, M.M. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Dec 1988. 38p. Order Number DE89619061/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A model-independent method is proposed for the determination of the total reaction cross section from elastic angular distributions. This method based on the generalized optical theorem, was applied to 16 complete elastic angular distributions of the system ^{12}C + ^{16}O at energies between E_{CM}=8.55 MeV and E_{CM} = 26.74 MeV. Some of the angular distributions were measured at the Sao Paulo Pelletron Laboratory. Angular distributions measured by the Erlangen and Saclay groups were also used. The reaction cross section is compared with fusion measurements and with σ_R obtained by indirect methods. The existence and conditions for the observation of the nuclear forward glory scattering are investigated.

35052 (KEK–88-6, pp. 41-53) **Heavy ion experiments at BNL AGS.** Akiba, Y. (Tokyo Univ. (Japan)). National Lab. for High Energy Physics, Oho, Ibaraki (Japan). Sep 1988. (CONF-8802137–: Workshop on physics of quark-gluon-plasma, Tsukuba, Japan, 18-20 Feb 1988). In *Proceedings of the workshop on physics of quark-gluon-plasma.* Order Number DE89780072/JAW. Available from NTIS (US Sales Only), PC A07/MF A01.

The report outlines major experimental results from BNL AGS heavy ion experiments. The AGS provides heavy ion beam with 14.5 GeV/c per nucleon. So far, oxygen silicon beams are accelerated. There are three major counter experiments approved at the AGS, namely E802, E810 and E814. The report addresses mainly on results from E802. First, measurements of neutral energy from O+A collisions by E806 are described. An interesting feature of the data is that edge of the observed energy distribution for O+Au and O+Cu is almost equivalent. The energy produced in the mid-rapidity is almost the same for central O+Au and for central O+Cu collisions. The transverse energy spectra for Si+Pb, Si+Cu and Si+Al are shown and discussed. The tail of the transverse energy for Si+Pb and Si+Cu reactions almost coincides. This result is consistent with the data obtained by the E802 PBGL detector for O+A collisions. The charged particle multiplicity for O+A and Si+A collisions measured by TMA detector of E802 are shown, and the multiplicity distribution is discussed. Pseudo-rapidity distributions of charged particles for central O+Au and Si-Au have also been investigated. E802 has a hadron calorimeter (ZCAL) at 0 degree of the beam line, and the detector is used to measure how much energy is left in the beam fragments. Preliminary results are outlined for Si+Al collisions. (N.K.).

35053 (KFK–4551) **Experimental investigation of direct elastic 156 MeV ^{6}Li break-up at large relative momenta of the fragments.** Heide, N. Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik. Mar 1989. 125p. (In German). Order Number DE89783053/JAW. Available from NTIS (US Sales Only), PC A06/MF A01.

The triple differential cross sections $d^3\sigma/(d\Omega_\alpha d\Omega_d dE_\alpha)$ for the reactions ^{208}Pb(^{6}Li,αd)^{208}Pb and ^{12}C(^{6}Li,αd)^{12}C at 156 MeV have been measured at large asymptotic relative momenta of the fragments using position sensitive semiconductors telescopes. The measured coincidence cross-sections show beside the typical break-up bump an up to now unobserved double structure. The origin of this structure can be understood qualitatively within the spectator picture and a prior-DWBA analysis, respectively. Both of the fragments can act as a spectator with comparable propability. The coherent sum of these contributions provides the double structure in this picture. The obtainability of experimental values for the half-on-shell T-matrix for ^{6}Li scattering from the coincidence data within the diffractional dissociation model is discussed.

35054 Limiting fragmentation in oxygen-induced emulsion interactions at 14.6, 60, and 200 GeV/nucleon. Adamovich, M. I. (Academica Sinica, Beijing, People's Republic of China(CN)); Aggarwal, M. M.; Arora, R.; Alexandrov, Y. A.; Azimov, S. A.; Basova, E.; Bhalla, K. B.; Bhasin, A.; Bhatia, V. S.; Bondarenko, R. A.; and others. *Physical Review Letters (USA),* 62(24): 2801-2804 (12 Jun 1989).

Pseudorapidity distributions of relativistic singly charged particles in oxygen-induced emulsion interactions at 14.6, 60, and 200 GeV/nucleon are studied. Limiting fragmentation behavior is observed in both the target and projectile fragmentation regions for a central as well as for a minimum-bias sample. Comparisons with the fritiof model reveal that the picture of fragmenting strings successfully describes the observed data.

35055 (ANU-P–973) **Heavy-ion reaction studies of ^{35}P, ^{36}P.** Orr, N.A.; Catford, W.N.; Fifield, L.K.; Ophel, T.R.; Weisser, D.C.;

Woods, C.L. Australian National Univ., Canberra (Australia). Dept. of Nuclear Physics. Oct 1987. 32p. Order Number DE89619073/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The spectroscopy of the $T_z \geq 5/2$ nuclei ^{35}P and ^{36}P has been studied using a variety of multi-nucleon heavy-ion transfer reactions. This has led to the observation of a number of new levels in both nuclei. The probable structure of these and previously reported levels are deduced through comparison with DWBA and shell model calculations.

35056 (ANU-P–975) **Effects of collective excitations in the elastic scattering of vector polarized deuterons.** Nurzynski, J.; Gruebler, W.; Konig, V.; Schmelzbach, P.A. Australian National Univ., Canberra (Australia). Dept. of Nuclear Physics. Aug 1987. 11p. Order Number DE89619074/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The differential cross sections and the vector analysing powers for 12 MeV vector polarized deuterons scattered elastically from ^{40}Ar, ^{46}Ti, ^{48}Ti, ^{50}Ti, ^{52}Cr, ^{54}Cr, ^{54}Fe, ^{56}Fe, ^{58}Ni, ^{60}Ni, ^{76}Se, ^{78}Se, ^{80}Se, ^{82}Se and ^{90}Zr were analysed assuming two-channel, 0_1^+-2_1^+, coupling. In contrast with the results of conventional optical model analysis for the same isotopes, the two-channel potential parameters are found to be described well without B(E2;0^+ -2^+) dependence.

35057 (ANU-P–1006) **Measurements of Γ_γ /Γ for states of ^{24}Mg in the excitation region 10 < E_x < 12 MeV.** Vermeer, W.J.; Pringle, D.M.; Wright, I.F. Australian National Univ., Canberra (Australia). Dept. of Nuclear Physics. Apr 1988. 30p. Order Number DE89619072/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Measurements of Γ_γ /Γ have been carried out for about 40 states of ^{24}Mg in the excitation region 10 to 12 MeV using a recoil-coincidence technique. The information obtained has been combined with known values of $\omega\gamma$ to determine Γ_γ and Γ_α. Widths of the order of 0.01 to 100 eV can be determined accurately using this method. Some previous data on levels in this excitation region are discussed. Excitation energies and electromagnetic transition rates are compared with theoretical predictions. Two notable conclusions are the observation of a considerable excess in E2 strength in the 10 to 12 MeV region compared with that predicted by the shell model, and the identification of the 4^+, 11.219 MeV level as possibly being a member of a collective band based on the 0^+, 6432 MeV level.

35058 (INIS-SU–77/A, pp. 130-134) **Investigation of angular correlations in the (n,p) reaction.** Antonov, A.D. Available from NTIS (US Sales Only), PC A19/MF A01; INIS.

The results of p-even and p-odd correlations in the ^{35}Cl(n,p)^{35}S and ^{14}N(n,p)^{14}C reactions are reported. On the base of the obtained experimental data the weak interaction matrix element for ^{35}Cl is calculated. 21 refs.

35059 (IPNO-DRE–87-39) **Review of high excitation energy structures in heavy ion collisions: target excitations and three body processes.** Frascaria, N. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Sep 1987. 18p. (CONF-8709200–: 1. topical meeting on giant resonance excitation in heavy-ion collisions, Legnaro, Italy, 21-25 Sep 1987). Order Number DE89781506/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A review of experimental results on high excitation energy structures in heavy ion inelastic scattering is presented. The contribution to the spectra of the pick-up break-up mechanism is discussed in the light of the data obtained with light heavy ion projectiles. Recent results obtained with ^{40}Ar beams at various energies will show that target excitations contribute strongly to the measured cross section.

35061 (Juel-Spez–481) **Study of the small-angle correlations of charged particles from alpha-particle induced reactions on ^{58}Ni at 120 MeV.** Palarczyk, M. Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik; Bonn Univ. (Germany, F.R.). Dec 1988. 103p. (In German). Order Number DE89783052/JAW. Available from NTIS (US Sales Only), PC A06/MF A01.

Spectra of coincident light particles from the reaction ^{58}Ni(α,c_1c_2) with c_i = p,d,α at an incident energy of 120 MeV were measured for small relative angles. The smallest relative angle was $\Theta_{rel} = 2.7^0$ and the scattering angle $\Theta_{lab} = 60^0$. A dedicated detector setup was used. In the Dalitz-Plots of particle combinations as p-α, d-α and α-α resonante states are visible. The p-p final state interaction was observed. The single particle inclusive spectra for protons and deuterons show exponential slopes. This is an indication of emission from full statistical equilibrium of the composite nuclear system at low energy, and from pre-equilibrium states at higher energy. Two particle correlation functions between light ejectils, as p, d and alpha, were extracted from the experimental data. It was found that the emission of correlated protons is from the pre-compound phase and not from the (^{58}Ni+α)-compound system. The analysis of this reaction shows that the p-p correlation appears to be an incoherent, the proton-alpha correlation a coherent emission. The p-p correlation function can be described in Koonin's model of final state interactions. The analysis in the framework of this model shows that the emission of both protons occurs from a source with spatial and temporal dependences. The space extension of the emitting region was found to be r_0 = 3 fm and the parameter describing the time evolution of this region, i.e. the product of the velocity like model parameter V' and the lifetime of this region tau, was found to be V'tau = 5.5 fm.

35062 **Giant resonance strength distribution in ^{40}Ca from inelastic scattering of 500 MeV protons.** Lisantti, J. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831(US)); Horen, D. J.; Bertrand, F. E.; Auble, R. L.; Burks, B. L.; Gross, E. E.; Sayer, R. O.; McDaniels, D. K.; Jones, K. W.; McClelland, J. B.; and others. *Physical Review [Section] C: Nuclear Physics (USA)*, 40(1): 211-219 (Jul 1989). DOE Contract AC05-84OR21400.

Differential cross section measurements have been made for the giantresonance region (13.2–40 MeV) in ^{40}Ca using 500 MeVprotons with an experimental energy resolution of 70 keV. Fine structure wasobserved in this energy region. After fixing the energy weighted sum ruledepletion for the isovector giant dipole resonance at 70%, energy weighted sumrules of 70±14 % for the isoscalar giant quadrupole resonanceand 15±3 % for the isoscalar giant hexadecapole resonance werededuced. All of these energy weighted sum rule depletions agree well withtheoretical predictions and results from other experiments.

35063 **Neutron scattering and the Fermi surface anomaly in ^{51}V.** Lawson, R.D. (Argonne National Lab., IL (USA)); Guenther, P.T.; Smith, A.B. *Nuclear Physics [Section] A (Netherlands)*, 493(2): 267-292 (6 Mar 1989). DOE Contract W-31-109-ENG-38.

Differential neutron elastic- and inelastic-scattering cross sections of vanadium were measured from 4.5 to 10.0 MeV. These results

were combined with previous 1.5 to 4.0 MeV scattering data from this laboratory, the 11.1 MeV elastic-scattering results obtained at Ohio University, and the reported neutron total cross sections to energies of $\simeq$ 20 MeV, to form a data base which was interpreted in terms of the spherical optical-statistical model. A fit to the data was achieved by making both the strengths and geometries of the optical-model potential energy dependent. These energy dependencies were large below $\simeq$ 6 MeV, but were smaller, and similar to those characteristic of global models, at higher energies. Using the dispersion relationship and the method of moments, the optical-model potential deduced from the 0 to 11.1 MeV neutron scattering data was extrapolated to higher energies and to the bound-state regime. This extrapolation led to predicted neutron total cross sections that are in good agreement with experimental values to at least 20 MeV. For negative energies the values of the volume-integral per nucleon of the real potential are in excellent agreement with those needed to reproduce the observed binding energies of particle and hole states and give clear evidence of the Fermi surface anomaly. It is argued that the use of a global optical model for interpreting low-energy data is suspect but is probably a reasonable approximation at higher energies.

35064 Half-life of ^{56}Co. Lesko, K. T. (Nuclear Science Division, Lawrence Berkeley Laboratory, Berkeley, California 94720(US)); Norman, E. B.; Sur, B.; Larimer, R. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 445-448 (Jul 1989). DOE Contract AC03-76SF00098.

The half-life of ^{56}Co was reinvestigated by measuring thetime-dependent yields of several nuclear γ-ray lines over a period of280 days. The ^{56}Co γ-ray yields were normalized tothose observed from internal standards. A value of77.08$\pm$0.08 days was deduced by averaging the resultsobtained from different γ-ray lines and source calibrations.

35065 (ANU-P–998) **Excitation of swift heavy ions in foil targets IV. Pre-equilibrium energy losses and mean charge states.** Bridwell, L.B.; Pender, L.F.; Sofield, C.J.; Hay, H.J.; Treacy, P.B. Australian National Univ., Canberra (Australia). Dept. of Nuclear Physics. May 1988. 23p. Order Number DE89617868/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Studies have been made of the approach to energy-loss and charge-state equilibrium of initially pure charge states of ions, transmitted through thin carbon targets. Ions of Li, F and Cl at 3 MeV per AMU were used. Detailed observations were made of outgoing energy losses and charge-state distributions, for outgoing charges equal to those ingoing. A Monte Carlo analysis is made of the charge-changing processes, which allows calculation of energy losses due to projectile charge exchange. The residual electronic target-ionisation loss is analysed to predict in-target charge states of the projectile ions. Using these, a comparison is made between the in-target effective charge for target ionisation, and the averaged ionic charge which fits charge-exchange data.

35066 (CRN-PN–8614) **Search for superdeformation in ^{144}Gd.** Vivien, J.P.; Nourreddine, A.; Beck, F.A.; Byrski, T.; Gehringer, C.; Haas, B.; Merdinger, J.C.; Dudek, J.; Radford, D.C.; Schutz, Y. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1986. 43p. Order Number DE89781503/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Quasi-continuum γ-decay studies of ^{144} Gd have been performed using the ^{120}Sn(^{28}Si,4n)reaction at 125, 135, 145 and 155 MeV bombarding energies. Angular distribution and multiplicity measurements have been done at the above energies. At 145 MeV bombarding energy a lifetime measurement has also been performed. Although a collective behaviour has been observed, the present data do not give evidence for population of superdeformed rotational bands. Theoretical interpretation using the cranking model with the Woods-Saxon field is given. The effects of temperature and pairing on the superdeformed configuration are discussed; superdeformation effects are predicted to disappear below I $\sim$ 60-70 Planck constant when temperature exceeds $\sim$ 500 KeV.

The measurements of the total neutron cross section for ^{142}Ce and ^{143}Pr($T_{1/2}$=13,6 d) were performed at the SM-2 reactor. Resonance parameters for ^{142}Ce six levels and for ^{143}Pr five levels were calculated over the energy up to 10000 eV. 6 refs.; 2 tabs.

35072 (IPNO-DRE–88-06) **Inelastic heavy ion scattering on ^{90}Zr and ^{208}Pb at intermediate energies.** Blumenfeld, Y.; Beaumel, D.; Chomaz, P.; Frascaria, N.; Garron, J.P.; Jacmart, J.C.; Roynette, J.C.; Scarpaci, J.A.; Suomijarvi, T.; Barrette, J. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 17p. (CONF-880195–: 26. international winter meeting on nuclear physics, Bormio, Italy, 25-29 Jan 1988). Order Number DE89781594/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Heavy ion inelastic scattering has been investigated using the SPEG spectrometer at GANIL. It is shown that the use of such a high resolution spectrometer allows a quantitative study of the giant resonances excited in heavy ion collisions. The contribution of the pick-up break-up mechanism to the high excitation energy region (E > 30 MeV) is then discussed. Recent results obtained with ^{40}Ar beams at two different incident energies show that target excitations are also present in this energy region.

35073 (IPNO-DRE–88-07) **Intermediate-mass fragments: a probe for the mechanisms involved in H.I. collisions around E/A = 30 MeV.** Borderie, B.; Jouan, D.; Rivet, M.F.; Cabot, C.; Gardes, D.; Gauvin, H.; Jacquet, D.; Monnet, F.; Montoya, M.; Hanappe, F. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Feb 1988. 13p. (CONF-880195–: 26. international winter meeting on nuclear physics, Bormio, Italy, 25-29 Jan 1988). Order Number DE89781598/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Intermediate-mass fragments emitted in coincidence with heavy residues in the reaction 27 MeV/nucleon Ar + Ag have been measured. A continuous evolution of the mechanisms producing these fragments is observed, from incompletely damped deeply inelastic collisions when the intermediate-mass fragment is emitted forward, up to 30^0, to completely dissipative collisions, when the fragment is found past 50^0. Information about preequilibrium emission is also derived in connection with the degree of dissipation of the collisions. Finally, semi-classical calculations (Landau-Vlasov) which reproduce experimental observations well, sustain the proposed mechanisms.

35074 (JINR-R–1-88-520) **Neutral star characteristics in (π^--Xe)-interactions at 3.5 GeV/c.** Grishin, V.G.; Miller, K.; Pluta, J.; Tas, P.; Strugalski, Z. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 6p. (In Russian). Order Number DE89619083/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The preliminary results on the neutron characteristics investigated from (π^--Xe) interactions at 3.5 GeV/c momentum are presented. The number of neutral stars on one collision is 0.65, the ratio of the forward-backward neutron emission is F/B=2.1. Multiplicity distribution of neutral stars and the distribution on charge track number in neutral stars are given. The cross sections of neutron interaction with xenon nuclei and the weights of neutral star registration in dependence on neutron momenta in the region up to 1.0 GeV/c are estimated. 8 refs.; 3 figs.; 2 tabs.

35075 (JINR-R–6-88-562) **^{147}Eu decay scheme and ^{147}Sm excited state structure.** Adam, J.; Dobes, J.; Zakoucky, D.; Kracik, B.; Navratil, P.; Zhelev, Zh.T.; Penev, I.; Mikhajlova, M. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1988. 14p. (In Russian). Order Number DE89619084/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the journal Izv. Akad. Nauk SSSR, Ser. Fiz.

Using the experimental data on the differential-integral γ-coincidences the decay scheme of ^{147}Eu has been constructed in which the levels 716,6; 1106,8; 1172,6; 1219,7; 1317,8; 1349,6; 1600,9; 1641,9 keV have been established for the first time in β-decay. The excitation by β-decay of the levels: 872,9; 1006,7; 1228,1; 1303,7; 1588,2; 1629,9 and 1658,4 keV have not been confirmed. Additionally for the states of ^{147}Sm the spins, parities and the log ft of correspondent values have been determined. The correspondence between the experimental and calculated energies of the ^{147}Sm - levels has been obtained in the framework of interactiong boson-fermion model. On the basis of the description of transition probabilities and log ft-values a conclusion about the necessity of taking into account in the operator of the transition an exchange terms has been drawn. 25 refs.; 2 figs.; 4 tabs.

35076 (JINR-R–6-88-563) **Gamma-rays at the ^{147}Eu -> ^{147}Sm decay.** Adam, J.; Zakoucky, D.; Kracik, B.; Zhelev, Zh.T.; Penev, I. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1988. 14p. (In Russian). Order Number DE89619085/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to Izv. Akad. Nauk SSSR, Ser. Fiz.

Using a suppressed-compton spectrometer in investigation of γ-rays from the decay of ^{147}Eu is performed. More than 24 new γ-transitions have been identified in the decay of ^{147}Eu and about 30 γ-transitions have been shown not to belong to this decay. New information is obtained about the placement of γ-rays into the decay scheme of ^{147}Eu on the basis of the integral-differential γ-coincidence measurements. 29 refs.; 4 tabs.

35077 (Juel-Spez–482) **Structure studies on the nuclides ^{96}Zr and ^{98}Zr via the high-spin β^--decays of the Y fission products.** Stolzenwald, M.L. Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik; Koeln Univ. (Germany, F.R.). Dec 1988. 86p. (In German). Order Number DE89783051/JAW. Available from NTIS (US Sales Only), PC A05/MF A01.

In the framework of this thesis the β^--decay of the high-spin states of the ^{96}Y and ^{98}Y parent nuclei of ^{96}Zr and ^{98}Zr was studied. These isomeric states were populated in the fission of the ^{235}U by means of thermal reactor neutrons. The term schemes of ^{96}Zr and ^{98}Zr could be essentially extended. By the evaluation of the angular correlations in ^{96}Zr for ten levels precise spin assignments could be made and for seven states the possible spin values confined to few alternatives. The study of the β^--feeding resulted that mainly the 4390 keV level in ^{96}Zr is populated by the β^--decay with a logft value of 5.0. The angular-correlation analysis gives a spin I = 8 for the 4390 keV level. With this experimental results and theoretical calculations with the IBFFM model on spin and parity $I^-\pi = 8^+$ of the ^{96}Y high-spin isomer with a $[\pi g_9 2/\chi \mu g_7 2/]$ configuration could be concluded. Furthermore the mixing parameters δ for two mixed M1/E2 transitions were determined which suggest with the values δ_{289} = -0.5(4) for the (6_2^+ -> 6_1^+) and δ_{475} = 0.1(2) for the (4_2^+ -> 4_1^+) transitions predominating M1 multipolarities. In ^{98}Zr only the angular correlation of the cascade of the four most intensive transitions 1223, 620, 647, and 1801 keV was studied whereby also here the spins of each level could be determined. It resulted that both an I = 6 state at an energy of E = 4292 keV and an I = 4 level at E = 2491 keV in ^{98}Zr is strongly populated by the β^--decay. Therefore it is assumed that spin and parity o the β^--decaying high-spin isomer of ^{98}Y $I^\pi = 5^+$ are which shall be confirmed by theoretical calculations with the IBFFM model. (orig./HSI).

35078 (LUIP–8805) **Calender of high multiplicity ^{16}O induced reactions in Ag(Br) at 200A MeV.** Schussler, F.; Monnand, E.; Nifenecker, H.; Jakobsson, B.; Joensson, G.; Karlsson, L.; Kopljar, V.; Noren, B.; Soederstroem, K. Lund Univ. (Sweden). Dept. of Cosmic and Subatomic Physics. May 1988. 109p. (LUNFD6-NFFK–7088-1-107-1988). Order Number DE89617871/JAW. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

This calendar contains information about all charged particles in 50 high multiplicity ^{16}O + ^{107}Ag or ^{80}Br events in nuclear emulsions between 200A MeV and 220A MeV. A stack of 26 Ilford G5 pellicles, each 10*10*0.06 cm^3, has been exposed horizontally to the 250A MeV ^{16}O beam from the Berkeley Bevalac with a flux of $5*10^4$ ions/cm^2. All charged particles with a range >= 5 μm are registered and indentified by conventional methods. Except for Z=1 particles, no mass determination could be performed experimentally and the adopted mass values are otherwise those of the most stable isotopes. The tables could be used to: Estimation of source velocity. Correlation studies of various kind - angles, phase space etc. Flow tensor calculations. (author) (50 tables, 50 figures).

35079 Production of helium (Z=2) projectile fragments in ^{16}O-emulsion interactions from *E/A*=2 to 200 GeV. Adamovich, M. I. (Lebedev Physical Institute, 117924, Moscow, U.S.S.R.(SU)). *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 66-72 (Jul 1989).

The fragmentation of relativistic ^{16}O projectiles in nuclear emulsion into projectile fragments of $Z \geq 2$ has been investigated. Production rates, charge, and multiplicity distribution of such projectile fragments and their dependence on target-fragment multiplicities have been obtained. The width of the momentum distribution of He (Z=2) projectile fragments as well as the average number of target fragments is found to decrease with increasing He multiplicity. These dependences are, within errors of measurement, the same for *E/A*=2.1, 14.6, 60, and 200 GeV, and to that extent satisfy the condition of limiting fragmentation.

35080 *g* factor of the (59/2$^-$ isomer in ^{147}Gd. Hass, M. (Argonne National Laboratory, Argonne, Illinois 60439(US)); Ahmad, I.; Janssens, R. V. F.; Khoo, T. L.; Korner, H. J.; Moore, E. F.; Wolfs, F. H. L.; Benczer-Koller, N.; Dafni, E.; Beard, K.; and others. *Physical Review [Section] C: Nuclear Physics (USA),* 39(6): 2237-2241 (Jun 1989). DOE Contract W-31-109-ENG-38.

The *g* factor of the 10 995 keV,J^π=59/2$^-$, and $T_{1/2}$=0.8 ns level in ^{147}Gd has beendetermined by the transient field method for ions recoiling through amagnetized Gd foil at a temperature of 100 K. The^{76}Ge(^{76}Ge,5*n*)^{147}Gd reactionat *E*(^{76}Ge)=310 MeV was used to provide high recoil velocity. A 100 ps flight time in vacuum between the target and the ferromagnet of 100 ps ensured that the γ-ray cascades fed the 59/2 level before the recoil ions traversed the Gd foil. The *g* factor was extracted from standard double ratios with the known parametrization of the transient field, yielding *g*=0.38(7). This value is in agreement with the predicted wave function and experimental single-particle moments in this mass region. Results for levels in ^{145,148}Gd were also obtained.

Australian National Univ., Canberra (Australia). Dept. of Nuclear Physics. May 1988. 13p. Order Number DE89619094/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Excited states in ^{180}Hg have been identified. Yrast states up to spin 16$^+$ are assigned. The decay pattern observed is indicative of a shape co-existence similar to that in the heavier Hg isotopes. The prolate deformed band is higher in energy, relative to the oblate band, than in ^{182}Hg, establishing a clear minimum in the prolate-oblate energy difference near N = 103, midshell for the $i_{13}2/$ neutrons.

Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

Available experimental data on deformed erbium isotopes (Z=68) and isotones with N=94 are used to verify the assumptions used for deriving formulas for reduced probabilities of E2 gamma transitions of the deexciting level of rotational bands of beta or gamma vibrational states to the levels of rotational bands of ground state g. The calculated values are given of parameters Z for the beta and gamma bands. Good agreement is shown with experimental data. (Z.J.). 2 figs., 2 tabs., 24 refs.

Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

Neutron resonance parameters for radioctive isotope Gd-153 are reporeted in the energy range of 0-60 eV. Average level spacing is found to be D=(3.0±0.6) eV. Corrected value for thermal neutron cross section as σ_t=23.000±2.000 g. 2 refs.; 2 figs.; 2 tabs.

35085 (IPNO-DRE–88-10) **Charge radius changes in even-a platinum nuclei.** Le Blanc, F.; Kilcher, P.; Obert, J.; Oms, J.; Putaux, J.C.; Roussiere, B.; Sauvage, J.; Savard, G.; Lee, J.K.P.; Crawford, J.E. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 16p. Order Number DE89781601/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Isotope shift measurements on even-A Pt isotopes have been obtained from A=186 to A=198. Charge radii differences have been extracted and are compared to constrained Hartree-Fock + BCS calculations. A possible shape transition between ^{186}Pt and ^{188}Pt is discussed.

35086 Coupling between the β and γ vibration in tungsten nuclei. Wu, C. Y. (Nuclear Structure Research Laboratory, University of Rochester, Rochester, New York 14627(US)); Cline, D.; Vogt, E. G.; Kernan, W. J.; Czosnyka, T.; Kavka, A.; Diamond, R. M. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 3-6 (Jul 1989). DOE Contract AC03-76SF00098.

The quadrupole collectivity in $^{182-184}$W has beenstudied by means of heavy-ion coulomb excitation with ^{58}Ni and^{136}Xe projectiles; the deexcitation γ rays weremeasured in γ-*p*-*p* triple coincidence experiments. Thesedata were used to determine, model-independently, both the static andtransition matrix elements for the low-lying states in these nuclei with asemiclassical Coulomb-excitation least-squares search code. The results for thequadrupole moments of the second 2$^+$ states and the *E*2transitions between the γ band and the ground-state band in thesenuclei do not support the prediction of a strong mixing between the β-and γ-vibrational bands in tungsten nuclei made by thepairing-plus-quadrupole model of Kumar and Baranger.

35087 Shape coexistence in ^{187}Au. Johansson, J. K. (Tandem Accelerator Laboratory, McMaster University, Hamilton, Canada L8S 4K1(CA)); Popescu, D. G.; Rajnauth, D. D.; Waddington, J. C.; Carpenter, M. P.; Courtney, L. H.; Janzen, V. P.; Larabee, A. J.; Liu, Z. M.; Riedinger, L. L.; and oth *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 132-144 (Jul 1989).

The level structure of odd-proton ^{187}Au was studied using the ^{172}Yb(^{19}F,4*n*) reaction. Gamma-gamma coincidence, angular distributions and γ-γ-time measurements were used to establish the energies, spins, parities, and lifetimes for the states in the decay scheme of ^{187}Au. Both prolate and oblate structures have been established. The prolate bands are built on the $\pi h_{9/2}$ α=±(1/2) and the $\pi i_{13/2}$ (α=1/2) particle states. Anoblate, strongly coupled band

built on a 90±10 ns isomericstate is reported for the first time. A second oblate structure built on the $h_{11/2}$ proton-hole state was established to much higher spinthan before. The backbend present in the $\pi i_{13/2}$ band hasbeen interpreted as the alignment of a pair of $h_{9/2}$ protons.

35088 (ANU-P–987) **Low lying yrast structure of ^{212}Po.** Poletti, A.R.; Dracoulis, G.D.; Byrne, A.P.; Stuchbery, A.E. Australian National Univ., Canberra (Australia). Dept. of Nuclear Physics. Jul 1987. 19p. Order Number DE89619101/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The properties of states in ^{212}Po populated by the ^{206}Pb(^{9}Be,αn) ^{212}Po reaction have been investigated. the previously proposed yrast scheme below 3MeV has been verified and eight further transitions placed in the level scheme. Mean lives of the 6^+, 8^+ and (10^+) states at 1355, 1476 and 1834 keV have been measured as 1.1(3), 24.6(3) and 0.8(2)ns respectively. Shell model calculations using effective interactions were used to interpret the observed scheme. A synthesis of all available theoretical and experimental evidence allows the 65s isomer to be identified clearly as the 18^+ level arising primarily from the $\pi(h_9 2/^2)^* \nu(g_9 2/i_{11} 2/)$ configuration.

The main goal of the CERN heavy-ion experiments is the search for an indication that the predicted state of deconfined quarks and gluons, the quark-gluon plasma (QGP), has been produced. The most promising indication that this may, in fact, be the case comes from the NA38 dimuon measurements, which are focused on the question of J/ψ suppression. This effect was predicted to be one of the signatures of QGP formation before any measurements were made, and it is the subject of the two other talks at this conference that deal with nucleus-nucleus reactions at ultrarelativistic energies. In this presentation we consider the general (global) features of heavy-ion reactions at CERN energies, and we examine the degree to which they differ from mere superpositions of nucleon-nucleon collisions. We discuss the present status of our data analysis and our main conclusions from the first round of CERN experiments with emphasis on transverse energy measurements, on attained energy densities, and on the spectra of produced neutral pions. Because of time limitations we will not discuss our measurements of distributions of charged particles and the analysis of these distributions in terms of fluctuations nor the results that we have obtained with the Plastic Ball on the behavior of target spectator matter. 20 refs., 5 figs.

35091 (GANIL-P–88-11) **Hot nuclei and search for multifragmentation in medium-energy heavy-ion collisions.** Doubre, H. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). 1988. 13p. (CONF-880766–: 5. international conference on clustering aspects in nuclear and subnuclear systems, Kyoto, Japan, 25-29 Jul 1988). Order Number DE89781590/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Some recent determinations of the excitation energies and temperatures of composite systems formed in intermediate-energy heavy-ion collisions are described and the issue of a limiting temperature is discussed. Several examples of experimental investigations of an eventual occurrence of a multifragmentation process are also described.

35092 (INS–731) **Formation of deeply bound π^- states from hypernuclear decay.** Bando, H.; Yamazaki, T.; Zofka, J. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Jan 1989. 17p. Order Number DE89778134/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The formation probabilities of deeply bound states of π^- from hypernuclear weak decay are calculated. The best candidate for detecting narrow 1s and 2p π^- bound states is ^{208}Pb, where the signature, a sharp peak in a proton spectrum, attains a strength, which may be within the future experimental reach.

35093 (JINR-R–1-88-703) **Interaction of relativistic protons and ^{12}C nuclei with lead target.** Voronko, V.A.; Kostin, V.Ya.; Migalenya, V.Ya. and others. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 4p. (In Russian). Order Number DE89619103/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The measurement of intensity of the neutron flux generated in a lead target of 50x50x80 cm^3 in size with the proton and ^{12}C nuclear beams with 9 GeV/c and 4.5 GeV/c momentum per nucleon, respectively, was carried out. Ratio of neutron intencity per one nucleus of ^{12}C to the intensity per one proton was 7.2±1.4 at 27 cm distance from the face target and 14.0±2.9 at 78 cm distance. It is shown that the contribution of neutrons of energy more than 10 MeV into the total spectrum of generated in a lead target neutrons is essentially higher than that in the fission neutron spectrum. 6 refs.; 2 figs.

35094 (LBL–27177) **Non-equilibrium fission processes in intermediate energy nuclear collisions.** Loveland, W.; Casey, C.; Xu, Z.; Seaborg, G.T.; Aleklett, K.; Sihver, L. Lawrence Berkeley Lab., CA (USA). Apr 1989. 8p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-890406–22: Fifty years with nuclear fission conference, Gaithersburg, Maryland, USA, 25-28 Apr 1989). Order Number DE89013695/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We have measured the target fragment yields, angular and energy distributions for the interaction of 12-16 MeV/A^{32}S with ^{165}Ho and ^{197}Au and for the interaction of 32 and 44 MeV/A ^{40}Ar with ^{197}Au. The Au fission fragments associated with the peripheral collision peak in the folding angle distribution originate in a normal, "slow" fission process in which statistical equilibrium has been established. At the two lowest projectile energies, the Au fission fragments associated with the central collision peak in the folding angle distribution originate in part from "fast" ($\tau \sim 10^{-23}$s), non-equilibrium processes. Most of the Ho fission fragments originate in non- equilibrium processes. The fast, non-equilibrium process giving rise to these fragments has many of the characteristics of "fast fission", but the cross sections associated with these fragments are larger than one would expect from current theories of "fast fission. " 14 refs., 8 figs.

35095 **Different continuum approaches to giant resonances in ^{208}Pb with 400-MeV protons.** Swenson, L. W. (Oregon State University, Corvallis, Oregon 97330(US)); Chen, X. Y.; Lisantti, J.; McDaniels, D. K.; Bergqvist, I.; Bertrand, F. E.; Horen, D. J.; Gross, E. E.; Glover, C.; Sayer, R. O.; and others. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 246-255 (Jul 1989). DOE Contract AC05-84OR21400.

New ^{208}Pb(p,p') measurements at 400 MeV arereported and analyzed using new approaches to the continuum in the giantresonance region. These approaches include a phenomenological procedure, andcalculations based on the free surface response function of semi-infinitenuclear matter. These methods are found to lead to giant resonance parameterswhich are consistent and in agreement

with established results. We interpretthis to mean that both approaches provide empirically consistentrepresentations of the continuum underlying the giant resonances. In additionto the well-known resonances, evidence of possible $3\hbar\omega$ L=5resonance strength is observed at 18-MeV excitation accounting for10±3 % of the energy-weighted sum rule.

Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

Thorium 232 and uranium 238 neutron-inelastic scattering cross sections at 144 keV neutron energy and p-wave strength functions have been determined. 12 refs.; 3 figs.

35100 (INIS-SU–78, pp. 190-194) **Measurement of resonance parameters of ^{232}Th and their integral check through the resonance integral.** Kobayashi, K. (Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst.); Fujita, Y.; Kimura, I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

In order to make an integral check of the resonance parameters, the resonance integral for the ^{232}Th(n,γ) reaction has been calculated with the parameters measured here and with the evaluated parameters in JENDL-2, ENDF/B-IV and -V, and these calculated results have been compared with the measurement made in a standard 1/E spectrum field. The calculation has also been performed by exchanging the parameters in the evaluated libraries for those presently measured. Resonance parameters in JENDL-2 have been found to be smaller than those measured, especially for the first four s-wave resonances. 15 refs.; 4 tabs.

35101 (INIS-SU–78, pp. 195-200) **Measurement of self-shielding factors of neutron capture cross sections for ^{232}Th and ^{238}U in the unresolved resonance region.** Fujita, Y. (Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst.); Kobayashi, K.; Oigawa, H. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

Self-shielding factors of neutron capture cross sections for Th-232 and U-238 have been measured in the resonance energy region from 1 to 35 keV, using the linac time-of-flight method at the Research Reactor Institute, Kyoto University. The self-shielding factor for an arbitrary dilution cross section has been obtained from a set of measured neutron transmission spectra and self-indication ratio measurements for several transmission samples of different thickness. The measured self-shielding factors have been compared with calculations performed using average resonance parameters from the evaluated nuclear data files JENDL-2 and ENDF/B-IV. The calculated shielding factors for Th-232 are in good agreement with the measurements within an experimental error of about 5%. For U-238, when the recent average parameters obtained by Olsen are employed, agreement between measurement and calculation is within 2-3%. This value is better than those calculated using JENDL-2 and EDF/B-IV data. 6 refs.; 6 figs.; 1 tab.

35102 (INIS-SU–78, pp. 203) **Measurement of radiative neutron capture cross section of uranium 238.** Varlamov, V.E. (AN SSSR, Leningrad (USSR). Inst. (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

The average cross sections and self-shielding factors were calculated using multilevel analysis remeters up to 500 eV. The results were compared with other evaluations. 6 refs.; 2 tabs.

35104 (INIS-SU–78, pp. 283-287) **Neutron cross sections of uranium 236 for thermal and resonance neutrons.** Vorona, P.N. (AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij); Vertebnyj, V.P.; Kal'chenko, A.I.; Krivenko, V.G.; Chervonnaya, L.E.; Chervyakov, V.Yu. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

Neutron time-of-flight spectrometer was used for uranium samples transmission measurements (U-metal and U_3O_8, enrichment-99.845% ^{236}U). Neutron energy dependence of σ_t for thermal neutrons and neutron resonance parameters up to 100 eV were received. σ_t (0.0253 eV)=16.0±0.1 barn. 4 refs.; 2 figs.; 3 tabs.

35105 (INIS-SU–78, pp. 303-308) **Measurement of multiplicity and total energy of gamma radiation from the ^{235}U fission by resonance neutrons.** Gundorin, N.A. (Joint Inst. for Nuclear Research, Dubna (USSR)); Duka-Zojomi, A.; Kliman, Ya.; Krishtiak, J. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

The multiplicity and the total energy of the gamma-rays from ^{235}U neutron resonances fission were measured. Weak difference between mean gamma-ray energies for the $J^{\pi}=3^-$ and 4^- compound states is reported, $\Delta\epsilon=(16\pm10)$ keV. 8 refs.; 4 figs.; 2 tabs.

35106 (INIS-SU–78, pp. 309-312) **Radiative capture cross sections of thermal neutrons for ^{236}U and ^{232}Th.** Davletshin, A.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst.); Sinitsa, V.V.; Tipunkov, A.O.; Tikhonov, S.V.; Tolstikov, V.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

^{236}U and ^{232}Th thermal capture cross sections have been measured relative to ^{197}Au thermal capture cross section by the activation technique. The results have been compared with the reported data. 9 refs.; 1 tab.

35107 (INIS-SU–78, pp. 316) **Average resonance parameters of ^{238}U.** Van'kov, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). URANIUM 238 TARGET/neutron reactions; CAPTURE; CROSS SECTIONS; GAMMA RADIATION; KEV RANGE; SELF-SHIELDING; TRANSMISSION

35108 (INIS-SU–78, pp. 331-333) **Summary results of measurements of 10-300 keV neutron transmission for thorium.** Filippov, V.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst.). Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

The values of total cross section measured with samples of different thickness for neutron having energies above 10 keV are collected. The average cross section and self-shielding factor values are presented. 5 refs.; 1 tab.

35109 (JAERI-M–88-252) **Measured data of delayed gamma-ray spectra from fissions of ^{232}Th, ^{233}U, ^{235}U, ^{238}U and ^{239}Pu by fast neutrons, tabular data.** Akiyama, Masatsugu; Katakura, Jun-ichi. Japan Atomic Energy Research Inst., Tokyo (Japan). Dec 1988. 242p. Order Number DE89778111/JAW. Available from NTIS (US Sales Only), PC A11/MF A01.

Measured gamma-ray spectrum data are presented in tabular form for fissions of ^{232}Th, ^{233}U, ^{235}U, ^{238}U and ^{239}Pu by fast neutrons. The spectral data are useful for validating the reliability of nuclear data used for summation calculation. The measurements were performed at YAYOI reactor of the University of Tokyo. The data were obtained by a NaI(T1) detector. The raw data were unfolded to provide spectral distributions. The distributions are presented in tabular form for energy range from 100 keV to 5 MeV. The data are represented in a unit of photons/fission/sec/MeV.

35110 **Neutron scattering cross sections up to 2.4 MeV for the ground and first two excited states of ^{232}Th.** Goswami, G.C. (Univ. of Lowell, Dept. of Physics and Applied Physics, Lowell, MA (US)); Egan, J.J.; Kegel, G.H.R.; Mittler, A.; Sheldon, E. *Nuclear Science and Engineering (USA)*, 100(1): 48-60 (Sep 1988).

Differential cross sections have been measured at the University of Lowell for the ground and first two excited states of ^{232}Th via the neutron time-of-flight technique. The following results are presented for neutron scattering cross sections: (a) excitation functions of ^{232}Th in the incident energy range from 185 to 2400 keV for the 0^+ ground state and the 2^+, 49-keV state, and in the 480- to 2400-keV range for the 4^+, 162-keV state; (b) angular distributions for the 0^+ and 2^+ states at 185 kev and for the 0^+, 2^+, and 4^+ states at 550 keV. Level cross sections were obtained using these and previously measured angular distributions.

35111 (ANU-P–991) **Energy dependence of the ^{16}O - ^{208}Pb effective interaction.** Lim, C.S.; Rebgetz, M.D.; Spear, R.H.; Vermeer, W.J.; Fewell, M.P.; Robson, B.A.; Smith, R. Australian National Univ., Canberra (Australia). Dept. of Nuclear Physics. Nov 1987. 10p. Order Number DE89619004/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The Coulomb-nuclear interference in the excitation probability of the 2.615 MeV (3^-) state of ^{208}Pb by ^{16}O at θ_{CM} 172 deg for bombarding energies between 57 MeV and 79 MeV has been studied. The data are described by an effective interaction which has a behaviour similar to that expected from the dispersion relation connecting the real and imaginary parts of the generalized optical potential.

35112 (CEA-CONF–9323) **Nucleon structure and the chiral filter.** Rho, M. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Theorique. 1987. 10p. (CONF-870909–: Conference on nuclear interactions and structures, Brighton, UK, 7-9 Sep 1987). Order Number DE89781505/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

I discuss the issues of quenched g_A in nuclei, pionic enhancement of nuclear electromagnetic form factors, manifestation of the anomalous Wess-Zumino term in nuclear medium, all on the same footing, in terms of the nucleon structure as 'derived' from a low-energy effective theory of QCD.

35113 (CRN-PN–88-31) **Comparison of the ^{13}C + ^{16}O reaction with ^{12}C + ^{17}O.** Freeman, R.M.; Haas, F.; Morsad, A.; Beck, C. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1988. 19p. Order Number DE89781550/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The $^{13}C + ^{16}0$ reaction has been studied by the kinematic coincidence technique in the $E_{c.m.}$ range between 19 and 30 MeV. Angular distributions and excitations functions were compared with results from $^{12}C + ^{17}0$ over the same energy range. Notable differences were found between the elastic angular distributions for the two reactions. Optical model fits were performed to determine which parameters were sensitive to these differences. Broad structures, like shape resonances, were most apparent in the $^{13}C + ^{16}0$ reaction, particularly for the excitation of collective states. Transfer reactions involving single-particle states, show a more complex energy dependence.

35114 (IC–88/422) **Modified VMD model with correct analytic properties for describing electromagnetic structure of He^4 nucleus.** Dubnicka, S.; Lucan, L. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 17p. Order Number DE89618974/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A new phenomenological model for electromagnetic (e.m.) form factor (ff) of He^4 nucleus is presented, which is based on a modification of the well proved in e.m. interactions of hadrons vector-meson-dominance (VMD) model by means of an incorporation of correct He^4 ff analytic properties, nonzero vector-meson widths and the right power asymptotic behaviour predicted by the quark model. It reproduces the existing experimental information on He^4 e.m. ff in the space-like region quite well. Furthermore, couplings of all well established isoscalar vector mesons with $J^{pc} = 1^{--}$ to He^4 nucleus are evaluated as a result of the analysis and the time-like region behaviour of He^4 e.m. ff is predicted. As a consequence of the latter the total cross section of e^+e^- -> He^4He-bar^4 process is calculated for the first time. (author). 17 refs, 3 figs.

35115 (IC–89/8) **Parity nonconserving asymmetries in the resonance scattering and nuclear reactions induced by polarized protons.** Dumitrescu, O.; Horoi, M.; Carstoiu, F.; Stratan, G. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 21p. Order Number DE89619005/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The parity-nonconserving nucleon-nucleon (PNC-NN) interaction studied in nuclear systems provides an unique window on $\Delta S=0$ hadronic weak processes. To check the predictions concerning the interactions between weak hadronic currents, low energy nuclear physics processes appear to be very suitable. Considering the nuclear reactions induced by polarized protons as low energy nuclear processes we derive expressions for the longitudinal and irregular transverse PNC analysing powers, when the reactions take place via parity mixed resonances. Applications for $^{13}C(p\text{-vector},p)^{13}C$, $^{15}N(p\text{-vector},p)^{15}N$ and $^{15}N(p\text{-vector},\alpha)^{12}C$ resonance reactions are done. (author). 23 refs, 4 figs, 2 tabs.

35116 (IC–89/14) **Four-nucleon correlations and the origin of the odd-even staggering of nuclear charge RADII of isotopes of one element.** Dumitrescu, O.; Horoi, M.; Bulboaca, I. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 10p. Order Number DE89618975/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

In the enlarged superfluid model (ESM), recently proposed, by including an adequate four-nucleon interaction in addition to the pairing effective residual interaction, global correlations between proton and neutron fluids other than two-nucleon pairing and long-range correlations in atomic nuclei are induced. Among the new effects that the ESM can explain, good results can be obtained for the odd-even staggering of the charge radii of isotopes of one element. (author). 32 refs, 1 fig., 2 tabs.

35117 (IC–89/27) **Superfluid isomers in Samarium region.** Dumitrescu, O.; Horoi, M. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 10p. Order Number DE89618977/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

A superfluid isomer by analogy with the fission (shape) isomers is theoretically predicted and found among the 0^+ excited states of ^{152}Sm. (author). 10 refs, 3 figs, 1 tab.

35118 (IFUSP-P–727) **Sp(1,R) calculation in a deformed harmonic oscillator basis.** Avancini, S.S.; Passos, E.J.V. de. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Aug 1988. 28p. Order Number DE89618978/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A qualitative analysis of the results of an Sp(1,R) calculation for ^8Be, in a deformed harmonic oscillator basis is performed. The model basis of states is given by the angular momentum projection of deformed phonon states, determined by the method of variation after projection. These deformed phonons are associated to giant monopole and quadrupole resonances.

35119 (IFUSP-P–744) **Solution to the Fokker-Planck equation for proton-nucleus collisions at high energies.** Pato, M.P.; Nemes, M.C. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Nov 1988. 9p. Order Number DE89619006/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The analytical solutions to a kinetic description of proton-nucleus collisions are presented. Friction and diffusion coefficients include Pauli blocking effects. The results are compared with the solutions obtained from Glauber's theory.

35120 (IFUSP-P–751) **Evaluation of E2 form factor = ^{24}Mg.** Marinelli, J.R.; Moreira, J.R. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Nov 1988. 20p. Order Number DE89619008/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Longitudinal and transverse electron scattering form factors for the 2^+ state at 1.37 Mev of the ^{24}Mg nucleus was evaluated with rotational model wavefunctions. Four different approaches were used for the transverse E2 form factor: PHF, cranking model, ridig rotor and irrotational flow. For the nuclear intrinsic wavefunction, the Nilsson model was assumed in all approaches yielding the calculation of the form factor in PWBA and DWBA. The results are discussed and compared with a recent measurement performed with 180^0 electron scattered from this state. The DWBA calculation, taking into account first order corrections shows that PHF and irrotational flow models give the best agreements with the available data and compete in quality with more complex calculation performed under the 'shell model' approach.

35121 (IFUSP-P–753) **Field theoretical approach to proton-nucleus reactions: I - one step inelastic scattering.** Eiras, A.; Kodama, T.; Nemes, M.C. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Nov 1988. 32p. Order Number DE89619009/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A closed form expression to the double differential cross section for one step proton-nucleus reaction within a field theoretical framework is obtained. Energy and momentum conservation as well as nuclear structure effects are consistently taken into account within the field theoretical eikonal approximation. In this formulation the Kinematics of such reaction is not dominated by the free nucleon-nucleon cross section but a new factor which called relativistic differential cross section in a Born Approximation.

35122 (IFUSP-P–754) **Importance of the Dirac sea on the dynamical behaviour of scalar meson masses.** Providencia, J. da; Nemes, M.C.; Goncalves, E.; Oliveira, M.M. de; Fiolhais, C. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Nov 1988. 28p. Order Number DE89618979/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The importance of the Dirac sea is discussed in the context of two models: the Relativistic Scalar Plasma and the well known σ-ω model. As far as the ground state is concerned, the Dirac sea is shown to play a decisive role to guarantee its stability. Furthermore, renormalization effects on the spectra of scalar particles are shown to change the spectra drastically. A comparison between the models allows for a deeper understanding of the role played by the vector mesons in nuclear matter.

35123 (IFUSP-P–759) **Faddeev and DWBA description of inclusive break-up and incomplete fusion reactions.** Hussein, M.S.; Frederico, T.; Mastroleo, R.C. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Dec 1988. 32p. Order Number DE89619010/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Three-Body Contributions to the inclusive break-up cross section are derived and discussed. The Faddeev equations are used for the purpose. A new sum rule, similar in structure to the Ichimura,

Austern and Vicent sum rule, but contains the full three-body corrections at the DWBA level, is derived and analysed within a Glauber-type approximation. Application of our theory to the extraction of astrophysically interesting information on charged particle induced reactions at low relative are made.

35124 (INDC(CCP)–297/GE) **International Evaluated Nuclear Structure Data File (ENSDF) in fundamental and applied photonuclear research.** Boboshin, I.N.; Varlamov, V.V. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Apr 1989. 11p. Order Number DE89618980/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Translation of a selected paper from Nuclear Constants 3, 1985, original in Russian was distributed as INDC(CCP)-252/G.

In order to provide the necessary nuclear physics data from the ENSDF file to those carrying out fundamental or applied photonuclear research a specialized software system was set up on an ES computer. A brief description of the block diagram of this software package and of one of the programs in this package (SUPER) is given. 4 refs, 6 figs.

35125 (INDC(CCP)–298/L) **Translation of selected papers published in Nuclear Constants 2, 1988.** International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Apr 1989. 70p. Order Number DE89619041/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

Translated by the IAEA. Original report in Russian was distributed as INDC(CCP)-294/G.

The document includes the English translation of 6 papers published in Nuclear Constants 2, 1988. A separate abstract was prepared for each of these papers. Refs, figs and tabs.

35126 (INDC(GDR)–50/L) **Influence of atomic, molecular and solid state effects on the neutron resonance cross-section.** Seidel, K.; Seeliger, D.; Meister, A.; Mittag, S.; Pilz, W. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Mar 1989. 51p. Order Number DE89617851/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

This paper gives a review of recent research into the influence of atomic, molecular and solid-state effects in a target on the cross-section for the interaction of neutrons with nuclei at low-energy neutron resonances. The influence of these effects on Doppler broadening is examined, and calculated and experimental results are compared. The results are also given of an investigation of temperature and chemical shifts in neutron resonances analogous to the second-order Doppler effect and isomer shift familiar from Moessbauer gamma-ray spectroscopy. (author). 56 refs, 17 figs, 3 tabs.

35127 (INIS-mf–11396) **32nd Annual conference and the 22nd annual theoretical seminar of the South African Institute of Physics.** South African Inst. of Physics, Faure (South Africa). 1987. 108p. (In English, Afrikaans). (CONF-8707216–: 32. Annual conference of the South African Institute of Physics, Durban, South Africa, 13-17 Jul 1987). Order Number DE89615754/JAW. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

This publication contains only the abstracts of seminars.

The 32nd annual conference and the 22nd annual theoretical seminar of the South African Institute of Physics was held from 13-17 July 1987 at the University of Natal, Durban. This publication contains only the abstracts of seminars delivered on the conference. The topics that were covered include the various facets of physics such as solid state physics, nuclear and particle physics, optics and spectroscopy, solar-terrestrial physics, education, and applied and industial physics.

35128 (INIS-mf–11456, pp. 423-426) **Theoretical investigation of nuclei in reactions with pions and kaons.** Mach, R. (Ceskoslovenska Akademie Ved, Rez (Czechoslovakia). Ustav Jaderne Fyziky); Majling, L. Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

In connection with the prepared start-up of the meson factory at the Institute of Nuclear Research in Moscow the authors contemplate the possible results of the study of nuclei in reactions with pions and kaons and the best orientation of the research. Attention is focused on subnuclear mechanisms of nuclear forces, on the reaction of pions with light nuclei and on the structure and decay of hypernuclei. (Z.J.). 3 figs., 14 refs.

35129 (INIS-mf–11456, pp. 435-438) **Relativistic meson-nucleon theory of nuclei.** Antalik, R. (Slovenska Akademia Vied, Bratislava (Czechoslovakia). Fyzikalny Ustav); Gmuca, S. Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Slovak). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

The present state is discussed of relativistic theories describing nuclear matter. Main attention is concentrated on quantum hadrodynamics. Equations of motion are given for the scalar meson field, for the mass vector field and for the nucleon field. Attention is also paid to the relativistic optical model and its description of scattering problems. (Z.J.). 11 refs.

35130 (INIS-mf–11456, pp. 439-442) **Proton resonances at energies up to 3 MeV.** Sterba, F. (Karlova Univ., Prague (Czechoslovakia). Fakulta Matematicko-Fyzikalni). Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

Some current aspects are discussed of the study of nuclear reactions with protons at proton energies of up to 3 MeV. Main attention is paid to proton resonances. Some applications are given using resonance reactions with protons. (Z.J.). 2 figs., 17 refs.

35131 (INIS-SU–77/A, pp. 372-376) **Application of theoretical models for prediction of neutron cross sections of poorly investigated nuclei with using ^{238}Pu as an example.** Klepatskij, A.B. (AN Belorusskoj SSR, Minsk (Byelorussian SSR). Inst. Yadernoj Ehnergetiki); Maslov, V.M.; Porodzinskij, Yu.V.; Sukhovitskij, E.Sh. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 1.* Order Number DE89780087/JAW. Available from NTIS (US Sales Only), PC A19/MF A01; INIS.

Nuclear models are of importance to neutron data prediction for poorly investigated nuclei. The models are employed for ^{238}Pu neutron data evaluation. The regions of resolved resonances (10^{-5}-500eV), unresolved resonances (0.5-150keV) and energy range of fast neutrons (0.15-20MeV) are considered. 10 refs.; 2 figs.

35132 (INIS-SU–78, pp. 53-57) **Statistical description of neutrino scattering in presence of direct processes.** Ezhov, S.N. (Kievskij Gosudarstvennyj Univ., Kiev (Ukrainian SSR)); Kabakova, N.E.; Plyujko, V.A. (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

The improved computation method of a fluctuation component of an everage cross section of neutron scattering both with and without allowance for inelastic transitions is formulated. 23 refs.; 3 figs.

35133 (INIS-SU–78, pp. 150-154) **On the structure of total width of neutron S resonances.** Rudak, Eh.A. (AN Belorusskoj SSR, Minsk (Byelorussian SSR). Inst. Fiziki). Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian).

(CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

In terms of the Fock-Krylov theorem an analytical expression has been obtained for the total width of neutron resonance s-tates. It is shown that in general case the total width is not a simple sum of the elastic and the inelastic widths.

35134 (INIS-SU–78, pp. 102-106) **New results on theoretical analysis of (n, α) reaction on light and medium nuclei.** Bychkov, V.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst.); Zelenetskij, A.V.; Pashchenko, A.B. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

In the framework of modern theoretical models of nuclear reactions an analysis has been done of the excitation functional and emission spectra of the neutron threshold reactions at neutron energies up to 20 MeV. The results of the analysis indicate the considerable difference between the alpha-particle transmission coefficients for the excited and ground state nucleus. 11 refs.; 4 figs.

35135 (INIS-SU–78, pp. 116-119) **Method of averaging over resonance cross sections within R matrix theory.** Vysotskij, A.G. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii); Luk'yanov, A.A.; Savova, N.; Yaneva, N. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

The analytic method of resonance cross-section averaging with account of level width fluctuations and interference effects is presented. 5 refs.; 1 fig.

35136 (INIS-SU–78, pp. 120-124) **Equations for averaged scattering amplitude in the random matrix method.** Girko, V.L. (Kievskij Gosudarstvennyj Univ., Kiev (Ukrainian SSR)); Ezhov, S.N.; Plyujko, V.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

The integral equations describing the dependence of averaged S-matrix on distribution of the resonance parameters are obtained. These equations have a simple structure in the case when numbers of levels and statistically independent channels are larger. 16 refs.

35137 (INIS-SU–78, pp. 125-129) **Effects of strong coupling between compound states and scattering channel of low-energy neutrons.** Danilin, B.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii). Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

The results of the interpolation approach have stimulated the development of the model of strong coupling between the compound states. Assuming the surface transition to the CS, an analytical expression for the S matrix was found. 3 refs.; 3 figs.

35138 (INIS-SU–78, pp. 130-134) **Theory of correlation phenomena in nuclear reactions in the region of overlapping resonance levels.** Kun, S.Yu. (AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij). Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

The correlation dependences between polarization observables as well as them like ones values and nuclear reaction cross sections are studied. The general regularity of the transition from the pure statistical reaction region at the cross section minima to the direct interactions one at the cross section maxima is found. The physical reason for statistical correlations is discussed. 6 refs.

35139 (INIS-SU–78, pp. 135-138) **Role of structure effects of nucleus in fast neutron scattering on chromium 52 nucleus.** Kashuba, I.E. (AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki); Porodzinskij, Yu.V.; Sukhovitskij, E.Sh. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

A coupled channel formalism for describing elastic and inelastic scattering from soft ^{52}Cr nucleus with β- and γ-collective motion is considered. The results calculated according to the model developed with the determined parameter values taking into account the contribution of processes passing through the compound nucleus stage describe a large array of data on neutron interaction with chromium-52 nuclei up to 15 MeV energy that testifies to the effectiveness of the model proposed. The present calculated results are compared with the experimental data. 8 refs.; 4 figs.

35140 (INIS-SU–78, pp. 139-143) **Optical potential of neutron interaction with lead nuclei in the energy range of 0.00025-16 MeV.** Anikin, G.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst.); Kotukhov, I.I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

The energy dependence of parameters have been investigated for the optical potential with "common geometry". The more complex form-factors being used than for the Woods-Saxon potential. 5 refs.; 4 figs,; 1 tab.

35141 (INIS-SU–78, pp. 144-149) **On the contribution of direct processes to cross section of charge-exchange ^{58}Ni(n,p)^{58}Co reaction.** Borzov, I.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst.); Pronyaev, V.G.; Trykov, E.L. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

The coupled channel method with microscopic charge-exchange transition potentials have been used to calculate ^{58}Ni(n,p)^{58}Co reaction cross sections for 0.1 -> 6.5 and 18.5 MeV neutrons with $J^{\pi}=1^{+}$ -> 6^{+} isobaric state excitation. The direct reaction mechanism is shown to give noticeable contribution to the high energy part of the proton spectra. 11 refs.; 3 figs.

35142 (INIS-SU–78, pp. 155-159) **Multiphonon variant of coupled channel method and neutron strength functions.** Samojlov, V.V. (Moskovskij Inzhenerno-Fizicheskij Inst., Moscow (USSR)); Urin, M.G. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh

Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

Within the many-phonon coupled-channel method A-dependences of S- and p-neutron strength functions (NSF) are calculated. It is shown that for a number of nuclei it is necessary to take into account many-phonon states and that such nuclei the NSF value is weakly dependent of the optical potential imaginary part intensity. 13 refs.; 4 figs.

35143 (INIS-SU–78, pp. 167) **Radiative capture of valence neutron within the model of strong coupling of compound states with scattering channel.** Danilin, B.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii). 35147 (INIS-SU–78, pp. 313-316) **Semiempirical determination of average cross sections for radiative neutron capture.** Nedvedyuk, K. (Lodz Univ. (Poland). Inst. Fizyki); Lason', L.; Popov, Yu.P. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

On the basis of recently published experimental $<\sigma\ (n,\gamma)>$ values at E_n=30 keV and relationships considered previously new estimations of the average cross sections, for isotopes, for which experimental data are not available are obtained. Evaluated cross sections for 52 isotopes of 16 elements are presented from Se to Pb. 9 refs.; 2 figs.

35148 (INIS-SU–78, pp. 343-347) **Calculated methods of estimation of multiple neutron interaction effects in samples with allowance for resonance structure of cross sections.** Androsenko, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst.); Androsenko, P.A.; Van'kov, A.A.; Kazakov, L.E. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); AN SSSR, Moscow (USSR); AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). (CONF-870959–: 1. international conference on neutron physics, Kiev, USSR, 14-18 Sep 1987). In *Neutron physics. Vol. 2.* Order Number DE89012115/JAW. Available from NTIS (US Sales Only), PC A16/MF A01; INIS.

Results of analytical and Monte Carlo calculations of corrections for neutron self-shielding and multiple collisions in samples and neutron detector materials for radiative capture cross section measurements are given. The results are compared with ones of approximate calculational method. 15 refs.; 2 figs.

35149 (IPNO-DRE–87-36) **Deeply inelastic collisions as a source of intermediate mass fragments at E/A = 27 MeV*.** Borderie, B.; Montoya, M.; Rivet, M.F.; Jouan, D.; Cabot, C.; Fuchs, H.; Gardes, D.; Gauvin, H.; Jacquet, D.; Monnet, F. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1987. 13p. Order Number DE89781510/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Intermediate-mass fragments detected in coincidence with heavy residues were measured in ^{40}Ar induced reactions on Ag at E/A = 27 MeV. From the observed characteristics, it is inferred that intermediate-mass fragments associated with the so-called intermediate-velocity source come essentially from deeply inelastic collisions.

35150 (IPNO-DRE–87-41) **Search for characteristics of preequilibrium protons emitted in Ar + Ag collisions at E/A = 27 MeV.** Jouan, D.; Rivet, M.F.; Borderie, B.; Gauvin, H.; Cabot, C.; Fuchs, H.; Gardes, D.; Jacquet, D.; Monnet, F.; Montoya, M. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Dec 1987. 13p. Order Number DE89781511/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Protons emitted in coincidence with heavy residues have been measured, for the reaction 27 MeV per nucleon ^{40}Ar + ^{nat}Ag. From the proton velocity spectra, an anisotropic component was extracted, which shows a broad angular distribution, and a mean velocity larger than the beam velocity. Multiplicities for this component are low, about 0.8, independent of the violence of the collision. For central collisions, selected via the higher heavy residue velocities, the velocity characteristics of the anisotropic component, seen in this case as a pure preequilibrium component, were compared to semi-classical calculations (Landau-Vlasov).

35151 (IPNO-DRE–88-18) **Inelastic scattering of 400 MeV polarized deuterons on ^{12}C, ^{24}Mg and ^{40}Ca.** Morlet, M.; Djalali, C.; Van de Wiele, J.; Willis, A.; Mandon, T.; Bonin, B. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 11p. Order Number DE89781531/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

the δS=1, δT=0 transitions were studied by performing inelastic scattering of polarized deuterons on several nuclei. Inelastic cross sections, vector A_y and tensor A_{yy} values were measured at forward angles for different states in C12, Mg24, and Ca40 with 400 MeV polarized deuterons. The shapes of the angular distribution are characteristic of the δL-transfer. The analyzing powers A_y at forward

angles is characteristic of the $\delta S=0$ or 1 transfer. As in (p,p') inelastic scattering, the energy of the 200 MeV/nucleon favors the excitation of $\delta S=1$ transitions relative to the $\delta S=0$ ones. The similarity between these (d,d') results and the (p,p') ones at 200 MeV indicates that a microscopic description of the (d bar, d') scattering in terms of N-N interaction can be undertaken.

35152 (ISN–87-75) **On some recent developments in microscopic nuclear models.** Piepenbring, R. Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires. 1987. 14p. (CONF-8708101–: 6. international symposium on capture gamma-ray spectroscopy, Leuven, Belgium, 31 Aug - 4 sep 1987). Order Number DE89781516/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

An overview of the status of development of some microscopic nuclear models is presented. A special attention is paid to the recent calculations starting from the effective nucleon-nucleon force, to the angular momentum projection method before variation, to the multiphonon method and to the selfconsistent coordinate method. The success and the limitations of the three last mentioned models are illustrated in the example of ^{168}Er.

35153 (ISN–87-96) **Anharmonicities of γ vibrations in ^{168}Er.** Piepenbring, R.; Jammari, M.K. Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires. Dec 1987. 26p. Order Number DE89781501/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The multiphonon method, which is mainly an exact diagonalisation of the total Hamiltonian in the collective space, is applied to the analysis of the γ vibrations in ^{168}Er. The results are compared to those obtained by Dumitrescu and Hamamoto in a perturbation treatment and by Matsuo and Matsuyanagi in the selfconsistent collective coordinate method. It is also explained why the quasiparticle phonon mode of Soloviev strongly overestimates the energies of the two phonons states.

35154 (IYaF–88-79) **Dynamics and statistics of unstable quantum states.** Zelevinskij, V.G.; Sokolov, V.V. AN SSSR, Novosibirsk (USSR). Inst. Yadernoj Fiziki. 1988. 41p. (In Russian). Order Number DE89618985/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Statistical spectrum theory, formulated in terms of arbitrary matrices is generalized into instable states. Statistics of energies and widths as eigenvalues of effective non-Hermitian Hamiltonian is investigated. Under weak mixing of states through the common channels of decay the statistic is described by Wigner formulae for distances between levels and by Porter-Thomas ones- for widths. However, level kindling disappears at the distances smaller than widths. Under strong mixing k of fast decaying states is formed (k is the number of open decay channels). Residual states appear to be long-living. Such reconstruction corresponds to direct process segregation (nuclear analogue of coherent Dicke superradiation). Appearance of cross section Erikson fluctuations is impossible under minor quantity of channels. The case of single-channel scattering is completely analysed. Joint distribution of energies and widths is found under the arbitrary force of external mixing; instable state mean density is obtained. 39 refs.; 3 refs.

35155 (JINR-E–1-88-450) **Nuclear matter excitation in pion-xenon collisions at 3.5 GeV/c. Inclusive spectra of neutral pions.** Pluta, J.; Miller, K.; Pawlak, T.; Peryt, W.; Strugalski, Z. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 12p. Order Number DE89619001/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Inclusive spectra of neutral pions have been analysed in π^- Xe collisions at 3.5 GeV/c in order to obtain data on incident particle energy deposition and nuclear matter excitation at a given value of impact parameter. The results show that two types of secondary pion sources can be distinguished. The first source, with the temperature about 135 MeV, prevails in peripheral collisions but its yield increases when the impact parameter decreases. The second one, with the temperature about 50 MeV, dominates in central collisions. 17 refs.; 9 figs.; 3 tabs.

35156 (JINR-E–4-88-228) **Effect of the particle-particle interaction on the $K^{\pi}=2^+$ states in deformed nuclei.** Solov'ev, V.G.; Shirikova, N.Yu. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 11p. Order Number DE89618986/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the journal Izv. Akad. Nauk SSSR, Ser. Fiz.

The effect of the particle-particle interaction on the $K^{\pi}=2^+$ states in even-even deformed nuclei is studied within the random phase approximation. This effect is shown to be considerable at the particle-particle interaction constant $G^{(22)}$ close to the isoscalar constant of the particle-hole interaction $K_0^{(22)}$. 11 refs.; 1 fig.; 3 tabs.

35157 (JINR-R–4-88-509) **Gamow-Teller β^+ decay of neutron-deficient deformed nuclei.** Solov'ev, V.G.; Sushkov, A.V. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 6p. (In Russian). Order Number DE89619037/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to Phys. Lett., B.

Gamow-teller β^+ decay of even-even deformed nuclei are calculated in the RPA with particle-hole and particle-particle interactions. Insertion of particle-particle interaction results in reduction of total force of (p,n)-transition in 2.5-3 time. Good description of log f-tildet for β^+ decay of ^{162,164,166}Yb and ^{166} Hf at g_A/g_V=-1 and -1.26 is obtained. 10 refs.; 1 tab.

35158 (JINR-R–4-88-612) **Microscopic consideration of d+t -> n+α nuclear reaction within the adiabatic representation.** Vinitskij, S.I.; Dubovik, V.M.; Markovskij, B.L.; Kuperin, Yu.A.; Mel'nikov, Yu.B. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 15p. (In Russian). Order Number DE89619020/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the International Seminar Microscopic Methods in a Few Particle System Theory, Kalinin, August 1988, and to J. Phys.

The effective equations for the cluster relative-motion function of the initial and final channels in the nuclear reaction d+t -> n+α are derived within the adiabatic approach. The effective energy-dependent potential is constructed by projecting onto the open channels and its asymptotic behaviour at large intercluster distances is studied. The asymptotic boundary conditions for the effective system of equations in the adiabatic representation are formulated in terms of the known coordinate asymptotics of the microscopic wave function of the five-body system. The relation of these equations with the resonating group model is also considered. 18 refs.; 3 figs.

35159 (KIYI–87-40) **Nuclei form and deformation effect on angular deuteron distribution at elastic and inelastic diffraction scattering.** Evlanov, M.V.; Isupov, V.Yu.; Tartakovskij, V.K. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1987. 28p. (In Russian). Order Number DE89617853/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The scattering of deuterons by axial and nonaxial soft nuclei in the framework of the diffraction model is considered. No assumption is made requiring the incident deuteron size to be small compared to that of the target nucleus. The effect of double scattering is taking into account as well. Differential cross sections of elastic and inelastic scattering of deuterons are calculated. Comparison of theoretical dependences with the available expermental data is carried out. It is shown that nonsphericity and softness of nucleus as well as the choice of deuteron wave functions essentially affect the cross sections of the interaction. 17 refs.; 10 figs.

35160 (KURRI-TR–303, pp. 24-29) **Recent progress in atomic mass formulas and β-decay gross theory.** Yamada, Masami (Waseda Univ., Tokyo (Japan). Science and Engineering Research Lab.). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. May 1988. (In Japanese). (CONF-8801127–: 4. specialist research meeting on measurements of short-lived isotopes, Kyoto, Japan, 12-13 Jan 1988). In *Proceedings of the 4th specialist research meeting on measurements of short-lived isotopes*. Order Number DE89003364/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

The first half of the report focuses on atomic mass formulas which have been developed by the author and his coworkers for accurate representation of the mass of various nuclides at their ground state. The one most frequently used by them is the Uno-Yamada Formula, which consists of two parts representing the

gross behavior and the fluctuations due to each nuclide, or so called shell effect. The latter part is the sum of a proton shell term and a neutron shell term, and may be constant or linear depending on the form of the shell terms. Two new formulas have been derived by incorporating the effect of proton-neutron interaction into the above-mentioned constant-type formula. One of them is different from the constant-type Uno-Yamada Formula in that the shell effect part contains a proton-neutron interaction term. Modification is also made to take into account the coulombic energy. The second half of the report addresses the β-decay gross theory. A modified β-decay gross theory is presented, in which improvements are made to reflect the effect of the UV factor and to meet the sum rules related with the Fermi transition. The monoparticle intensity function is also improved by taking into account solutions of many-body problems related with the sum rules. (N.K.).

35161 (Lund-MPh–87/08) **Shape coexistence in the neutron deficient Pb isotopes and the configuration-constrained shell correction approach.** Bengtsson, R.; Nazarewicz, W. Lund Inst. of Tech. (Sweden). Dept. of Mathematical Physics; Niels Bohr Inst., Copenhagen (Denmark); Politechnika Warszawska, Warsaw (Poland). Inst. Fizyki. Apr 1987. 19p. Order Number DE89783599/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Calculations of shape-isomeric states in neutron deficient lead isotopes have been performed using the configuration-constrained shell correction method with a Woods-Saxon average potential and a monopole pairing interaction. This approach enables us to decompose the ground state potential energy surface in separate parts characterized uniquely by the number of occupied intruder orbitals. The calculations reproduce the positions of the excited 0^+ intruder states. The isotope ^{196}Pb is discussed in detail.

35162 (ORNL/FTR–3277) **[NATO Advanced Study Institute on "The nuclear equation of state,", Peniscola, Spain, May 22–June 3, 1989]: Foreign trip report.** Strayer, M.R. Oak Ridge National Lab., TN (USA). 9 Jun 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014181/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The NATO Advanced Study Institute was a symposium of about 200 scientists from Europe and the US discussing nucleus-nucleus collisions at intermediate and high energies. The sessions were split equally between investigations attempting to learn about the nuclear equation of state, and the more fundamental studies of quantum chromodynamics and the possible formation of the quark-gluon plasma. New data from the AGS and CERN experiments were presented.

35163 (PCCF-T–8811) **Study of the He3 breakup reaction and the triton production spectra at 283 MeV.** Hussain Obid, R. Clermont-Ferrand-2 Univ., 63 - Aubiere (France). Lab. de Physique Corpusculaire. 1988. 131p. (In French). Order Number DE89781524/JAW. Available from NTIS (US Sales Only), PC A07/MF A01.

The breakup of He3 ions at 94MeV/nucleon was studied in inclusive experiments on nuclei ranging from C12 to Pb208, and in coincidence experiments (γd) and (γt) on an A127 target. The inclusive spectra of protons and deuterons show an important contribution of the He3 breakup reaction to the reaction cross section (80%). Analysis of the dependence as a function of A confirms a peripheral mechanism. The coincidence experiment gives a proportion of inelastic breakup in the inclusive cross section of 40 %. Examination of triton spectra reveals that at 94 MeV the dominant reaction is not breakup transfer as at lower energies, but charge exchange. The spectra peak at energies of 20MeV, compatible with the excitation of a mixture of L=1 and L=2 states. The variation of the cross section following an $A^{1/3}$ law indicates a peripheral mechanism for the (He3,t) reaction too. The (γ-t) coincidence reaction showing residual nucleus production near the target nucleus reinforces this result.

35164 ΛN–ΣN *couplingin* $_{\Lambda}^{3}$**H.** Afnan, I. R. (School of Physical Sciences, The Flinders University of South Australia, Bedford Park, South Australia 5042 Australia(AU)); Gibson, B. F. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 7-9 (Jul 1989).

Using separable potential equations to model the T=0,J=1/2 ΛNN three-body system, we explore the effects ofΛN–ΣN coupling in the ground state of the hypertriton. ExplicitΛN–ΣN coupling in the hyperon-nucleon interaction is shown toplay a significant role, even in this lightly bound system. When the ΣNchannel is formally eliminated, the dispersive energy dependence of theresulting ΛN effective interaction is repulsive whereas the resultingΛNN three-body force is attractive.

35165 Pseudoscalar πN coupling and relativistic proton-nucleus scattering. Gross, F. (Department of Physics, College of William and Mary, Williamsburg, Virginia 23185(US)); Maung, K. M.; Tjon, J. A.; Townsend, L. W. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 10-12 (Jul 1989).

Relativistic p-^{40}Ca elastic scattering observablesare calculated using relativistic NN amplitudes obtained from thesolution of a two-body relativistic equation. Results at 200 MeV are presentedfor three sets of NN amplitudes, two with pure pseudovector coupling forthe pion and one with a 25% admixture of pseudoscalar coupling. Differencesbetween the predictions of these three models provide a measure of theuncertainty in constructing Dirac optical potentials from NN amplitudes.

35166 Production of the H dibaryon in relativistic heavy-ion collisions. Dover, C. B. (Brookhaven National Laboratory, Upton, New York 11973(US)); Koch, P.; May, M. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 115-125 (Jul 1989).

We discuss mechanisms for the production of exotic hadrons in heavy-ion collisions at high energy, focusing on the doubly strange H dibaryon. In a hadron gas phase, we estimate the H formation rate, per central Si+Au collision, to be of order 0.01 for temperatures T=120–140 MeV, based on a conventional coalescence model. If the quark-gluon plasma phase is excited, we expect an enhancement relative to the rate for a hadron gas. We explore various schemes for detecting the H in the high multiplicity background characteristic of heavy-ion collisions. The proposed detection techniques include the measurement of weak decays such as $H \rightarrow \Sigma^- p$, the search for nuclear fragments with anomalous charge/mass ratio, and diffractive dissociation processes such as $Hp \rightarrow \Xi^- pp$. .AE

35167 Spin-flip cross sections for $^{13}C(\vec{p},\vec{n})^{13}N$(g.s.) at 500 MeV. Ray, L. (Department of Physics, University of Texas, Austin, Texas 78712(US)); Shepard, J. R. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 237-245 (Jul 1989).

It was recently shown that analyzing power data for 500 MeV(p,n) charge exchange from ^{15}N could not beadequately explained by either relativistic or nonrelativistic distorted waveimpulse approximation models. In general, reaction models which incorporaterelativistic dynamics provide a successful description of proton-nucleuselastic scattering at intermediate energies. It is therefore important tounderstand the reasons for the apparent failure of the theoretical models withrespect to the description of (p,n) charge exchange data from oddtargets. In this work a method of analyzing intermediate energy(p,n) reaction data from odd target nuclei is presented whichfocuses attention on specific dynamical elements of the relativistic distortedwave impulse approximation model. Included in these elements are the differentpieces of the Lorentz invariant nucleon-nucleon isovector effective interactionand the aspects of nuclear structure associated with the valence nucleon. Theanalysis utilizes certain linear combinations of the $(\vec{p},\vec{n})$polarization transfer observables, the important quantities being thetransverse and longitudinal spin-flip cross sections and the projectileno-spin-flip cross section. The method is illustrated with relativisticdistorted wave impulse approximation calculations for the$^{13}C(\vec{p},\vec{n})^{13}N$(g.s.) reaction at 500MeV. It is intended that analyses of this type will provide an important toolfor diagnosing the apparent inadequacies with the theoretical description ofintermediate energy (p,n) charge exchange from odd nuclei.

35168 Polarization response functions and the $(\vec{e},e\vec{p})$ reaction. Picklesimer, A. (Physics Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545(US)); Van Orden, J. W. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 290-303 (Jul 1989).

The first comprehensive study of the full set of 18 response functionsrelevant to the $(\vec{e},e\vec{p})$ reaction is presented. Benchmarkanalytical features and limiting cases of the response functions are described.Numerical predictions contrasting nonrelativistic and relativistic (Dirac)dynamics and on- and off-shell final-state interaction effects are presented.Basic physical characteristics and dependences of the response functions areidentified. The outlook for future experimental studies of the$(\vec{e},e\vec{p})$ polarization response functions is discussed.

35169 Two-loop corrections for nuclear matter in the Walecka model. Furnstahl, R. J. (Department of Physics and Astronomy, University of Maryland, College Park, Maryland 20742(US)); Perry, R. J.; Serot, B. D. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 321-353 (Jul 1989).

Two-loop corrections for nuclear matter, including vacuum polarization, arecalculated in the Walecka model to study the loop expansion as an approximationscheme for quantum hadrodynamics. Criteria for useful approximation schemes arediscussed, and the concepts of strong and weak convergence are introduced. Thetwo-loop corrections are evaluated first with one-loop parameters and meanfields and then by minimizing the total energy density with respect to thescalar field and refitting parameters to empirical nuclear matter saturationproperties. The size and nature of the corrections indicate that the loopexpansion is not convergent at two-loop order in either the strong or weaksense. Prospects for alternative approximation schemes are discussed.

35170 Wave function of ^{14}N. Amos, K. (School of Physics, The University of Melbourne, Parkville, Victoria, 3052 Australia(AU)); Koetsier, D.; Kurath, D. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 374-381 (Jul 1989).

The β- and γ-decay rates, electron scattering form factors,and intermediate energy (p,p') and ($\mathbf{p},n$)cross-section data are used to compare a set of wave functions that have beenproposed for ^{14}N. With pertinent reaction t matrices andallowance for reasonable and often small core polarization corrections the wavefunctions derived by standard (shell-model) calculations are found to be themost relevant.

35171 Finite nucleus Dirac mean field theory and random phase approximation using finite *B* splines. McNeil, J. A. (Department of Physics, Colorado School of Mines, Golden, Colorado 80401(US)); Furnstahl, R. J.; Rost, E.; Shepard, J. R. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 399-406 (Jul 1989).

We calculate the finite nucleus Dirac mean field spectrum in a Galerkinapproach using finite basis splines. We review the method and present resultsfor the relativistic σ-ω model for the closed-shell nuclei^{16}O and ^{40}Ca. We study the convergence of themethod as a function of the size of the basis and the closure properties of thespectrum using an energy-weighted dipole sum rule. We apply the method to theDirac random-phase-approximation response and present results for the isoscalar1^- and 3^- longitudinal form factors of^{16}O and ^{40}Ca. We also use a *B*-splinespectral representation of the positive-energy projector to evaluate partialenergy-weighted sum rules and compare with nonrelativistic sum rule results.

35172 Coriolis coupling in the rotational bands of deformed odd-odd nuclei. Jain, A. K. (Florida State University, Tallahassee, Florida 32306(US)); Kvasil, J.; Sheline, R. K.; Hoff, R. W. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 432-444 (Jul 1989). DOE Contract W-7405-ENG-48.

Evidence is presented for the existence of odd-even staggering inK^- rotational bands (with $K>0$) of odd-odd nuclei in therare-earth and actinide regions. Coriolis-coupling calculations have beencarried out for rotational bands in ^{168}Tm,^{176}Lu, ^{182}Ta, and ^{182}Re.With these calculations, we are able to reproduce the odd-even staggeringobserved in these nuclei. In particular, the unusually strong staggeringobserved in the $K=2^+$ and 4^- bands of^{182}Re can be understood. Unusual features in the wavefunctions of some bands reflect the importance of couplings due to terms otherthan Coriolis in the Hamiltonian.

35173 Large-N_c QCD, composite nucleons, and the Dirac sea. Cohen, T. D. (Department of Physics and Astronomy, University of Maryland, College Park, Maryland 20742(US)). *Physical Review Letters (USA),* 62(26): 3027-3030 (26 Jun 1989).

It is shown that one-nucleon-loop calculations of the vacuum contributions to the effective potential for hadronic field theories with point nucleon fields are not compatible with large-N_c QCD. One expects that nucleon substructure will lead to a suppression of such effects of at least order N_c^{1-d}, where d is the dimension of spacetime. Issues of the self-consistency of the large-N_c QCD are discussed.

35174 (CTH-RF–60) **Eigenvalues of one-speed neutrons in finite slabs.** Sjoestrand, N.G. Chalmers Univ. of Tech., Goeteborg (Sweden). Dept. of Reactor Physics. Sep 1988. 10p. Order Number DE89617842/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The criticality factor has been determined for finite slabs. assuming neutrons of one speed scattering isotropically. The finite extension of the slab in two dimensions was taken into account by the buckling approximation. Numerical values are given of the criticality factor as a function of the thickness and lateral buckling. For the corresponding time-dependent case the decay constant has also been calculated.

International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 18p. Order Number DE89617843/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The slowing down of the Boltzmann Equation for generalized boundary conditions is considered and transformed into one speed equation in Laplace space. Exact relations between energy reflection and transmission coefficients for a problem with diffuse reflecting boundary conditions and the albedos for the problem with isotropic boundary conditions are obtained. The Galerkin method is used to calculate the energy reflection coefficient for a finite slab at different thicknesses for different mass ratios A, target to projectile mass ratio, for different synthetic scattering kernels. The methods for partial heat fluxes for isotropic and anisotropic scattering in dispersive medium are given. The results obtained for isotropic boundary conditions are compared well with the exact results. (author). 16 refs, 4 tabs.

Solution of one particular problem of γ-radiation transport with deviation of group built-up factors as a final result is described. The problem is solved numerically using the method of moments. The metodical part include the formation of numerical algorithm of solution of transport equation with respect to the moments of distribution function and reduction of flux function (intensity) according to determined moments. The practical part of the problem includes writing of the program of numerical solution and computer calculation. The program is written in Fortran-4 algorithmic language for BESM-6 computer. 9 refs.; 12 tabs.

Consideration is given to be algorithm and the body of EhTR program of simulating electron trajectories in an infinite homogeneous medium by the Monte Carlo method. The algorithm is based on Fokker-Planck approximation for describing gazing collisions. The main feature of the algorithm lies in the fact that its realization doesn't require preliminary tabulation of any distribution. Results of comparative calculations, supporting the EhTR program operationability are presented. 16 refs.; 6 figs.

Available from NTIS (US Sales Only), PC A19/MF A01; INIS.

Space and angular distribution of the diffuse scattered neutrons on the high-perfect crystals are investigated. In real crystals thermal vibrations and defects distort crystal lattice, violating coherent relation of secondary waves. It results in the weakening of interference effects or in their utter elimination, the change in angular and spatial distribution of diffracted radiation intensity and also in the appearance of diffuse scattering. The distribution of diffuse scattering intensity in the space of momentum transfer vectors permits to determine the type of defects (implanted or vacancy one), their symmetry and dimensions. 5 refs.; 5 figs.

Neutron transmission with a reactor beam through polyethylene and samples of construction materials is used for spectra reconstruction of unreacted neutrons and moments of cross section distribution on the spectra of different regidity. 5 refs.; 5 tabs.

35181 (ISN–87-95) **Excitation of giant dipole modes in heavy-ion reactions.** Suraud, E.; Pi, M.; Schuck, P. Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires. Nov 1987. 17p. (CONF-8709200–: 1. topical meeting on giant resonance excitation in heavy-ion collisions, Legnaro, Italy, 21-25 Sep 1987). Order Number DE89781518/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A study of the excitation of giant dipole modes during heavy-ion reactions is presented within the framework of a complete (non linearized) Vlasov equation. It is found that, in the entrance channel, a giant dipole motion is responsible for the charge equilibration process in the fused system. The phonon energies corresponding to this mode are in agreement with what is expected for excited, rotating, deformed giant dipole oscillations.

A study is made on procedures for obtaining desired scattering function information. The neutron spectral modulation technique incorporates both the low (including DC) and high frequency Fourier components in its incident spectrum. Lake's procedure increases the Fourier components of the doconvoluted scattering function by using the existing Fourier components as nucleus, thereby bridges the Fourier gap and extends the Fourier region. Since the Lake's procedure takes care of the missing Fourier components, a single measurement using an appropriate NSM modulation suffices to recover the S(W) line shape. Deep modulation depth is not essential to reproduce the scattering function. This should be contrasted to the previous NSM treatment as well as to the neutron spin echo method, both of which require the several repeat of measurements with the varying modulation frequency under the high degree of beam polarization condition. Although the computer simulation of the present paper does not include the statistical fluctuation encountered in the experimental data, these analyses show a great promise of the NSM method, which can now be used with much flexibility in the field of both cold and ultracold neutron scattering experiment. (N.K.).

In the last International Conference on Neutron Physics in Kiev, 1987, A.P. Serebrov announced his intention to measure the neutron life time with ultra cold neutrons (UCN) by means of a device, in which a sphere with a horizontal rotation axis has a circular window on the great circle perpendicular to the axis. Serebrov did not mention how this instrument was operated. The present note concerns with this point. Firstly why is it spherical? Because UCN stored in it will not suffer energy transfer from its wall and their spectrum would not change. This should be the most important feature of the device and the sphere might as well be replaced by a horizontal cylinder in principle. Secondly imagine UCN jumping around in the gravitational field in the sphere. The number of reflections in a certain time will be a function of the maximum potential energy averaged over the UCN contained in the sphere. The number of the UCN on the other hand is reduced by reflection from the wall during this time. The UCN life time measurement can be much improved compared with the conventional free neutron life time measurement. According to calculations based on some assumptions, it is at least in principle very likely that the accuracy of

neutron life time can be improved by means of UCN with the ingenious device proposed by Serebrov. (N.K.).

An He^3 cryostat for UCN production has been installed in the KEK neutron scattering facilities. Cooling test of the cryostat has recently been accomplished successfully with an UCN bottle temperature of 0.76 K reached. The report outlines the construction of the cryostat and describes major results of the cooling test. The equipment has a L-shape so that it can be placed close to the cold neutron source. The target portion has a capacity is 15 l, the greatest among the cryostats below 1 K in the world. Its design ensures a reduced consumption of liquid helium and liquid nitrogen as well as improved basic performance. For the testing, cooling is performed with liquid nitrogen, followed by liquid helium, 1 K cooling, pure He^4 and then He^3. Measurements are made of temperature, liquid level, and cooling power. The temperature distribution in the heat exchanger is calculated. It is demonstrated that stable operation is possible at the He^3 temperature of 0.44 K, permitting physical experiments in a 3 m bottle. The cryostat requires 3~4 days of pre-cooling, with a liquid helium consumption of about 300 l. Liquid consumption during stationary operation is 2.0 l/hr. The bottle temperature can be measured accurately. Observations of temperature difference between the UCN bottle and He^3 are interpreted by simulation. (N.K.).

35186 (OEVS-Mitteilung–1988, pp. 625-629) **Axial distribution of absorbed doses in fast neutron field at the RB reactor.** Sokcic-Kostic, M. (Institut za Nuklearne Nauke Boris Kidric, Belgrade (Yugoslavia)); Pesic, M.; Antic, D.; Ninkovic, M. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

The coupled fast thermal system CFTS at the RB reactor is created for obtaining fast neutron fields. The axial distribution of fast neutron flux density in its second configuration (CFTS-2) is measured. The axial distribution of absorbed doses is computed on the basis of mentioned experimental results. At the end these experimental and computed results are given. 6 refs., 3 figs., 1 tab.

35187 **Development of a cone-geometry positron moderator.** Lynn, K. G. (Brookhaven National Laboratory, Upton, New York 11973(US)); Gramsch, E.; Usmar, S. G.; Sferlazzo, P. *Applied Physics Letters (USA),* 55(1): 87-89 (3 Jul 1989). DOE Contract AC02-76CH00016.

Results are presented on a new cone-shaped positron moderator which shows a high moderator efficiency (i.e., conversion of beta decay to emitted slow positrons). The moderator efficiencies for the cone moderators studied were found to be up to 0.14% compared to thin-foil measurements of 0.06% in the same experimental system including identical source and holder. These moderators are rugged and easily fabricated, however, they have a lower brightness than single-crystal foil moderators. Comparison of various geometries is presented as well as suggestions for further improvements to increase the total efficiencies.

35188 **Barkas effect with use of antiprotons and protons.** Gabrielse, G. (Department of Physics, Harvard University, Cambridge, Massachusetts 02138(US)); Fei, X.; Orozco, L. A.; Rolston, S. L.; Tjoelker, R. L.; Trainor, T. A.; Haas, J.; Kalinowsky, H.; Kells, W. *Physical Review [Section] A: General Physics (USA),* 40(1): 481-484 (1 Jul 1989).

The difference in the range of protons and antiprotons in matter, anexample of the Barkas effect, is observed in a simple time-of-flight apparatus.The ranges of 5.9-MeV antiprotons and protons differ by about 6% in a degradermade predominantly of aluminum.

35189 (AECL–8408) **Study on the health of the employees of Atomic Energy of Canada Limited. III. Upgrading the data base.** Johnston, L.H.; Werner, M.M. Atomic Energy of Canada Ltd., Pinawa, MB (Canada). Whiteshell Nuclear Research Establishment. 1987. 26p. Order Number DE89619935/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The Atomic Energy of Canada Ltd (AECL) Employee Health Study commenced in 1980 July following the issue of a Company-Wide General Notice of 1980 April by the President of Atomic Energy of Canada Limited, Mr. James Donnelly. The study was set up to determine the causes of death of the AECL study population as compared to a similar group in the general population and to determine if there is a relationship between cause of death and occupational exposure to ionising radiation. Previous AECL reports have outlined how the study has been set up and implemented. The purpose of this report is to describe the reasons for and the methods of upgrading the data base for the AECL Employee Health Study. Some description of procedures used during the first linkage and recommendations for future linkages are included.

35190 (CNEN-NE–3-05) **Requirements of radiation protection and safety for nuclear medicine services.** Comissao Nacional de Energia Nuclear, Rio de Janeiro, RJ (Brazil). 1989. 17p. (In Portuguese). Order Number DE89618064/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The requirements of radiation protection and safety for nuclear medicine services are established. The norms is applied to activities related to the radiopharmaceuticals for therapeutics and 'in vivo' diagnostics purposes. (M.C.K.).

35191 (IBK–1602) **SI unit for exposure - suggestion for the name, symbol and definition.** Ninkovicj, M. Institut za Nuklearne Nauke Boris Kidric, Belgrade (Yugoslavia). 1985. 7p. Order Number DE89618135/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Of all SI radiation quantities, only the exposure unit remains unnamed. The authors have proposed a name, symbol and definition for this quantity. Relationships among some radiation quantities for X- and gamma-rays in air and conversion factors from old into new units are given. (author). 10 refs.; 1 tab.

35193 (JINR–16-88-524) **Experimental determination of the influence of an ionization chamber wall material on the chamber sensitivity in high energy particle beams.** Zielczynski, M.; Molokanov, A.G.; Cherevatenko, E.P. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1988. 5p. (In Russian). Order Number DE89619956/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Influence of an atomic composition of material surrounding the gas cavity on gas ionization has been investigated in medical beams of protons with the energy of 200 MeV and 660 MeV and neutrons with mean energy of 350 MeV. Data obtained permit to calculate the correction factors required for determination of dose absorbed in a phantom by means of real detectors. It is shown that corrections may be neglected for ionization chambers with organic material walls. 5 refs.; 2 figs.; 1 tab.

35194 (LHRL-LIB/Trans–3) **Dose limits.** Fitoussi, L. Australian Nuclear Science and Technology Organisation, Lucas Heights (Australia). Dec 1987. 34p. Order Number DE89618065/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Translated from CEA Clefs (Jul 1987) no. 6 p. 22-33.

The dose limit is defined to be the level of harmfulness which must not be exceeded, so that an activity can be exercised in a regular manner without running a risk unacceptable to man and the society. The paper examines the effects of radiation categorised into stochastic and non-stochastic. Dose limits for workers and the public are discussed.

35195 (MRP/MRL–84-60(TR)) **Radon (thoron) daughter personal alpha-dosimeter of the passive type using a diffused-junction detector and an electrostatic collector.** Bigu, J.; Frattini, A. Canada Centre for Mineral and Energy Technology, Ottawa, ON (Canada). Mining Research Labs. May 1984. 30p. Order Number DE89619957/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A solid-state alpha-dosimeter has been designed and found to be suitable for personal and environmental radon-thoron daughter monitoring. The dosimeter basically consists of an electrostatic collector and an alpha-particle counting system with spectroscopy capabilities. The sensitive volume (~20 cm^3) of the electrostatic collector consists of a cylindrically-shaped metal wire screen and a diffused-junction silicon alpha-detector covered with a thin aluminized mylar sheet. A DC voltage (~450 V) is applied between the wire screen and the mylar sheet, the latter held at negative potential relative to the metal screen. Data can be retrieved during or after sampling by means of a micro-computer (Epson HX20) via a RS-232 communcation interface unit. The dosimeter has been calibrated in a large (26 m^3) radon/thoron test facility. A linear relationship was found between radon gas concentration and radon daughter Working Level, and the dosimeter's alpha-count. The dosimeter is mounted on top of an ordinary miner's cap lamp battery and is ideally suited for personal monitoring in underground uranium mines and other working areas. The dosimeter presented here is a considerably improved version of an earlier prototype.

35196 (NKS–88-7, pp. 4) **Dispersion of radioactivity within the reactor radioactive effluents dispersion and environmental effects' AKTI-100 and AKTU-200.** Kilpi, K. (VTT (Finland)). Nordisk Kontaktorgan for Atomenergispoergsmaal, Risoe (Denmark). Nov 1988. (In Swedish). In *Nordic projects concerning nuclear safety. Report for January-June 1988.* Order Number DE89618061/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Survey of the "state-of-the art" and of research activities within the field of radioactivity inside the reactor itself, including aerosol transport, chemistry, sensitivity studies and coordination of research activities. (AB).

35197 (NRPB-R–227) **Radiation exposure of the UK population - 1988 review.** Hughes, J.S.; Shaw, K.B.; O'Riordan, M.C. National Radiological Protection Board, Chilton (UK). Mar 1989. 98p. Available from H.M. Stationery Office, London, price Pound 7.00.

This is the fourth review in 14 years and reflects radiological conditions in the late 1980s. The main conclusions are: (a) the annual dose, averaged over the whole population, is about 2.5 mSv in total; (b) some 87% of the total is from natural radiation with half from radon exposure indoors; (c) medical exposure of patients accounts for 12% of the total; (d) all other artificial sources - nuclear discharges, fallout, miscellaneous and occupational - account for 1% of the total. The radiological, as opposed to the sociological, impact on the UK of the Chernobyl reactor accident was slight.

35198 (OEVS-Mitteilung–1988, pp. 77-80) **Instructor kit to demonstrate basic radiation protection.** Boeck, H. (Atominstitut der Oesterreichischen Universitaeten, Vienna (Austria)); Hammer, J. Oesterreichischer Verband fuer Strahlenschutz (OeVS), Vienna (Austria). Nov 1988. (CONF-860969–: 4. European congress and 13. regional congress of the International Radiation Protection Association, Salzburg, Austria, 15-19 Sep 1986). In *4. European congress and 13. regional congress of IRPA. 20 years experience in radiation protection - a review and outlook.* Order Number DE89613806/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

A suitcase containing all the necessary equipment to perform twelve simple but most instructive experiments with two small radiation sources is described. Its main aim is to assist persons involved in students education in the field of radiation protection or nuclear physics, to set up the experiments in the most instructive way to explain the physics background and to discuss the results. The hardware is described and the twelve experiments listed. 1 fig. (qui).

35199 (ORNL/FTR–3278) **[Tenth symposium on microdosimetry, Rome, Italy; Department of Energy/Commission of European Communities workshop, Rome, Italy; and visit to Neuherberg, W. Germany, May 21–June 3, 1989]: Foreign trip report.** Wright, H.A. Oak Ridge National Lab., TN (USA). 15 Jun 1989. 7p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014751/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Report of Harvel A. Wright, to participate in the Tenth Symposium on Microdosimetry in Rome, Italy, May 21-26, 1989; to participate in a Department of Energy/Commission of European Communities (DOE/CEC) Workshop on Long-Term Research Needs and Priorities in Microdosimetry, held in Rome following the microdosimetry symposium; and to visit the Gesellschaft fur Strahlen- and Umweltforschung (GSF) in Neuherberg, FRG, to carry out collaborative research with Dr. H.G. Paretzke.

35200 (SSI–88-10) **Nuclear power industry, -activity discharge, -occupational exposures. Third quater of the year 1987.** National Inst. of Radiation Protection, Stockholm (Sweden). 19 May 1988. 32p. (In Swedish). Order Number DE89618071/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Operations during the quarter: Several plants were revised. Less energy demand during summer half and revisions have implied a lower factor of utilization than during winter half. Discharges during the quarter: Discharge from all plants were low. The discharges are less then 1% of standards for permitted discharges considering individual doses, with exception for Ringhals, where the discharge is about 4% of standards. Occupational exposures during the quarter: No personnel in radiological work at the nuclear power plants, Asea-Atom or Studsvik received a dose exceeding the quarter dose limit, 30 mSv. No personnel in radiological work was internally contaminated by radioactive substances in contents exceeding 0.5% of the limit for the yearly ingestion of radioactive substances. The reporting limit to SSI is 0.5%. (O.S.).

Sponsored by DOE Energy Research. DOE Contract FG02-86ER45265. Order Number DE89013510/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper discusses the following topics: high $_{\perp}H_c$ perpendicular anisotropy $Nd_2Fe_{14}B$ films; high $_{\perp}H_c$ films that exhibit in-the-film-plane anisotropy; election energy loss results on $SmCo_5$ and $Nd_2Fe_{14}B$; thick high energy films of $Sm_2(Co,Fe,Zr)_{17}$; high coercive force Sm-Ti-Fe film samples; and synthesis of $R(Ti,Fe)_{12}$(R = Nd,Sm) compound. (LSP)

35202 (GANIL-A–88-02) **Beam foil interaction studies for the future stripper of Ganil.** Baron, E.; Ricaud, C. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). 1988. 3p. (CONF-880695–: 1. European Particle Accelerator Conference (EPAC-1), Rome, Italy, 7-11 Jun 1988). Order Number DE89781543/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

The GANIL 3 - cyclotron accelerator complex is to be upgraded in 1989 by increasing the beam energy at the stripper. In view of this modification, the effect of carbon stripper foils of various thicknesses (from 50 to 250 $\mu g/cm^2$) on the energy spread of Ar, Kr, Xe and Ta

beams was measured using the analysing section of the 270^0 spectrometer. Energies ranging from 3.2 to 6.5 MeV/A (i.e corresponding to the future energy range) were used, and intensities of several hundreds of electrical nanoamperes were concentrated over a few mm^2 spot. Unusually large values of the additional energy spread are reported. In addition, charge state distributions of the 6.48 MeV/A Xe and 4.81 MeV/A Ta beams were measured as a function of the carbon thickness, in order to be able to choose how close to the equilibrium thickness the stripper should be, while keeping the energy spread of the outgoing beams within reasonable limits.

35203 (IAE–4677/1) **Passage of ultrarelativistic electrons through real crystals.** Starostin, V.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1988. 5p. (In Russian). Order Number DE89618624/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

A theory has been developed on passage of fast charged particles through single crystals of any nature. Necessity of allowance for defect influence in choosing the crystal, the source of directional radiation, is shown. 5 refs.

35204 (IC–88/289) **Thermodynamics of two component gaseous and solid state plasmas at any degeneracy.** Kraeft, W.D.; Stolzmann, W.; Fromhold-Treu, I.; Rother, T. International Centre for Theoretical Physics, Trieste (Italy). Oct 1988. 12p. Order Number DE89617620/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We give the results of thermodynamical calculations for two component plasmas which are of interest for dense hydrogen, noble gas and alkali plasmas and for electron hole plasmas in optically excited semiconductors as well. 25 refs, 4 figs.

35205 (IC–88/291) **Theoretical study of the interplay of electron-electron interaction and disorder.** Brezini, A.; Behilil, S. International Centre for Theoretical Physics, Trieste (Italy). Oct 1988. 14p. Order Number DE89617600/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A disordered Hubbard model with diagonal disorder is used to investigate the electron localization effects associated with both disorder and electron-electron interaction. Extensive results are reported on the ground state properties and compared to other theories. Two regimes have been found: when the electron-electron interaction u is greater than the disorder parameter w and when u < w. (author). 18 refs, 4 figs.

35206 (IC–88/376) **Pressure effects on Ge and Si, A simplified tight binding approach.** Tuncay, C. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 7p. Order Number DE89617601/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

A simplified version of Empirical Tight Binding Method is used to predict the effects of hydrostatic pressure on Ge and Si bands. The method does not involve band structure calculations but gives equivalent results, which mimic some experimental outcome. (author). 13 refs, 1 fig., 1 tab.

35207 (IC–88/421) **Thermal stability between rotating cylinders in a radially symmetrical gravitational field.** Bestman, A.R. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 6p. Order Number DE89618548/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The paper considers the flow in a porous medium confined between two rotating heated cylinders in a radially symmetrical gravitational field. Particular attention if focussed on the critical point for the onset of instability. The effect of porosity and heating on the stability boundary is discussed quantitatively. The results of this work are important to geophysics. (author). 8 refs, 1 tab.

35208 (IFUSP-P–703) **Optical absorption study of radiation and thermal effects in Brazilian samples of spodumene.** Isotani, S.; Fujii, A.T.; Antonini, R.; Furtado, W. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Mar 1988. 57p. Order Number DE89618625/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

A detailed analysis of the optical absorption spectra of five varieties of Brazilian spodumene is presented. The samples were submitted to heat treatments and irradiated with gamma rays, x radiation, electrons and ultraviolet light. (M.C.K.).

35220 (INIS-mf–11456, pp. 295-298) **Hyperfine interactions in substituted YIG's.** Englich, J. (Karlova Univ., Prague (Czechoslovakia). Fakulta Matematicko-Fyzikalni); Novak, P. Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

The possibilities are studied of the method of nuclear magnetic resonance for the study of magnetic properties and the magnetic structure of ferrimagnetic iron oxides. For measuring NMR spectra the pulse technique was used of the double pulse spin echo. The non-colinear structure was studied of magnetic moments of the rare earth ions in garnets. The NMR was studied of Fe^{3+} ions in polycrystalline samples of $Bi_xY_{3-x}Fe_5O_{12}$ and $La_xY_{3-x}Fe_5O_{12}$. Experimentally confirmed was the anticipated structure of the spectrum. From the temperature dependence of the NMR frequency it is possible to derive the temperature dependence of the magnetic moment of the Fe^{3+} ion. (M.D.). 2 figs., 11 refs.

35221 (INIS-mf–11456, pp. 299-302) **Moessbauer spectroscopy of amorphous magnetic materials.** Zemcik, T. (Ceskoslovenska Akademie Ved, Brno (Czechoslovakia). Ustav Fyzikalni Metalurgie). Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

Briefly summed up is available knowledge of the Moessbauer spectroscopy of amorphous ferromagnetic alloys. The main applications consist in obtaining information on the atomic and magnetic structure of the amorphous state, studying the relaxation processes by magnetic changes which they induce and studying the limits of stability of the amorphous state. Examples are given of experiments described in the literature. (M.D.). 2 figs., 10 refs.

35222 (INIS-mf–11456, pp. 277-280) **Microstructure study of amorphous material by EXAFS method.** Smotlacha, O. (Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Fyzikalni Ustav). Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

The X-ray is emitted by the source, passes through monochromator and an intensity monitor, then through the investigated sample and impinges on the detector. During measurement the wavelength of X-radiation gradually changes. Measured is the wavelength dependence of radiation intensity attenuated by the sample. The absorption coefficient shows oscillattions, the so-called fine structure on the shortwave side of the absorption edges. For energies up to 50 eV behind the absorption edge the fine structure is known as XANES (X-ray Absorption Near Edge Structure), for energies between 60 - 80 eV behind the absorption edge it is known as EXAFS (Extended X-ray Absorption Fine Structure). The advantages and disadvantages of the diffraction method and the EXAFS method are

compared on the nonoriented system of two elements. (M.D.). 4 figs., 5 refs.

35223 (IPNO-DRE–87-33(1)) **Spontaneous desorption and plasma desorption mass spectrometry: a simple way to compare keV and MeV ion induced desorption.** Della-Negra, S.; Deprun, C.; Le Beyec, Y.; Bolbach, G. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1987. 1-2p. (CONF-8705114– : 35. conference on mass spectrometry and applied topics, Denver, Colorado, USA, 24-29 May 1987). Order Number DE89781421/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

Spontaneous and simultaneous emission of negative ions and electrons in a time of flight mass spectrometer was used to compare keV and MeV ion induced desorption. Results obtained with composite films of Cd arachidate layers superposed by monolayers of Cd stereate show that the molecular ion yield of the top layer (stearic acid) increases with the number of layers of the same compound in the Cf252 mode, but decreases strongly in the SD mode. A strong difference betwen Cf252 and SD is also observed in the molecular ion yield of arachidic acid. Mass spectra for two targets consisting of 2 ML of CD stereate on 2 ML of Cd arachidate and on 12 ML of Cd arachidate are shown. They suggest that there are more in flight fragmentations in fission fragment induced desorption than in keV ion induced desorption. It is assumed that more internal energy is on the average transferred to the molecular ions when they are emitted from the layers bombarded by MeV ions.

35224 (IPNO-DRE–87-33(2)) **Thickness and volume effects in MeV ion induced desorption (PDMS).** Della-Negra, S.; Deprun, C.; Le Beyec, Y.; Standing, K.G.; Bolbach, G. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1987. 3-4p. (CONF-8705114–: 35. conference on mass spectrometry and applied topics, Denver, Colorado, USA, 24-29 May 1987). Order Number DE89781422/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

The origin of ion emission in MeV ion induced desorption was investigated using Cd stearate and arachidate molecules to prepare targets. Experiments were performed with fission fragments from a Cf252 source and 1.16 MeV/u Kr ions accelerated by a linear accelerator. The variation of the ion yield from composite films as a function of the Langmuir-Blodgett film thickness of the same molecule, as well as the decrease of the yield for ions from subsurface layers are compatible with an emission from a conical volume of 200Å depth.

35225 (IPNO-DRE–87-33(5)) **Secondary ion emission from surface and volume with high and low energy ions.** Deprun, C.; Della-Negra, S.; Le Beyec, Y.; Bolbach, G. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1987. 13p. (In French). (CONF-8709414–: 6. mass spectrometry colloquium, Strasbourg, France, 15-17 Sep 1987). Order Number DE89781427/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Secondary ion emission from fast ion impact (Cf252 fission fragments) of Langmuir-Blodgett films consisting of superposed two molecule layers with similar structure and mass (Cd stereate and Cd arachidate) was analyzed. Emission of deproton secondary ions of stereate and arachidate acids was studied for various target configurations. Results show that under the influence of high energy ions, secondary ion ejection comes from a conical volume of 200A depth.

35226 (IPNO-DRE–87-33(6)) **Fast ion desorption (Mev/u): interaction depth in secondary H+ ion emission: probe of the surface-projectile interaction.** Della-Negra, S.; Le Beyec, Y.; Monart, B.; Standing, K.; Wien, K. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1987. 14p. (In French). (CONF-8709414–: 6. mass spectrometry colloquium, Strasbourg, France, 15-17 Sep 1987). Order Number DE89781425/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The emission of ions resulting from the bombardment of solid targets by 1 MeV/u projectiles was studied by time of flight spectrometry to examine the energy transfer process from the interior of a material towards the surface. Results show an interaction depth between the primary ion and the material which varies according to the type of secondary ion emitted. The depth calculated using a model is 200 A for agregates emitted from a CsI target bombarded by a Kr 18^+ beam. The estimates were verified using an H^+ probe.

35227 (JINR–14-88-535) **Influence of ionization and heavy ion nuclear energy losses on defect formation in LiF crystals.** Didyk, A.Yu.; Oganesyan, R.Ts.; Skuratov, V.A.; Regel', V.R. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions. 1988. 10p. (In Russian). Order Number DE89618626/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to Fiz. Tverd. Tela.

Absorption spectra and mechanical properties of LiF irradiated with ^{136}Xe (118 MeV), Ar (225,46,3 MeV), ^{20}Ne (112,5 MeV), ^{22}Ne (26,9 MeV) ions at 10^{10}-10^{14} cm^{-2} dose range were studied. It determined by total ionization energy losses of heavy ions. The observed differences in dose dependences of point defect concentrations for Xe, Ar, Ne beginning after certain dose may be explained as a result of ion track overlapping. The change of mechanical properties of LiF is determined by the radiation damages caused by elastic collisions of bombarded ions with lattice atoms. 12 refs.; 5 figs.; 1 tab.

35228 (JINR-E–14-88-429) **Neutron scattering investigations of lattice dynamics and structure of superconducting ceramics $La_{2-x}Sr_xCuO_{4-\delta}$ at different temperatures.** Belushkin, A.V.; Goremychkin, E.A.; Natkaniec, I. and others. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics. 1988. 10p. Order Number DE89618553/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to the journal Phys. C.

Inelastic neutron scattering (INS) together with neutron diffraction (simultaneous information on the structure behaviour) were measured for $La_{2-x}Sr_xCuO_{4-\delta}$ (x=0.0, 0.1, 0.2, 0.3) at temperatures: 290, 77 and 10 K using - the time-of-flight spectrometer at the pulsed reactor. A new line near the energy transfer of 6 MeV has been detected in the INS spectra at 77 and 10 K. The intensity of this line depends on both momentum transfer and temperature. That points to the magnetic nature of the corresponding excitation. It also veries with strontium concentration. 17 refs.; 3 figs.; 1 tab.

35229 (JINR-E–14-88-430) **Phonon density of states of $YBa_2Cu_3O_x$ in dependence on oxygen content and temperature.** Natkaniec, I.; Belushkin, A.V.; Mayer, J. and others. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics. 1988. 6p. Order Number DE89618554/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to the journal Pis'ma Zh. Ehksp. Teor. Fiz.

Inelastic neutron scattering (INS) and neutron diffraction spectra of $YBa_2Cu_3O_x$ compounds for x=6.95, 6.45 and 6.15 at temperatures 290, 80 and 10 K were measured. Generalized functions of phonon density of states (GDOS) obtained from INS spectra change significantly in the wide energy range from 10 to 90 MeV with increasing oxygen deficiency. An anomalous increase of the GDOS at energies from 15 to 40 MeV with decreasing temperature was observed for superconducting samples (x=6.15 and 6.45), while in the non-superconducting sample (x=6.15) such effect was less pronounced. 20 refs.; 2 figs.; 1 tab.

35230 (JINR-R–4-88-447) **On determination of the magnetic field penetration depth in oxide superconductors by polarized neutron reflection.** Korneev, D.A.; Chernenko, L.P. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics. 1988. 11p. (In Russian). Order Number DE89618555/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to Poverkhn: Fiz., Khim., Mekh.

The $R_+(k_{perpendicular})$ reflection coefficients are calculated for $YBa_2Cu_3O_7$ film sprayed from $SrTiO_3$ ($k_{perpendicular}$ is a normal to the surface componenta of a wavevector of neutrons) using the qiantum mechanical model describing the reflection of neutrons from the surface of a thin superconducting film. The dependence of $S(k_{perpendicular})=R_{(sub)}(k_{perpendicular})/R_+(k_{perpendicular})$ on the depth of magnetic field penetration into a superconductor Λ, on the external magnetic field H, and on a film thickness d is analysed. The possibility is motivated of carrying out experiments on determination of Λ under condition compared favourably with those under which the experiments with massive samples of high temperature superconductor have been conducted. 7 refs.; 6 figs.; 1 tab.

35231 (LA-UR–89-1486) **Partial pressure analysis of CF_4/O_2 plasmas.** Martz, J.C.; Hess, D.W.; Anderson, W.E. Los Alamos National Lab., NM (USA). 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-8809125–2: NATO ASI on plasma surface interaction and processing of materials, Alicante, Spain, 4-16 Sep 1988). Order Number DE89012654/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This work will examine a simple down-stream sampling arrangement for effluent analysis in a typical plasma environment. This method offers the advantage of simplicity when compared to the need for extraction optics and energy analyzing stages required for flux-type analysis. In addition, partial pressure analysis provides information on the plasma/surface interactions occurring over the entire surface area of the reactor as opposed to just those occurring at the sampling orifice in flux-type analysis. This fact makes partial-pressure analysis particularly attractive for such tasks as plasma-etch end-point monitoring. In this example, experimental partial-pressure measurements of a CF_4/O_2 plasma are presented as is the application of the technique to plasma etch end-point detection. 12 refs., 2 figs.

35232 (LYCEN–87-48) **Charge exchange processes of foil dissociation fragments of fast H^+_2 ions and H^+_n clusters.** Mazuy, B.; Belkacem, A.; Chevallier, M.; Gaillard, M.J.; Poizat, J.C.; Remillieux, J. Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire. Oct 1987. 10p. (CONF-8710159–: 12. international conference on atomic collisions in solids, Okayama, Japan, 12-16 Oct 1987). Order Number DE89781496/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

We have measured angular and charge state distributions of atomic fragments resulting from the foil dissociation of 30-120 KeV/p H^+_n clusters. The fragment neutralization probability has been investigated for beam velocities above and around the Bohr velocity. At a given velocity the width of the angular distribution of neutral atoms and their yield are observed to increase with n up to $n > 5$ and $n > 7$, respectively. Moreover we have used the simpler H^+_2 case to propose new ideas to explain the vicinity effects observed on the charge exchange processes.

35234 Evaluation of geometrical contributions to the spread of the Compton-scatter energy distribution. Hanson, A. L. (Brookhaven National Laboratory, Upton, New York 11973(US)); Gigante, G. E. *Physical Review [Section] A: General Physics (USA),* 40(1): 171-180 (1 Jul 1989). DOE Contract AC02-76CH00016.

The spectrum from Compton-scattered x rays is an inherently broaddistribution. This distribution is the sum of several Gaussian-likedistributions, which gives the sum its unique shape. The Gaussian-likedistributions are the result of convoluting the so-called Compton profile, thespread in the scattered-x-ray energies due to the momentum distributions of thetarget electrons, with the detector response and the geometrical effects. Thedistribution is then further modified by the absorption within the sample. Aformulation for both qualitatively and quantitatively determining the magnitudeof the geometrical contributions is presented. This formulation is based on arecently devised approach to the scattering geometry [Hanson, Gigante, Meron,Phys. Rev. Lett. 61, 135 (1988)]. A methodology for determiningthe geometrical spread in the energy of the scattered x rays is presented. Theresults can be conveniently used to optimize scattering geometries for thereduction of the geometry-caused spread.

35235 Steady-state propagation of a crack in a viscoelastic strip. Barber, M. (Institute for Theoretical Physics, University of California, Santa Barbara, California 93106(US)); Donley, J.; Langer, J. S. *Physical Review [Section] A: General Physics (USA),* 40(1): 366-376 (1 Jul 1989).

The theory of steady-state propagation of a crack in a viscoelastic solidis reexamined in light of recent developments in ostensibly similarfree-boundary problems, specifically, dendritic crystal growth and viscousfingering. We find that, at least within the conventional formulation offracture dynamics, the problem of predicting the growth rate and the shape of acrack does not involve mathematical subtleties analogous to those which havebeen found in the previously mentioned situations. We derive some generalformulas for the variation of the shape of the cohesive zone at the crack tipas a function of driving force, and we compute specific shapes, growth rates,and dissipation patterns for a simple model of the cohesive stresses.

35236 Dynamic polarization of ^{19}F in a fluorinated alcohol. Hill, D. (Argonne National Lab., IL (USA)); Kasprzyk, T.; Jarmer, J.J.; Penttilae, S.; Krumpolc, M.; Hoffmann, G.W.; Purcell, M. *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment (Netherlands),* 277(2/3): 319-322 (1 May 1989). DOE Contract W-31-109-ENG-38;AS05-80ER10638.

We studied microwave dynamic cooling of ^{19}F and ^1H nuclei in mixtures of 1,1,1,3,3,3-hexafluoro-2-propanol and water, doped with Cr(V) complex. Equal spin temperatures of the two nuclei are produced, and the highest spin polarizations ($\simeq$ 80%) are found in mixtures near the eutectic ratio. The high fluorine content and polarization make this a suitable target material for polarized nuclear scattering experiments.

35237 Charge-exchange reactions in metal clusters: Role of magic numbers. Khanna, S. N. (Department of Physics, Virginia Commonwealth University, Richmond, Virginia 23284-2000(US)); Jena, P.; Rao, B. K. *Physical Review [Section] B: Condensed Matter (USA),* 40(2): 966-969 (15 Jul 1989).

Using total energies calculated from self-consistent theories, we show thatthe charge-exchange reactions of metal clusters tend to favor the production of"magic-number" species in larger clusters. Implications of our results forone's ability to produce neutral-cluster beams of a given size are discussed.

35238 Calibration of an argon in germanium standard using Rutherford backscattering spectrometry for energy dispersive x-ray spectroscopy. Skulina, K. M. (Department of Nuclear Engineering, Phoenix Memorial Laboratory, The University of Michigan, Ann Arbor, Michigan 48109-2100(US)); van der Leeden, G. A.; Vincent, D. H. *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films (USA),* 7(4): 2794-2796 (Jul 1989).

An argon standard for energy dispersive x-ray spectroscopy (EDS) has been made by bias sputtering hydrogenated amorphous germanium (*a*-Ge:H) films and determining the concentration of argon with Rutherford backscattering spectrometry. Varying concentrations of argon in hydrogenated amorphous germanium were achieved by changing the dc bias on the substrate holder and the gas pressure during rf magnetron sputtering onto a silicon substrate. It was found that standardless EDS analysis underestimates the argon concentration by about a factor of 2.

35239 Structural and dynamical consequences of interactions in interfacial systems. Landman, U. (School of Physics, Georgia Institute of Technology, Atlanta, Georgia 30332(US)); Luedtke, W. D.; Ribarsky, M. W. *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films (USA),* 7(4): 2829-2839 (Jul 1989).

Basic understanding of the structure and dynamics of materials and their response to external perturbations requires knowledge on the microscopic level, of the underlying energetics and atomic dynamics, whose consequences we observe and measure. Coupled with the above is the everlasting quest to observe and understand natural phenomena on refined microscopic scales, which provides the impetus for the development of experimental and theoretical techniques for the interrogation of materials with refined spatial and temporal resolution. In this paper we review molecular dynamics simulations for studies of the energetics and dynamical response of

materials to external mechanical perturbations. Applications to investigations of solid and liquid interfacial systems under stress and to studies of the consequences of tip–substrate interactions in atomic force microscopy are demonstrated.

35240 **Simple and efficient procedure for the Monte Carlo calculation of the surface free energy in coexisting phases.** Potvin, J. (Department of Physics, Boston University, Boston, Massachusetts 02215(CA)); Rebbi, C. *Physical Review Letters (USA)*, 62(26): 3062-3065 (26 Jun 1989).

We describe a new method for calculating the surface tension along a surface separating two coexisting phases. It is based on a Monte Carlo simulation where one-half of the lattice is adiabatically brought from one phase to the other. The surface free energy is obtained as a difference between the total free energies of the homogeneous and mixed phases. We present the results from a numerical simulation of the two-dimensional seven-state Potts model. Application to lattice quantum chromodynamics is also discussed.

35241 (IC–88/339) **Time dependence of magnetization of high temperature superconductors.** Larkin, A.I.; Geshkenbein, V.B. International Centre for Theoretical Physics, Trieste (Italy). Oct 1988. 9p. Order Number DE89617777/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Magnetization of high T_c superconductors logarithmically decreases with time. There is a maximum in the temperature dependence of the coefficient at this logarithm. If one assumes that there do exist two kinds of pinning centers, then this dependence can be described in the Anderson theory of thermal creeps of Abrikosov's vortices. The temperature dependence of the critical current is also discussed. (author). 23 refs.

35242 (IC–88/340) **Mott transition: Low-energy excitations and superconductivity.** Ioffe, L.B.; Larkin, A.I. International Centre for Theoretical Physics, Trieste (Italy). Sep 1988. 17p. Order Number DE89617778/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

It is possible that metal-dielectric transition does not result in changes of magnetic or crystallographic symmetry. In this case a fermionic spectrum is not changed at the transition, but additional low-energy excitations appear which can be described as a gauge field that has the same symmetry as an electromagnetic one. In the case of a non half-filled band gapless scalar Bose excitations also appear. Due to the presence of additional gauge field the physical conductivity is determined by the lowest conductivity of the Fermi or Bose subsystems. (author). 11 refs.

35243 (IC–88/366) **Off-diagonal long-range order and superconducting particle density.** Pang Gendi; Pu Fucho; Zhao Baoheng. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 12p. Order Number DE89617779/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Relations between the existence of ODLRO in the reduced density matrix rho_n (for all $n \geq 1$) and that of superconducting currents in a hollow cylinder is discussed. Some concrete behaviours of rho_n, including the power lay decaying behaviour, in the coordinate space representation are considered and the corresponding effective superconducting particle densities are given. Some restraint conditions caused by the existence of the ODLRO (including quasi-ODLRO) have been found and discussions on the minimum unit of flux quantization are also included. (author). 3 refs.

35244 (IC–88/427) **Composite VS constituent particle aspects of hole motion in the CuO_2 plane.** Su Zhaobin; Yu Lu. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 11p. Order Number DE89618864/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The question whether the basic physics related to Hi-Tc Superconductivity can be described in terms of the one-band Hubbard model, or an oxygen-copper two-band model, is a question under active discussion. In this paper, a theoretical scheme is developed to consider the oxygen-copper singlet state as a composite particle. It appears as a bound state in low-frequency phenomena such as conductivity and IR absorption. On the contrary, the oxygen and copper states appear as constituent particles in high-frequency phenomena such as high-energy electron spectroscopy. Depending on the values of the parameters involved, a two-band Fermi-liquid type behavior, or an one-band Hubbard type behavior, should be expected. On the one band, a p-wave pairing of holes induced by antiferromagnetic spin fluctuations, is discussed in the Fermi-liquid picture. On the other hand, the oxygen propagation effect, the renormalization of the hole hopping integral, as well as the possible interpretation of the conductivity, are considered in the composite particle picture. A possible scenario for superconductivity, differing both from the BCS pairing and the holon condensation, is speculated. (author). 25 refs, 1 fig.

35245 (IC–89/11) **Pinning of curved flux lines on the boundary between two phases of high temperature superconductors.** Saif, A.G. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 11p. Order Number DE89618865/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The distribution of the magnetic fields and the current density in a system of two phases of high temperature superconductors (HTS) are determined. Recently, this system has been confirmed experimentally. The energy of the interaction between curved flux lines (FLs) and the interface is calculated. It is shown that for positive ΔG (the change in the flux line (FL) energy at the Interface) the FLs will be pinned by the interface and the pinning force is formulated. Moreover, this force will be different according to the movement of the FL to the right or to the left. Agreements with the previous results (in special cases) are obtained. This study may serve to test the pinning experimentally. (author). 4 refs.

35246 (LBL–26578) **Bibliography of high-T_c superconducting films.** Talvacchio, J. Lawrence Berkeley Lab., CA (USA); Westinghouse Electric Corp., Pittsburgh, PA (USA). Research and Development Center. Jan 1989. 60p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. Order Number DE89013395/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

This document represents an effort to make bibliographic information on high-T_c superconductor films available to those who cannot access the on-line database at the Westinghouse R and D Center. The database contains a growing list of references – approaching 5000 – each of which is identified by a set of two-letter keywords. The database is used the same way as as INSPEC's, but its fixed set of standard keywords enables the user to obtain a complete list of references on keyworded topics. Since a single keyword (or search term) such as "sputtering" creates a bibliography that is too long for practical use, the database is used most effectively by combining a series of keywords using Boolean algebra to identify a handful of relevant references. The structure of this document is intended to present the subset of papers concerning high-T_c films (725 papers) in a compact format as a substitute for on-line searches. Rather than listing separate bibliographies for each of the 185 keywords, a single list of all the references is contained in Section 6, and indices based on the keywords are contained in Sections 3–5. This report is a true bibliography and does not contain any informative text. 725 refs.

35247 (AECL–8482) **Solution to the driven diffusion of a step boundary with a source term.** Zee, R.H.; Lee-Whiting, G.E. Atomic Energy of Canada Ltd., Chalk River, ON (Canada). Chalk River Nuclear Labs. Jun 1984. 19p. Order Number DE89618391/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The partial differential equation governing the one-dimensional driven diffusion of a step boundary is solved analytically using the Laplace transform technique for a finite system and an infinite system both with either a constant source or a concentration-proportional source. The analytical solutions for the two finite

systems each includes an infinite series which becomes negligible at long times. The solutions for the two infinite systems are in the form of error functions. Effects of the source term on the eletrotransport of oxygen in zirconium are examined.

35248 (CBPF-NF–063/88) **General exact solution for homogeneous time-dependent self-gravitating perfect fluids.** Gaete, P.; Hojman, R. Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro, RJ (Brazil). 1988. 17p. Order Number DE89618425/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A procedure to obtain the general exact solution of Einstein equations for a self-gravitating spherically-symmetric static perfect fluid obeying an arbitrary equation of state, is applied to time-dependent Kantowsky-Sachs line elements (with spherical, planar and hyperbolic symmetry). As in the static case, the solution is generated by an arbitrary function of the independent variable and its first derivative. To illustrate the results, the whole family of (plane-symmetric) solutions with a "gamma-law" equation of state is explicity obtained in terms of simple known functions. It is also shown that, while in the static plane-symmtric line elements, every metric is in one to one correspondence with a "partner-metric" (both originated from the same generatrix function), in this case every generatrix function univocally determines one metric.

35249 (IC–88/293) **Left regular bands of groups of left quotients.** El-Qallali, A. International Centre for Theoretical Physics, Trieste (Italy). Oct 1988. 17p. Order Number DE89618376/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A semigroup S which has a left regular band of groups as a semigroup of left quotients is shown to be the semigroup which is a left regular band of right reversible cancellative semigroups. An alternative characterization is provided by using spinned products. These results are applied to the case where S is a superabundant whose set of idempotents forms a left normal band. (author). 13 refs.

35250 (IC–88/329) **Structure of the fixed point set of an involutory automorphism of PSL(2,q), q odd, $q \geq 5$.** Hassani, A. International Centre for Theoretical Physics, Trieste (Italy). Nov 1988. 12p. Order Number DE89617522/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

PSL(2,q) is the projective special linear group. The automorphism group of PSL(2,q) is denoted by $P\Gamma L(2,q)$. The structure of $P\Gamma L(2,q)$ is well-known, it is isomorphic to the semidirect product of PGL(2,q) by a cyclic group A of order n, where $q=p^n$, p a prime. Taking α is an element of $P\Gamma L(2,q)$ such that $\alpha^2=1$ by considering conjugacy classes of involutions in $P\Gamma L(2,q)$ and finding the centralizer of this element in PSL(2,q) we prove the following result. Theorem: Let α be an involutary automorphism of PSL(2,q) where q is odd and $q \geq 5$. Then (i) if q is not a square the fixed point set of α is either dihedral of order q-1 or dihedral of order q+1. (ii) If $q=r^2$ the fixed point set of α is either dihedral of order q-1, or dihedral of order q+1 or is isomorphic to PGL(2,r). (author). 2 refs.

35251 (IC–88/353) **Generation of higher-order squeezing of quantum electromagnetic fields by degenerate four-wave mixing and other processes.** Li Xizeng; Shan Ying; Mandel, L. International Centre for Theoretical Physics, Trieste (Italy). Nov 1988. 7p. Order Number DE89618392/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

It is found that the field of the combined mode of the probe wave and the phase-conjugate wave in the process of degenerate four-wave mixing exhibits higher-order squeezing to all even order. The degree of squeezing increases with the order N, and the higher-order squeeze parameter q_N may approach -1. (author). 3 refs, 2 figs.

35252 (IC–88/383) **On the areas of various bodies in the Euclidean space: The case of irregular convex polygons.** Ozoemena, P.C. International Centre for Theoretical Physics, Trieste (Italy). Nov 1988. 20p. Order Number DE89618377/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A theorem is proposed for the areas of n-sided irregular convex polygons, of given length of sides. The theorem is illustrated as a simple but powerful one in estimating the areas of irregular polygons, being dependent only on the number of sides n (and not on any of the explicit angles) of the irregular polygon. Finally, because of the global symmetry shown by equilateral triangles, squares and circles under group (gauge) theory, the relationships governing their areas, when they are inscribed or escribed in one another are discussed as riders, and some areas of their applications in graph theory, ratios and maxima and minima problems of differential calculus briefly mentioned. (author). 11 refs, 6 figs, 1 tab.

35253 (IC–88/385) **Chaoticity of interval self-maps with positive entropy.** Xiong Jincheng. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 12p. Order Number DE89618378/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Li and Yorke originally introduced the notion of chaos for continuous self-map of the interval I = (0,1). In the present paper we show that an interval self-map with positive topological entropy has a chaoticity more complicated than the chaoticity in the sense of Li and Yorke. The main result is that if f:I -> I is continuous and has a periodic point with odd period > 1 then there exists a closed subset K of I invariant with respect to f such that the periodic points are dense in K, the periods of periodic points in K form an infinite set and f—K is topologically mixing. (author). 9 refs.

35254 (IC–88/403) **Finding isolated zero points of complex polynomial mappings.** Xu Senlin. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 16p. Order Number DE89617523/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In this paper, at first the properties of isolated zero points of complex polynomial mappings are discussed using the integral expression of a degree of C^1 mapping, Sard's Theorems and homotopy. Then we prove that for almost every complex polynomial mapping $P:C^n->C^n$, the zero set $H^{-1}(0)$ of the homotopy $H(z,t)=tP(z)+(1-t)Q(z)$ consists of $s=P|_{j=1}{}^n s_j$ disjoint differential curves, and the zero set $phi_{\delta(subj)}{}^{-1}(0)$ of its piecewise linear approximation $phi_{\delta(subj)}$ consists of some broken lines which do not meet ν-dimensional simplexes ($0 \leq \nu \leq 2n-1$), where $Q(z)=(Q_1(z),...,Q_n(z))$, $Q_j(z)=z_j{}^{aj}-b_j{}^{aj}$, $b_j$not $=0, j=1,...,n$. When ($\lim_{j->\infty} \delta_j=0$), these broken lines tend to corresponding differential curves in $H^{-1}(0)$. (author). 4 refs.

35255 (IC–88/404) **S^7 without any construction of Lie group.** Zhou Jian; Xu Senlin. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 7p. Order Number DE89618380/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

It was proved that the sphere S^n is a parallelizable manifold if and only if n = 1,3 or 7, and that S^n is an H-space if and only if n = 0,1,3 or 7. Because a Lie group must necessarily be a parallelizable manifold and also an H-space, naturally one asks that S^n is a Lie group for n = 0, 1,3 or 7? In this paper we prove that S^7 is not a Lie group, and it is not even a topological group. Therefore, S^n is a Lie group (or a topological group) if and only if n = 0,1,3. (author). 11 refs.

35256 (IC–88/409) **$S^m(1)$ x $S^{n-m}(1)$ is embedded into $S^{n+1}(1)$ with prescribed mean curvature.** Huang Xuanguo. International Centre for Theoretical Physics, Trieste (Italy). Nov 1988. 10p. Order Number DE89617524/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

It is proved that $S^m(1)$ x $S^{n-m}(1)$ can be imbedded into $S^{n+1}(1)$ with suitable mean curvature function. (author). 3 refs.

35257 (IC–88/410) **Compact surface in three-dimensional ellipsoid with prescribed mean curvature (I).** Huang Xuanguo. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 10p. Order Number DE89618381/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

It is proved that torus $S^1(1)xS^1(1)$ can be embedded into three-dimensional ellipsoid M_3 with suitable mean curvature function. (author). 3 refs.

35258 (IC–88/416) **Spherically symmetric solutions in dimensionally reduced spacetimes.** Mignemi, S.; Wiltshire, D.L. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 24p. Order Number DE89617529/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We study static solutions of the vacuum Einstein equations in D=m+n+2 dimensions which have the following symmetries; the solutions are spherically symmetric in (m+2) dimensions, (or more generally the m-sphere is replaced by any arbitrary m-dimensional Einstein space), while the internal space is an arbitrary n-dimensional Einstein space. The global properties of all such solutions are derived by considering the equivalent dimensionally reduced system in (m+2) dimensions, and by using techniques from the theory of dynamical systems after a judicious choice of variables. Apart from the trivial case of the Schwarzschild solution with constant scalar field all solutions are found to contain naked singularities or else not to be asymptotically flat; as would be expected from the "no hair" theorems. (author). 27 refs, 2 figs.

35259 (IC–88/417) **Reductions and quantization.** Mladenov, I.M. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 14p. Order Number DE89618393/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The interchangeability of the Marsden-Weinstein reduction procedure and the Kostant-Souriau geometric quantization is studied by detailed examination of a concrete dynamical system - the so called MIC-Kepler problem. It is proved that some stages of reduction plus geometric quantization technique produce the complete quantum spectrum of the system while others give part of it or nothing. (author). 30 refs.

35260 (IC–88/419) **Extended Weyl group for Kac-Moody algebras.** Dobrev, V.K. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 15p. Order Number DE89617525/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We introduce an extended Weyl group W^e for the highest weight modules over $A_1^{(1)}$. This group is the direct product of the standard affine Weyl (or Weyl-Kac) group W and a new group W_a. The latter we introduced recently in order to rewrite the character formulae for certain factor modules of singular Verma modules (i.e., Verma modules for which the central charge is equal to minus the dual Coxeter number) in the form of the classical Weyl character formula for the finite-dimensional irreducible representations of semisimple Lie algebras (resp. Weyl-Kac character formula for the integrable highest weight modules over affine Kac-Moody algebras) so that W_a was playing the role of the usual Weyl group (resp. affine Weyl group). We use the extended group W^e to rewrite in a similar manner the characters of factor modules of a larger class of Verma modules including also all Verma modules with integral highest weights. Thus our new formula includes as partial cases the Weyl-Kac character formula and the character formulae obtained. We make also the conjecture that our formula holds for any affine Kac-Moody algebra. (author). 15 refs.

35261 (IC–88/420) **On sufficient conditions for a function to be analytic.** Diab, F.M. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 8p. Order Number DE89618382/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The object of this note is to discuss the minimal requirements for monogeneity (and in particular, for analyticity) of schlicht continuous mappings in the sense that the slightest alteration in these requirements endangers the possibly analytical character of such mappings. (author). 6 refs.

35262 (IC–88/428) **General hulls in uniform algebras.** Tonev, T.V. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 10p. Order Number DE89618383/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Here we give an approach for introducing general hulls of closed subsets of the spectrum of a given uniform algebra, that relates to n-th Shilov-Sibony-Basener boundaries. 9 refs.

35263 (IC–88/429) **Analytic manifolds in uniform algebras.** Tonev, T.V. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 8p. Order Number DE89618384/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Here we extend Bear-Hile's result concerning the version of famous Bishop's theorem for one-dimensional analytic structures in two directions: for n-dimensional complex analytic manifolds, n>1, and for generalized analytic manifolds. 14 refs.

35264 (IC–88/430) **Higher-dimensional black holes with realistic asymptotes in the presence of dilatons and electromagnetic fields.** Ivanov, B.I. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 29p. Order Number DE89618426/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We find black hole solutions in higher dimensions with extra space in orthogonal coordinates, which compactifies at infinity. We study the effect of massless scalar fields, abelian electromagnetic fields and their interacting combination advocated by the heterotic string theory. The conditions under which the extra space blows up near the horizon are given. (author). 9 refs.

35265 (IC–89/1) **Multiple pole solutions of the AKNS hierarchy and its reductions.** Gu Xinshen. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 7p. Order Number DE89618385/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

By using the universal formulas of multiple pole solutions for AKNS hierarchy, the universal formulas of multiple pole solutions for three reductions of AKNS hierarchy, which include M-kdV hierarchy and NLS hierarchy, are obtained. (author). 6 refs.

35266 (IC–89/3) **Black holes and the heterotic string.** Ivanov, B.V. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 11p. Order Number DE89618427/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We find explicitly and classify some of the black hole solutions for the effective Lagrangian induced by the heterotic string in the tree approximation. (author). 5 refs.

35267 (IC–89/4) **Kasner-type black holes.** Ivanov, B.V. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 14p. Order Number DE89618428/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A joint study is standard and isotropic coordinates allows to give a complete classification of higher-dimensional black holes with string-inspired boundary conditions. Except the typical case with a horizon and a singularity inside, we find black holes with finite metric and flat-time solutions with non-trivial space properties. The constraints on the free parameters are analogous to the constraints for Kasner cosmological solutions. (author). 7 refs.

35268 (IC–89/6) **D=3 Chern-Simons action, supergravity and quantization.** Dayi, O.F. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 12p. Order Number DE89617530/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

An interpretation of three-dimensional simple supergravity as a pure Chern-Simons gauge action is shown to be valid up to the one loop level. Canonical quantization of this system does not lead to an explicit definition of the physical Hilbert space. Hence another formulation of the N = 1 three-dimensional supergravity is introduced. In this formalism an explicit definition of the physical Hilbert space is possible, but still one has to solve the problems of showing that there exists a global set of coordinates and of defining the inner product. (author). 10 refs.

35269 (IC–89/10) **On the hydrodynamic approach to the Schroedinger equation.** Zanette, D.H. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 5p. Order Number DE89618394/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The classical limit of the Schroedinger equation is analyzed in the frame of its hydrodynamical formulation. In that limit the probability density develops shock waves, clearly contradicting the exact result. By an approximated analysis in the point on which these discontinuities appear, it is shown that their formation is inhibited by quantum effects. (author). 4 refs.

International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 15p. Order Number DE89618395/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The inverse scattering method for Davey-Stewartson II (DS-II) equation including both soliton and continuous spectrum solutions is developed. The explicit formulae for N-soliton solutions are given. Note that our solitons decrease as $-z-^{-2}$ with z tending to infinity. (author). 8 refs.

35271 (IC–89/13) **Compact hypersurface in n+1 dimensional ellipsoid with prescribed mean curvature.** Huang Xuanguo. International Centre for Theoretical Physics, Trieste (Italy). Feb 1989. 11p. Order Number DE89618386/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

It is proved that n dimensional unit sphere $S^n(1)$ can be imbedded into a n+1 dimensional ellipsoid with suitable mean curvature function. (author). 6 refs.

35272 (IC–89/22) **Compact surface in three-dimensional ellipsoid with prescribed mean curvature (II).** Huang Xuanguo. International Centre for Theoretical Physics, Trieste (Italy). Feb 1989. 24p. Order Number DE89618387/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

It is proved that 2-dimensional Ellipsoid can be imbedded into a 3-dimensional Ellipsoid with suitable mean curvature function. (author). 3 refs.

35273 (IC–89/44) **Markov processes in Hilbert space and continuous spontaneous localization of systems of identical particles.** Ghirardi, G.C.; Pearle, P.; Rimini, A. International Centre for Theoretical Physics, Trieste (Italy). Mar 1989. 28p. Order Number DE89618396/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Stochastic differential equations describing the Markovian evolution of state vectors in the quantum Hilbert space are studied as possible expressions of a universal dynamical principle. The general features of the considered class of equations as well as their dynamical consequences are investigated in detail. The stochastic evolution is proved to induce continuous dynamical reduction of the state vector onto mutually orthogonal subspaces. A specific choice, expressed in terms of creation and annihilation operators, of the operators defining the Markov process is then proved to be appropriate to describe continuous spontaneous localization of systems of identical particles. The dynamics obtained in such a way leaves practically unaffected the standard quantum evolution of microscopic systems and induces a very rapid suppression of coherence among macroscopically distinguishable states. The classical behaviour of macroscopic objects as well as the reduction of the wave packet in a quantum measurement process can be consistently derived from the postulated universal dynamical principle. (author). 23 refs.

35274 (IFT-P–27/88) **Is higher-derivative gravity a good therapy to the causal pathologies of Goedel-type universes.** Accioly, A.J. Instituto de Fisica Teorica, Sao Paulo, SP (Brazil). 1988. 8p. Order Number DE89618429/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The possibility of considering higher-derivative gravity as a therapy to the causal pathologies of Goedel-type universes is investigated. As a consequence an unusual cosmological solution is obtained.

35275 (IFT-P–28/88) **Gravitational nonminimally coupled electromagnetic fields: a possible solution to some idiosincrasies of Einstein-Maxwell theory.** Accioly, A.J. Instituto de Fisica Teorica, Sao Paulo, SP (Brazil). 1988. 37p. Order Number DE89618430/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A theory of nonminimal coupling of electromagnetism and gravitation in the framework of Riomannian geometry is constructed. As a consequence the main difficulties concerning the Einstein-Maxwell theory are cleared away. The theory works as a kind of correction to the Einstein-Maxwell one for regions with strong curvature and for times much greater than the Planck time. A Reissner-Nordstroem-type solution is exhibited and comments are made on a parameter which somewhat resembles the "Schwarzschild radius". A mechanism of charge creation via nonminimal coupling is also discussed. We calculate the propagation of photons in a Robertson-Walker background and find that the effect of the nonminimal coupling in this case may be to deviate the photon from the null geodesics, increasing its velocity beyond the flat-space value. Taking into account this results, the observed isotropy of the background radiation can be explained in a simple way, regardless of any assumption about the state of the Universe prior to the Planck time.

35276 (IFT-P–33/88) **Unusual cosmological solution in the context of higher-derivative gravity.** Accioly, A.J. Instituto de Fisica Teorica, Sao Paulo, SP (Brazil). 1988. 7p. Order Number DE89618431/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

A general vacuum solution to the higher-derivative gravity field equations is presented in case of a model that exhibits symmetries of the Goedel-type. The solution possesses unusual properties.

35277 (IFUSP-P–738) **On the quantization of chiral bosonic particles.** Gomes, M.; Rivelles, V.O.; Silva, A.J. da. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Sep 1988. 10p. Order Number DE89618397/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Starting from the classical of a left moving massless relativistic particle the quantization of chiral bosons is discussed. Using the Batalin-Fradkin-Vilkowski formalism the particle propagator is derived and the result is extended to a hidden soliton sector.

35278 (IFUSP-P–742) **Compton's Kinematics and Einstein - Ehrenfest's radiation theory.** Barranco, A.V.; Franca, H.M. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Sep 1988. 39p. Order Number DE89618398/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The Compton Kinematic relations are obtained from entirely classical arguments, that is, without the corpuscular concept of the photon. The calculations are nonrelativistic and result from Einstein and Ehrenfest's radiation theory modified in order to introduce the effects of the classical zero-point fileds characteristic of Stochastic Electrodynamics.

35279 (IFUSP-P–756) **Kosterlitz-thouless phase transition in two-dimensional hierarchical Coulomb gases.** Marchetti, D.H.U.; Perez, J.F. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Nov 1988. 30p. Order Number DE89618399/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A hierarchical version of two-dimensional lattice Coulomb gases is investigated. For $\beta>\beta_c = 8PI$ there is a locally stable line of fixed points for the Renormalization Group ('block charges') transformations. For $\beta>\beta^-_c$ ($\beta_c \leq \beta^-_c \leq 3PI/2\ \beta_c$), these fixed points are globally stable. As a consequence, there is no screening of external charges for any activity if $\beta > \beta^-_c$. At β_c a supercritical bifurcation takes place and the behavior of the model for $\beta <$ or approx., β_c as to show a weak form of screening, is investigated.

35289 (INIS-SU–91) **Analytic Moufang-transformations.** Paal, Eh.N. AN Ehstonskoj SSR, Tallin (USSR). 1988. 22p. Order Number DE89618388/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The paper is aimed to be an introduction to the concept of an analytic birepresentation of an analytic Moufang loop. To describe the deviation of (S,T) from associativity, the associators (S,T) are defined and certain constraints for them, called the minimality conditions of (S,T) are established. Preprint F–46; 15 refs.

35290 (JINR-E–5-88-456) **Some exact solutions of the three-identical-particle problem with S-wave inverse square potentials.** Pupyshev, V.V. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 7p. Order Number DE89618402/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to Phys. Lett., A.

The existence criterion of exact solutions to the Schroedinger equation as a product of the Bessel function of the hyperradius and a finite sum hyperharmonics is proved within the Faddeev integrodifferential approach. 11 refs.; 1 tab.

35291 (JINR-R–2-88-441) **Retarded solutions and causality principle.** Shirokov, M.I. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 15p. (In Russian). Order Number DE89618404/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the journal Usp. Fiz. Nauk.

It is shown that the retarded solutions of the quantum field equations appear in the prediction problem and the advanced ones appear in retrodiction. It is argued that the equations and their solution do not imply the causality principle (stating that the cause must precede the effect), the initial state of the system or an external action on it being considered as the cause. The 'time arrow' in the quantum mechanics is discussed in connection with the reduction of the state vector occuring in the measuring process. A new interpretation of Bogolyubov N.N. causality axiom is suggested. 28 refs.; 2 figs.

35292 (JINR-R–2-88-483) **Generally covariant representation of the Landau and Lifshitz pseudotensor.** Tentyukov, M.N. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 9p. (In Russian). Order Number DE89618432/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The symmetrical second order tensor field describing the gravitation is considered on the four-dimensional affinely connected space without torsion. The expression corresponding to the Einstein superpotential usually used in the pseudotensor approach to the energy-momentum problem is defined by the variational method. The generalized Landau and Lifshitz superpotential is introduced by analogy with this expression. Then the tensor corresponding to the Landau and Lifshitz pseudotensor is defined. The investigation has been performed at the Laboratory of Theoretical Physics, JINR. 9 refs.

35293 (JINR-R–2-88-626) **Fundamental length and relativistic length.** Strel'tsov, V.N. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 2p. (In Russian). Order Number DE89618433/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

It si noted that the introduction of fundamental length contradicts the conventional representations concerning the contraction of the longitudinal size of fast-moving objects. The use of the concept of relativistic length and the following "elongation formula" permits one to solve this problem. 5 refs.

35294 (JINR-R–4-88-438) **Three-body molecular description of the transter reaction.** Matveenko, A.V. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 10p. (In Russian). Order Number DE89618405/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to the Organizing Committee of the 5-th International Conference on Cluster Aspects in Nuclear and Subnuclear Systems, Kyoto, Japan, July 1988.

A unified approach to the description of molecular states in a three-body system is proposed. The method is based on the old adiabatic idea of Born and Oppenheimer and in its present form looks like a modification of the hyperspherical adiabatic method. The proper choice of the coordinate system and the preliminary analytic analysis of the singularities of the problem are argued to be important for a further development of a powerful numerical procedure for solving the problem. 12 refs.; 3 figs.

35295 (JINR-R–17-88-349) **On some stochastic properties of the infinitely dimensional hamiltonian systems of classical mechanics.** Sankovich, D.P. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 10p. (In Russian). Order Number DE89618403/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Some simplest systems of the classical one-dimensional field theory is considered. For the nonlinear Schroedinger model the kinetic and hydrodynamic equations are obtained. For the one-dimensional Ginzburg-Landau type system by Bogolubov inequality the lower bound for the pair correlation function and average total momentum is obtained. In case of the cubic non-linearity (KdV-model) we attempt to do a hydrodynamic interpretation of the conservation laws and reductions arised in the model. 6 refs.

35296 (LBL–26953) **Theory of x-ray holography including phase and amplitude contrast and finite transfer functions.** Howells, M.R. Lawrence Berkeley Lab., CA (USA). Jan 1989. 13p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. Order Number DE89012835/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We present the theory in broadly the same way as for visible holography, specializing to the Gabor, in-line case with plane-wave illumination, but allowing phase and amplitude contrast and a fairly general transfer function. Much of this theory is treated by a number of earlier authors but none with the particular choice of issues that we wish to address. These are those mentioned plus numerical reconstruction from a digitized hologram and of course application to the soft x-ray spectral range. For simplicity and clarity, we consider first an amplitude and phase object consisting of a single, on-axis pixel and an ideal, perfect transfer function. (12 refs., 4 figs.)

35297 (SAND–89-7082C) **A finite element method for solving electromagnetic scattering problems.** Cangellaris, A.C.; Lee, R. Sandia National Labs., Albuquerque, NM (USA). 1989. 3p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890660–8: Institute of Electrical and Electronics Engineers (IEEE) Antennas Propagation Society (AP-S) international symposium, San Jose, California, USA, 26-30 Jun 1989). Order Number DE89013496/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

One of the major issues associated with using the finite element method in opening regions is the problem of truncating the computational mesh. There have been numerous techniques which have been developed in the past several years. Hybrid finite element methods were first introduced by Silvester and Hsieh and McDonald and Wexler. They used a surface integral equation involving the appropriate Green's function that satisfies Sommerfeld's radiation condition at infinity to account for the truncation at the boundary. Mei developed an innovative method called the unimoment method that utilizes finite-element solutions inside a sphere containing the scatterer and eigenfunction expansions in the exterior of the sphere to compute the fields everywhere. Since then, several modifications and/or extensions of the aforementioned methods have appeared. In this paper, we present a new finite element formulation of the electromagnetic scattering problem. This new formulation could be thought of as a generalization of the unimoment method. Although our preliminary results are for two dimensional problems, the method can be extended to three dimensional geometries. 7 refs., 2 figs.

35298 (UCRL–53874) **Bidirectional Reflection Distribution Functions from surface bump maps.** Cabral, B.K. Lawrence Livermore National Lab., CA (USA). 17 Jun 1988. 74p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE89013712/JAW. Available from NTIS, PC A05/MF A01 - OSTI; GPO Dep.

Thesis. Submitted to Univ. of California, Davis.

The interaction of light and matter define what we see. This interaction can be characterized by a function which relates incoming light to the distribution of outgoing or reflected light. The Bidirectional Reflection Distribution Function (BRDF) is just such a function. Computer graphics scientists attempting to model this function have made simplifying assumptions about the reflecting surfaces. These simpler models have produced adequate results but only handle very uniform or isotropic surface characteristics. Reality on the other hand is filled with a variety of surface textures which result in a variety of BRDFs. This thesis broadens the class of BRDFs which can be used in computer graphics to render objects more realistically. It presents two enhancements to previous work done by the author. First, it describes a method for the approximation of surface absorption of light through the use of a computed geometric attentuation factor. This factor is computed by calculating the parts of the surface which are visible in the incident and reflecting directions. Specifically, it describes the algorithms and theory behind the visibility calculations and how it affects the reflection properties of the surface. Second, it describes a method for computing Fresnel's Law for conducting and dielectric surface materials and how Fresnel's Law affects surface reflectivity. This work also presents a method for rendering objects using the computed BRDFs. 38 refs., 29 figs., 2 tabs.

35299 **Rotational symmetry analysis for semiclassical and quantum mechanics.** Harter, W.G. (Univ. of Arkansas, Fayetteville (USA)). pp. 27 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Rotational symmetry analysis has been applied to molecular structure determination. The presence of anisotropic potentials makes the problem analogous to the quantum mechanics of rotation. Approximations are made relating tensor matrix elements of high J and K states to asymptotic expressions for the Clebsch Gordan coefficient. Examples are given of J-phase trafectories on rotational energy (RE) surfaces. The magnitude of J is a constant on the RE surfaces.

35300 **Algebraic approach to molecular spectra and dynamics.** Levine, R.D. (Hebrew Univ., Jerusalem (Israel)). pp. 12 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Algebraic Hamiltonians which are bilinear in the generators of a Lie group provide an accurate yet practical description of molecular spectra even in the highly anharmonic regime. The approach can be extended, in a phenomenological fashion, to larger molecules. The group representations provide a basis in which other molecular properties can be computed. In particular, the scattering and transition amplitudes can be so determined.

35301 **Dynamical symmetries in nuclear structure.** Casten, R.F. (Brookhaven National Lab., Upton, NY (USA)). pp. 28 of Group

theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). DOE Contract AC02-76CH00016. (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

In recent years the concept of dynamical symmetries in nuclei has witnessed a renaissance of interest and activity. Much of this work has been developed in the context of the Interacting Boson Approximation (or IBA) model. The appearance and properties of dynamical symmetries in nuclei will be reviewed, with emphasis on their characteristic signatures and on the role of the proton-neutron interaction in their formation, systematics and evolution.

35302 Fermion dynamical symmetry model and nuclear structure. Wu, C. (Drexel Univ., Philadelphia, PA (USA)). pp. 26 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A fermion dynamical symmetry model (FDSM) for the structure of nuclei is presented. The model has a SU_3 rotational limit, a SO(6) γ-soft limit and three vibrational limits (SU_2, SO_7 and $SO_5 \times SU_2$), with fully microscopic connections between these dynamical symmetries and the underlying shell structure. It is shown that both the phenomenological Interacting Boson Model (IBM) and the Geometrical Model (GM) can be recovered from this model under certain approximations.

35303 Group theory approach to scattering. Iachello, F. (Yale Univ., New Haven, CT (USA)). pp. 18 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). DOE Contract AC02-76ER03074. (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The group theory approach to scattering developed recently by several authors is reviewed. In particularly, the concept of Euclidean connection which allows a purely algebraic determination of the S-matrix is introduced and discussed.

35304 Algebraic methods in medium energy scattering from nuclei and molecules. Amado, R.D. (Univ. of Pennsylvania, Philadelphia (USA)). pp. 2 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The theoretical development and application to diatomic molecules is presented for medium energy scattering from complex quantum targets. Medium energy is defined as an energy that is large compared with the collective states of the target.

35305 Group theoretical approach to scattering. Biedenharn, L.C. (Duke Univ., Durham, NC (USA)); Stahlhofen, A. pp. 12 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The group theoretic approach to scattering is discussed using the concept of the factor space of scattering. The authors give a detailed discussion of relativistic SO(3,1) scattering for spin 1/2 particles, and sketch the Dirac-Coulomb problem as an example of broken symmetry. An addendum clarifies misunderstandings related to the use of the Euclidean group.

35306 Violation of periodic symmetry in quasicrystals. Kramer, P. (Institut fuer Theoretische Physik der Universitaet, Tuebingen (West Germany)). pp. 16 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

It seems that with quasicrystals the authors are entering a new field of ordered structures in the solid state. There is a wealth of new experimental information based on advanced techniques for probing these new materials. In the theory one must understand the new physics of this order and develop the fields which so far have been explored for periodic order. The violation of periodic symmetry is a challenge to their imagination. Required are tools of high-dimensional crystallography, from the geometry of lattices, from quasiperiodic functions and Fourier transform theory. Groups and their representations, which are the subject of this contribution, will play a key role in the theory of non-periodic order in solids.

35307 Growth of quasicrystals. Elser, V. (AT and T Bell Labs., Murray Hill, NJ (USA)). pp. 22 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Certain random packings of regular decagons in the plane are equivalent to two dimensional surfaces defined on a four dimensional lattice. The controlled generation of such surfaces corresponds to a physical model of quasicrystal growth. Computer experiments are described where the thermal gradient, growth velocity, and relative angle between growth direction and decagon axes are varied. The results suggest an entropic mechanism for (near) decagonal order. Geometrically, the anisotropy introduced by the growth conditions create a tilt in the surface while spatial nonuniformity in the growth conditions generates tears. Analogues of these effects in three dimensions are able to explain the peculiar pattern of shifts, and the large widths, of peaks in diffraction from icosahedral phase.

35308 Hausdorff dimension of irrational windings. Cvitanovic, P. (Niels Bohr Institute, Copenhagen (Denmark)). pp. 15 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The author uses the thermodynamical formalism to obtain estimates of the Hausdorff dimension of the fractal set formed by the irrational winding parameter values of critical circle maps, and elucidate its conjectured universality. The author investigates in detail the Farey level definition of the Hausdorff dimension. The author finds that in this version of the thermodynamic formalism the Hausdorff dimension marks a phase transition from harmonic to geometric scalings.

35309 Number of periodic windows in one-dimensional mappings. Hao, B. (Institute of Theoretical Physics, Beijing (China)); Zeng, W. pp. 17 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The total number of periodic windows in one-dimensional mapping may be related to several other enumeration problems, in particular, to the number of symmetry types of periodic sequences. The latter problem has been studied by mathematicians for a long time. However, to apply their results to mappings one must be careful in choosing the correct group, as it is shown in the example of the antisymmetric cubic map.

35310 Generalized symmetries. Olver, P.J. (Univ. of Minnesota, Minneapolis (USA)). pp. 13 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A summary of the basic theory of generalized symmetries of partial differential equations and connections with conservation laws is presented. This is followed by a summary of recent applications to different area of mathematical physics.

35311 What is new in the study of differential equations by group theoretical methods?. Winternitz, P. (Universite de Montreal, Quebec (Canada)). pp. 20 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte.

Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Several recent developments have made the application of group theory to the solving of differential equations more powerful than it used to be. The ones discussed here are: (1) The advent of symbol manipulating computer languages that greatly simplify the construction of the symmetry group of an equation. (2) Methods of finding all subgroups of a given Lie symmetry group. (3) The theory of infinite dimensional Lie algebras. (4) The combination of group theory and singularity analysis.

35312 Approximate global symmetries of the electroweak interactions. Georgi, H. (Boston Univ., MA (USA)). pp. 9 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The author discusses and exemplifies a simple explanation for the approximate symmetries of the electroweak interactions that arises naturally in models in which the quarks, leptons and Higgs particles are all composite states of strongly interacting fermions.

35313 Quasi-lattices associated with arbitrary groups: Application to icosahedral and dihedral groups. Haase, R.W. (Technische Universitaet Wien (Austria)); Kramer, P. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A systematic approach is given for the construction of families of polytopes associated with a given group G and subgroup H. The emphasis is placed on the role of the induced representation theory and project to E_3. This procedure is applied to both the icosahedral group J, the dihedral group D_{10} and its isomorphic group C_{10v}. They provide various types of quasi-lattices associated with these groups and hence are candidates for modelling the quasi-crystalline structures for the icosahedral and decagonal phases of aluminum-transition metal alloys.

35314 Symmetry and subgroups of the regular tetrahedron in 4-dimensions. Deonarine, S. (Bronx Community College of City Univ. of New York, NY (USA)); Birman, J.L. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The 384 point symmetry operations of G_0 the group of the regular tetrahedron in 4-dimensions, are given in terms of permutations on 8-symbols. All subgroups $G \subset G_0$ are derived using Group Representation theory. These are presented in a family-tree of subgroups. Some applications are discussed.

35315 Symmetry of quasiperiodic lattices and decomposability of crystallographic point groups. Lu, J.P. (City College of the City Univ. of New York, NY (USA)); Birman, J.L. pp. 8 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A new classification scheme for all quasilattices in N dimensions is obtained, based on embedding the quasilattice in an $M > N$ dimensional periodic lattice. M is the number of independent lattice vectors needed to index the quasilattice over the integer field. The authors show that each R-decomposable and Q-irreducible crystal group in M dimensions gives rise to a quasilattice in lower dimension; the quasilattice so obtained has either the full symmetry group or is a subgroup of the periodic lattice. If Q-irreducibility is restricted to N dimensions, one obtains a class of N-Dimensional quasilattices which can be embedded in M dimensions. A full example is worked out for M=4, N=2.

35316 Tensorial properties distinguishing icosahedral symmetry from cubic or isotropic SO(3) symmetry. Goshen, S.Y. (Nuclear Research Center, Beer-Sheba (Israel)); Birman, J.L. pp. 4 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A method is given by which tensor response functions can be calculated for icosahedral, cubic and isotropic systems. New components can appear in third and higher order tensor response (or compliance) effects.

35317 Symmetry and phase transitions in decagonal quasicrystals. Litvin, D.B. (City College of the City University of New York, NY (USA)); Kopsky, V.; Birman, J.L. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The possible non-crystallographic point group of the decagonal quasi-crystal phase of Al-Mn alloys has been shown by Bendersky to be either C_{10h} or D_{10h}. For the physically irreducible representations of these groups, the authors derive the extended integrity basis, Clebsch-Gordan products, stability spaces, and tensorial covariants. The point groups which can arise in phase transitions are determined. It is shown that equilibrium tensori properties whose components transform as the components of the electrogyration or electrostriction tensors can distinguish between the $C_{10h}$and d_{10h} point group symmetry of the decagonal phase.

35318 Group theory and elasticity of quasicrystals. Jaric, M.V. (Texas A and M Univ., College Station (USA)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A calculation of elastic constants of quasicrystals leads to an interesting use of invariant theory. The author first derives a general result for G-invariant sums over G-covariants. Then, they give the explicit forms of the relevant basic elasticity tensors for icosahedral quasicrystals. The author suggests a particularly convenient coordinate system for the elasticity tensor.

35319 Dynamical group approach to certain anharmonic oscillator and perturbed Coulomb potentials. De Meyer, H. (State Univ. of Ghent (Belgium)); Vanden Berghe, G.; Fack, V. pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

It is discussed how the SO(2,1) dynamical group formalism combined with algebraic perturbation theory leads to high accuracy approximations for the bound state energies of the anharmonic oscillator potential $V(x) = X^2 + \lambda x^2/(1+gx^2)$ and of the exponential cosine screened Coulomb potential $V(r) = -\exp(-\lambda r)\cos(\mu r)/r$.

35320 Symmetry-conserving higher-order interaction terms in the I.B.A.-model: the O(6) limit. Vanden Berghe, G. (State Univ. of Ghent (Belgium)); Vanthournout, J.; Van der Jeugt, J.; De Meyer, H. pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Explicit matrix elements are found for the generators of the group O(6) in an arbitrary totally symmetric irreducible representation, using the physical principal SO(3) subgroup in the chain $SO(6) \supset SO(5) \supset SO(3)$. It is shown that the obtained reduced matrix elements can be used to calculate closed analytical forms for the eigenvalues of third-order SO(3) scalar operators which can play a role in the description of the O(6) limit of the I.B.A.-model. A comparison with experimental data is given.

35321 Algorithms for supercomputers. Alder, B.J. (Lawrence Livermore National Lab. (US)). v.v of Supercomputer simulations in chemistry. Dupuis, M. Springer-Verlag New York Inc., New York, NY (1986). (CONF-8508156–: Conference on supercomputer simulations in chemistry, Montreal, Canada, 25-27 Aug 1985).

Better numerical procedures, improved computational power and additional physical insights have contributed significantly to progress in dealing with classical and quantum statistical mechanics problems. Past developments are discussed and future possibilities outlined.

35322 Classification of symmetry preserving cubic interactions in the interacting boson model. De Meyer, H. (State Univ. of Ghent (Belgium)); Van der Jeugt, J. pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

It is shown that the most general I.B.M.-Hamiltonian contains 17 independent Hermitian cubic interaction terms. Their explicit structure in terms of the U(6) generators is established. A similar analysis is also made for each of the dynamical symmetry limits.

35323 Algebraic foundation for the triaxial rotor. Draayer, J.P. (Louisiana State Univ., Baton Rouge (USA)); Leschber, Y. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The SU(3) → SO(3) group structure is shown to support the dynamics of a triaxial quantum rotor. Specifically, a simple analytic result is given for mapping from the rotor hamiltonian to its fourth-order SU(3) → SO(3) integrity basis image. An important feature of the mapping is that it carries invariants of the rotor into Casimir invariants of SU(3). Results for spectra and transition rates are used to demonstrate the effectiveness of the mapping. The theory gives physical significance to operators first introduced by Racah in his attempt to provide a canonical resolution of the SU(3) → SO(3) state-labelling problem.

35324 Spin quenching and the SO_8 and SP_6 fermion models of collective motion. Ginocchio, J.N. (Los Alamos National Lab., NM (USA)). pp. 4 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The author shows that within the SO_8 model the expectation value of the spin operator in the subspace consisting only of $J^\pi = 0^+, 2^+$ pairs only is reduced in magnitude with respect to the single-particle expectation values of the spin operator.

35325 U(6,1) model of pairing and quadrupole collectivity. Rosensteel, G. (Tulane Univ., New Orleans, LA (USA)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

An algebraic structure is developed to unify the Interacting Boson Model (IBM) and the Noncompact Symplectic Model for nuclear structure physics. A particular goal is the understanding of the effects on IBM valence space renormalization of excitations of the nuclear core. An excellant candidate for the unifying algebraic structure is shown to be the noncompact unitary algebra u(6,1).

35326 Theorem on the Schwinger representations of Lie groups and its application to the algebraic Hamiltonian for diatomic molecules. Kim, S.K. (Temple Univ., Philadelphia, PA (USA)). pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A general transformation theory has been developed for boson operators utilizing a Lie group Schwinger representation. It is shown that this theory can be applied to the most general albegraic Hamiltonian for a diatomic molecule based on the U(4) vibron model. This comes about from an extension of earlier word which utilized fourth order generators of U(4) to describe the rotational and vibrational degrees of freedom.

35327 Group theoretical techniques for molecular electronic spectra. Lemus, R. (Centro de Estudios Nucleares (Mexico)); Frank, A.; Iachello, F. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The authors present a general algebraic description of electronic-rotation-vibration spectra for diatomic molecules. A complete basis for the united atoms limit is constructed and matrix elements of interaction terms evaluated in closed form. Some applications are discussed.

35328 Algebraic approach to collision dynamics of composite projectiles. Berman, M. (Hebrew Univ., Jerusalem (Israel)); Levine, R.D. pp. 8 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The time evolution of the density matrix in nuclear or molecular collision can be treated by algebraic techniques within the maximum entropy formalism. The same approach can also be used to propagate pure states. This algebraic approach has now been implemented in full detail. An illustrative example is briefly presented.

35329 Algebraic method for relativistic systems - spectrum and radiative transitions. Bohm, A. (Univ. of Texas, Austin (USA)); Loewe, M.; Magnollay, P. pp. 8 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Hadron resonances are described as excited states of a quantal relativistic oscillator. Radiative transitions are calculated from a postulated coupling of the oscillator to the electromagnetic field.

35330 Dynamical SU(8) - a laboratory for phase coexistence. Solomon, A.I. (Open Univ., Milton Keynes (England)); Birman, J.L. pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The authors consider a model hamiltonian for the coexisting many-electron phenomena of superconductivity, charge density waves and ferro and anti-ferromagnetism. The spectrum-generating algebra (SGA) for such a model is su(8). They identify all 63 generators of this Lie algebra in physically meaningful bases for which the Cartan elements correspond to symmetries conserved at high temperature. The remaining 56 generators are shown to correspond to the order parameters of the various phases present in the model. A chain of subalgebras is exhibited, and the associated phenomena identified.

35331 Discrete symmetries and selection rules in unified SU(8) for superconductivity and density waves. Birman, J.L. (City College of the City Univ. of New York, NY (USA)); Solomon, A.I. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The authors show that a discrete T symmetry produces selection rules which require certain order parameters to vanish.

35332 Diamond solvable Lie group and fiber optical communication systems. Schempp, W. (Univ. of Siegen (West Germany)). pp. 11 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

It is the purpose of this paper to show that harmonic analysis on the diamond solvable Lie group allows them to compute explicitly the quantized transverse eigenmode spectrum of optoelectronic devices used in fiber optical communication systems. As a result, the coupling coefficients of optoelectronic devices are expressed in terms of Krawtchouk polynomials.

35333 Dynamical groups in Lie optics. Wolf, K.B. (Universidad Nacional Autonoma de Mexico). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The author reviews the state of Lie optics regarding the role of symmetries, dynamics, and phase space. It is suggested that a Euclidean algebra should be the subject of quantization to effect the passage between geometrical and wave optics.

35334 Symmetries of linear Newtonian systems. Lopez, A.G. (Princeton Univ., NJ (USA)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Several new results in connection with the structure of the Lie algebras of symmetries and of variational symmetries of arbitrary linear systems of second-order ordinary differential equations are reported.

35335 SU(1,1) coherent states and squeezed light interacting with an anharmonic oscillator. Gerry, C.C. (Saint Bonaventure Univ., NY (USA)). pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The authors consider a solvable model of a nonabsorbing nonlinear medium modelled as an anharmonic oscillator interacting with squeezed light described as an SU(1,1) coherent state. They find that the squeezing is eventually revoked and furthermore, the greater the initial squeezing, the more rapidly it is revoked.

35336 Symplectic decomposition of reaction channels. Kramer, P. (Institut fuer Theoretische Physik der Universitaet Tuebingen (West Germany)); Papadopolos, Z. pp. 8 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The channels in a nuclear reaction are characterized by unitary and symplectic quantum numbers. For partners with $s^4p^{\cdot\cdot}$ configuration, unitary and symplectic principles exclude the formation of the lowest shell model compound states and lead to the occurrence of molecular resonances. The authors study the decomposition of some channel states w.r.t. the symplectic states.

35337 Group theoretical approach to squeezed states using generalized bose operators. Katriel, J. (Israel Institute of Technology, Haifa); Rasetti, M.; Solomon, A.I. pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Generalized, k-boson Holstein-Primakoff realizations of SU(2) and SU(1,1) are introduced in terms of generalized bose operators. The corresponding group theoretical coherent states are studied with respect to their squeezing properties relative to k-boson dynamical variables.

35338 Hidden symmetries and stereographic projection in rank one symmetric spaces. Perline, R. (Drexel Univ., Philadelphia, PA (USA)). pp. 3 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The author discusses stereographic projection in euclidean, Minkowski, and hyperbolic space, and their applications to demonstrating hidden symmetries of mechanical systems. Generalizations to rank one symmetric spaces are considered.

35339 Properties of the strong factor in dynamically generated S-matrices. Amado, R.D. (Univ. of Pennsylvania, Philadelphia (USA)); Sparrow, D.A. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The group theoretic S-matrix of Alhassid, Iachello and Wu is factorable into a product of Coulomb and strong factors. The strong factor is examined with a view to relating it to more familiar potential and phase shift descriptions. The authors find simple approximate expressions for the phase shifts which are very accurate for heavy-ion type applications. For peripheral scattering it is possible to obtain simple expressions relating the AIW strong factor to an effective potential.

35340 Group deformations and dynamic symmetries in scattering systems. Frank, A. (Universidad Nacional Autonoma de Mexico). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

It is shown that the group theoretical mechanisms of contraction and expansion can be applied for the derivation of recurrence relations associated to S matrices. The contraction describes the distortion of physical states when evolving from one kind of symmetry to another. The method is illustrated for a one dimensional scattering model involving the SO(2,1) group, which already displays much of the structure arising in higher dimensional systems.

35341 Group contraction and the algebraic approach to scattering. Celeghini, E. (Dipartimento di Fisica dell'Universita, Firenze (Italy)); Iachello, F.; Tarlini, M.; Vitiello, G. pp. 9 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The authors show that links and formal analogies can be established between the formalism of the algebraic approach to scattering and that of spontaneous symmetry breaking. The dynamical rearrangement of the symmetry is shown to be a common feature of both formalisms. This observation gives a new perspective to the problem and provides clues for the extension of the algebraic approach to more complex situations.

35342 Symmetries of some hypergeometric series: implications for 3j- and 6j-coefficients. Louck, J.D. (Los Alamos National Lab., NM (USA)); Beyer, W.A.; Biedenharn, L.C.; Stein, P.R. pp. 7 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The occurrence of generalized hypergeometric series as factors in the Wigner-Clebsch-Gordan (3j) and Racah (6j) coefficients is well known. The recently discovered S_5 symmetry of the Saalschuetzian ${}_4F_3$ series may be used to extend the symmetries of the 6j-coefficients to the much larger group generated by S_5 and the group of Regge symmetries. (A similar extension may be carried out for the 3j-coefficients.) The required extension of the domain or definition of the 6j-coefficients and the properties of its symmetry group is developed here.

35343 Nonlinear differential equations with superposition laws for the osp(1,2) superalgebra. Gagnon, L. (Univ. de Montreal, Quebec (Canada)); Beckers, J.; Hussin, V.; Winternitz, P. pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical

methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The theory of nonlinear ordinary differential equations with superposition principles is generalized to the superequations based on the osp(1,2) superalgebra. A superposition formula is then obtained.

35344 Symmetry groups of partial differential equations associated with vector-valued differential forms. Papachristou, C.J. (Brigham Young Univ., Provo, UT (USA)); Harrison, B.K. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

An older geometric technique employing exterior differential forms for the study of symmetry groups of partial differential equations is generalized and extended to problems involving sets of vector-valued differential forms. Application is made to the classical Yang-Mills equations.

35345 Horizontal constraints, Clebsch potentials and variational principles on principal fiber bundles. Cendra, H. (Universidad Nacional, Bahia Blanca (Argentina)); Ibort, L.A.; Marsden, J.E. pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The authors generalize the geometrical description of Lin constraints and variational principles in terms of Clebsch variables to configuration spaces that are non-trivial principal fiber bundles of structural group G. The generalization is intended to describe problems such as fluids with free boundaries or Yang-Mills fields.

35346 Symmetry reduction for the Kadomtsev-Petviashvili equation and its Baecklund transformation. David, D. (McGill Univ., Montreal, Quebec (Canada)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The infinite dimensional symmetry group of the potential Kadomtsev-Petviashvili (PKP) equation is found and applied to its Baecklund transformation (BT). The method of symmetry reduction is then applied to the PKP equation, and simultaneously to its BT. This yields new solutions to the KP equation.

35347 Hierarchies of symmetries and conserved functionals of the Federbush model. Kersten, P.H.M. (Univ. of Twente (Netherlands)). pp. 18 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The Lie algebra of Lie-Baecklund transformations of the Federbush model is discussed. Relying on the grading of the model, first and second order (x,t)- independent Lie-Baecklund transformations are obtained. The construction of four creating and annihilating Lie-Baecklund transformations, which turn out to be local, is given. These transformations, which are polynomial of degree one in x and t, generate four hierarchies of Lie-Baecklund transformations. Finally, due to the construction of two Lie-Baecklund transformations which are polynomial of degree two in x and t, the authors obtain an infinite number of hierarchies of Hamiltonian vector fields. The corresponding Hamiltonian densities are given. All results are obtained by symbolic computation, using REDUCE 3 and developed software packages.

35348 Levi-Civita, Kustaanheimo-Stiefel and other transformations. Lambert, D. (Universite Catholique de Louvain (Belgium)); Kibler, M. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Nonbijective quadratic transformations which generalize the LC transformation and the KS transformation are defined in an algebraic framework based on the use of Cayley-Dickson algebras of dimension n {<=} 8. The general algebraic framework sketched here allows them to generate other (nonbijective) quadratic transformations besides the LC- and KS-like transformations. The KS- and LC-like as well as the other transformations are investigated from a geometrical viewpoint. It appears that they are connected to Hopf and pseudo-Hopf fibrations.

35349 Spin structure, projection operators, and Bose-Fermi equivalence on the 2d torus for simply laced groups. Redlich, A.N. (Theoretical Particle Physics Institute for Advanced Study, Princeton, NJ (USA)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

It is shown that projection operators - equivalent to summing over generalized spin structures - are essential for bose-fermi equivalence on the two-dimensional torus for all of the simply laced groups. An explicit calculation of the bosonic and fermionic partition functions is given for the simplest case: the adjoint representation of spin (2N).

35350 Representation of the generators of symplectic algebras. Chacon, E. (Instituto de Fisica (Mexico)); Moshinsky, M. pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

In this note the authors outline a procedure for obtaining the matrix representation of the generators of a symplectic Lie algebra of an arbitrary number of dimensions, when the irreps are in the positive discrete series. These results are relevant to the matrix representation of Hamiltonians in the symplectic model of the nucleus.

35351 New perspective on the U(n) Wigner-Racah calculus. Le Blanc, R. (Univ. of Michigan, Ann Arbor (USA)); Hecht, K.T. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Recent developments in the theory of group and tensor representations has enabled the authors to shed a new light on the U(n) Wigner-Racah calculus.

35352 SU(n) representation theory in terms of pseudo-unitary groups. Quesne, C. (Universite Libre de Bruxelles, Brussels (Belgium)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The complementarity relation between U(n) and U(p,q) within some positive discrete series irreps of a larger U(pn,qn) group is reviewed and used to construct SU(n) models and to solve the SU(n) external state labelling problem.

35353 Integral-spin fields on 3+2 de Sitter space. Gazeau, J.P. (Universite Paris (France)); Hans, M. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Irreducible or nondecomposable representations of the de Sitter group SO(3,2) are extensively studied. Corresponding carrier states and invariant two-point functions are built through recurrence formula. The problems of light-cone propagation and reverberation phenomenon are examined. A particular emphasis is given on the so-called massless nondecomposable representations with arbitrary spin, with the following result: for a certain choice of the gauge-fixing parameter, the carrier states propagate only on the light-cone.

35354 Phase-space formalism for quantized fields. Kaiser, G. (Harvard Univ., Cambridge, MA (USA)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Quantum Field Theory is shown to possess a natural representation of the coherent-state type, based on solid physical principles such as the positivity of the energy and relativistic covariance. Quantized fields, initially defined over spacetime, are seen to extend canonically to a complex four-dimensional domain which, they carefully show, can be viewed as an extended, covariant classical phase space for the particles associated with the theory. Observables such as charge, 4-momentum etc. have simpler expressions in this formalism, and the corresponding currents in phase space can be displayed as regularizations of the usual ones in spacetime. However, they suggest that it is just as natural to take the view that the phase-space formulation is primary and the spacetime formulation is a singularization obtained by going to boundary-values. Examples of the improved regularity of their formalism are: Klein-Gordon particles in phase space possess a genuine (i.e., positive) probability current; Dirac particles in phase space undergo no Zitterbewegung; all particles are covariantly extended in space rather than being point-particles; quantized fields are operator-valued analytic functions rather than distributions.

35355 Unitary representations of diffeomorphism groups and unusual particle statistics. Goldin, G.A. (Rutgers, the State Univ., New Brunswick, NJ (USA)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

In quantum theory unitary irreducible representations of Diff(M) and related groups describe many different physical systems, including particles obeying Bose, Fermi, or para statistics for $M = R^3$, and Θ-statistics for $M = R^2$. This paper reports progress in the group-theoretic description of such systems, for example: (1) exchange symmetry must be defined with respect to particle permutations rather than label permutations; and (2) braid group statistics can occur for particles with internal degrees of freedom such as quantum dipoles in R^2 or S^2.

35356 Unitary representations of photon polarization vectors. Han, D. (NASA - Goddard Space Flight Center, Greenbelt, MD (USA)); Kim, Y.S.; Noz, M.E. pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Lorentz transformation properties of free photons are studied within the framework of Wigner's little group for massless particles. It is shown that every four-by-four non-unitary matrix applicable to a photon polarization vector can be converted to a rotation matrix through a gauge transformation.

35357 Non-linear representations of the Poincare group in 3 and 4 space-time dimensions. Rideau, G. (Universite Paris (France)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Non-linear partial differential equations covariant with respect to the Poincare group generate non-linear representations of this group realized on the space of initial data. A basic problem is to learn if these particular representations are linearizable or not. This leads to the more general problem of classifying a priori the non-linear representations of the Poincare group up to an (generally non-linear) equivalence. The authors give here some partial results for the Poincare groups in 3 and 4 space-time dimensions which prove at least formally the existence of non-linear and non-linearizable representations.

35358 Differential geometry and gauge structure of maximal-acceleration invariant phase space. Brandt, H.E. (Harry Diamond Labs., Adelphi, MD (USA)). pp. 9 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Maximal-acceleration invariant phase space is treated as a fiber bundle in which the base manifold is spacetime and the fiber manifold is four-velocity space. The differential geometry of the fiber bundle is developed in terms of a noncoordinate basis. The commutation coefficients of the anholonomic basis are calculated, and the gauge potential is shown to be the inner product of the spacetime affine connection and the four-velocity.

35359 New geometric symmetries via nonlinear realizations. Dalton, B.J. (Saint Cloud State Univ., MN (USA)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Limited nonlinear realizations of the Lorentz Group as transformations that mix the local four-velocities with fields, leaving invariant the Minkowski metric form $x_\mu x_\mu$ have been presented in earlier work. Here the authors show that limited extensions of these types of realizations to groups beyond the Lorentz Group, leaving $x_\mu x_\mu$ invariant, are possible. These realizations affect the x_μ only in the presence of fields. New realizations of SU(2), SU(2) x U(1), SU(2) x SU(2), and the translation group are presented. Limitations, possible extensions and physical implications are discussed.

35360 Neutrino mass and double beta decay. Kayser, B. (National Science Foundation, Washington, DC (USA)). pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Considerable efforts both theoretical and experimental are being expended to determine the neutrino mass. All existing versions of grand unified theory predict a neutrino mass based on location with massive particles in a unifying group. Double beta decay and solar neutrino measurements have failed to record a neutrino mass. Studies of the beta decay of tritium seem to have determined a sum of neutrino mass eigenstates for all allowed emissions. The mass of the electron neutrino awaits final determination.

35361 Applications of the three-dimensional ϕ^6-model to structural phase transitions. Grundland, A.M. (Memorial Univ. of Newfoundland, Saint John's (Canada)); Tuszynski, J.A.; Winternitz, P. pp. 12 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A systematic investigation has recently been completed into the nonlinear Klein-Gordon equation which is an equation of motion for a scalar order parameter in second and first order phase transitions. In this paper they apply the symmetry reduction method to obtain the results relevant for structural phase transitions. The many attempts made in the past employed one-dimensional solutions. Here, they interpret the various three-dimensional exact solutions as homogeneous phases, domain walls, nucleation centers, phonons and defect structures. They also outline further calculations leading to a direct comparison with experiment.

35362 Explicit expression for the product of the class of transpositions with an arbitrary class of the symmetric group. Katriel, J. (Univ. of Waterloo, Ontario (Canada)); Paldus, J. pp. 4 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110--: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

An expression for the product of the class operator of the transpositions with an arbitrary class operator of the symmetric group is derived. The derivation is purely combinatorial, using no information from character theory.

35363 Recent results on group decompositions and some applications. Hebda, J. (Saint Louis Univ., MS (USA)); Moylan, P. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Given a connected Lie group G and a closed connected subgroup H of G the authors give a necessary and sufficient condition that G decomposes into the cartesian product of G/H and H. They apply this criterion to a number of physically interesting situations which involve de Sitter and anti-de Sitter space. Finally they given an application to the conformal invariance of wave equations on de Sitter space.

35364 Representations of the Lie superalgebra G(3). Sciarrino, A. (Universita de Napoli (Italy)); Sorba, P. pp. 9 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A method to build up explicitly the content into SU(2) x G_2 irreducible representations for typical as well as atypical representations of the exceptional Lie superalgebra G(3) is presented. Young supertableaux are introduced to describe representations of G(3).

35365 Principal subalgebras of Lie superalgebras and unimodality. Van der Jeugt, J. (State Univ. of Ghent (Belgium)). pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A short review of some properties of the principal three-dimensional subalgebra (TDS) of a simple Lie algebra including the unimodality of principally specialized characters is given. For Lie superalgebras, the situation is more complicated. First, a classification is obtained of those Lie superalgebras which contain a principal five-dimensional subalgebra (FDS). Then, the unimodality of principally specialized characters of typical finite-dimensional modules is discussed, and some applications are mentioned.

35366 Generally covariant quantum field theory. Haag, R. (Institut fuer Theoretische Physik der Universitaet Hamburg (West Germany)). pp. 2 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A synthesis is performed of the essential principles of general relativity with those of quantum theory. Germs are defined and used to reconstruct the theory. It is shown that with consideration of certain restricted states, the germs form a sheaf corresponding precisely to the desired merged theories.

35367 Covariance representation of global quantum dynamics and its symmetries. Rieckers, A. (Institut fuer Theoretische Physik Universitaet Tuebingen (West Germany)). pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A method is presented for implementing the dynamics and symmetries of a global quantum description by pairs of partial isometries and for separating the part which is continuous in the group parameter.

35368 Quantum De Sitter structured connection and an example: the quantum relativistic rotator. Aldinger, R.R. (Eastern Illinois Univ., Charleston (USA)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The relationship between the gauge-theoretic and geometrical aspects of the structure of isolated (neutral) hadronic bound states is considered by analyzing the gauge theory of a de Sitter SO(4,1). The analysis is based on Drechsler's soldered de Sitter fiber bundle which possesses as its fiber a four-dimensional pseudo-Riemannian space of constant negative curvature characterized by a radius R of the order of 10^{-13}cm. The structure group of the bundle is a de Sitter SO(4,1) which contains translations as well as rotations all of which are initially on an equal footing. A scaling of 4 of the 10 generators of SO(4,1) breaks the original symmetry down to the Lorentz SO(3,1) which, after quantization in the inertial gauge, leads to the experimentally verifiable hadron model of the quantum relativistic rotator.

35369 Infinite dimensional Lie algebras acting on the solution space of σ models with a Wess-Zumino term. Saint-Aubin, Y. (Universite de Montreal, Quebec (Canada)). pp. 7 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

An infinite set of symmetry transformations for the 2-dimensional SU(n) σ model with a Wess-Zumino term is presented. The algebraic structure spanned by these symmetries is studied. The left and right symmetries are shown to decouple at the critical values of the ratio of the coupling constants.

35370 Relationship between supersymmetry and solvable potentials. Cooper, F. (Los Alamos National Lab., NM (USA)); Ginocchio, J.N.; Khare, A. pp. 7 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The authors study in detail the relationship between the general class of solvable Natanzon potentials, supersymmetry and shape invariance. They first show that this general class of solvable potentials can be cast into supersymmetric form. They then show that these solvable potentials are not in general shape invariant; i.e. shape invariance even though sufficient is not a necessary condition for exact solvability. Further, using supersymmetry they generate a huge class of new solvable potentials which do not belong to the Natanzon class.

35371 Effective quark-diquarksupersymmetry and the splitting of the Regge trajectories. Catto, S. (Baruch College of the City Univ. of New York, NY (USA)); Kuyucak, S. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Splitting of Regge trajectories and their deviations from their linear limit for smaller values of the orbital angular momentum are calculated and are shown to be in excellent agreement with recent experimental results. Also, following the suggestion of a linear confinement potential for the quarks inside hadrons from lattice QCD, the authors solve numerically the Dirac equation for the case of a scalar potential V_s = cr. They evaluate the energy expectation values, and calculate the masses of hadrons.

35372 N=2 superconformal quantum harmonic oscillator. Dehin, D. (Universite de Liege (Belgium)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The largest invariance superalgebra of the supersymmetric harmonic oscillator has been found. Here the authors consider the three-dimensional case that they compare with other recent contributions and different ways of supersymmetrization.

35373 Superspace formulation of 10-D sugra+sym theory A La Green-Schwarz. Bonora, L. (Univ. of Padova (Italy)); Pasti, P.; Tonin, M. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The authors have developed a superspace formulation for the coupling of supergravity and supersymmetric Yang-Mills theory. The superfields relevant to the superspace formulation are the supervielbeins, the Lorentz superconnection, Lie-algebras, the Lorentz curvature, the gauge curvature and needed superforms.

35374 Parastring theories. Mansouri, F. (Univ. of Cincinnati, OH (USA)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Parastring theories are formulated in the light cone gauge, and their properties are discussed.

35375 Q_{BRST} and negative norm states: an application to the bosonic string. Spiegelglas, M. (School for Natural Sciences, Princeton, NJ (USA)). pp. 8 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Studying the relationship between a BRST operator, satisfying $Q\dagger = Q$, $Q^2 = 0$ and the negative metric space on which it acts, conditions for the cohomology of Q to be positive definite are formulated. An application to the Bosonic String and gives a new proof and some insight into the No - ghost theorem.

35376 Orthonormal gauge and affine geometry in string theory. Cho, B.H. (Korea Advanced Institute of Science and Technology, Seoul); Myung, Y.S. pp. 4 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The authors discuss orthonormal gauge, affine transformation and conformal transformation in string theory.

35377 Non-compact symmetric spaces in current particle theories. Ha, Y.K. (Temple Univ., Philadelphia, PA (USA)). pp. 3 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A survey of the recent physical uses of non-compact homogeneous manifolds G/H, where G is a non-compact Lie group and H its maximal compact subgroup, is given in the context of supergravity models and high-dimensional theories. Dynamical considerations involved in the study of theories with global non-compact symmetries are outlined.

35378 Superinvariant chiral fields. Panagopoulos, H. (Universita di Pisa (Italy)); Vinet, L. pp. 8 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The characterization of chiral fields with conformal supersymmetries is summarized.

35379 Bag formation in a chiral model. Jain, P. (Syracuse Univ., NY (USA)). pp. 10 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The low energy properties of the nucleon can be qualitatively explained either by considering it as a soliton (Skyrmion) in a theory of mesons or by considering it as a composite state of three quarks trapped in a bag (bubble) in the QCD vacuum. One would like to inquire as to the analog of the vacuum bubble in the chiral model of mesons. Here they discuss a simple extension of the Skyrme model in which a vacuum bubble may be automatically generated for the nucleon. Their toy model is constructed with an additional gluonic background field in such a way that the trace anomaly of QCD is satisfied. Although the model is certainly a rough approximation to the true low energy effective Lagrangian it does have the nice feature of giving a similar fit to the nucleon parameters as the original Skyrme model, using however the experimental value of the pion decay constant.

35380 Derivation of Dirac's bispinor equation from a Yang-Mills Lagrangian. Morris, R. (RCA/MSR, Morrestown, NJ (USA)); Reifler, F. pp. 4 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The Dirac bispinor equation can be derived from a Yang-Mills Lagrangian in the limit of a large coupling constant, and all observables associated with the Dirac bispinor field may be directly expressed using Yang-Mills formulas. The tensor formula obtained this way for the Dirac Lagrangian agrees with the formula recently derived by Takahashi and Zhelnorovich.

35381 Nonholonomic systems with symmetry (and a model for a classical particle on a Yang-Mills field). Koiller, J. (Instituto de Matematica de UFRJ, Rio de Janeiro (Brazil)). pp. 4 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The author presents the reduced equations for two types of nonholonomic systems with Lie group symmetry. One of them leads to a model for the motion of a particle in a gauge field.

35382 3-cocycles in the monopole sector of gauge theories. Bakas, I. (Univ. of Texas, Austin (USA)); McMullan, D. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Using the Chern-Simons secondary characteristic class, a generalized descent tower of globally defined cocycles results. The authors study its relevance to monopole physics when the defining simplexes interpolate between disconnected components of the gauge group orbit in the space of Yang-Mills connections. They focus their attention to 1 and 3 such cocycles of the 3-space gauge group.

35383 Polynomial link invariant, braid groups and the XXZ chain. Carr, R.R. (Drexel Univ., Philadelphia, PA (USA)). pp. 8 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Recently, a number of new and powerful polynomial invariants have been discovered for tame oriented links in 3-space. In this note, they describe a simple link invariant closely related to the XXZ quantum spin chain.

35384 Spin(8) representations and particle physics. Smith, F.D. Jr. (Georgia Institute of Technology, Atlanta (USA)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The half-spinor, adjoint, and vector representations of Spin(8) are interpreted as corresponding respectively to fermion leptons and quarks, to gauge bosons, and to a base manifold that reduces by a geometric Higgs mechanism to a 4-dimensional space-time. The geometry of the resulting Spin(8) gauge field theory gives values for elementary particle masses and force strength constants that are roughly consistent with experimental results insofar as they exist, and predictions of values that can be tested experimentally in the near future, such as prediction of the t-quark mass to be about 130 Gev.

35385 Different symmetries of mesons and baryons. Bhattacharjee, B.J. (Saint Anthony's College, Shillong (India)). pp. 4 of

Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

It is observed that properties of elementary particles (eps) are periodic function of rest mass/energy. Symmetries arises out of Energy-spin term diagram (and parity - spacing rule conditions) shows that numerically many GMO formulae exist. It also indicates how many particles may exist in nature.

35386 Announcement: the solution for the measurement problem in quantum mechanics. Yoshimura, J. (State Univ. of New York, Syracuse (USA)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The solution for the measurement problem in quantum mechanics is announced. A quantum probability space is the human information about the properties of elementary particles. It can be equal to the maximal information about the particles at the macro level universe. It is not the complete or incomplete state function of particles, but an inference function for the result of measurement. This theory rejects both the hidden variables and the measurement processes, as opposed to the traditional two major interpretations of probability in quantum mechanics.

35387 Isotropy subgroups for reducible representations of space groups. Hatch, D.M. (Brigham Young Univ., Provo, UT (USA)); Stokes, H.T. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

A procedure is outlined which yields the isotropy subgroups (of a given space group G_0) allowed by reducible representations. The method uses the isotropy subgroups obtained for irreducible representations. Subgroups associated with the direct sum of two irreducible representations are obtained by group intersection. The resulting subgroups correspond physically to the lower symmetry phases for coupled order parameters. An example is given where D_{4h}^1 is taken as G_0.

35388 Space groups with Q-reducible point groups. Kopsky, V. (Pennsylvania State Univ., Reading (USA)); Litvin, D.B. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

If a point group G of a space group G is Q-reducible, then the group G has the following properties: (1) The point group G is a direct or subdirect product of point groups H_1 and H_2 which act on G-invariant subspaces V_1 and V_2. (2) The translation subgroup T_G splits into a direct or subdirect product of its projections T_1 and T_2 onto V_1 and V_2. (3) The subgroups $T_1^\circ = T_G \cap V_1$ and $T_2^\circ = T_G \cap V_2$ are normal in G and the corresponding factor groups G/T_1° and G/T_2° have the structure of subperiodic groups. (4) The group G itself is a direct or subdirect product of space groups of lower dimensions. These properties can be used either for the analysis of space groups with Q-reducible point groups or for the construction of space groups on the basis of the knowledge of lower dimensional ones. These points are illustrated by an example of groups of Laue Class D_4.

35389 Physical applications of compatibility relations for space group Clebsch-Gordan coefficients. Dirl, R. (Technische Universitat Wien (Austria)). pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Compatibility relations for multiplicities and for space group Clebsch-Gordan matrices are presented for the first time. Closed expressions are derived in both cases. The implications of continuous parameter variations are analyzed in terms of a special class of irreducible tensor operators.

35390 Various classification schemes for irreducible space group representations. Davies, B.L. (Univ. of Wales, Bangor (England)); Dirl, R. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

Various classification schemes for space group irreps are discussed. The various schemes are either due to different shapes of representation domains or due to chain adaptations. The authors also propose a unification procedure to standardize space group irreps.

35391 Auxiliary group approach to the reduction of multiple Kronecker products and to chain-adapted reducing matrices. Aroyo, M.I. (Univ. of Sofia (Bulgaria)); Kotzev, J.N.; Dirl, R.; Kasperkovitz, P.; Davies, B.L. pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The auxiliary group approach (AGA) utilizes a set of transformations of (co)representations to derive relations between the elements of a matrix that decomposes a reducible (co)rep of a given group into irreducible constituents. The method reduces the number of matrix elements that have to be calculated and establishes conventions for multiply occurring (co)irreps. In this note AGA is applied to multiple Kronecker products and combined with well-known group-subgroup relations.

35392 6D-symbols for corepresentations of antiunitary magnetic groups. Angelova, M.N. (Univ. of Sofia (Bulgaria)); Peev, M.K.; Aroyo, M.I.; Kotzev, J.N. pp. 6 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The discussed symmetry and generating relations for 6D-symbols are common for the cases of reps and coreps. The peculiarities of the corep Schur lemma and of the coreps themselves lead to some essential differences in the two cases. Besides, those properties of the 6j-symbols, that are connected with the orthogonality relations for 3j-symbols (such as Biedenharn identity, Racah backcoupling rule) are in doubt for the above defined 6D-symbols (2). The symmetry and generating relations for 6D-symbols are extensively applied in their calculation. They effect in decreasing the volume of the necessary calculations and moreover they open the possibility for obtaining a set of 6D-symbols, whose properties mimic to a great extent those of the 6j-symbols. They have calculated and tabulated the sets of 6D-symbols for all single and double-valued coreps of the eleven gray and black-and-white cubic point groups. The results will be published elsewhere.

35393 GRAPE - Group representation and application in physics environment. Zhan, C. (Institute of Theoretical Physics, Beijing (China)); Jun-ming, G.; Bai-lin, H. pp. 5 of Group theoretical methods in physics. Gilmore, R. (ed.) World Scientific Publishing Company Pte. Ltd., Singapore (1987). (CONF-8610110–: 15. international colloquium on group theoretical methods in physics, Philadelphia, Pennsylvania, USA, 20-24 Oct 1986).

The authors describe a knowledge-engineering project to build a Group Representation and Application in Physics Environment, abbreviated as GRAPE. For the time being, it includes some knowledge of point groups and space groups, as well as a few applications to physical problems. The architecture of GRAPE is hierarchical and modular. A natural language interface has been provided. A model of GRAPE has been implemented and tested. It is written in LISP. They aim at providing a powerful group-theoretical environment for physicists in the future.

35394 Quantum level statistics of pseudointegrable billiards. Cheon, T. (Department of Physics and Astronomy, University of

Maryland, College Park, Maryland 20742(US)); Cohen, T. D. *Physical Review Letters (USA)*, 62(24): 2769-2772 (12 Jun 1989).

We study the spectral statistics of systems of two-dimensional pseudointegrable billiards. These systems are classically nonergodic, but nonseparable. It is found that such systems possess quantum spectra which are closely simulated by the Gaussian orthogonal ensemble. We discuss the implications of these results on the conjectured relation between classical chaos and quantum level statistics. We emphasize the importance of the semiclassical nature of any such relation.

70 FUSION ENERGY

35395 (UCID–21706) **Current benefits of fusion energy research.** Glass, A.J. Lawrence Livermore National Lab., CA (USA). 10 Mar 1989. 14p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE89013384/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper contains the text of an address given to staff members of several congressional committees on the present benefits of fusion energy research. This talk gives a nontechnical overview of fusion energy now and in the future.

35396 (ACIESP–60(v.3), pp. 320-330) **Critical power for rf current drive.** Assis, A.S. de (Universidade Estadual de Campinas, SP (Brazil). Inst. de Fisica); Busnardo Neto, J. Academia de Ciencias do Estado de Sao Paulo, SP (Brazil). 1988. (CONF-8808156–: 6. Japan-Brazil symposium on science and technology, Sao Paulo, Brazil, 10-12 Aug 1988). In *Proceedings of the 6. Japan-Brazil Symposium on Science and Technology.* Order Number DE89612371/JAW. Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

A one dimensonal quasilinear formulation is used to study RF current generation with low-frequency Alfven waves in a uniform, infinite plasma. Three regimes are identified: 1- weak source, in which the current is proportional to the applied power; 2- strong-source, in which a plateau exists in the distribution function and the current saturates; 3- Critical-source, an intermediary situation where the minimum power needed for current saturation can be estimated. Values of this critical power and the saturation current for the kinetic Alfven wave used as a driver in several contemporary tokamaks are presented.

35397 (ACIESP–60(v.3), pp. 331-339) **Quasilinear electron cyclotron absorption in a slab model for TBR-2.** Ziebell, L.F. (Rio Grande do Sul Univ., Porto Alegre (Brazil). Inst. de Fisica). Academia de Ciencias do Estado de Sao Paulo, SP (Brazil). 1988. (CONF-8808156–: 6. Japan-Brazil symposium on science and technology, Sao Paulo, Brazil, 10-12 Aug 1988). In *Proceedings of the 6. Japan-Brazil Symposium on Science and Technology.* Order Number DE89612371/JAW. Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

The electron cyclotron radiation generated by a gyrotron of operating frequency f = 35 GHz and power of 60 kW is used for heating and current drive experiments in the tokamak TBR-2 a project currently under study. A quasilinear code, that contains a self-consistent diffusion coefficient for electron cyclotron waves, averaged over tokamak magnetic surfaces, and includes collisions by means of a linearized Fokker-Planck collison term was developed. This code is applied to a slab model for TBR-2, supposed with an initial current presenting features of lower hybrid generated currents. A numerical analysis of two situations with good absorption is done.

35398 (ACIESP–60(v.3), pp. 340-347) **RFP plasma experiment at INPE.** Ueda, M. (Instituto de Pesquisas Espaciais, Sao Jose dos Campos, SP (Brazil)); Aso, Y. Academia de Ciencias do Estado de Sao Paulo, SP (Brazil). 1988. (CONF-8808156–: 6. Japan-Brazil symposium on science and technology, Sao Paulo, Brazil, 10-12 Aug 1988). In *Proceedings of the 6. Japan-Brazil Symposium on Science and Technology.* Order Number DE89612371/JAW. Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

Plasma experiments in CECI, a small Reversed Field Pinch (RFP) apparatus, are described. Preliminary measurements in this device shown the production of a plasma with peak current of 1.3kA and discharge duration of nearly 80μs, when a toroidal DC field of 100G was used. A loop voltage of 40V was measured and a maximum electron temperature of 3eV was estimated for these discharges. Experimental points in the F-θ diagram for CECI indicate that its plasma is approaching the RFP configuration when the discharge is optimize. The probe data also show that the plasma column expands outward. Numerical results indicate that leakage fields have to be reduced below 5G to form appropriate magnetic surfaces.

35399 (ACIESP–60(v.3), pp. 367-376) **Non-stationary classical diffusion in field - reversed configurations.** Clemente, R.A. (Universidade Estadual de Campinas, SP (Brazil). Inst. de Fisica); Sakanaka, P.H.; Mania, A.J. Academia de Ciencias do Estado de Sao Paulo, SP (Brazil). 1988. (CONF-8808156–: 6. Japan-Brazil symposium on science and technology, Sao Paulo, Brazil, 10-12 Aug 1988). In *Proceedings of the 6. Japan-Brazil Symposium on Science and Technology.* Order Number DE89612371/JAW. Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

Plasma decay in field-reversed configurations (FRC) is described using resistive MHD equations. Assuming non-stationariety together with uniform but time dependent plasma temperature and neglecting inertial effects in the momentum balance equation, it is possible to show that the functional dependence of the plasma pressure with the poloidal magnetic flux remains fixed during diffusion. This allows to describe FRC evolution as a continuous sequence of plasma equilibria satisfying proper boundary conditions. The method is applied to pressure profiles linear with the poloidal magnetic flux obtaining the evolution of the flux, the number of confined particles and the size of the plasma boundary.

35400 (ACIESP–60(v.3), pp. 348-358) **Recent results in T.C. - I UNICAMP.** Machida, M. (Universidade Estadual de Campinas, SP (Brazil)); Aramaki, E.A.; Porto, P.; Berni, L.A.; Sakanaka, P.H.; Ueda, M.; Aso, Y. Academia de Ciencias do Estado de Sao Paulo, SP (Brazil). 1988. (CONF-8808156–: 6. Japan-Brazil symposium on science and technology, Sao Paulo, Brazil, 10-12 Aug 1988). In *Proceedings of the 6. Japan-Brazil Symposium on Science and Technology.* Order Number DE89612371/JAW. Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

Recent results obtained in the implosion phase of the field reversed theta-pinch T.C.-I operating at UNICAMP are present. The diagnostics involved in this phase are: internal and external probes, Rogowski loops, Faraday Cup, photodiode and spectrometer measurements. The main results from these diagnostics are: total current on solenoid coils for 20 kV discharge, 150 kA; maximum magnetic field, 3 kG; end scape speed, 3 x 10^6 cm/s; scape beam density, 2,6 x 10^{12} cm $^{-3}$; estimated ion temperature at the center $\simeq$ 150 eV; line density from MHD oscillations, $\simeq$ 2 x 10^{15} cm^{-3}.

35401 (ACIESP–60(v.3), pp. 307-313) **Sawteeth fluctuations detection.** Vannucci, A. (Sao Paulo Univ., SP (Brazil). Inst. de Fisica); Nascimento, I.C. do; Caldas, I.L.; Sanada, E.K.; Tuszel, A.G.; Fagundes, A.N. Academia de Ciencias do Estado de Sao Paulo, SP (Brazil). 1988. (CONF-8808156–: 6. Japan-Brazil symposium on science and technology, Sao Paulo, Brazil, 10-12 Aug 1988). In *Proceedings of the 6. Japan-Brazil Symposium on Science and Technology.* Order Number DE89612371/JAW. Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

Sawteeth oscillations were identified during the discharges in the small Tokamak TBR-1 through a pin-hole camera and their main characteristics were studied. Comparing the measured period of the internal disruption (sawteeth) with the ones expected from scaling laws, good agreement is reached. The measured sawteeth crashes agree with the value expected from Kadomtsev's model. However, there some sawteeth oscillations, corresponding to conditions of higher Z_{eff} of the plasma, which showed longer crashes that could not be explained by this model.

35402 (ACIESP–60(v.3), pp. 359-366) **Rotational instabilities in field reversed configurations.** Santiago, M.A.M. (Universidade Federal Fluminense, Niteroi, RJ (Brazil)); Tsui, K.H.; Ponciano,

B.M.B.; Sakanaka, P.H. Academia de Ciencias do Estado de Sao Paulo, SP (Brazil). 1988. (CONF-8808156–: 6. Japan-Brazil symposium on science and technology, Sao Paulo, Brazil, 10-12 Aug 1988). In *Proceedings of the 6. Japan-Brazil Symposium on Science and Technology*. Order Number DE89612371/JAW. Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

The rotational instability (n = 2 toroidal mode) in field reversed configurations (FRC) using the ideal MHD equations in cylindrical geometry is studied. These equations are solved using a realistic densite profile, and the influence of some plasma parameters on the growth rate is analysed. The model shows good qualitative results. The growth rate increases rapidly as rotational frequency goes up and the mode m = 2 dominates over the m = 1 mode. With the variation of the density profile, it is observed that the growth rate decreases as the density dip at the center fills up. Calculated value ranges from 1/2 to 1/7 of the rotational frequency Ω whereas the measured value is around $\Omega/50$. The developed analysis is valid for larger machines. The influence of the plasma resistivity on the mode stabilization is also analysed. The resistivity, which is the fundamental factor in the formation of compact torus, tends to decrease the growth rate.

35403 (CEA-R–5477) **Theory of plasma electrodynamics.** Bonnaud, G. CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France). 1989. 208p. (In French). Order Number DE89781577/JAW. Available from NTIS (US Sales Only), PC A10/MF A01.

The subject of this report is the physics of the electromagnetic behaviour of unmagnetized plasmas. After basic kinetic concepts, the dispersion relation of the plasma modes are developed, with emphasis on the comparison between the analytical expressions and the exact numerical solutions, especially on Landau dampings. Then, collisional dampings are presented. The mode couplings which drive parametric instabilities are then treated. Finally, the non-linear mechanisms, the pump depletion, designed as weak non-linearity, and the strong non-linearities which affect the longitudinal modes are discussed.

35404 (CONF-8905120–16) **Fast wave current drive modeling for ITER and prospects for a near-term proof of principle experiment.** Batchelor, D.B.; Jaeger, E.F.; Carter, M.D.; Swain, D.W. Oak Ridge National Lab., TN (USA). 1989. 5p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From 8. topical conference on radio frequency power in plasmas; Irvine, California, USA; 1-3 May 1989. Order Number DE89013049/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

It is widely recognized that a key element in the development of an attractive tokamak reactor, and in the successful achievement of the mission of ITER is the development of an efficient steady state current drive technique. The two primary issues to be resolved are: Can an acceptable antenna be designed to produce a $k_{\|}$ spectrum with most power in the phase velocity range $v_e < v_{phase} < c$? Will the rf power be efficiently absorbed by electrons in the desired velocity range without unacceptable parasitic damping by fuel ions and α particles? To address these issues we have employed the ORION code which gives a 3D full-wave solution of the fast wave equations in tokamak geometry along with power absorption and current drive profiles. This 3D code realistically models the launched antenna spectrum with radial focusing, includes toroidal eigenmode effects (multiple pass absorption) if present, and includes the effects of ion cyclotron harmonic and α particle damping. 8 refs., 1 fig.

35405 (CONF-8905120–17) **Loading, absorption, and Fokker-Planck calculations for upcoming ICRF experiments on ATF.** Shepard, T.D.; Carter, M.D.; Goulding, R.H.; Kwon, M. Oak Ridge National Lab., TN (USA). 1989. 5p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From 8. topical conference on radio frequency power in plasmas; Irvine, California, USA; 1-3 May 1989. Order Number DE89013059/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

ICRF experiments on ATF at the 100-kW level are planned for the current 1989 operating period. These plans include the $2\omega_{cH}$ regime at f_{RF} = 28.88 MHz, D(H) at 14.44 MHz, and ^{4}He(^{3}He) and D(^{3}He) at 9.63 MHz. ECH target plasmas have $n_{eo} \lesssim 0.15 \times 10^{20}$ m^{-3} and B = 0.95 T. The density and temperature profiles obtained are broader than those from 1988, owing to recent field error corrections. The values used for target-plasma parameters in the calculations were taken from initial 1989 ATF data. Loading and absorption calculations have been performed using the 3D RF heating code ORION with a helically symmetric equilibrium, and Fokker-Planck calculations were performed using the steady-state code RFTRANS with two velocity dimensions and one spatial dimension. 6 refs., 3 figs.

35406 (CRN-CPR–88-05) **Spectral density analysis of noisy repetitive pulses. Models for continuously operating mode-locked lasers.** Cunin, B.; Geoffroy, B.; Heisel, F.; Lepine, T.; Miehe, J.A. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1988. 29p. Order Number DE89781552/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A theoretical description and the interpretation of the power spectra of high repetition rate laser pulses showing fluctuations in time, intensity and shape are presented.

35407 (DOE/ER/53175–T1) **[Collision processes of interest in MFE plasma research]: Progress report.** Missouri Univ., Rolla, MO (USA). [1989]. 3p. Sponsored by DOE Energy Research. DOE Contract FG02-84ER53175. Order Number DE89013681/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Research on this grant is devoted to the calculation of heavy particle collision cross sections needed for diagnostics studies of magnetic fusion plasmas. This work requires the development and testing of new theoretical techniques, and the implementation of benchmarked methods to collisions pertinent to fusion reactors. On the last context, we have provided the cross sections for modeling the beam penetration in an ERT plasma, charge exchange recombination values for impurity ion diagnostic studies, and those for assessing the feasibility of using a high efficiency plasma neutralizer for 0.5 to 1.0 MeV/u D^- beams. We have also extended our theoretical understanding to H^+, He^{++} + He collisions in order to be prepared for the modeling of helium and transport in the next generation of reactors.

35408 (DOE/ER/53227–134) **Magnetic turbulence versus safety factor in the Tokapole II tokamak.** Graessle, D.E. Wisconsin Univ., Madison, WI (USA). Plasma Physics Research. 1989. 143p. Sponsored by DOE Energy Research. DOE Contract FG02-86ER53227. Order Number DE89012875/JAW. Available from NTIS, PC A05/MF A01 - OSTI; GPO Dep.

Low-frequency ($\omega \ll \omega_{ci}$) radial magnetic turbulence has been measured over the full radius (r = 0 – 18 cm) for discharges in Tokapole II. It has been scaled over the range of edge safety factor 0.6 {<=} q_a {<=} 5.0. It was found that q_a served as a control parameter for both the magnetic fluctuation amplitude and the global confinement time. As q_a is reduced from 5 to 0.6 the turbulence level increases by a factor of fifty while the confinement time decreases by more than a factor of ten. Due to the lack of profile diagnostics, no detailed study of confinement could be done. The turbulent amplitude 1 cm inside the separatrix is nearly large enough for q_a {<=} 1 to account for the global confinement by means of collisionless stochastic magnetic transport. Frequency spectra have been obtained reliably from 10 to 400 kHz. For all q_a most of the fluctuation power appears below 100 kHz. This low-frequency structure changes as the safety factor is varied. Although the spectra do not always have clearly-defined peaks in this range of f, radial coherence lengths at these frequencies are very long, indicating global modes with a broadband structure. For f {>=} 100 kHz, the spectra become featureless, with a power-law frequency decay. For q_a {<=} 3, the spectra decay as $f^{-1.4}$ in all cases. For higher q_a, a new power law decay of $f^{-2.3}$ appears. Radial, poloidal, and parallel correlation analysis has been done for the full range of q_a, but with less detailed scan than was included in the amplitude studies.

35409 (DOE/ET/51013–263) **Testing of full scale ITER OHMIC heating coil conductors.** Hoenig, M.O. Massachusetts Inst. of Tech., Cambridge, MA (USA). Plasma Fusion Center. Jan 1989. 32p. Sponsored by DOE Energy Research. DOE Contract AC02-78ET51013. Order Number DE89014650/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The optimized conductor, "CICC-OH-1" is designed for 12.5 T operation at 30 kA with an I(op) /I(crit) ratio [R_I] of 0.5, with B_{max} =

14.7 T at R_I = 1.0. To use "CICC-OH-1" in the 2.5 m bore OH Coil, the CIC is co-wound with a structural band, sized to limit tensile strength to 50% of Yield at 30 kA and 12.5 T. When wound into a 1.3 m bore test coil, tensile stress in the "CICC-OH-1" conduit equals 50% of Yield at 30 kA and 12.5 T. The conductor requires no additional inter-turn structure in this coil configuration. Conduit thickness of the "CICC-OH-1" permits a minimum bend radius of 0.5 m. A 1.3 m bore test coil could be economically produced by upgrading the JAERI DPCF Test Facility. The DPCF increase in field would be achieved by the replacement of its 30 kA NbTi DPC-U1 & U2 field coils with coils using new 30 kA Nb_3Sn conductor. The upgraded DPCF Coil would consist of three or four 1.3 m bore pairs of coil modules. Conductor used would be "CICC-OH-1" or equivalent. Three or four full scale candidate OH Coil conductors, provided by different sponsors could thus be readily evaluated as part of the upgraded DPC Facility. The proposed test coil could also accommodate test pancakes or modules of other conductors. We believe that an upgrade of the existing DPCF facility, with an investment of $M 20 in a new 3-Module-Pair Coil, is feasible. The investment could logically be shared by three and four sponsors. The upgrade would also have to include modifications to the DPCF Cryogenic system to accommodate higher AC loss. 12 figs., 2 tabs.

35410 (GA-A–19667) **Electron cyclotron emission spectra calculated from ECRF heated electron distributions obtained with a 3D Fokker-Planck code.** Harvey, R.W.; O'Brien, M.R.; McCoy, M.G.; Kerbel, G.D. General Atomics, San Diego, CA (USA). May 1989. 12p. Sponsored by DOE Energy Research. DOE Contract AC03-89ER53277. (CONF-8905159–1: Joint IAEA technical committee meeting on ECE and ECRH and 7th joint workshop on ECE and ECRH (EC-7), Hefei, China, 8-11 May 1989). Order Number DE89013026/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Cyclotron emission spectra are obtained with a new computer code HORACE which incorporates ray tracing and a relativistic determination of the absorption and emission coefficients from nonthermal electron distributions. The latter are obtained from a 3D bounce-averaged Fokker-Planck code. Ohmic and ECH heated discharges from DIII-D, T-10, and FT-1 are examined to evaluate the extent that ECE measurements represent average plasma energies, and to interpret nonthermal ECE features. 13 refs., 4 figs.

35411 (HIFT–144) **Macroscale implicit electromagnetic particle simulation of magnetized plasmas.** Tanaka, Motohiko. Hiroshima Univ. (Japan). Inst. for Fusion Theory. Jan 1988. 39p. Order Number DE89778170/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

An electromagnetic and multi-dimensional macroscale particle simulation code (MACROS) is presented which enables us to make a large time and spatial scale kinetic simulation of magnetized plasmas. Particle ions, finite mass electrons with the guiding-center approximation and a complete set of Maxwell equations are employed. Implicit field-particle coupled equations are derived in which a time-decentered (slightly backward) finite differential scheme is used to achieve stability for large time and spatial scales. It is shown analytically that the present simulation scheme suppresses high frequency electromagnetic waves and that it accurately reproduces low frequency waves in the plasma. These properties are verified by numerical examination of eigenmodes in a 2-D thermal equilibrium plasma and by that of the kinetic Alfven wave.

35412 (HIFT–146) **Development of stochastic webs in a wave-driven linear oscillator.** Murakami, Sadayoshi; Sato, Tetsuya; Hasegawa, Akira. Hiroshima Univ. (Japan). Inst. for Fusion Theory. Jan 1988. 27p. Order Number DE89778171/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We present developments of stochastic webs in a linear oscillator which is driven by a finite number (N) of external waves with frequency ω_0 (harmonic of the linear oscillator frequency). The expansion of the stochastic domain as functions of the number of waves and their amplitudes is studied numerically. The results with small amplitude waves compares well with the perturbation theory. When the amplitude of external waves is small a leaf structure which expands with N develops radially in the phase space.

35413 (HIFT–148) **Effects of an ambipolar field on stability of electrostatic drift waves in sheet plasmas.** Chaudhry, M.B.; Nishikawa, Kyoji; Hojo, Hitoshi; Watanabe, Tsuguhiro. Hiroshima Univ. (Japan). Inst. for Fusion Theory. May 1988. 28p. Order Number DE89778172/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The effects of an ambipolar field on stability of electrostatic drift waves in sheet plasmas are investigated numerically. The analysis is based on an integral equation in the wavenumber space derived from the profiles of Gaussian density and parabolic ambipolar potential. The ambipolar field dependence of the eigenfrequency and eigenfunction of the drift waves is obtained. It is found that the drift waves are stabilized for a strong ambipolar potential of both the hill-type and well-type. The stabilization is due to the ion Landau damping caused from the velocity shear effect of the ExB drift. Purely growing (zero real frequency) drift modes are also found in the case of a hill-type ambipolar potential.

35414 (IAE–4545/15) **TRANSITOR computer code for calculation and analysis of transport processes in a tokamak.** Pereverzev, G.V.; Yushmanov, P.N. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1987. 33p. (In Russian). Order Number DE89617633/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A program complex designed for analysis of transport processs in a tokamak is described. The given system differs from the programs which are currently used by the fact that the user can do without programming languages. Transport phenomena are written in the form maximally closed to the form of equation writting in articles. To record transport coefficients, various elementary and other processes one can use library formulas describing a wide set of physical processes. Creation of a program of numeric solution on the base of assigned equations of analysis or calculation of transport processes is realized in TRANSITOR system automatically.

35415 (IC–88/384) **Producing of an ECR plasma using 2450MHz Whistler Wave and the investigating of its parameters.** Fang Yude; Zhang Jiande; Fu Keming; Lu Xiangyu; Liu Dengcheng; Wang Xianyu; Xie Weidong; Bao Dinghua; Yin Xiejin. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 16p. Order Number DE89618689/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A stable ECR plasma was produced and sustained in HER mirror using 2450MHz Whistler wave. The parameters of the ECR plasma and their chaining characters were studied in detail and were compared with those of the DC discharge plasmas. The conclusion is that the ECR plasma is a high ionizability, low temperature, middle density plasma, its peak density may much exceed the cutoff density of the pump wave (when $\omega = \omega_{pe}$) and arrive at the order of $10^{12}cm^{-3}$. The ECR plasma includes some high energy hot electrons (20Kev-200Kev) and middle energy warm electrons (< 20Kev). Those two kinds of electron created some strong X-ray emissions in a wide frequency range. The ECR plasma has higher edge density and can strongly interact with the wall. (author). 9 refs, 17 figs.

35416 (IC–89/15) **Effects of the wave-driven radial motion in lower-hybrid current drive tokamak.** Wu Weimin; Xia Mengfen. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 13p. Order Number DE89617674/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

It is pointed out that there is a remarkable effect of wave-driven motion on the relaxation process, the stationary state, the wave-particle coupling mechanism and the wave-driven radial transport for the strong-wave case in lower-hybrid current drive tokamak. (author). 12 refs.

35417 (INIS-mf–11443) **Wills Plasma Physics Department annual progress report 1987.** Sydney Univ. (Australia). Dept. of Plasma Physics. 1988. 40p. Order Number DE89617632/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The experimental research program has three major themes - the study of hydromagnetic waves and RF heating using the TORTUS tokamak, the development of diagnostic techniques particularly those based on submillimetre lasers and the gyrotron, and gas discharge studies.

35418 (IPPJ–867) **Proceedings of the US-Japan workshop on advanced plasma modeling, 3.** Nagoya Univ. (Japan). Inst. of Plasma Physics. Apr 1988. 51p. (CONF-8703311–: 2. U.S.-Japan workshop on advanced plasma modeling, Nagoya, Japan, 23-27 Mar 1987). Available from NTIS (US Sales Only), PC A03/MF A01.

Individual papers are processed separately for the data base. (DLC)

35419 (IPPJ–867, pp. 1-23) **Vlasov ion zero mass electron model for plasma simulations.** Dawson, J.M. (California Univ., Los Angeles (USA)); Kazeminezhad, F. Nagoya Univ. (Japan). Inst. of Plasma Physics. Apr 1988. (CONF-8703311–: 2. U.S.-Japan workshop on advanced plasma modeling, Nagoya, Japan, 23-27 Mar 1987). In *Proceedings of the US-Japan workshop on advanced plasma modeling, 3.* Order Number DE89012145/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We have developed two-and three-dimensional models with kinetic ions and massless fluid electrons. The use of fluid electrons allows us to eliminate the electric field so that it never has to be solved for. We are then able to derive a Vlasov equation for the particle ions and obtain the linear dispersion relation from it. We compare the results from this theory with simulation results from our model; excellent agreement is found. The model exhibits Alfven waves, ion cyclotron waves, low frequency whistler waves and ion Bernstein waves. We have used the model to simulate instabilities such as might be caused by the injection of an energetic neutral beam into the plasma. We have also implemented a two time step correction technique into code which improves energy conservation by a factor of 10^3 and allows us to use time steps which are an order of magnitude larger. (J.P.N.).

35420 (IPPJ–867, pp. 24-48) **Modeling of subtle kinetic processes in plasma simulation.** Sydora, R.D. (California Univ., Los Angeles (USA)); Decyk, V.K.; Dawson, J.M. Nagoya Univ. (Japan). Inst. of Plasma Physics. Apr 1988. (CONF-8703311–: 2. U.S.-Japan workshop on advanced plasma modeling, Nagoya, Japan, 23-27 Mar 1987). In *Proceedings of the US-Japan workshop on advanced plasma modeling, 3.* Order Number DE89012145/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A new diagnostic method for plasma simulation models is presented which enables one to probe the subtle dielectric properties of the plasma medium. The procedure involves the removal of the background plasma response in order to isolate the effects of small perturbing influences which are externally added. We have found the technique accurately describes fundamental kinetic plasma behavior such as the shielding of individual test charges and currents. Wave emission studies and drag of test particles has been carried out in explicit particle algorithms as well as large time step implicit and gyrokinetic models. Accurate plasma behavior is produced and it is possible to investigate in detail, processes which can be compared with plasma kinetic theory. The technique of subtraction is not only limited to particle simulation models but also can be used in MHD or fluid models where resolution is difficult due to the intensity of the background response relative to the phenomena one is interested in measuring, such as a weakly grouwing instability or nonlinear mode coupling effect.

35421 (IPPT-IFTR–7/1985) **Double layers of transitional zone of multicomponent cosmic plasma.** Turski, A.J. Polska Akademia Nauk, Warsaw (Poland). Inst. Podstawowych Problemow Techniki. 1985. 37p. (In Polish). Order Number DE89618730/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

On a basis of stationary Vlasov-Poisson equation method of analysis of stationary plasma double layers and soliton waves is given. Criterion of minimalization of Landau instability and method of determination of quasistationary solutions for double layers in multicomponent plasma are presented. 13 refs., 7 figs. (M.F.-W.).

35422 (IPPT-IFTR–19/1985) **Field in a plane plasma waveguide.** Brahmer-Kacprzynska, A. Polska Akademia Nauk, Warsaw (Poland). Inst. Podstawowych Problemow Techniki. 1985. 17p. (In Polish). Order Number DE89618729/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Representation of electromagnetic field radiated from harmonic source placed in a plane waveguide filled with cold electron plasma is given. Radiation-mode and hybrid representation of this field depend on frequency of source is discussed. 7 refs., 3 figs. (L.I.).

35423 (JET-R–88-07) **Some theoretical aspects of diffusion in cylindrical plasmas.** Weenink, M.P.H. Commission of the European Communities, Abingdon (UK). JET Joint Undertaking. Sep 1988. 28p. Order Number DE89618702/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In this preliminary report some theoretical aspects of diffusion in rotationally symmetric cylindrical plasma columns are considered. Both boundary value and initial value problems are solved in principle. Also the effect of a radially inward pinch velocity has been incorporated. The main aim was to derive rigorous solutions with which approximate solutions can be compared that have been obtained by using physically plausible assumptions. The derivations given in this report can also be used for similar problems concerning the conduction of heat.

35424 (NRC–9012959) **Pacing the US magnetic fusion program.** National Research Council, Washington, DC (USA). Committee on Magnetic Fusion in Energy Policy. 1989. 149p. Sponsored by DOE Energy Research. DOE Contract FG05-87ER54034. Order Number DE89012959/JAW. Available from NTIS, PC A08/MF A01 - OSTI; GPO Dep.

This study addresses the priority and pace of the nation's magnetic fusion research and development program in the context of long-term national energy policy. In particular, the committee interpreted its task as follows: To review the implications of long-term national energy policy for current research and development in magnetic fusion; to identify factors that should enter the further development of such policy to reduce risks associated with the future electricity supply system; to propose criteria applicable to research and develop in electric generation in reaching long-term energy policy goals; to apply these criteria to magnetic fusion and alternative electric generation technologies in order to develop recommendations on the priority pace of the magnetic fusion program; and to present its results in a final report. The most important goals of the US Department of Energy's current Magnetic Fusion Energy Program Plan are to demonstrate the scientific and engineering feasibility of fusion, Demonstrating engineering feasibility will require the design, construction, and operation of an engineering test reactor, which the plan envisions financing through a combination of domestic and international funding. The committee believes that current domestic program funding levels are inadequate to meet even the near-term objectives of the plan.

35425 (ORNL/TM–11102) **A first glance at the initial ATF experimental results.** Carreras, B.A.; Dominguez, N.; Leboeuf, J.N.; Lynch, V.E.; Charlton, L.A. Oak Ridge National Lab., TN (USA). May 1989. 34p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89013737/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

In the initial phase of ATF operation, the plasma minor radius and the edge rotational transform were reduced by field errors. This caused an effective change of the magnetic configuration: it improved the stability properties but worsened the equilibrium properties. The threshold for the second stability regime was lowered to $\beta_0 \sim 1.5\%$. Experimental profile data are compatible with operation in the second stability regime, and the achieved beta values, $\beta_0 \sim 3\%$, are well beyond the theoretically calculated threshold. Magnetic fluctuation measurements showed the effects of beta self-stabilization. They are in reasonable agreement with the predictions of the theory and support the evidence that ATF has already operated in the second stability regime. 24 refs., 20 figs., 1 tab.

35426 (PPLK–9) **Heliotron E results (1981-March 1988).** Kyoto Univ., Uji (Japan). Plasma Physics Lab. 1988. 587p. Order Number DE89778200/JAW. Available from NTIS (US Sales Only), PC A25/MF A01.

The original proposal of heliotron configuration was made by Professor Uo. The experimental studies were started in 1959 by Heliotron A, and Heliotron B (1960), Heliotron C (1965), Heliotron D (1970), Heliotron DM (1975), Heliotron E (1980) and Heliotron DR (1981) followed for more than 25 years in order to establish the proof of the principle of heliotron configuration. In this way, the heliotron has become a promising candidate for toroidal magnetic

fusion reactors. The Heliotron E results obtained in the Plasma Physics laboratory, Kyoto University, have been well accepted in the world fusion community. The data obtained in the Heliotron E are the basis for the design of a next large helical device in Japan. To commemorate the achievements of Professor Uo, the collection of all the papers concerning the Heliotron E that were published in various scientific journals from 1981 through March, 1988, including the proceedings of the European Physical Society Conference and the IAEA International Conference on Plasma Physics and Fusion Research is published. 74 papers are grouped into five categories: confinement and heating experiments, plasma-wall interaction studies, diagnostics, heating systems, and the theory related to stellarator/heliotron devices. (Kako, I.).

35427 (PPPL–2626) **Stability of elongated cross-section tokamaks to axisymmetric even poloidal mode number deformations.** Weiner, R.; Jardin, S.C.; Pomphrey, N. Princeton Univ., NJ (USA). Plasma Physics Lab. Jun 1989. 19p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE89013401/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A recent paper by Nakayama, Sato and Matsuoka suggests that elliptical cross section tokamaks with aspect ratio R/a = 3.2 and with elongation κ = 2.6 are unstable to a splitting (m = 2, n = 0) instability for plasma $\beta > 5\%$, and that κ {>=} 4.0 plasmas are unstable to splitting for β {¿ =} 1%. We have tried to reproduce these results using the MHD evolution code TSC, but find these configurations to be stable, not even near a stability boundary. Even a κ = 3.7 plasma with β = 23.0% is stable to the splitting mode. However, the addition of pinching coils at the waist will cause the plasma to split if the current in these coils exceeds a critical value I_c which decreases with increasing β. 8 refs., 11 figs., 1 tab.

35428 (TRITA-PFU–88-04) **Timedependent pinchmodel for current and temperature in Extrap.** Bonnevier, B. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research. Jun 1988. 13p. Order Number DE89617658/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A model of the build up of current and temperature of a pinch obeying the Bennet relation is presented. It is a zero-dimensional time-dependent model, employing an energy equation and assuming pressure balance. It describes the interaction of the external circuit with the toroidal plasma through the toroidal current, and estimates the driving voltage required for an Extrap pinch. Programming the discharge current may be required, so that the pinch-separatrix radius ratio is maintained within stability limits.

35429 (TRITA-PFU–88-05) **Vacuum magnetic fields in the toroidal Extrap device.** Brunsell, P.; Li Jin. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research. Aug 1988. 57p. Order Number DE89617634/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

A model of the ring system of the Extrap T1 device is developed. The model is used for calculating the distribution of poloidal flux and the vacuum magnetic field in the device. Numerical data from the model are compared with measurements. Effects of the vacuum vessel resistivity are discussed qualitatively. Measured profiles of the toroidal and the vertical bias magnetic field in the device are presented. Time constants of the vacuum vessel and the ring structure are estimated. (authors).

35430 (TRITA-PFU–88-06) **Large Debye distance effects in a homogeneous plasma.** Scheffel, J.; Lehnert, B. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research. Sep 1988. 34p. Order Number DE89617675/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The classical phenomenon of electron plasma oscillations has been investigated form new aspects. The applicability of standard normal mode analysis of plasma perturbations has been judged from comparisons with exact, numerical calculations. We consider both Maxwellian and non-Maxwellian velocity distribution. Emphasis is on perturbations for which $\alpha\lambda_D$ is of order unity, where α denotes wave number and λ_D Debye distance. The corresponding Large Debye Distance (LDD) damping is found to substantially dominate over Landau damping. This limits the validity of normal mode analysis of non-Maxwellian distributions. The physics of LDD damping and its close connection to Large Larmor Radius (LLR) damping is discussed. A major finding concerns perturbations of plasmas with non-Maxwellian, bump-in-tail, velocity distribution functions $f_0(w)$. For sufficiently large $\alpha\ \lambda_D$ (of order unity) the plasma responds by damping perturbations which are initially unstable in the Landau sense, i.e. with phase velocities initially in the interval where $df_0/dw >=0$. It is found that the plasma responds through shifting the phase velocity above the upper velocity limit of this interval. This is shown to be due to a resonance with the drifting electrons of the bump, and explains the Penrose criterion (authors).

35431 (UCRL–100574) **Pulsed lower-hybrid wave penetration in reactor plasmas.** Cohen, R.H.; Bonoli, P.T.; Porkolab, M.; Rognlien, T.D. Lawrence Livermore National Lab., CA (USA). 1989. 4p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-8905120–13: 8. topical conference on radio frequency power in plasmas, Irvine, California, USA, 1-3 May 1989). Order Number DE89013260/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Providing lower-hybrid power in short, intense (GW) pulses allows enhanced wave penetration in reactor-grade plasmas. We examine nonlinear absorption, ray propagation, and parametric instability of the intense pulses. We find that simultaneously achieving good penetration while avoiding parametric instabilities is possible, but imposes restrictions on the peak power density, pulse duration, and/or rf spot shape. In particular, power launched in narrow strips, elongated along the field direction, is desired. 4 refs., 4 figs.

35432 (UCRL–100575) **Optimum launching of electron-cyclotron power for localized current drive in a hot tokamak.** Smith, G.R. Lawrence Livermore National Lab., CA (USA). May 1989. 4p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-8905120–15: 8. topical conference on radio frequency power in plasmas, Irvine, California, USA, 1-3 May 1989). Order Number DE89012935/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Optimum launch parameters are determined for localized electron-cyclotron current drive near the magnetic axis and the q=2 surface by solving several minimization problems. For central current drive, equatorial and bottom launch are compared. Localized current drive near q=2 is studied for equatorial launch and for an alternative outside launch geometry that may be better for suppressing tearing modes and controlling disruptions. 6 refs., 2 figs.

35433 (UCRL–100591) **Modeling of LH current drive in self-consistent elongated tokamak MHD equilibria.** Blackfield, D.T.; Devoto, R.S.; Fenstermacher, M.E.; Bonoli, P.T.; Porkolab, M.; Yugo, J. Lawrence Livermore National Lab., CA (USA). 9 May 1989. 4p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-8905120–14: 8. topical conference on radio frequency power in plasmas, Irvine, California, USA, 1-3 May 1989). Order Number DE89013263/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Calculations of non-inductive current drive typically have been used with model MHD equilibria which are independently generated from an assumed toroidal current profile or from a fit to an experiment. Such a method can lead to serious errors since the driven current can dramatically alter the equilibrium and changes in the equilibrium B-fields can dramatically alter the current drive. The latter effect is quite pronounced in LH current drive where the ray trajectories are sensitive to the local values of the magnetic shear and the density gradient. In order to overcome these problems, we have modified a LH simulation code to accommodate elongated plasmas with numerically generated equilibria. The new LH module has been added to the ACCOME code which solves for current drive by neutral beams, electric fields, and bootstrap effects in a self-consistent 2-D equilibrium. We briefly describe the model in the next section and then present results of a study of LH current drive in ITER. 2 refs., 6 figs., 2 tabs.

35434 **Magnetic-field fluctuations from 0 to 26 Hz observed from a polar-orbiting satellite.** Erlandson, R.E. (Applied Physics Lab., The Johns Hopkins Univ., Johns Hopkins Road, Laurel, MD (US)); Zanetti, L.J.; Potemra, T.A. *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA)*, 17(2): 196-200 (Apr 1989).

The polar orbit of the Viking satellite provides a unique opportunity to obtain observations of magnetic fluctuations at mid-altitudes on the dayside of the magnetosphere and in the polar-cusp region. One type of magnetic-field fluctuation, observed in the dayside magnetosphere, was Pc 1 waves. Pc 1 waves are in the electromagnetic ion-cyclotron mode and are generated by anisotropies in energetic ion distributions. The waves are thought to be generated near the equator and to propagate large distances along magnetic-field lines. Most observations of Pc 1 waves have been obtained near the equator using geosynchronous satellites and on the surface of the earth. The Viking observations provide an opportunity to observe Pc 1 waves at mid-latitudes above the ionosphere and to determine the spectral structure and polarization of the waves. ULF/ELF broadband noise represents a second type of magnetic fluctuation acquired by Viking. This type of magnetic fluctuation was observed at high latitudes near the polar cusp and may be useful in the identification of polar-cusp boundaries. Thirdly, electromagnetic ion-cyclotron waves have also been observed in the polar-cusp region. These waves occur only during an unusually high level of magnetic activity and appear to be generated locally.

35435 Excitation of linearly stable waves in a multispecies plasma. Roth, I. (Space Sciences Lab., Univ. of California, Berkeley, Berkeley, CA (US)); Hudson, M.K. *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA),* 17(2): 201-204 (Apr 1989).

Excitation of electrostatic modes as a result of the injection of an argon beam into a multispecies plasma is investigated. It is shown that a warm beam excites waves with phase velocities in the linearly stable regime. The excitation mechanism is due to thermal fluctuations, which are enhanced by the argon beam. The importance of these modes for experimental observations and particle diffusion is discussed.

35436 The role of dust particles with large gyroradii in the 2/3 fall-down process. Azar, M.J. (Dept. of Physics, Univ. of California, San Diego, La Jolla, CA (US)); Thompson, W.B. *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA),* 17(2): 228-237 (Apr 1989).

The authors consider the Alfven-Arrhenius fall-down process and propose a mechanism whereby the Rosseland electric field (the field needed to maintain quasi-neutrality) may be responsible for the capture and confinement of large gyroradius dust particles within a plasma shell stratified along the direction of the magnetic-field lines. For these particles, the effect of the magnetic force is rather weak, and they move with a constant z component of the angular momentum in a one-dimensional equivalent potential (gravitational plus centrifugal). This has a maximum at the equator and a minimum at the 2/3 points, i.e., the points where the field-aligned components of the gravitational and centrifugal forces balance. Under suitable initial conditions the authors show that these are points of maximum dust density and minimum plasma density. The authors, therefore, expect the plasma-planetisemal transition to take place at the 2/3 points in accordance with the Alfven-Arrhenius mechanism. Finally, they show that the fraction of infalling dust particles that can accrete onto the equatorial plane via the Alfven-Arrhenius and Rosseland mechanisms is rather small ($- (L/R_e) << 1$), L being the thickness of the plasma shell, and R_e, a characteristic length scale of the field line.

35437 Anode spot plasma torch. Ghaemi, M.S. (Univ. of Iowa, Iowa City, IA (US)); Seyhoonzadeh, A.; Lim, W.B.; Tao, J.; Cooney, J.; Forsling, P.; Bailey, M.; Lonngren, K.E. *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA),* 17(2): 342-343 (Apr 1989).

With acetone as a catalyst in an argon discharge plasma, it is observed that localized high-density anode spots can be formed at sharp edges in the plasma. By placing the sharp edge on top of a small permanent magnet, the current which is attracted to the spot can locally burn a piece of metal beneath the sharp edge.

35438 Long-term development of elongated tokamak plasmas after failure of feedback stabilization. Jensen, T. H. (General Atomics, P.O. Box 85608, San Diego, California 92138(US)); Chu, M. S. *Physics of Fluids B: Plasma Physics (USA),* 1(7): 1545-1547 (Jul 1989).

Tokamaks with cross sections elongated in the axial direction are subject toan instability that basically involves an axial displacement of the plasma. Thisinstability can be stabilized by a feedback circuit. This Brief Communicationdeals with the long-term development of the plasma after a failure of thefeedback circuit during an otherwise normal discharge. The short-term (linear)development of such a plasma was considered earlier by Yokomizo *et*. [Nucl. Fusion **23**, 1593 (**1983**)]. During thelong-term development, the plasma makes intimate contact with the surroundingconducting shell (vacuum vessel). The timescale for this development is longcompared to the Alfven time, so that it is appropriate to consider the plasmain a magnetohydrodynamic (MHD) equlibrium which evolves slowly. This equilibrium(assumed axisymmetric) is unusual in that currents and forces are exchangedbetween the shell and the plasma. The dynamics of the equilibrium is determinedby Ohmic dissipation associated with the plasma currents and the toroidal andpoloidal currents of the shell. For a "typical" large tokamak, it is foundthat dissipation in the shell may dominate. Modeling of such long-termdevelopment may be important because the forces acting on the shell due to theshell currents may be large. It may be important that dissipation in the plasmacan be neglected or that it is small in such modeling since the uncertainty ofthe results, due to uncertainties associated with the plasma, is absent or maybe small.

35439 2D Fokker-Planck simulations of short-pulse laser-plasma interactions. Rickard, G. J. (Blackett Laboratory, Imperial College of Science and Technology, Prince Consort Road, London SW7 2BZ, United Kingdom(GB)); Bell, A. R.; Epperlein, E. M. *Physical Review Letters (USA),* 62(23): 2687-2690 (5 Jun 1989).

The Fokker-Planck equation for electrons in two spatial dimensions in thediffusive approximation is solved by the alternating direction implicit method.The ions are modeled hydrodynamically. We discuss simulations of short-pulse(3.4 psec) experiments at a wavelength of 1/4 μm. We findsubstantial departures from Spitzer heat flow in both magnitude *and*direction. As a result we find that, even for 10-μm-diam laser spots,the heat flow into the target is not strongly reduced by energy escaping alongthe target surface.

35440 Competition between the stimulated Raman and Brillouin scattering instabilities in 0.35-μm irradiated CH foil targets. Baldis, H. A. (National Research Council, Ottawa, Ontario, Canada K1A 0R6(US)); Young, P. E.; Drake, R. P.; Kruer, W. L.; Estabrook, K.; Williams, E. A.; Johnston, T. W. *Physical Review Letters (USA),* 62(24): 2829-2832 (12 Jun 1989). DOE Contract W-7405-ENG-48.

The first experimental evidence of modification of the scattered light spectrum of stimulated Raman scattering due to the presence of significant levels of stimulated Brillouin scattering is presented. The observed spectrum, as well as the spectral *Raman gap* observed in this and other experiments, is explained in terms of the modified growth of Raman in the presence of ion waves.

35441 (ACIESP–60(v.3), pp. 314-319) **Random distribution of magnetic field lines in tokamaks.** Heller, M.V. (Sao Paulo Univ., SP (Brazil). Inst. de Fisica); Caldas, I.L. Academia de Ciencias do Estado de Sao Paulo, SP (Brazil). 1988. (CONF-8808156–: 6. Japan-Brazil symposium on science and technology, Sao Paulo, Brazil, 10-12 Aug 1988). In *Proceedings of the 6. Japan-Brazil Symposium on Science and Technology.* Order Number DE89612371/JAW. Available from NTIS (US Sales Only), PC A17/MF A01 - OSTI; INIS.

Magnetic surface break-up caused by overlapping of magnetic islands, created by resonant helical windings and by plasma oscillations, is investigated integrating numerically the differential equations for the magnetic field lines.

35442 (CEA-CONF–9763) **Problems in tritium handling in fusion reactors studies at CEA within the european effort.** Roth, E.; Hircq, B.; Fidelle, J.P. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Technologique et de Developpement Industriel (IRDI). 1988. 26p.

(CONF-8806374–: Workshop on ceramic materials for fusion, Tokyo, Japan, Jun 1988). Order Number DE89781430/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Technological aspects of tritium handling linked with the operation of a fusion reactor are reviewed. Tritium storage is discussed from the point of view of the volumme of a single unit and of the nature of the metal bed. Purification of tritium and recovery from tritiated compounds is studied, including conversion from water to the gaseous form. Interaction of tritium and structural materials is developed from the point of view of corrosion, embrittlement, permeation. A flowsheet displaying a conception of a reference tritium circuit is proposed, and consideration is given to specifications of large components, namely pumps and gatevalves for tritium circuits.

35443 (CONF-8904215–3) **Desorption activation energies for tritium release from ceramic breeders.** Kopasz, J.P.; Fischer, A.K.; Johnson, C.E. Argonne National Lab., IL (USA). 1989. 20p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. From Symposium on fabrication and properties of lithium ceramics; Indianapolis, Indiana, USA; 24-26 Apr 1989. Order Number DE89014667/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Desorption has been identified as an important process in determining the kinetics of tritium release from ceramic tritium breeder materials considered for use in fusion reactors. However, details of the desorption of tritium from ceramic materials are mostly unknown. Models of tritium release have treated desorption as a simple process with desorption occurring from one type of site with one activation energy. Recent measurements of the rates of water uptake by $LiAlO_2$, and evolution of water from $LiAlO_2$ exposed to water, indicate the presence of multiple types of desorption sites. Estimates of desorption activation energies were obtained from these data and from data in the literature suggesting multiple types of desorption sites for desorption from Li_2O and Li_4SiO_4. 15 refs., 4 figs.

35444 (DOE/DP/40131–02) **Technical progress report for measurement of ambipolar potential of laser fusion targets: Bi-monthly report, December 1, 1980–January 31, 1981.** Stringfield, R. Physics International Co., San Leandro, CA (USA). 28 Feb 1981. 8p. Sponsored by DOE Defense Programs. DOE Contract AC08-80DP40131. Order Number DE89013017/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The general design of this spectrometer has been completed. A meeting was held at the University of Rochester to review the experiment. The delay in the completion of the spectrometer by ARACOR is expected to be 4 to 5 weeks.

35445 (DOE/DP/40131–04) **Technical progress report for measurement of ambipolar laser fusion targets: Bi-monthly report, April 1, 1981–May 31, 1981.** Stringfield, R. Physics International Co., San Leandro, CA (USA). 30 Jun 1981. 9p. Sponsored by DOE Defense Programs. DOE Contract AC08-80DP40131. Order Number DE89013019/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Assembly of the spectrometer hardware and electronics is underway. The microballoons for the main experiment have been chosen. Discussions were held with personnel at the Stanford Tandem Van de Graaff Facility in preparation for calibration of the spectrometer.

35446 (ENEA-RT-FUS–88-10, pp. 5-9) **Conductor design for NET machine.** Bruzzese, B. (Associazione EURATOM-ENEA sulla Fusione, Frascati (Italy)); Catitti, A.; Cerreta, R.; Della Corte, A.; Pasotti, G.; Ricci, M.V.; Sacchetti, N.; Spadoni, M. ENEA, Rome (Italy). 1988. (CONF-880736–: 12. international cryogenic engineering conference and exhibition, Southampton, UK, 12-15 Jul 1988). In *Contributions to the 12th. International Cryogenic Engineering Conference. Southampton, 12-15 July 1988.* Order Number DE89612427/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

As the present NET specifications call for a toroidal magnetic field of about 5 T on the plasma axis the geometry of the TF coils system will require a maximum magnetic field on the conductor of about 11 T. A superconducting magnet system fulfilling these conditions can be designed on the basis of the present technology choosing one of the two following solutions: (1) a Nb-Ti conductor cooled by means of pressurized superfluid helium at 1.8 K; (2) an A-15 based conductor cooled by liquid Helium at temperatures around 4.5 K.

35447 (IAEA-R–2927-F) **Laboratory scale development of coating for improving characteristics of candidate materials for fusion reactor. Final report for the period 1 October 1981 - 30 November 1988.** Agarwala, R.P. Bhabha Atomic Research Centre, Bombay (India). Chemistry Div.; International Atomic Energy Agency, Vienna (Austria). Jan 1989. 104p. Order Number DE89617686/JAW. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

Application of coatings of refractory low atomic number materials on to different components of Tokamak type controlled thermonuclear reactor are expected to provide a degree of design flexibility. The project envisages to deal with the challenging problem on laboratory scale. Coatings investigated include carbon, beryllium, boron, titanium carbide and alumina and substrates chosen have been 304, 316 stainless steels, monel-400, molybdenum, copper, graphite, etc. For their deposition, different techniques (e.g. evaporation, sputtering and their different variants) have been tried, appropriate ones chosen and their parameters optimized. The coating composition has been analyzed using X-ray diffraction (XRD), Auger electron spectroscopy (AES), X-ray photoelectron spectroscopy (XPS), Rutherford backscattering analysis (RBS) and secondary ions mass spectroscopy (SIMS). Surface morphology has been studied using scanning electron microscopy (SEM). Sebastian coating adherence tester has been used for adhesion measurement and Wilson's Tukon microhardness tester for their microhardness measurement. The coatings have been subjected to pulses from YAG laser to evaluate their thermal cycling behaviour. Deuterium ion bombardment (Energy: 20-120 keV; doses: 10^{19}-$9.3x10^{20}$ ions/cm^2) behaviour has also been studied. In general, adherent and hard coatings capable of withstanding thermal cycling could be deposited. Out of the coatings studied, titanium carbide shows best results. The following pages are reprints and not mircrofiched: p. 25-32, 39-41, 57-81. Bibliographic description is on page 13.

35448 (INIS-mf–11454, pp. 63-65) **Cryomagnetic systems for plasma heating in tokamaks.** Chovanec, F. (Slovenska Akademia Ved, Bratislava (Czechoslovakia). Elektrotechnicky Ustav); Kokavec, J.; Krempasky, I.; Usak, P.; Polak, M.; Jansak, L. Ceskoslovenska Vedeckotechnicka Spolecnost, Usti nad Labem (Czechoslovakia). Dum Techniky. Apr 1988. (In Slovak). (CONF-8804279–: Cryogenics '88, Usti nad Labem, Czechoslovakia, 19-21 Apr 1988). In *Cryogenics '88.* Order Number DE89617941/JAW. Available from NTIS (US Sales Only), PC A10/MF A01 - OSTI; INIS.

Cryomagnetic systems for gyrotron plasma heating in tokamaks were designed and tested. The systems consists of superconducting split pair coils providing a 5 T magnetic field with a defined axial field profile, correcting coils, helium cryostats and computer controlled power supply units. Presented are the design, construction and test results of a number of systems. (author). 2 figs.

35449 (INIS-mf–11456, pp. 131-136) **Thermonuclear reactions.** Kopecky, V. (Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu); Zacek, F. Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

Present (1986) state of the art of the world thermonuclear research is briefly surveyed. During the last three decades, plasma parameters in experimental devices are slowly but steadily approaching the limit of the break-even given by the Lawson criterion. Both the magnetic and inertial confinement schemes are intensively investigated. Among various alternative ways of magnetic confinement, the decisive proof of feasibility of the controlled fusion is expected from the new generation tokamaks. In the last period, substantial progress was achieved in the methods of additional plasma heating (pellet and neutral beam injection and high-frequency heating). Also encouraging results on the non-inductive current drive were obtained. The main results of experiments on

large tokamaks are recapitulated and further prospects of international cooperation discussed. The Czechoslovak contributions in the field in the question are mentioned. (J.V.). 3 figs., 1 tab., 12 refs.

35450 (INIS-mf–11456, pp. 447-450) **Polarization experiments in fusion reactions of light nuclei.** Bem, P. (Ceskoslovenska Akademie Ved, Rez (Czechoslovakia). Ustav Jaderne Fyziky). Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Czech). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

The present research activity of the Department of Nuclear Reactions, Czechoslovak Institute of Nuclear Physics, aims at studying the role of spin orientation in fusion reactions of light nuclei at energies close to the reaction threshold. The polarization effects might be of great importance especially in connection with the possibility of controlling the reactivity of a spin-polarized plasma. Detailed knowledge of the fusion reaction kinetics in indispensable also for the practical application of muon-catalyzed fusion. For experimental investigation of contributions of higher-order partial waves in reactions of polarized deuterons on a tritium target, a complex experimental apparatus was set up. Simultaneously, a sophisticated method of theoretical analysis of experimental data was developed. The latter was tested on the results of the Los Alamos experiment with polarized deuterons. (J.V.). 4 figs., 8 refs.

35451 (JAERI-M–88-241) **Experiments on D-T neutron source characteristics of an FNS high speed water cooled target.** Ikeda, Yujiro; Oyama, Yukio; Fukahori, Tokio; Maekawa, Hiroshi; Nakamura, Tomoo. Japan Atomic Energy Research Inst., Tokyo (Japan). Dec 1988. 46p. (In Japanese). Order Number DE89778090/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The D-T neutron source is essential for the fusion neutronics experiments and it is of importance to characterize the source conditions in order to perform the experiment as well as analysis with high accuracy. A fast water cooled D-T target system at the end of the 80deg beam line of FNS accelerator was installed for the fusion blanket integral experiments. The target assembly has a rather complex and tight structure in order to reduce high heat production due to high incident d^+ beam current at the target position. It is expected that the target structure influences the neutron spectrum and angular distributions of the neutrons emitted from the assembly. Prior to successive blanket neutronics experiments, measurements have been carried out on the source characteristics. The angular distribution of the neutron fluxes on horizontal, vertical and axial planes were measured with the foil activation technique. The angular distribution was also measured by an NE213 scintillation counter using a dual rotatable deck. The angles dependent neutron spectra around the target were obtained with TOF technique. Experimental results were discussed on the basis of the nuclear reaction kinematics for $^3T(d,n)^4He$ by taking the target structure into account. As a result, it was proved that the structure of the assembly affects significantly the neutron emission character. The experimental data obtained will be used for verification of analytical calculation of D-T source.

35452 (JAERI-M–88-246) **Results of pellet injection experiments in JT-60.** Yoshino, Ryuji. Japan Atomic Energy Research Inst., Tokyo (Japan). Dec 1988. 17p. Order Number DE89778091/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

This paper presents recent experimental results of pellet injection to joule plasma and heating experiments of pellet injected plasma by NB, LHRF, and ICRF. Especially clear improvement in confinement has been obtained in NB heating of pellet injected plasma up to 10-15 MW in Ip = 1.5-1.8 MA lower-side X-point divertor configuration.

35453 (JAERI-M–88-251) **Safety analysis and evaluation of the next fusion device.** Kobayashi, Shigetada; Honda, Tsutomu; Ohmura, Hiroshi; Kawai, Masayoshi; Shimizu, Takeshi; Yamaoka, Mitsuaki; Nakahara, Katsuhiko; Seki, Yasushi. Japan Atomic Energy Research Inst., Tokyo (Japan). Dec 1988. 308p. (In Japanese). Order Number DE89778110/JAW. Available from NTIS (US Sales Only), PC A14/MF A01.

As a part of safety evaluation, a probabilistic risk assessment (PRA) has been attempted for the Next Fusion Device system. Among the various events related to safety, a number of representative events have been selected for assessment, from the events in normal operation state, repair and maintenance state and accidental state. In the first chapter, in order to conduct the probabilistic risk assessment of the whole Fusion Experimental Reactor (FER), the data base required for the analysis was investigated in 1.1, the results on the failure mode and effects analysis (FMEA), accident sequence, radioactive inventory leakage flow path, event tree analysis (ETA) and fault tree analysis (FTA) were summarized in 1.2 to 1.5, respectively. Based on these results, accident initiating events were evaluated in 1.6, and overall risk was assessed in 1.7 and the tasks for the future were summarized in 1.8. It is important to analyze and evaluate various events during normal operations, repair and maintenance and accidents. However, due to the large uncertainties in the modeling of phenomena or the data base, there are many events for which realistic analyses are difficult. Three such events were selected and studied in chapter two. In 2.1, the temperature rise in the reactor structure after the Loss-of-Coolant-Accident caused by the decay heat under various heat removal conditions were investigated. In 2.2, the radiation dose of personnel during repair and maintenance period caused by the release of activated dust were estimated. Lastly, in 2.3 tritium behavior in the stainless steel first wall and graphite armour were studied.

35454 (JAERI-M–88-253) **Hydrogen isotope separation study with TSTA cryogenic distillation system. Single column experimet with D-T system.** Yamanishi, Toshihiko; Yoshida, Hiroshi; Naito, Taisei; Hirata, Shingo; Sherman, R.H.; Bartlit, J.R.; Anderson, J.L. Japan Atomic Energy Research Inst., Tokyo (Japan). Dec 1988. 24p. Order Number DE89778112/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

An experimental study of cryogenic distillation was performed with deuterium-tritium (60 g of tritium) by using one column in the TSTA (Tritium System Test Assembly) isotope separation system. The overall HETP values were 4 ~ 5.7 cm for the total reflux mode and 5 ~ 5.5 cm for the total recycle mode. The values for both operation modes increased slightly with the vapour velocity. No effect of the reflux ratio on the overall HETP was observed. The HETP depended little on the column height. The dynamic column behaviour predicted by mathematical simulation modeling was in qualitative agreement with the experimental observation.

35455 (JAERI-M–88-254) **Hydrogen isotope separation study with the TSTA cryogenic distillation system. Two-column experiment with H-D-T.** Yamanishi, Toshihiko; Yoshida, Hiroshi; Fukui, Hiroshi; Naito, Taisei; Hirata, Shingo; Sherman, R.H.; Gruetzmacher, K.M.; Bartlit, J.R.; Anderson, J.L. Japan Atomic Energy Research Inst., Tokyo (Japan). Dec 1988. 33p. Order Number DE89778093/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Cryogenic distillation cascade experiments were performed using two columns in the TSTA (Tritium System Test Assembly) isotope separation system with H-D-T. Both columns, differing in packed height and inner diameter, confirmed the overall HETP values were approximately 5 cm and relatively constant within the column. The dynamic behaviour of the cascade was also discussed, and a basic control method was proposed.

35456 (JAERI-M–88-268) **Bibliographic data on surface processes in particle-material interactions published in Japan, 1986-1987.** Gesi, Kazuo; Nagai, Siro; Ozawa, Kunio. Japan Atomic Energy Research Inst., Tokyo (Japan). Jan 1989. 133p. Order Number DE89778129/JAW. Available from NTIS (US Sales Only), PC A07/MF A01.

Data on surface processes in particle-material interactions for fusion technology have been surveyed and collected over 24 publications which have been published during January, 1986 - December, 1987 in Japan. The bibliographic data in the form of data sheets were sent to the International Data Center in IAEA. This report presents 97 selected data sheets arranged in the order of codes of relevant phenomena. A list of literature is given. (author) 159 refs.

35457 (LBL–25432) **Heavy Ion Fusion Accelerator Research (HIFAR) year-end report, October 1, 1987–March 31, 1988.** Lawrence Berkeley Lab., CA (USA). Jun 1988. 28p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (HIFAN–397). Order Number DE89013417/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The basic objective of the Heavy Ion Fusion Accelerator Research (HIFAR) program is to assess the suitability of heavy ion accelerators as igniters for Inertial Confinement Fusion (ICF). A specific accelerator technology, the induction linac, has been studied at Lawrence Berkeley Laboratory and has reached the point at which its viability for ICF applications can be assessed over the next few years. The HIFAR program addresses the generation of high-power, high-brightness beams of heavy ions, the understanding of the scaling laws in this novel physics regime, and the validation of new accelerator strategies, to cut costs. Key elements to be addressed include: beam quality limits set by transverse and longitudinal beam physics; development of induction accelerating modules, and multiple-beam hardware, at affordable costs; acceleration of multiple beams with current amplification – both new features in a linac – without significant dilution of the optical quality of beams; and final bunching, transport, and accurate focusing on a small target.

35458 (LBL–25985) **The Berkeley 2 MV heavy ion fusion injector.** Rutkowski, H.L.; Faltens, A.; Vanecek, D.; Pike, C.; Brodzik, D.; Johnson, R.M.; Meyer, E.A.; Humphries, S. Jr. Lawrence Berkeley Lab., CA (USA). Mar 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-890335–190: 13. particle accelerator conference, Chicago, Illinois, USA, 20-23 Mar 1989). Order Number DE89012980/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This paper is an update on the development of the 500 mA per beam sixteen beam injector being built at LBL. An inductively graded Marx bank provides the acceleration potential on the electrostatic column. A carbon arc source provides the pulsed current for the injector. We report recent results on extracted beam parameters, column performance, the generator performance, and system design changes. The carbon ion beam is diagnosed with Faraday cups and with a double slit emittance measurement system. Controls for the final machine are also discussed. 7 refs., 4 figs.

35459 (LBL–25989) **Report on the symposium on heavy ion inertial fusion, Darmstadt, Germany, June 1988.** Keefe, D. Lawrence Berkeley Lab., CA (USA). Mar 1989. 5p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-890335–195: 13. particle accelerator conference, Chicago, Illinois, USA, 20-23 Mar 1989). Order Number DE89013694/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The Symposium hosted by GSI attracted about 130 participants from 12 countries. Progress in developments for high-current low-emittance heavy ion beams in both rf linacs and induction linacs has been reported. Significant current amplification in a proof-of-principle multiple-beam induction linac was described. Experimental results from France and Germany show enhanced energy deposition by low-energy heavy ions in hot dense plasmas. The GSI heavy ion synchrotron (SIS) and the experimental storage ring (ESR) are under construction; when completed, the beams will be used for experiments to study hot dense plasma phenomena. 28 refs., 6 figs.

35460 (LBL–25995) **Acceleration units for the Induction Linac Systems Experiment (ILSE).** Faltens, A.; Brady, V.; Brodzik, D.; Hansen, L.; Laslett, L.J.; Mukherjee, S.; Bubp, D.; Ravenscroft, D.; Reginato, L. Lawrence Berkeley Lab., CA (USA). Mar 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-890335–194: 13. particle accelerator conference, Chicago, Illinois, USA, 20-23 Mar 1989;HIFAN–409). Order Number DE89013688/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The design of a high current heavy ion induction linac driver for inertial confinement fusion is optimized by adjusting the acceleration units along the length of the accelerator to match the beam current, energy, and pulse duration at any location. At the low energy end of the machine the optimum is a large number of electrostatically focused parallel beamlets, whereas at higher energies the optimum is a smaller number of magnetically focused beams. ILSE parallels this strategy by using 16 electrostatically focused beamlets at the low end followed by 4 magnetically focused beams after beam combining. 3 refs., 2 figs.

35461 (LBL–25998) **Engineering study of a 10 MeV heavy ion linear accelerator.** Fong, C.G.; Fessenden, T.J.; Fulton, R.L.; Keefe, D. Lawrence Berkeley Lab., CA (USA). Mar 1989. 4p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-890335–188: 13. particle accelerator conference, Chicago, Illinois, USA, 20-23 Mar 1989;HIFAN–408). Order Number DE89012999/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

LBL's Heavy Ion Fusion Accelerator Research group has completed the engineering study of the Induction Linac Systems Experiment (ILSE). ILSE will address nearly all accelerator physics issues of a scaled heavy ion induction linac inertial fusion pellet driver. Designed as a series of subsystem experiments, ILSE will accelerate 16 parallel carbon ion beams from a 2 MeV injector presently under development to 10 MeV at one μsec. This overview paper will present the physics and engineering requirements and describe conceptual design approaches for building ILSE. Major ILSE subsystems consist of electrostatic focusing quadrupole matching and accelerating sections, a 16 to 4 beam transverse combining section, a 4 beam magnetic focusing quadrupole accelerating section, a single beam 180 degree bend section, a drift compression section and a final focus and target chamber. These subsystems are the subject of accompanying papers. Also discussed are vacuum and alignment, diagnostics/data acquisition and controls, key conclusions and plans for further development. 10 refs., 4 figs., 1 tab.

35462 (LBL–26167) **2-D emittance equation with acceleration and compression.** Hahn, K.D.; Smith, L. Lawrence Berkeley Lab., CA (USA). Oct 1988. 7p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (HIFAN–415). Order Number DE89012860/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Since both acceleration and compression are required for an Inertial Fusion Driver, the understanding of their effect on the beam quality, emittance, is important. This report attempts to generalize the usual emittance formula for the drifting beam to include these effects. The derivation of the 2-D emittance equation is carried out and a comparison with the particle code results is given. The 2-D emittance at a given axial location is reasonable to consider for a long beam, particularly with velocity tilt; transverse emittance averaged over the entire bunch is not a useful quantity. 6 refs., 2 figs., 1 tab.

35463 (LBL–26482) **Heavy Ion Fusion Accelerator Research (HIFAR) year-end report, April 1–September 30, 1988.** Lawrence Berkeley Lab., CA (USA). Dec 1988. 24p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (HIFAN–419). Order Number DE89012858/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The basic objective of the Heavy Ion Fusion Accelerator Research (HIFAR) program is to assess the suitability of heavy ion accelerators as igniters for Inertial Confinement Fusion (ICF). A specific accelerator technology, the induction linac, has been studied at the Lawrence Berkeley Laboratory and has reached the point at which its viability for ICF applications can be assessed over the next few years. The HIFAR program addresses the generation of high power, high-brightness beams of heavy ions, the understanding of the scaling laws in this novel physics regime, and the validation of new accelerator strategies, to cut costs. Key elements to be addressed include: beam quality limits set by transverse and longitudinal beam physics; development of induction accelerating modules, and multiple-beam hardware, at affordable costs; acceleration of multiple beams with current amplification –both new features in a linac – without significant dilution of the optical quality of the beams; final bunching, transport, and accurate focusing on a small target.

35464 (SAND–88-3238C) **Improvements in synchronization of the PBFA-II accelerator with laser-triggered gas switches.** Wilson, J.M.; Donovan, G.L. Sandia National Labs., Albuquerque, NM (USA). 1989. 14p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890665–8: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, California, USA, 12-14 Jun 1989). Order Number DE89013067/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

PBFA II is a 36-module ion accelerator built by Sandia National Laboratories for inertial confinement fusion studies. In the water-filled, pulse-forming section of the accelerator, each module is fitted with a 5.0-MV, SF_6-filled gas switch located between an intermediate storage capacitor and the first pulse forming line. The intermediate storage capacitor is charged to 4.8-5.0 MV in approximately 950 ns by a Marx generator located in the oil section of the machine. The gas switch is required to close on command and transfer the stored capacitor energy to Line 1, a coaxial transmission line of 100 ns two-way electrical length. The switches are triggered by a single 3.0-J KrF laser located under the accelerator; a complex beam-splitting/distribution system is used to deliver 20-40 mJ, 35 ns FWHM beamlets to the individual switches. In order to properly drive the experimental load on PBFA II, equal-amplitude pulses must be produced by each pulse-forming line with a module-to-module first-to-last timing difference (spread) of less than 20 ns. The gas switch, the last command-triggered point in the module, is the major determinant of total machine synchrony. To compensate for the additional (<3 ns) rms jitter of three sets of self-breaking water switches downstream of the gas switches, first-to-last timing spread of the 36 gas switches must be less than 15 ns. 5 refs., 6 figs.

35465 (SAND–89-0091C) **Improved core insulation schemes for multi-terawatt magnetic switches.** Harjes, H.C.; Mann, G.A.; Neau, E.L.; Morgan, F.A. Sandia National Labs., Albuquerque, NM (USA). 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890665–21: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, California, USA, 12-14 Jun 1989). Order Number DE89013814/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The operation of multi-terawatt magnetic switches was successfully demonstrated in the CometII pulsed power module in 1984. Those switches, however, had short lifetimes (<100 shots) due to inter-lamina dielectric breakdowns at electric-field levels far lower than expected. Since then, experiments have been conducted to gain an understanding of this problem. We found that the breakdowns occurred at low electric-field levels, because the thin dielectric film (Mylar) was abrasively degraded by the relatively rough surface of the magnetic tape (Metglas) during the core winding process. This problem can be solved by modifying the Metglas surface before winding. A factor of 2 improvement in breakdown level, from .8 MV/cm to 1.6 MV/cm, has been demonstrated on the MSTF module (a Marx driven, 500 kV, 2 Ω, 50 ns PFN) in 18" OD switches wound with Electrodag coated Metglas (nominal coating thickness ~6 μm). Even better performance has been achieved in smaller scale tests with an electrophoretically applied plastic-coated Metglas. A description of these experiments and a discussion of the results will be presented. 7 refs., 10 figs., 1 tab.

35466 (SAND–89-0274C) **Ion sources for light-ion fusion.** Gerber, R.A.; Bieg, K.W.; Dreike, P.L.; McKay, P.F.; Pregenzer, A.L.; Tisone, G.C.; Woodworth, J.R. Sandia National Labs., Albuquerque, NM (USA). 1989. 38p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890703–3: International conference on ion sources, Berkeley, California, USA, 9-15 Jul 1989). Order Number DE89012639/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Light-ion drivers offer a potentially efficient and low-cost method to compress and heat an Inertial-Confinement Fusion (ICF) target. In order to produce a significant thermonuclear burn of the fuel, focused ion-beam intensities of 100 TW/cm^2 are required. The ion sources for these pulsed-power drivers should produce a single-ion species and should be capable of providing current-density levels up to 5 kA/cm^2, in pulse widths of 10 ns to 20 ns, at voltages up to several tens of megavolts. Most ion sources used in the past have produced multiple-ion species, including protons and heavier ions, such as carbon and oxygen. In the last few years there has been a substantial research effort to produce single-species sources. The major effort since 1983 has been directed towards developing a pure, high-current Li^+ source for the light-ion fusion accelerator, PBFA II. There are two types of ion sources being used for intense in-beam generation: passive sources, which are produced directly or indirectly by the diode voltage itself, and active sources, in which a preformed plasma is generated before the arrival of the power pulse. A survey of existing ion sources and those under development will be given. Emphasis will be given to the lithium-ion sources being developed at Sandia National Laboratories (SNL). 39 refs., 7 figs.

35467 (SAND–89-0276C) **Lithium fluoride ion source experiments on PBFA II.** Bieg, K.W.; Pregenzer, A.L.; Woodworth, J.R.; Lockner, T.R.; Johnson, D.J.; Gerber, R.A.; Bailey, J.E.; Kensek, R.P.; Leeper, R.J.; Maenchen, J.E. Sandia National Labs., Albuquerque, NM (USA). 1989. 16p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890703–6: International conference on ion sources, Berkeley, California, USA, 9-15 Jul 1989). Order Number DE89013562/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Lithium fluoride, field-enhanced ion source experiments are being performed on PBFA II. The source consists of a thin coating of LiF on a microscopically rough substrate. Diagnostics to measure ion beam energy, purity, and transport include electrical monitors, Faraday cups, nuclear activation, ion pinhole camera, Rutherford magnetic spectrograph, and shadowbox aperture array, With PBFA II operating at three-quarters energy, the source has produced 16 TW of ion power and 550 kJ of ion energy with 70% diode efficiency. Over 26 kJ of lithium beam energy has been focused to the diode center axis with a peak energy density of about 1.3 kJ/cm^2. PICDIAG simulations of the lithium focus indicate the intrinsic source divergence is about 45 mrad with a 20-μm-grade porous stainless steel substrate. 13 refs., 4 figs.

35468 (SAND–89-1458C) **PBFA II applied B-field ion diode proton beam characteristics.** Johnson, D.J.; Locknew, T.R.; Leeper, R.J.; Maenchen, J.E.; Mendel, C.W.; Rochau, G.E.; Stygar, W.A.; Coats, R.S.; Desjarlais, M.P.; Kensek, R.P. Sandia National Labs., Albuquerque, NM (USA). 1989. 15p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890665–17: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, California, USA, 12-14 Jun 1989). Order Number DE89014782/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

An applied B-field ion diode on PBFA II has produced a 17 TW proton beam for investigation of beam generation and transport physics pertinent to inertial confinement fusion experiments. Power was fed to the diode via two conical self-magnetically-insulated transmission lines that incorporated plasma opening switches. The diode utilized a pair of B-field coils in disc shaped cathodes to produce a 3 T axial B-field that insulated the 16 mm anode-cathode gap from electron loss. The 15-cm-radius anode was configured with a 5.5-cm-tall curved ion emitting region. A 2.6 MA ion beam originated from this region, was accelerated to 6 MV in the anode-cathode gap, and then transported ballistically toward the axis in a current neutralizing gas cell. The best transport (75%) occurred with narrow 5.5-cm-tall anode sources in which a 180 kJ proton beam was observed within 1.2 cm of the diode centerline. The FWHM of the beam focused at the centerline of the diode was 5 to 7 mm. This beam gave a peak proton power density of approximately 5 TW/cm^2. 12 refs., 8 figs.

35469 (SAND–89-1494C) **Theory, simulation, and experiment of a single module coax-to-parallel-plate transition for the transformer section of PBFA II.** Johnson, W.A.; Schneider, L.X.; Neau, E.L. Sandia National Labs., Albuquerque, NM (USA). 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890665–14: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, California, USA, 12-14 Jun 1989). Order Number DE89013493/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Techniques are being developed to gain understanding of energy transport efficiencies through changes in pulsed power transmission line geometries. These techniques are being applied to design study of the PBFA-II accelerator which has the goal of increasing the energy available for ICF experiments. Transverse electromagnetic (TEM) wave analysis yields a simple circuit model of the new coax-to- parallel-plate transition. This simple model gives insight into the dominant physics of the device and suggests design improvements that will lead to the desired energy efficiencies. Insights gained by this simple model are confirmed and refined by 3-dimensional, time dependent computer simulations with the SOS code and scale

model experiments. Simulations have predicted experimental results to high degree of accuracy which adds confidence in both the simulations and the scale model experiments. 1 ref., 11 figs., 1 tab.

35470 (UCRL–100012) **Passive optical losses in laser glass.** Caird, J.A.; Milanovich, F.P.; Nielsen, N.D.; Powell, H.T.; Marion, J.E.; Pertica, A.J.; Roe, J.N. Lawrence Livermore National Lab., CA (USA). 11 May 1989. 21p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890423–10: CLEO '89: conference on lasers and electro optics, Baltimore, Maryland, USA, 24-28 Apr 1989). Order Number DE89013784/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Background absorption, scattering, and stress-birefringence loss measurements are reported for phosphate laser glass amplifier media used in fusion and high average power laser systems. Typical background absorption and stress birefringence losses were found to be comparable, and on the order of 10^{-3} cm^{-1}. Scattering losses, on the other hand, were typically found to be more than an order of magnitude smaller. The results indicate that improvements in the cost/performance ratio can be achieved by reducing background absorption of birefringence, and possibly also through the use of cheaper polishing techniques. 6 refs.

35471 (INIS-GB–190) **UKAEA underlying research programme annual report. April 1987 - March 1988.** Mason, J.P. (ed.). UKAEA Harwell Lab. (UK). Financial Dept. Nov 1988. 167p. Order Number DE89620462/JAW. Available from NTIS (US Sales Only), PC A08/MF A01 - OSTI; INIS.

Work from all technical areas of the Authority's underlying research programme is described. This is typically in the form of an interim progress report for the year April 1987 to March 1988. The seventeen chapters report research into radiation damage, fracture studies, chemical effects at surfaces, surface physics and corrosion, fluid mechanics and heat transfer, nuclear studies, neutron beam studies, theoretical sciences, instrumentation, reactor physics and control, fabrication processes, laser isotope separation, nuclear fuel cycle studies, quantum electronics, radiological protection, and miscellaneous underlying research.

35472 (SAND–89-1112C) **Seals task force activities.** Waddoups, I.G. Sandia National Labs., Albuquerque, NM (USA). 1989. 3p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890736–4: 30. annual meeting of the Institute of Nuclear Materials Management, Orlando, Florida, USA, 9-12 Jul 1989). Order Number DE89014744/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The Department of Energy (DOE) established the seals task force in 1986 to scope the extent of seals problems, develop guidelines and criteria, and recommend improvements. Recent task force activities have been to update the Safeguards Seals Reference manual produced in 1986, lay the groundwork for seal standardization, and make recommendations for general and specific seals problems in the field. This paper will discuss the manual updates and other general task force activities. 5 refs.

The Materials Department of the National Atomic Energy Commission gives a description of the research done during the period 1985/1986 in the following fields; corrosion and transport of matter, transport phenomena, phase solidification and transformation, mechanical properties, theory of the materials behaviour, and special techniques development. Furthermore it is outlined the rendering of services and the advice given to the nuclear power plants and other institutions. Finally a list of publications, courses, seminars, lectures and presentation to congresses are included. (M.E.L.).

35474 (CNEA-NT–7/88) **Summary of activities of the Research Department 1985.** Comision Nacional de Energia Atomica, Buenos Aires (Argentina). 18 May 1989. 96p. (In Spanish). Order Number DE89620471/JAW. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

This annual report of teh Research Department concerns the year 1985. It describes the work carried out in the following fields: Physics, Reactor Chemistry, Radiobiology, Prospective and Special Studies, Biomathematics and Radiochemistry. During the year the first experiments employing heavy ion beams of the new electrostatic accelerator Tandar were made. A list of publications of the Department is enclosed here. (M.E.L.).

35475 (DOE/IG–0267) **Exploratory research and development funds at Los Alamos National Laboratory.** USDOE Office of Inspector General, Albuquerque, NM (USA). Western Regional Office. 17 May 1989. 9p. Sponsored by DOE Management & Administration. Available from OSTI.

Public Law 95-39 authorized contractors operating government laboratories to use a reasonable amount of their operating budget to fund employee-suggested projects up to the pilot stage of development. The Department established a program that permitted its multiprogram laboratories, such as the Los Alamos National Laboratory (LANL), to conduct employee-suggested research at the laboratories' discretion. This discretionary program was referred to as Exploratory Research and Development (ER and D). The purpose of this audit was to evaluate the Department's oversight of an LANL's implementation of the ER and D program.

35476 (IAEA-AL–011) **International Atomic Energy Agency's Laboratories at Seibersdorf and in Vienna.** International Atomic Energy Agency, Seibersdorf (Austria). Laboratories. Dec 1988. 63p. Order Number DE89620460/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

The report briefly describes the main research activities performed during 1988 at the IAEA Laboratories at Seibersdorf in the Agriculture Laboratory, Physics-Chemistry-Instrumentation Laboratory and Safeguards Analytical Laboratory as well as the training activities.

35477 (IAEA-INFCIRC–1(Rev.9)) **Information circulars.** International Atomic Energy Agency, Vienna (Austria). Apr 1989. 111p. Order Number DE89620461/JAW. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

The document summarizes the Information Circulars published by the IAEA under the symbol INFCIRC/for the purpose of bringing matters of general interest to the attention of all Members of the Agency. A complete list of INFCIRCs in numerical order with their titles is given in the Annex.

35478 (INIS-mf–11466) **Annual report 1986-87.** Comision Nacional de Energia Atomica, Buenos Aires (Argentina). 1987. 76p. (In Spanish). Order Number DE89620472/JAW. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

This report issued by the Argentine National Atomic Energy Commission (CNEA) covers the two-year period 1986-1987. It describs the research and development carried out in the following fields: nuclear power plants; supplies to nuclear power plants; radioisotopes and radiations; radiological protection and nuclear safety; research and development. In the item general aspects other activities performed by CNEA are included, and in the associated firms with CNEA information on the technological development, and goods and services production is provided. (M.E.L.).

35479 (SV-UK–1987-15) **Compilation of results 1987. Nuclear power technology.** Swedish State Power Board, Vaellingby (Sweden). 13 Mar 1987. 69p. (In Swedish). Order Number DE89618370/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

A compilation is carried out which in concentrated form presents reports on research and development within the nuclear energy field covering a two and a half years period. The foregoing report was edited in December 1984. The projects are presendted with title, project number, responsible unit, person to contact and short result

reports. The result reports consist of short summaries over each project. (L.F.).

35480 (AD-A–201603/8/XAB) **Parallel processing on transputer arrays for the recognition of objects in infrared images. Memorandum report.** Baker, S.A. Royal Radar Establishment, Malvern (UK). Sep 1988. 16p. (RSRE-MEMO–4197). Available from NTIS, PC A03/MF A01.

This Memorandum describes work done in mapping image-processing algorithms on to transputer arrays. Object classification based on the autocorrelation function has been applied to infrared images. Using the OCCAM programming language, parallel-processing techniques were developed to make use of the concurrency available for communication and calculation. The results for this specific problem are assessed and conclusions drawn on the use of transputers and OCCAM for parallel processing.

35481 (AD-A–201618/6/XAB) **Message-Driven Processor architecture, Version 11. Artificial intelligence memo.** Dally, W.; Chien, A.; Fiske, S.; Horwat, W.; Keen, J. Massachusetts Inst. of Tech., Cambridge, MA (USA). Artificial Intelligence Lab. 18 Aug 1988. 39p. (AI-M–1069). Available from NTIS, PC A03/MF A01.

The Message-Driven Processor is a node of a large-scale multiprocessor being developed by the Concurrent VLSI Architecture Group. It is intended to support fine-grained, message-passing, parallel computation. It contains several novel architectural features, such as a low-latency network interface, extensive type-checking hardware, and on-chip memory that can be used as an associative lookup table. This document is a programmer's guide to the MDP. It describes the processor's register architecture, instruction set, and the data types supported by the processor. It also details the MDP's message sending and exception handling facilities.

35482 (AD-A–201651/7/XAB) **Fast and processor-efficient parallel algorithms for reducible-flow graphs. Technical report.** Ramachandran, V. Illinois Univ., Urbana, IL (USA). Coordinated Science Lab. Nov 1988. 28p. (UILU-ENG–88-2257). Available from NTIS, PC A03/MF A01.

This document presents parallel NC algorithms for recognizing reducible flow graphs (rfg's), and for finding dominators, minimum feedback vertex sets, and a depth first-search numbering in an rfg. All of these algorithms run in polylog parallel time using M (n) processors, where M (n) is the number of processors needed to multiply two nxn matrices in polylog time; this is the best processor bound currently known for polylog-time parallel algorithms for directed graphs. It is shown that finding a minimum feedback vertex in vertex-weighted rfg's or finding a minimum feedback arc set in arc-weighted rfg's is complete. For arc or vertex weights in unary, the authors presents RNC algorithms for these problems and shows that these problems are in NC if and only if the problem of finding a maximum matching is in NC.

35483 (DOE/ER/25026–28) **Parallel methods for the numerical solution of ordinary differential equations.** Tam, Hon Wah. Illinois Univ., Urbana, IL (USA). Dept. of Computer Science. c May 1989. 139p. Sponsored by DOE/ER;OGA. DOE Contract FG02-87ER25026. (UIUCDCS-R–89-1516;UILU-ENG–89-1735). Available from Univ. of Illinois at Urbana-Champaign, 1304 W. Springfield Ave., Urbana, IL 61801-2987.

We study time parallelism for the numerical solution of nonstiff ordinary differential equations. Stability and accuracy are the two main considerations in deriving good numerical o.d.e. methods. However, existing parallel methods have poor stability properties in that their stability regions are smaller than those of good sequential methods of the same order. In this thesis we present a precise understanding of how stability limits the potential of parallelism in o.d.e.'s. We propose a fairly specific approach to construct good parallel methods – we consider zero-stable parallel methods whose stability polynomials are perfect powers of those of simple methods with good stability regions. Based on this approach we derive new efficient parallel methods. The proposed families of block methods have stability regions which do not change as the order increases. These new methods have much better stability properties than the Adams PECE methods of the same order. The above perfect power stability polynomial approach can also be extended to multi-block methods. 49 refs.

35484 (DOE/ER/25026–29) **Accuracy increase in waveform Gauss Seidel.** Juang, F.; Gear, C.W. Illinois Univ., Urbana, IL (USA). Dept. of Computer Science. Jun 1989. 27p. Sponsored by DOE Energy Research. DOE Contract FG02-87ER25026. (UILU-ENG–89-1737;UIUCDCS-R–89-1518). Order Number DE89014812/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The traditional approach for solving large dynamical systems is time consuming. Waveform relaxation, an iterative technique for solving systems of differential equations, can be used to reduce the processing time. It has been shown to converge superlinearly on finite intervals. In this paper, the order of accuracy of solutions generated by a relaxation approach, the waveform Gauss-Seidel method, is discussed. In this approach, a directed graph, called a dependency graph, is used to indicate the coupling relations among all components. The relation between the accuracy increase after each Gauss-Seidel iteration and the lengths of ascending chains (simple directed paths) in cycles in the dependency graph is discussed. It is proved that the cycle in the dependency graph which has the minimum ratio of its length to its number of ascending chains, determines the average accuracy increase. Effective use of the waveform Gauss-Seidel method depends on the ordering of the components. The result in this paper provides a basis for selecting the ordering. 2 refs.

35485 (DOE/ER/25026–30) **Safety in numbers: The boundless errors of numerical computation.** Skeel, R.D. Illinois Univ., Urbana, IL (USA). Dept. of Computer Science. Jun 1989. 9p. Sponsored by DOE Energy Research. DOE Contract FG02-87ER25026. Order Number DE89014813/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Perhaps the greatest unresolved question in numerical computing is how to cope with the issue of uncertainty in the accuracy of computed numerical quantities. The problem is not so much the errors in the answers, but the lack of a correct error bound or a confidence interval. The problem arises because of the failure to keep track of known errors and because of unknown errors due to finite sampling techniques. Several approaches to this question are discussed, principally interval analysis and probabilistic techniques. Reasons for the neglect of the uncertainty issue are suggested, and the benefits of providing consistently correct answers are considered. 13 refs.

35486 (FNAL/C–89/118) **ACP/R3000 processors in data acquisition systems.** Deppe, J.; Areti, H.; Atac, R.; Biel, J.; Cook, A.; Edel, M.; Fischler, M.; Gaines, I.; Husby, D.; Isely, M. Fermi National Accelerator Lab., Batavia, IL (USA). Feb 1989. 4p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-890545–3: 6. conference on real-time computer applications in nuclear, particle and plasma physics, Williamsburg, Virginia, USA, 15-18 May 1989). Order Number DE89014811/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We describe ACP/R3000 processor based data acquisition systems for high energy physics. This VME bus compatible processor board, with a computational power equivalent to 15 VAX 11/780s or better, contains 8 Mb of memory for event buffering and has a high speed secondary bus that allows data gathering from front end electronics. 2 refs., 3 figs.

35487 (IFVE-OTF–88-110) **Programs for numerical integration of piece-wise smooth functions.** Sokolov, S.N. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij. 1988. 12p. (In Russian).

Order Number DE89620449/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A series of fortran programs for the numerical integration of piece-wise smooth functions in the one- and manydimensional spaces is described. The programs use Newton-Cotes quadrature formulas, make accuracy checks at each step, find efficiently the places of degraded smoothness (narrow peaks, splittings, breakpoints), optimize the step size and the degree of quadrature formula, assure the closeness of the actual accuracy of the result the asked one, and have improved reliability. 4 figs.

35488 (INIS-SU–74/A, pp. 86-91) **Determination of probability density on base of a finite set of integral data.** Tarasko, M.Z. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1987. (In Russian). In *Methods and programs for numerical solution of the mathematical physics problems. Scientific-technical collection.* Order Number DE89012113/JAW. Available from NTIS (US Sales Only), PC A05/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 2.

Problem of determining probability of investigated physical value on the base of a finite set of integral experimental data is stated as the problem of evaluation of distribution parameters from exponential family with the maximal entropy. Algorithm description and standard program of parameters optimization are presented. 7 refs.

35489 (JINR-R–10-88-432) **Emulation of MS DOS Operational System on the Autonomous Crate-Controller with I8086 microprocessor.** Hons, Z.; Cizek, P.; Streit, V. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1988. 3p. (In Russian). Order Number DE89620452/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

KM-DOS operating system for CAMAC autonomous crate-controller based on Intel 8086/8087 microprocessor connected with Pravec-16 IBM PC is described. The KM-DOS system fully emulates the MS DOS environment on the CAMAC controller. Thus ASSEMBLER, FORTRAN, C and PASCAL programs compiled and linked on IBM PC and compatible can be run on the CAMAC controller and parall work of both computers is enabled. 3 refs.; 1 tab.

35490 (LBL–25770) **SOS – Stan's Own Server: An NFS [Network File System] file server for the IBM PC.** Tan, See-Mong; Holmes, H.; Eades, C. Lawrence Berkeley Lab., CA (USA). Aug 1988. 4p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. Order Number DE89013412/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

SOS is a file server written to run on the IBM PC or compatibles. It conforms to Sun Microsystem's Network File System (NFS) protocol version 2. This paper discusses the SOS implementation and includes notes on portability, for programmers who wish to understand or modify it.

35491 (LBL–26700) **UCB-NE-101 user's manual.** Lee, W.W.L. Lawrence Berkeley Lab., CA (USA). Feb 1989. 14p. Sponsored by DOE Radioactive Waste Management. DOE Contract AC03-76SF00098. (UCB-NE–4135). Order Number DE89013419/JAW. Available from NTIS, PC A03/MF A01 - OSTI.

The purpose of this manual is to provide users of UCB-NE-101 with the information necessary to use UCB-NE-101 effectively. UCB-NE-101 calculates the concentration of solubility-limited species as a function of space and time and its mass flux rates from a waste sphere buried in a nuclear waste repository in water-saturated rock. The waste is surrounded by one type of rock, and some distance away, there is another type of rock. The inner layer of rock can be a backfill around a nuclear waste package and the outer layer the natural rock. The mass flux calculated is at the interface of the two layers. The species concentration calculated is in the inner layer. A constant concentration of the species, usually the solubility, is specified at the waste sphere/inner layer interface. Dissolution and transport is governed by the solubility of the species, and diffusion in the porous media. 1 ref., 1 fig.

35492 (LBL–27044) **UCB-NE-108 user's manual.** Kang, C.H.; Lee, W.W.L. Lawrence Berkeley Lab., CA (USA). Apr 1989. 9p. Sponsored by DOE Radioactive Waste Management. DOE Contract AC03-76SF00098. (UCB-NE–4143). Order Number DE89012842/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The purpose of this manual is to provide users of UCB-NE-108 with the information necessary to use UCB-NE-108 effectively. UCB-NE-108 is a computer code for calculating the fractional release rate of readily soluble radionuclides that are released from nuclear waste emplaced in water-saturated porous media, and transported through layers of porous media. Waste placed in such environments will gradually dissolve. For many species such as actinides and rare earths, the process of dissolution is governed by the exterior flow field, and the chemical reaction rate or leaching rate. In a spent-fuel waste package the soluble cesium and iodine accumulated in fuel-cladding gaps, voids, and grain boundaries of spent fuel rods are expected to dissolve rapidly when groundwater penetrates the fuel cladding. UCB-NE-108 is a code for calculating the release rate at the interface of two layers of porous material, such as the backfill around a high-level waste package and natural rock, to check compliance with the US Nuclear Regulatory Commission's (USNRC) subsystem performance objective. It is an implementation of the analytic solution given below. 6 refs., 2 figs.

35493 (ORNL/TM–11198) **Non-linear surface fitting of laser range images using a hypercube concurrent computer.** Finley, M. Oak Ridge National Lab., TN (USA). Jun 1989. 15p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. (CESAR–89/24). Order Number DE89013720/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Segmentation and non-linear surface fitting with laser range images are attempted on a hypercube concurrent processor. Low-level software acquires range images onto the hypercube. A substantially modified existing range image edge detector works in the hypercube image analysis environment to accomplish segmentation. The Levenberg-Marquardt algorithm implements the non-linear least squares fitting of the surfaces. Problems were found with each part of the approach. The edge detection algorithm is unnecessarily complex and yields an all to cluttered edge map. The fitting routine is limited by hardware in the number of surfaces that it can process. Finally, the fitting approach requires input estimates of the parameters which do not appear to be generalized for any image, thus keeping the process from being totally automated. Other research in surface fitting on serial computers has yielded results which may be helpful additions to solve the problems of automation. 5 refs., 8 figs.

35494 (SAND–89-0459C) **Radiation characterization of a 28C256 EEPROM.** Wrobel, T.F.; Hash, G.L.; Williams, R.J. Sandia National Labs., Albuquerque, NM (USA). 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890723–7: 26. annual conference on nuclear and space radiation effects, Marco Island, Florida, USA, 24-28 Jul 1989). Order Number DE89008686/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

28C256 EEPROM total dose and dose-rate results are presented. Mode dependent total dose failure occurred at 9.5 krad(Si) when writing and 33 krad(Si) when reading. Average upset and latch-up thresholds were 3.8×10^8 rad(Si)/s and 7.7×10^8 rad(Si)/s, respectively. 3 refs., 5 tabs.

35495 (SOL–89-3) **The Principal Pivoting Method revisited.** Cottle, R.W. Stanford Univ., CA (USA). Systems Optimization Lab. Apr 1989. 18p. Sponsored by DOE Energy Research. DOE Contract FG03-87ER25028. Order Number DE89013115/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The Principal Pivoting Method (PPM) for the Linear Complementarity Problem (LCP) is shown to be applicable to the class of LCPs involving the newly identified class of sufficient matrices. 10 refs.

35496 (SOL–89-4) **Note on degeneracy: Technical report.** Krishna, A.S. Stanford Univ., CA (USA). Systems Optimization Lab. Apr 1989. 4p. Sponsored by DOE Energy Research. DOE Contract FG03-87ER25028. Order Number DE89013483/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Given a linear program in standard form, Min cx s.t. $Ax = b$, $x \geq 0$, where A is an m x n matrix rational coefficients, one technique used to resolve degeneracy in the simplex algorithm is the lexicographic rule. This rule adjoins to b a non-singular m x m square

matrix M. The appended columns of M are updated along with b on each iteration. When the ratio test for determining the pivot row results in a tie, the ratio test is applied to the corresponding elements of the updated columns of M in turn, from left to right, until the tie is resolved. In this note we prove that it is only necessary instead, to adjoin to b a single column d whose ith component is $d_i = \pi^i$, (or preferably the fractional part of π^i in order that $|d_i| < 1$). Any transcendental number, like $e = 2.73\cdots$, the base of the natural logirithm, can be used instead of $\pi = 3.14\cdots$. The proof exploits the fundamental property of transcendental number namely, it can never be a root of polynomial equation $\alpha_1 x + \alpha_2 x^2 + \cdots + \alpha_p x^p = 0$ when $\alpha_1, \alpha_2, \cdots, \alpha_p$ are rational and not all zero.

35497 (SOL–89-5) **An efficient exact algorithm for the "least squares" image registration problems.** Zikan, K. Stanford Univ., CA (USA). Systems Optimization Lab. May 1989. 14p. Sponsored by DOE Energy Research. DOE Contract FG03-87ER25028. Order Number DE89013116/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Image registration involves estimating how one set of n-dimensional points is rotated, scaled, and translates into a second set of n- dimensional points. In practice, n is usually 2 or 3. We give an exact algorithm to solve the "least-squares" formulation of the two-dimensional registration problem. The algorithm, which is based on parametric linear programming, can be viewed as a refinement of the $O(k^3)$ approximation method proposed by Zikan and Silberburg. The approach can be extended to handle registration of images of different cardinalities. 13 refs., 1 fig.

35498 (UCID–21656) **Proposal for a code development and maintenance environment.** Young, J. Lawrence Livermore National Lab., CA (USA). 17 Apr 1989. 13p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE89013380/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper discusses methods of improving software development. 3 refs., 6 figs.

35499 (UCRL–98149) **Monotone piecewise cubic data fitting.** Fritsch, F.N. Lawrence Livermore National Lab., CA (USA). Jul 1988. 8p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890742–1: 2. Shrivenham international conference on algorithms for approximation, Shrivenham, UK, 12-15 Jul 1989). Order Number DE89006742/JAW. Available from NTIS, PC A02/MF A01 - OSTI.

This paper describes PCHLS, an algorithm for least squares fitting of a monotone piecewise cubic function to data. It extends the piecewise cubic Hermite interpolation package PCHIP to situations in which the data are noisy or are adequately represented by far fewer cubic pieces than data points. 6 refs., 5 figs.

35500 (UCRL–101076) **LLNL's plan for a prototype circuit switch, a potential gigabit LAN of the future.** Rupert, P.R. Lawrence Livermore National Lab., CA (USA). Apr 1989. 6p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-8904210–4: Cray user's group conference, Los Angeles, California, USA, 24-28 Apr 1989). Order Number DE89013147/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

LLNL's High Speed Communication Project will prototype a communications system designed to foster distributed computing and to provide visualization from our Supercomputers to our Scientists and Engineers. High Quality graphics images require 24 MBits per frame and 750 MBits/sec for animation; we fully anticipate that the next generation of Supercomputers will provide animated results for general users. Local visualization machines will be available for rendering and graphics manipulation, but visualization of meaningful physics will require communications of large blocks of computed results between Supercomputers and local devices. In addition to visualization, we are developing a distributed computing environment. The required transfer of data between Supercomputers and other local mini-Supers or special purpose floating point accelerators, will sorely tax our existing communications ability. Improved communications mechanisms will be necessary before distributed applications can become truly effective. This paper describes our plans to demonstrate, through the use of a prototype system, data transmission at 800 MBits/sec per channel and aggregate bandwidth growth that is linear with the number of connected users and computers. 3 figs.

35501 (WSRC-RP–89-123) **The Savannah River Site local area network.** Johnson, A.J. Westinghouse Savannah River Co., Aiken, SC (USA). 1989. 13p. Sponsored by DOE Defense Programs. DOE Contract AC09-89SR18035. (CONF-8906124–1: Meeting of the Association of Energy Systems Operations and Programming, Morgantown, West Virginia, USA, 6-9 Jun 1989). Order Number DE89013554/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The Savannah River Site (SRS) consists of thirteen separate operating or administrative facilities, or areas, spread out over 300 square miles of federal reservation. A facility of this size presents rather unique difficulties to anyone attempting to provide a comprehensive and high performance computer network, or local area network (LAN). Figure 1 is a diagram of the SRS and indicates the approximate number of "knowledge workers" (i.e., managerial, professional, and clerical staff) which are located in each site area. The goal of the SRS LAN project is to have each of these workers connected to and using the computer network by the end of 1990. By mid 1989 SRS is three quarters of the way to completing this goal. The fundamental LAN strategy for Savannah River is the integration of personal computers with mid size "departmental" computers located within each site area with links to the site's mainframe computer systems and offsite databases for information access. This integration is being provided by baseband local area networks in each of the site areas adjoined together via a broadband and digital telephone communications system to form one sitewide internetwork. The site internetwork is used to connect the departmental and mainframe computers together as well as provide workstation to computer access between site areas. 6 figs.

35502 **A high dynamic range acousto-optic image correlator for real-time pattern recognition.** Molley, P.A. (Sandia National Labs., Albuquerque, NM (US)); Stalker, K.T. v.v of Digital and optical shape representation and pattern recognition. Juday, R.D. SPIE Society of Photo-Optical Instrumentation Engineers, Bellingham, WA (1988). (CONF-8804230–: Digital and optical shape representation and pattern recognition, Orlando, Florida, USA, 4-6 Apr 1988).

The architecture and experimental results for an incoherent acousto-optic image correlator suitable for real-time applications are presented. In the basic architecture, each time a line of the raster-scanned input image is fed into the acousto-optic device (AOD), all rows of a digitally stored reference image are read into the system using an array of light emitting diodes (LEDs). Thus, the required two-dimensional correlation is performed as a series of multi-channel 1-D time-integrations in x (performed in the AOD) combined with a multi-channel correlation in y (perpendicular to the AOD axis) using a modified CCD. The LED array and detector modifications which markedly increase the dynamic range are discussed as well as the correlator design. Further, a novel memory for storing the reference object is described for rapidly changing templates. Experimental results indicate the architecture is useful for applications in the areas of character recognition and target identification.

35503 **Artificial intelligence and real-time optimization.** Wong, C. (Lawrence Livermore National Lab., Livermore, CA (US)). v.v of Proceedings of the 24th Eastern Analytical Symposium, Inc. Litarvin Literature, Arvada, CO (1987). (CONF-861009–: Silver Jubilee Eastern Analytical symposium, New York, New York, USA, 20-24 Oct 1986).

The ability to optimize instrument operational and data acquisition parameters while actually running an experiment has a number of advantages. If there are vast amounts of complex data, as from a triple quadrupole mass spectrometer (TQMS), selective data optimization, acquisition, and information enhancement are achieved. A good example of this is determination of trace sulfur gas species in the pyrolysis gas of an oil shale retort using an on-line TQMS. Traditionally, tuning parameters for the sulfur gas analysis are manually determined by an expert operator of the TQMS. A particular parent-daughter pair, representative of a mass range which includes most of the sulfur gases of interest, is chosen. Typically, this would be daughter 32 from parent 60 of carbonyl sulfide. However, recent

studies have shown that the optimum tuning for COS, is not the optimum for carbon disulfide (daughter 32 of parent 76), or ethanethiol (daughter 20 from parent 62), even though both the parent and daughter ions for these compounds are very close in molecular weight and the compounds all contain sulfur. In fact, just one tuning parameter, the collision energy, if optimized for COS, resulting in a 50% loss in intensity for CS2 or ethanethiol. Given the number of parameters to be tuned, manual tuning for each compound is simply not cost effective. Therefore, an expert system has been developed which enables the instrument to be optimized for the various gases based on rules associated with peak shape, intensity, resolution, interactions between tuning parameters and compound and mass differences.

35504 Analysis of binarized Hartley phase-only filter performance with respect to stochastic noise. Dickey, F.M. (Sandia National Labs., Albuquerque, NM (US)); Mason, J.J.; Stalker, K.T. v.v of Digital and optical shape representation and pattern recognition. Juday, R.D. SPIE Society of Photo-Optical Instrumentation Engineers, Bellingham, WA (1988). (CONF-8804230–: Digital and optical shape representation and pattern recognition, Orlando, Florida, USA, 4-6 Apr 1988).

Binary phase-only filters (BPOF) are a viable candidate for the replacement of matched filters in real-time image processing and pattern recognition applications. The original BPOFs were binarized versions of the real or imaginary parts of the Fourier transform. Recently, a filter has been proposed which is the binarized Hartley transform. In this paper, the noise performance of the binarized Hartley phase-only filter is analyzed and compared to other BPOFs as well as the phase-only and matched filter. It is well known that the matched filter optimizes signal-to-noise ratio. Further, it can be shown that the matched filter phase is the optimum phase-only filter. A bound on the BPOF signal-to-noise ratio relative to that of the phase-only filter is derived. Finally, the analysis is applied to the generalized form of the binarized Hartley transform.

35505 Simulated annealing in networks for computing possible arrangements for red and green cones. Ahumada, A.J. Jr. (NASA Ames Research Center (US)). v.v of Proceedings of the IEEE first international conference on neural networks. Volumes 1-4. Caudill, M.; Butler, C. IEEE Service Center, Piscataway, NJ (1987). (CONF-8706130–: 1. IEEE international conference on neural networks, San Diego, California, USA, 21-24 Jun 1987).

The packing arrangement of the cones in the central fovea has been carefully measured in retinal preparations from monkeys. Psychophysical measurements have been made using laser interferometry in humans. Although these measurements are indirect, they are free from possible histological artifacts. The psychophysical techniques for observing the arrangement are based on the moire patterns which are perceived when very fine gratings are imaged on the retina by laser interferometry. The results of the technique depend on the regularity of the cone array. In the center of the fovea, where the cones can be very regularly packed, the moire pattern is fairly regular and the technique gives both the orientation and the spacing of the cone array. In the center of the fovea, there are very few blue cones, so they are ignored here and only the red and green ones are considered. The arrangement of the red or green cones alone is now known. There is no definitive information about the relative number of red and greens in the central fovea, although there is indirect evidence indicating that there are twice as many red cones as green cones.

35506 Massively parallel mathematical sieves. Montry, G.R. (Sandia National Labs., Albuquerque, NM (US)). *International Journal of Supercomputer Application (USA)*, 3(1): 59-74 (1989).

The Sieve of Eratosthenes is a well-known algorithm for finding all prime numbers in a given subset of integers. A parallel version of the Sieve is described that produces computational speedups over 800 on a hypercube with 1,024 processing elements for problems of fixed size. Computational speedups as high as 980 are achieved when the problem size per processor is fixed. The method of parallelization generalizes to other sieves and will be efficient on any ensemble architecture. We investigate two highly parallel sieves using scattered decomposition and compare their performance on a hypercube multiprocessor. A comparison of different parallelization techniques for the sieve illustrates the trade-offs necessary in the design and implementation of massively parallel algorithms for large ensemble computers.

35507 (ESC-WR–89-01) **Restricted feasibility study on conversion of the EDN system to the Cyber-computer.** Roemer, J.C.; Warmer, C.J. Stichting Energieonderzoek Centrum Nederland, Petten (Netherlands). Energie Studie Centrum. Feb 1989. 45p. (In Dutch). Available from Netherlands Energy Research Foundation ECN, P.O. Box 1, 1755 ZG Petten, Netherlands.

The Energy Databank Netherlands (EDN) functions since 1987 as a referential databank for numerical energy related data in the Netherlands. The databank works on a personal computer and questions to the system are answered by an intermediary. The supported committee EDN suggested in one of her meetings (Feb. 5th, 1988) to come to a better use of the present databank. One of the suggestions was to determine the interest for a directly accessible EDN on a mainframe computer (Cyber). The results of an inquiry held amongst subscribers, users and interested people are presented and discussed. The technical possibilities at ENR (computer centre of the Netherlands Energy Research Foundation) and the necessary operations to transfer the EDN to the Cyber are discussed too. It is concluded that a directly accessible EDN with numerical data is favorite. Transfer of the present EDN to the Cyber is technically seen no problem. The input of the numerical data however will be very labor-intensive. 9 tabs., 2 apps.

35508 Improved cassette recording of multichannel analyzer data. Latner, N. (Environmental Measurements Laboratory, New York, NY (USA)); Chiu, N. *Health Physics (USA)*, 56(4): 561-563 (Apr 1989).

As part of a field experiment, five of these modified tape decks with associated MCAs have been operating successfully for several months in an essentially unattended mode. In addition, this automatic system facilitates readout during attended operation by eliminating the need to press keys. Tapes generated on these decks are totally compatible and interchangeable with those made by the manual cassette unit.

35509 (SAND–89-0192) **Recommended baseline direct-strike lightning environment for stockpile-to-target sequences.** Fisher, R.J.; Uman, M.A. Sandia National Labs., Albuquerque, NM (USA). May 1989. 18p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. Order Number DE89012879/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The lightning literature extant through the end of 1988 has been reviewed and used to develop an updated generic, or baseline, direct-strike lightning environment for nuclear weapon Stockpile-to-Target Sequence documents. The supporting rationale for recommended changes is given, along with a discussion of the interpretation of the environment for weapon nuclear safety assessment. 13 refs., 2 tabs.

35510 (SAND–89-0289C) **Z-pinch experiments on Saturn at 30 TW.** Spielman, R.B.; Dukart, R.J.; Hanson, D.L.; Hammel, B.A.; Hsing, W.W.; Matzen, M.K.; Porter, J.L. Sandia National Labs., Albuquerque, NM (USA). 1989. 14p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-8904107–3: 2. international conference on high-density pinches (ICHDP-2), Laguna Beach, California, USA, 26-28 Apr 1989). Order Number DE89013497/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We have recently completed the first gas-puff z-pinch on Saturn (32 TW, 1.4 MJ, 1.9 MV, 40-ns FWHM, and 0.11 Ω). These experiments used the most powerful driver to date for fast z-pinch experiments. Saturn, a 36 module accelerator, uses a double post-hole vacuum convolute to deliver the total machine current to the load. The 10-nH Saturn z-pinch diode is capable of delivering a peak current of 10.5 MA. We diagnosed the current using segmented Rogowski coils at the insulator, resistive shunts in the

vacuum transmission lines, and B-dot loops and piezoelectric pressure gauges near the load. On most shots electrical losses in the vacuum convolute were minimal with nearly complete current delivery to the z-pinch load. We have conducted experiments with deuterium, neon, argon, krypton, and xenon gas puffs. A maximum total radiation yield of 505 ± 25 kJ was obtained with xenon. The peak keV x-ray yields were 100 ± 5 kJ for neon K-shell radiation, 30 ± 4 kJ for krypton L-shell radiation, and 39 ± 4 kJ for argon K-shell radiation. 12 refs., 15 figs., 2 tabs.

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in *DOE Energy Data Base: Corporate Author Entries* (DOE/TIC-4585). Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, also abbreviated; and (3) the language of the document if non-English (R;US;In French). Author affiliations are not listed in this index.

Strategies for optimal plant redesign in a changing environment: Annual report, 1988–1989, 14:34119 (R;US)

CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)
Theory of plasma electrodynamics, 14:35403 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Service de Radio-Agronomie
Procedures for expressing natural or induced variability in carnation (Dianthus Caryophyllus L.), 14:34672 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. d'Analyse de Surete
Evaluation of the damages in rocks caused by the construction of a repository, 14:33252 (R;FR;In French)
Evolution of general design requirements for french pressurized water reactors, 14:33568 (R;FR)
Nuclear installations sites safety, 14:33546 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Chimie Appliquee et d'Etudes Analytiques
Gaseous elements in metals, 14:34050 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Inst. de Recherche Technologique et de Developpement Industriel (IRDI)
Optogalvanic spectroscopy in flames, 14:34049 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. d'Etudes Mecaniques et Thermiques
Analysis of impact phenomena between PWR fuel assemblies in earthquake situations, 14:33478 (R;FR)
Fluid structure interaction due to fluid communications between fluid volumes. Application to seismic behaviour of F.B.R. vessels, 14:33513 (R;FR)
Two-phase cross flow damping in tube arrays, 14:34169 (R;FR)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Physico-Chimie
Study of non stoichiometric pure and Zr-Doped yttria surfaces by X-Ray photoelectron spectroscopy and scanning electron microscopy, 14:33944 (R;FR)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Physique Nucleaire
Nucleons in nuclei (II), 14:35043 (R;FR)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Technologique et de Developpement Industriel (IRDI)
Problems in tritium handling in fusion reactors studies at CEA within the european effort, 14:35442 (R;FR)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Theorique
Nucleon structure and the chiral filter, 14:35112 (R;FR)

CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Protection contre les Rayonnements
Fusion process for metallic wastes slightly contaminated by radioactive substances, 14:33251 (R;FR;In French)

Central Electricity Generating Board, Berkeley (UK). Berkeley Nuclear Labs.
Carburisation of stainless steel caused by oil in sodium, 14:33514 (R;GB)

Central Electricity Research Labs., Leatherhead (UK)
Determination of magnesium in simulated PWR coolant by graphite furnace atomic absorption spectrometry, 14:33479 (R;GB)
Oxide deposition in the orifices of AGR boiler inlet ferrule assemblies, 14:33508 (R;GB)

Central Research Inst. of Electric Power Industry, Tokyo (Japan)
A solidification method of low level radioactive waste using fly ash, 14:33126 (R;JP;In Japanese)
Development of moving bed desulfurization method, 14:33063 (R;JP;In Japanese)
Study of CWM dry preparation systems using water-air mixed jet pump, 14:33033 (R;JP;In Japanese)
Study on low calorific gas combustion (Part 4), 14:33138 (R;JP;In Japanese)
The long-term reliability of desulfurization sorbent for hot coal gas desulfurization, 14:33064 (R;JP;In Japanese)

Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro, RJ (Brazil)
Dissipative effects in Friedmann universes, 14:34769 (R;BR)
General exact solution for homogeneous time-dependent self-gravitating perfect fluids, 14:35248 (R;BR)
Is the number of photons conserved in an expanding universe, 14:34767 (R;BR)
Quantum fields in cosmological space-times: a soluble example, 14:34768 (R;BR)
SU(4) properties of the Dirac equation, 14:35004 (R;BR)

Centro Tecnico Aeroespacial, Sao Jose dos Campos, SP (Brazil). Inst. de Estudos Avancados
Modifications in the UNIMUG computer code (Addendum to technical note EAV/NT–003/80), 14:33529 (R;BR;In Portuguese)

Ceramics Process Systems Corp., Cambridge, MA (USA)
Composite ceramic superconducting wires for electric-motor applications. Quarterly report No. 2, 30 September-30 December 1988, 14:34116 (R;US)

Ceskoslovenska Akademie Ved, Ondrejov (Czechoslovakia). Astronomicky Ustav
Astrophysics. Proceedings. Vol. 5, 14:34796 (R;CS)

Ceskoslovenska Komise pro Atomovou Energii, Prague (Czechoslovakia)
Instructions for processing programs for transport, storage and handling of nuclear fuel and for programs of basic critical experiments on nuclear research installations, 14:33246 (R;CS;In Czech)
Nuclear power reactors, 14:33457 (R;CS;In Czech)

Ceskoslovenska Vedeckotechnicka Spolecnost, Usti nad Labem (Czechoslovakia). Dum Techniky
Cryogenics '88, 14:34122 (R;CS;In English, Czech, Slovak, Russian)

Chalmers Univ. of Tech., Goeteborg (Sweden). Dept. of Reactor Physics
Eigenvalues of one-speed neutrons in finite slabs, 14:35174 (R;SE)

Charles River Associates, Inc., Boston, MA (USA)
Glass industry: opportunities for natural gas technologies. Topical report, February 1987-September 1988, 14:33192 (R;US)

Cincinnati Univ., OH (USA). Dept. of Electrical and Computer Engineering
Integration of detectors and optical-waveguide structures. Final report, 15 March 1985-15 March 1988, 14:34361 (R;US)

Clarkson Univ., Potsdam, NY (USA)
Analysis and computer tools for separation processes involving nonideal mixtures: Progress report, June 1, 1986–November 30, 1989, 14:34053 (R;US)

Clermont-Ferrand-2 Univ., 63 - Aubiere (France). Lab. de Physique Corpusculaire
Study of the He3 breakup reaction and the triton production spectra at 283 MeV, 14:35163 (R;FR;In French)

Colorado School of Mines, Golden, CO (USA). Dept. of Chemical Engineering and Petroleum Refining
Process and analytical studies of enhanced low severity co-processing using selective coal pretreatment: Quarterly technical progress report, December 1988–February 1989, 14:33072 (R;US)

Colorado School of Mines, Golden, CO (USA). Dept. of Geophysics
Studies of electrical and electromagnetic methods for characterizing salt properties at the WIPP [Waste Isolation Pilot Project] Site, New Mexico, 14:33292 (R;US)

Colorado State Univ., Fort Collins, CO (USA). Dept. of Forest and Wood Sciences
Impacts of acidic deposition: context and case studies of forest soils in the southeastern US, 14:34464 (R;US)

Colorado Univ., Boulder, CO (USA)
Beam-Beam deflection as a beam tuning tool at the SLAC Linear Collider, 14:34252 (R;US)

Comision Nacional de Energia Atomica, Buenos Aires (Argentina)
Activities of the years 1985/86 Materials Department, 14:35473 (R;AR;In Spanish)
Annual report 1986-87, 14:35478 (R;AR;In Spanish)
Construction times and the decommissioning of nuclear power plants, 14:33527 (R;AR;In Spanish)
Nuclear power production costs, 14:33526 (R;AR;In Spanish)
Summary of activities of the Research Department 1985, 14:35474 (R;AR;In Spanish)
X-Ray fluorescence of microquantities of hafnium in zirconium by precipitation as thin film, 14:34051 (R;AR;In Spanish)

Comision Nacional de Energia Atomica, Buenos Aires (Argentina). Gerencia de Proteccion Radiologica y Seguridad
Geostatistical investigations of rock masses. The Sierra del Medio Case (Argentina), 14:33253 (R;AR)

Comissao Nacional de Energia Nuclear, Rio de Janeiro, RJ (Brazil)
Function of specialized organization in work safety engineering for nuclear installations, 14:33521 (R;BR;In Portuguese)
Requirements of radiation protection and safety for nuclear medicine services, 14:35190 (R;BR;In Portuguese)

Commission of the European Communities, Abingdon (UK). JET Joint Undertaking
Some theoretical aspects of diffusion in cylindrical plasmas, 14:35423 (R;GB)

Commission of the European Communities, Luxembourg (Luxembourg)
Determination of geotechnical properties of loose ground salt as potential backfill material in an underground waste repository, 14:33265 (R;FR;In French)
Determining the density distribution in a 7 metre coke oven. Doctoral thesis, Clausthal Technical University - 2 appendices, 14:33078 (R;XE;In German)
Progress in synthetic fuels, 14:33079 (R;GB)

Confederated Tribes of the Umatilla Indian Reservation, Pendleton, OR (USA)
Operation, maintenance and evaluation of the Bonifer and Minthorn springs juvenile release and adult collection facilities: Annual report, 1987, 14:33378 (R;US)

Connecticut Univ. Health Center, Farmington, CT (USA). Dept. of Biochemistry
Absence of transient elevated UV resistance during germination of 'Bacillus subtilis' spores lacking small, acid-soluble spore proteins alpha and beta, 14:34667 (R;US)

Conservation Foundation, Washington, DC (USA)
Opportunities to assist developing countries in the proper use of agricultural and industrial chemicals. Report of the Committee on Health and Environment. Volume 1. Research paper(Final), 14:33647 (R;US)

Consolidation Coal Co., Library, PA (USA). Research and Development Dept.
Coal and petroleum reactions in coal/oil coprocessing, 14:33167 (R;US)
Recycle oils from fluid coking of coal liquefaction bottoms, 14:33062 (R;US)

Some thoughts on coal structure: Implications of coal liquids characterization, 14:33041 (R;US)
Stable carbon isotope analysis of coal/petroleum coprocessing products, 14:33166 (R;US)

Coordinating Research Council, Inc., Atlanta, GA (USA)
1987 CRC (Coordinating Research Council) octane number requirement survey, 14:34714 (R;US)

Cottrell Environmental Sciences, Somerville, NJ (USA)
Microwave energy for SO_2 and NO_x removal from flue gas: Final report, 14:33437 (R;US)

Council for Scientific and Industrial Research, Faure (South Africa). National Accelerator Centre
Method for the stress calibration of a beam buncher, 14:34249 (R;ZA;In Afrikaans)
Neutron dosimetry intercomparison study with tissue equivalent ionization chambers: National Accelerator Centre and Universite Catholique de Louvain, Belgium, 14:34626 (R;ZA)
Neutron dosimetry measurements at the MRC cyclotron unit, Clatterbridge Hospital, U.K., 14:34625 (R;ZA)
Radiobiological intercomparison: dosimetry aspects, 14:34687 (R;ZA)

Council for Scientific and Industrial Research, Stellenbosch (South Africa). National Accelerator Centre
Comparison of the gamma component of two high energy neutron therapy beams, 14:34627 (R;ZA)
Field factors for the NAC p(66 MeV)/Be neutron therapy beam, 14:34628 (R;ZA)

D

Decision Focus, Inc., Los Altos, CA (USA)
The DYNAMICS model for measuring dynamic operating benefits, 14:33665 (R;US)

Defense Intelligence Agency, Washington, DC (USA). Directorate for Scientific and Technical Intelligence
Bibliography of Soviet laser developments, Number 90, July-August 1987, 14:34142 (R;US)

Delaware Univ., Newark, DE (USA). Dept. of Chemical Engineering
Modifiers in rhodium catalysts for carbon monoxide hydrogenation: Structure-activity relationships, 14:33357 (R;US)

Department of Energy, Mines and Resources, Ottawa, ON (Canada). Coal Research Labs. Div.
Interfacial thermodynamics and adsorption. 1. An introduction to surface energetics and a survey of temperature dependence studies, 14:34072 (R;CA)
Survey of microprocessor based performance monitoring devices in Canadian surface coal and oil sands mines in 1987, 14:33207 (R;CA)

Department of Energy, New York, NY (USA). Environmental Measurements Lab.
The EML soil inventory and archive, 14:34468 (R;US)

Department of National Defence, Ottawa, ON (Canada). Research and Development Branch
Superconductivity: recent developments and defence applications, 14:34115 (R;CA)

Department of the Environment, London (UK)
Capabilities and requirements for modelling radionuclide transport in the geosphere, 14:34504 (R;GB)
Chemical speciation modelling of the South Terras and Madeira Abyssal Plain natural analogue sites, 14:33259 (R;GB)
Preparation of fully-active Synroc and its radiation stability. Final report, 14:33250 (R;GB)
Summary report of a seminar on geosphere modelling requirements of deep disposal of low and intermediate level radioactive wastes, 14:33260 (R;GB)

Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt e.V., Koeln (Germany, F.R.)
Theoretical investigation of diffusion flame stabilization over a recirculating flow, 14:34099 (R;DE;In German)

Deutsche Wissenschaftliche Gesellschaft fuer Erdoel, Erdgas und Kohle e.V., Hamburg (Germany, F.R.)
Facies and genesis of upper carboniferous coal seams from Northwest Germany. Final report. Pt. 1, 14:33132 (R;DE;In German)

Deutsches Hydrographisches Inst. (DHI), Hamburg (Germany, F.R.)
Model investigations on the propagation of artificial radionuclides in the North Sea, 14:34503 (R;DE;In German)

Dravo Lime Co., Pittsburgh, PA (USA)
5-MW Toronto HALT [Hydrate Addition at Low Temperature] pilot plant testing: Appendices: Part 1-B, 14:33438 (R;US)
Conceptual HALT [Hydrate Addition at Low Temperature] scaleup design: Capital and operating costs: Part 5, 14:33441 (R;US)
ESP [electrostatic precipitator] tests at Toronto: Test results: Part 3, 14:33439 (R;US)
Multi-nozzle humidification tests: Test results: Part 4, 14:33440 (R;US)

Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab.
Macro- and micromixing in strirred tanks, 14:33756 (TJ;US)
Root cause analysis handbook, 14:34715 (R;US)

Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Plant
Summary of campaigns SGM-9 and SGM-10 of the DWPF scale glass melter (U), 14:33263 (R;US)

Duke Univ., Durham, NC (USA). Dept. of Civil and Environmental Engineering
Microscopic modelling of sound waves in granular material: Quarterly progress report, January 1, 1989–March 31, 1989, 14:33135 (R;US)

Duquesne Light Co., Pittsburgh, PA (USA)
Ash utilization in highways: Pennsylvania demonstration project, 14:33128 (R;US)

Dynamac Corp., Rockville, MD (USA). Enviro Control Div.
Mercury control technology assessment study: General Electric Ccompany, Circleville Lamp Plant, Circleville, Ohio. Preliminary survey report for the site visit of October 6, 1981. Final report, 14:34392 (R;US)
Mercury control technology assessment study: GTE Products Corporation, Chemical and Metallurgical Division, Towanda, Pennsylvania. Preliminary survey report for the site visit of June 9, 1981. Final report, 14:34393 (R;US)
Mercury control technology assessment study: Micro Switch, a Honeywell Division, Freeport, Illinois. Preliminary survey report for the site visit of May 5, 1981. Final report, 14:34394 (R;US)

Arapahoe low-sulfur-coal Fabric Filter Pilot Plant: Volume 4, Shake-deflate cleaning tests, May 1984–July 1986: Final report, 14:33442 (R;US)
Ash utilization in highways: Pennsylvania demonstration project, 14:33128 (R;US)
Causes of FGD [flue gas desulfurization] construction material failures: Volume 1, September 1982–July 1985: Final report, 14:33443 (R;US)
Causes of FGD [flue gas desulfurization] construction material failures: Volume 2, August 1985–December 1986: Final report, 14:33444 (R;US)
Characterizing fuels for utility-scale atmospheric fluidized-bed combustors: Volume 1, Initial development, 14:33141 (R;US)
Characterizing fuels for utility-scale atmospheric fluidized-bed combustors: Volume 2, Appendixes, 14:33142 (R;US)

Estimates of Zircaloy integrity during dry storage of spent nuclear fuel: Final report, 14:33460 (R;US)
Guidelines for improving fuel reliability: Final report, 14:33481 (R;US)
Horizontal-flow boiling heat transfer using refrigerant mixtures: Final report, 14:34170 (R;US)
Qualification of PWR steam generator chemical cleaning for Indian Point-2: Final report, 14:33480 (R;US)
Robots to support radioactive waste activities: Task analysis, conceptual design, and commercial evaluation, 14:33533 (R;US)
Staged combustion for reduced NO_x emissions from an atmospheric fluidized-bed combustor, 14:33445 (R;US)
The DYNAMICS model for measuring dynamic operating benefits, 14:33665 (R;US)

Enconsults Oy, Kaarina (Finland)
Combustion of water/heavy fuel oil emulsions and oil, 14:33181 (R;FI;In Finnish)

Environment Canada, Ottawa, ON (Canada). Inland Waters Directorate
Atlantic provinces historical water levels summary, to 1987, 14:33372 (R;CA;In English and French)
British Columbia historical water levels summary, to 1987, 14:33373 (R;CA;In English and French)
Manitoba historical water levels summary, to 1987, 14:33374 (R;CA;In English and French)
Ontario historical water levels summary, to 1987, 14:33375 (R;CA;In English and French)

Environmental and Chemical Sciences, Inc., Aiken, SC (USA)
Distribution and abundance of zooplankton at selected locations on the Savannah River and from tributaries of the Savannah River Plant: December 1984–August 1985, 14:34488 (R;US)

Environmental Protection Agency, Anchorage, AK (USA). Alaska Operations Office
Causeways in the Alaskan Beaufort Sea. Final report, 14:33177 (R;US)

Environmental Protection Agency, Ann Arbor, MI (USA)
Formaldehyde sampling from automobile exhaust: a hardware approach. Technical report, 14:33797 (R;US)
Resistively heated metal monolith as a cold start assist for a methanol engine. interim report. Technical report, 14:33794 (R;US)

Environmental Protection Agency, Ann Arbor, MI (USA). Office of Mobile Sources
Proposed organic emission standards and test procedures for 1988 and later methanol vehicles and engines, 14:33799 (R;US)

Environmental Protection Agency, Cincinnati, OH (USA). Office of Environmental Criteria and Assessment
Health and Environmental Effects Profile for Phthalic Acids (o-, m-, p-), 14:34708 (R;US)

Environmental Protection Agency, Research Triangle Park, NC (USA). Office of Air Quality Planning and Standards
Protocols for generating unit-specific emission estimates for equipment leaks of VOC (volatile organic compounds) and VHAP (volatile hazardous air pollutants). Final report, 14:34407 (R;US)

Environmental Protection Agency, Washington, DC (USA). Office of Emergency and Remedial Response
Superfund exposure assessment manual, 14:34480 (R;US)

Environmental Protection Agency, Washington, DC (USA). Office of Solid Waste
Amendment to the Best Demonstrated Available Technology (BDAT) background document for F001-F005 spent solvents. Volumes 1 and 2, 14:33764 (R;US)
Best Demonstrated and Available Technology (BDAT) background document for K016, K18, K019, K020, K030. Final report, 14:33762 (R;US)
Best Demonstrated Available Technology (BDAT) background document for K048, K049, K050, K051, K052. Final report, 14:33763 (R;US)

Environmental Protection Agency, Washington, DC (USA). Office of Water Regulations and Standards
Land application and distribution and marketing of sewage sludge: technical support document, 14:34481 (R;US)
Landfilling of sewage sludge: technical support document, 14:34482 (R;US)

Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.). Medizinische Fakultaet
Steroid hormones and peptide hormones in atopic eczema. Radioimmunological determination of diurnal plasma level variations of testosterone, cortisol, prolactin and human growth factor in healthy volunteers and patients showing atopic eczemae, 14:34618 (R;DE;In German)

European Organization for Nuclear Research, Geneva (Switzerland)
Free-electron laser theory, 14:34277 (R;XC)

F

Fenix and Scisson, Inc., Mercury, NV (USA)
Lithology and stratigraphy of drill holes completed during 1988 in LANL [Los Alamos National Laboratory] use areas of Yucca Flat, Nevada Test Site, Volume 10: Geologic report, 14:34120 (R;US)

Fermi National Accelerator Lab., Batavia, IL (USA)
ACP/R3000 processors in data acquisition systems, 14:35486 (R;US)

Hilbert space of closed bosonic string, 14:34991 (R;SE)

Stoller (S.M.) Corp., Pleasantville, NY (USA)
Guidelines for improving fuel reliability: Final report, 14:33481 (R;US)

Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires
Associated particle technique for absolute neutron counting efficiency determination, 14:34320 (R;FR)
Background estimates and limits on compositeness at LEP $Z^0 -> \gamma\gamma\gamma$ and e^+ search, 14:34947 (R;FR)
Comparison of the $^{13}C + ^{16}0$ reaction with $^{12}C + ^{17}0$, 14:35113 (R;FR)
Electric discharges in an electrostatic machine. Analysis of work by J.A. Staniforth and C.M. Cooke, 14:34280 (R;FR;In French)
Search for superdeformation in ^{144}Gd, 14:35066 (R;FR)
Spectral density analysis of noisy repetitive pulses. Models for continuously operating mode-locked lasers, 14:35406 (R;FR)
Study of meson production in 200 A. GeV ion collisions using decay muons, 14:34948 (R;FR)
Test of the Fugi MB43458 preamplifier in a CERN type drift chamber, 14:34279 (R;FR;In French)

Studsvik Energiteknik AB, Nykoeping (Sweden)
Base irradiation history and interim inspection of the KWU/CE test fuel rods of rod groups PK4 and PK6: The SUPER-RAMP Project, 14:33498 (R;SE)
Complementary metallography on the rods PW 3/4 and PW 5/3: The Super-Ramp Project, 14:33467 (R;SE)
Destructive examination of PW3 and PW5 rods: The Super-Ramp Project, 14:33466 (R;SE)
Destructive examinations of BG8 and BG9 rods: The Studsvik Super-Ramp Project, 14:33473 (R;SE)
Fabrication and characterization of Westinghouse-design fuel rods for The Super-Ramp Project: The Studsvik Super-Ramp Project, 14:33500 (R;SE)
Foam quality by low ambient temperatures and varying tube temperatures, 14:33776 (R;SE;In Swedish)
Hot cell examinations of AA test fuel rods: The Studsvik Super-Ramp Extension Project, 14:33476 (R;SE)
Non-destructive examination of PW3 rods: The Super-Ramp Project, 14:33464 (R;SE)
Non-destructive examinations of BG8 and BG9 rods: The Super-Ramp Project, 14:33468 (R;SE)
Post-ramp examinations of KWU/CE rods at Karlstein: The Super-Ramp Project, 14:33471 (R;SE)
Power ramping of Super-Ramp test fuel rods: Final irradiation report: The Super-Ramp Project, 14:33470 (R;SE)
Power ramping of the PWR rods PK4/1, 2, 3 and PK6/1, 2, 3 irradiation report: The Studsvik Super-Ramp Project, 14:33463 (R;SE)
Power ramping of the rods PW3/1, 2, 3 and 4: Irradiation report: The Studsvik Super-Ramp Project, 14:33543 (R;SE)
Power ramping of the rods PW5/1, 2 and 3: Irradiation report: The Super-Ramp Project, 14:33465 (R;SE)
Results of non-destructive examinations of the fuel rods of the groups PK4 and PK6: The Studsvik Super-Ramp Project, 14:33495 (R;SE)
Results of profilometry, E C tests and radiography of test rods supplied by Asea-Atom: The Studsvik Super-Ramp Extension Project, 14:33475 (R;SE)

Test fuel rod fabrication and pre-irradiation characterization report, rod groups PK4 and PK6: The Studsvik Super-Ramp Project, 14:33497 (R;SE)
The Studsvik Super-Ramp Extension Project: Progress report, January 1–September 30, 1984, 14:33506 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, April–June, 1980 and July–September, 1980, 14:33494 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, April–June 1981, 14:33502 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, July–September 1981, 14:33503 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, October–December 1981, 14:33504 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March 1982, 14:33505 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, October–December, 1982, 14:33469 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, October–December 1980, 14:33496 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March 1983 and April–June 1983 [first and second quarters], 14:33472 (R;SE)
The Studsvik Super-Ramp Project: Final report, 14:33474 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March, 1981, 14:33499 (R;SE)
Westinghouse test fuel rods: Base irradiation history report: The Super-Ramp Project, 14:33501 (R;SE)

Studsvik Energy, Nykoeping (Sweden)
Empiric model of pulverized coal combustion, 14:33143 (R;SE;In Swedish)

Stuttgart Univ. (Germany, F.R.). Inst. fuer Kernenergetik und Energiesysteme
Expert system for selection and evaluation of heating system improvement measures, 14:33722 (R;DE;In German)

Surface Rights Board, Edmonton, AB (Canada)
5th Annual report of the Surface Rights Board appointed under the Surface Rights Act for the year 1986, 14:33660 (R;CA)

Svenska Kommunfoerbundet, Stockholm (Sweden)
Municipal emergency planning for oil spills at sea. Manual of municipal preparedness, 14:33176 (R;SE;In Swedish)

Swedish Council for Building Research, Stockholm (Sweden)
Advanced heat pump for single-family dwellings. Market potential in Sweden, Norway, USA, and Canada, 14:33712 (R;SE;In Swedish)
Air heat pumps in the residential sector. Low-frequency acoustic nuisance, 14:33714 (R;SE;In Swedish)
Constructional and operating experience from the GRUDIS system at Hammarstrand, 14:33770 (R;SE;In Swedish)
Constructional and operating experiences from the GRUDIS system at Vedevaag, 14:33771 (R;SE;In Swedish)
Degradation of glycols in heat pumps and solar heating systems. Laboratory investigation, 14:33715 (R;SE;In Swedish)
Energy saving by equipment based upon microcomputers. Comparison between computerized and time control of a ventilation a heating system, 14:33711 (R;SE;In Swedish)
Heat production plant and consumer service units in the GRUDIS system at Vedevaag, 14:33772 (R;SE;In Swedish)
Radon i dwellings. Testing and evaluation of constructional and buildings services engineering measures, 14:34467 (R;SE;In Swedish)
Short-term heat storage in excavated wells in earth. A feasibility study, 14:33713 (R;SE;In Swedish)
Storage of waste heat in a rock cavern and borehole heat store in Vaenersborg, 14:33751 (R;SE;In Swedish)

Swedish National Board for Technical Development, Stockholm (Sweden)
Articulated bus with pressure accumulator and two-axle drive possibility, 14:33796 (R;SE;In Swedish)
Theoretical study of conducting polymers and polymer-metal interfaces, 14:33988 (R;SE;In Swedish)

Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden)
Description of geological data in SKBs database GEOTAB, 14:34725 (R;SE)
Hydrogeochemical assessment of crystaline rock for radioactive waste disposal: the Stripa experience, 14:33308 (R;SE)
On the corrosion of copper in pure water, 14:33905 (R;SE)
Stripa project annual report 1987, 14:33309 (R;SE)
Ultimate storage of reactor wastes. Final report on safety, 14:33283 (R;SE;In Swedish)

Swedish Nuclear Power Inspectorate, Stockholm (Sweden)
Deterministric and probabilistric model for oilspill fires in nuclear power plants. A final report to the Swedish Nuclear Power Inspectorate, 14:33540 (R;SE)
Geochemical computer codes. A review. Final report, 14:34508 (R;SE)
Nuclide solubilities and distribution coefficients for use in probabilistic modeling. Data for the nucliedes ^{14}C, ^{79}Se, ^{93}Zr, ^{99}Tc, ^{126}Sn, ^{129}I, ^{135}Cs, ^{237}Np and ^{239}Np, 14:34479 (R;SE)
On the swelling of ion exchange resins used in Swedish nuclear power plants, 14:33310 (R;SE)
PHREEQE Geochemical equilibrium code data base and calculations. Final report, 14:34509 (R;SE)
Users' guide to OSFIC. A computer program for oilspill fires in compartments, 14:33541 (R;SE)

Swedish State Power Board, Vaellingby (Sweden)
Boltometer testing of reference bolt in the Final Repository for Reactor Waste (SFR), Forsmark, 14:34134 (R;SE;In Swedish)
Compilation of results 1987. Nuclear power technology, 14:35479 (R;SE;In Swedish)
Partial conversion of direct-electric heated single family residence with a small heat pump. Pilot project progress report after 2.5 month follow-up, 14:33744 (R;SE;In Swedish)

Sydney Univ. (Australia). Dept. of Plasma Physics
Wills Plasma Physics Department annual progress report 1987, 14:35417 (R;AU)

T

Technische Univ. Muenchen (Germany, F.R.). Fakultaet fuer Medizin
Concentrations of testosterone, luteal hormone and prolactin in the serum as well as comparisons of sensitivity between radioimmunoassays and enzyme assays for the detection of acid prostate phosphatase in the presence of carcinomas of the prostate, 14:34613 (R;DE;In German)

Technology Prospects, Inc., Falls Church, VA (USA)
A national strategy for the export of US geothermal technology, 14:33422 (R;US)

TECOGEN, Inc., Waltham, MA (USA)
Integrated gas-fired desiccant dehumidification vapor-compression cooling system for residential application. Phase 1. Final report, December 1986-December 1987, 14:33741 (R;US)

Tennessee Univ., Tullahoma, TN (USA). Space Inst.
MHD [magnetohydrodynamics] seed recovery and regeneration based on the Formate Process: Quarterly technical progress report, September 18, 1987–December 31, 1987, 14:33685 (R;US)
Particle sizing experiments with the laser Doppler velocimeter: Final report, 14:34362 (R;US)

Texas A and M Univ., College Station, TX (USA). Water Resources Inst.
Fiscal Year 1987 program report: Texas Water Resources Institute, 14:34513 (R;US)

Texas Univ., Austin, TX (USA). Bureau of Economic Geology
Geologic evaluation of critical production parameters for coalbed methane resources. Part 1. San Juan Basin. Annual report, August 1987-July 1988, 14:33194 (R;US)
Site selection for GRI (Gas Research Institute) cooperative tight-gas-field research. Volume 2. Geologic characteristics of selected low-permeability gas sandstones. Topical report, May-July 1988, 14:33196 (R;US)

Texas Univ., San Antonio, TX (USA). Health Science Center
Effect of radiofrequency radiation on MRNA expression in cultured rodent cells, 14:34711 (R;US)

Application for certification, 1989 model year light-duty vehicles - Audi, 14:33789 (R;DE)

Valtion Teknillinen Tutkimuskeskus, Espoo (Finland)
Pressurized fluidized bed combustion and gasification systems, 14:33146 (R;FI)

Vermont Univ., Burlington, VT (USA)
The development of in vitro mutagenicity testing systems using T-lymphocytes: Research progress report: June 1, 1988–May 31, 1989, 14:34671 (R;US)

Virginia Polytechnic Inst. and State Univ., Blacksburg, VA (USA). Management Systems Labs.
Research and development of methods and tools for achieving and maintaining consensus processes in the face of change within and among government oversite agencies: First annual performance report: Research status, October 1988–September 1989, 14:33661 (R;US)

Virginia Univ., Charlottesville, VA (USA). Dept. of Physics
Studies of autoionizing states relevant to dielectronic recombination: Progress report, July 1, 1988–April 1, 1989, 14:34898 (R;US)

Volkswagen of America, Inc., Ann Arbor, MI (USA)
Application for certification, 1989 model year light-duty vehicles - Volkswagen, 14:33786 (R;US)

Volvo of America Corp., Rockleigh, NJ (USA)
Application for certification, 1989 model year light-duty vehicles - Volvo Cars of North America, 14:33788 (R;US)

Vyskumny Ustav Jadrovych Elektrarni, Trnava (Czechoslovakia). Rezortne Skoliace a Vycvikove Stredisko
Operation of nuclear power plants. Instruction manual, 14:33483 (R;CS;In Slovak)

W

Washington State Univ., Pullman, WA (USA)
Quantitative three-dimensional structural techniques, 14:34717 (R;US)
The role of electricity in Pacific Northwest irrigated agriculture, 1979–1987: Volume 1, A study of irrigation price elasticity of demand, the importance of irrigated agriculture to rural communities, and an evaluation of alternative targeted rate discount options for irrigation consumers, 14:33753 (R;US)

Washington State Univ., Pullman, WA (USA). Dept. of Geology
Three-dimensional computer analysis and modelling of remote sensing-structural geologic problems, 14:34716 (R;US)

Waterloo Univ., ON (Canada). Waterloo Centre for Process Development
Biotechnological methods for upgrading of bitumen, heavy oil, and residue. Final report for phase 2, 14:33212 (R;CA)

Weidlinger Associates, Palo Alto, CA (USA)
Large-scale, explicit wave simulations on the CRAY-2, 14:34726 (R;US)

West Valley Nuclear Services Co., Inc., West Valley, NY (USA)
Preliminary design of the high-level waste canister storage system: Topical report for the period of January 1, 1987–September 30, 1987, 14:33257 (R;US)

West Virginia Univ., Morgantown, WV (USA). Dept. of Chemical Engineering
Deactivation of hydrotreatment catalysts used for coal liquids: Semi-annual report, November 12, 1988–May 11, 1989, 14:33067 (R;US)

West Virginia Univ., Morgantown, WV (USA). Dept. of Chemistry
Fundamentals of coal-char chemistry. Final report, February 1985-April 1988, 14:33102 (R;US)

West Virginia Univ., Morgantown, WV (USA). Dept. of Mechanical and Aerospace Engineering
A study of coal particle shape and three-body wear: Quarterly report, January–March 1989, 14:33121 (R;US)

West Virginia Univ., Morgantown, WV (USA). Harley O. Staggers National Transportation Center
Evaluation of the spare-ratio concept in the management of transit rolling stock. Final report, 14:33750 (R;US)

Western Research Inst., Laramie, WY (USA)
A solid-state NMR study of condensation/retrograde reactions during coal liquefaction: Quarterly progress report, January 1, 1989–March 31, 1989, 14:33073 (R;US)
Production of jet fuels from coal-derived liquids. Volume 3. Jet fuels potential of liquid by-products from the Great Plains Gasification Project. Interim report, September 1986-December 1987, 14:33039 (R;US)

Westinghouse Electric Corp., Pittsburgh, PA (USA). Advanced Energy Systems Div.
Conceptural design of a coal-fired MHD retrofit plant: Quarterly report for January 1989–March 1989, 14:34379 (R;US)

Westinghouse Electric Corp., Pittsburgh, PA (USA). Research and Development Center
Bibliography of high-T_c superconducting films, 14:35246 (R;US)

Westinghouse Electric Corp., Pittsburgh, PA (USA). Service Technology Div.
Qualification of PWR steam generator chemical cleaning for Indian Point-2: Final report, 14:33480 (R;US)

Westinghouse Electric Nuclear Energy Systems Europe (WENESE), Brussels (Belgium)
Westinghouse test fuel rods: Base irradiation history report: The Super-Ramp Project, 14:33501 (R;SE)

Westinghouse Hanford Co., Richland, WA (USA)
Hazardous material shipping computer-assisted training course, 14:33315 (R;US)
Model testing conducted to benchmark the Shippingport Reactor Pressure Vessel/Neutron Shield Tank safety analysis report for packaging, 14:33314 (R;US)
Production Test N-611 and N-614 emergency cooling/fog spray supply characterization tests: Final report, 14:33561 (R;US)

Westinghouse Savannah River Co., Aiken, SC (USA)
Fluorination of incinerator ash by hydrofluorination or ammonium bifluoride fusion for plutonium recovery, 14:33316 (R;US)
The Savannah River Site local area network, 14:35501 (R;US)

Wisconsin Univ., Madison, WI (USA)
Design and operation of a horizontal liquid helium flow facility, 14:34117 (R;US)

Wisconsin Univ., Madison, WI (USA). Plasma Physics Research
Magnetic turbulence versus safety factor in the Tokapole II tokamak, 14:35408 (R;US)

Wyoming Univ., Laramie, WY (USA). Dept. of Chemical Engineering
Use of basic nitrogen to chemically clean coal: Quarterly report no. 9 for the period March 15, 1989 to June 15, 1989, 14:33077 (R;US)

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, *EDB Subject Thesaurus* (DOE/OSTI-7000). In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. *See also* references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

A

A CODES
ASR4: A computer code for fitting and processing 4-gage anelastic strain recovery data, 14:34130 (R;US)
Knowledge-enhanced network simulation modeling of the nuclear power plant operator, 14:33594 (BA;US)

Indoor Air Pollution
Health-hazard evaluation determination report No. 77-27-437, Keller Aluminum Furniture of Indiana, Linton, Indiana, 14:34397 (R;US)
Health-hazard evaluation report HETA 86-447-1919, Estherville Foods, Inc., Estherville, Iowa, 14:34422 (R;US)
Health-hazard evaluation report HETA 86-461-1920, Ballas Egg Products Corporation, Zanesville, Ohio, 14:34421 (R;US)
Occupational Exposure
Health-hazard evaluation determination report No. 76-115-425, H F E Inc., Ft. Collins, Colorado, 14:34408 (R;US)
AEROSPACE INDUSTRY
Maintenance Facilities
Preliminary control technology assessment of TWA Maintenance Facility, Kansas City, Missouri, August 18, 1981, 14:34395 (R;US)
Materials Testing
Nondestructive detection of the T_1 phase in Al-Li alloys, 14:33921 (J;US)
AGE ESTIMATION
See also ISOTOPE DATING
Greenland
U-Pb and Rb-Sr age determinations on Caledonian plutonic rocks in the central part of the Scoresby Sund region, East Greenland, 14:34718 (RA;DK)
Validation
Lithologic controls on rock varnish formation as determined by SEM [scanning electron microscope], 14:34761 (R;US)
AGR TYPE REACTORS
Boilers
Oxide deposition in the orifices of AGR boiler inlet ferrule assemblies, 14:33508 (R;GB)
AGRICULTURAL RESIDUES
See AGRICULTURAL WASTES
AGRICULTURAL WASTES
Saccharification
Biomass conversion through radiation immobilization of enzymes and microorganisms and pre-irradiation techniques at IPEN/CNEN, Sao Paulo, 14:33386 (RA;XA)
AGRICULTURE
See also DAIRY INDUSTRY

Bibliographies
Agricultural Energy Centre, 14:33759 (R;CA)
Chemical Industry
Opportunities to assist developing countries in the proper use of agricultural and industrial chemicals. Report of the Committee on Health and Environment. Volume 1. Research paper(Final), 14:33647 (R;US)
Fallout Deposits
Radioactive fallout in food and agriculture. A background review for the FAO Standing Committee on Radiation Effects, the FAO Land and Water Development Division, and the Joint FAO/IAEA Division of Nuclear Techniques in Food and Agriculture, 14:34469 (R;XA)
Pest Control
Opportunities to assist developing countries in the proper use of agricultural and industrial chemicals. Report of the Committee on Health and Environment. Volume 1. Research paper(Final), 14:33647 (R;US)

AIR
Combustion Kinetics
Flame acceleration and transition to detonation in channels, 14:33344 (BA;US)
High pressure autoignition of natural gas/air mixtures and the problem of engine knock, 14:33202 (BA;US)
Contamination
Activity levels in air and ground in the region of Bremen after the Chernobyl accident, 14:34443 (RA;AT)
Chernobyl in the university town Muenster (FRG), 14:34478 (RA;AT;In German)
Detonations
Hydrogen-air-diluent detonations, 14:33343 (BA;US)
Radon 222
Method for direct determination of the 'working level', 14:34349 (RA;AT;In German)

AIR CONDITIONING
Control Equipment
Requirements for air conditioning control devices and processes, 14:33746 (R;FI;In Finnish)
Forecasting
Predicting air conditioner load curves from energy audit data: A comparison of predicted and actual air conditioning data from the Athens load control experiment, 14:33451 (R;US)

AIR FILTERS
Interlaboratory Comparisons
Report on the intercomparison run IAEA-083 radionuclides in simulated airfilters, 14:34055 (R;XA)
Multi-Element Analysis
Report on the intercomparison run IAEA-083 radionuclides in simulated airfilters, 14:34055 (R;XA)

AIR FLOW
Mathematical Models
Applications of a simplified model for predicting air flows in multizone structures, 14:33725 (R;US)

AIR POLLUTION
See also INDOOR AIR POLLUTION
Impacts of acidic deposition: context and case studies of forest soils in the southeastern US, 14:34464 (R;US)
Information Systems
Toxic Air Pollutant Emission Factors: information storage and retrieval system. User's manual. Final report, 14:34406 (R;US)

AIR POLLUTION ABATEMENT
Cost
Costs of reducing nitrogen oxide emissions from power plants, 14:33446 (R;FI;In Finnish)
Standards
Proposed organic emission standards and test procedures for 1988 and later methanol vehicles and engines, 14:33799 (R;US)

AIR POLLUTION CONTROL
Research Programs
National Acid Precipitation Assessment Program annual report, 1987, 14:34383 (R;US)

AIR QUALITY
Historical Aspects
Estimates of historic urban air quality trends and precipitation acidity in selected US cities (1880-1980), 14:34381 (R;US)
Monitoring
Indoor air quality in commercial buildings: Volume 1, Measurement results and interpretation: Final report, December 1987, 14:33718 (R;US)
Indoor air quality in commercial buildings: Volume 2, Appendices: Final report, December 1987, 14:33719 (R;US)

AIR SOURCE HEAT PUMPS
Heat Sources
Soil air as a heat source for domestic heating by heat pumps, 14:33723 (RA;CA;In English and French)
Noise Pollution
Air heat pumps in the residential sector. Low-frequency acoustic nuisance, 14:33714 (R;SE;In Swedish)

AIRBORNE PARTICLES

Corrosion Protection
Oxidation of metals and associated mass transport, 14:33907 (B;US)
Oxidation
Electrochemical reactions at the electrode in submerged arc welding, 14:33918 (BA;US)
Oxidation of metals and associated mass transport, 14:33907 (B;US)
Research Programs
Overview of the advanced research and technology development fossil energy materials program, 14:33815 (RA;US)
Symmetry Groups
Tensorial properties distinguishing icosahedral symmetry from cubic or isotropic SO(3) symmetry, 14:35316 (BA;SG)

ALPHA REACTIONS
Inclusive Interactions
Study of the small-angle correlations of charged particles from alpha-particle induced reactions on ^{58}Ni at 120 MeV, 14:35061 (R;DE;In German)

ALPHA-BEARING WASTES
Radioactive Waste Disposal
Contribution to internal pressure and flammable gas concnetration in RAM [radioactive material] transport packages, 14:33295 (R;US)
Radioactive Waste Processing
A low level/transuranic waste sorting device for plutonium assay, 14:33290 (R;US)

ALUMINIA
See ALUMINIUM OXIDES

ALUMINIUM
Charged-Particle Transport
Barkas effect with use of antiprotons and protons, 14:35188 (J;US)
Electric Arcs
Cathode ions from microsecond aluminum vacuum arcs, 14:34940 (J;US)

Electrochemistry
An impedance study of the electrodissolution of aluminum in 4M KOH at 25°C, 14:33693 (BA;US)
Grain Boundaries
Solute effects on mechanical properties of grain boundaries, 14:33825 (RA;US)
Pitting Corrosion
Transport processes in localized corrosion, 14:33819 (RA;US)
Radiation Effects
Radiation effects in metals and semiconductors, 14:33834 (RA;US)
Ultrasonic studies of radiation effects, 14:33833 (RA;US)

ALUMINIUM ALLOYS
See also ALUMINIUM BASE ALLOYS
Crystal Lattices
Quasi-lattices associated with arbitrary groups: Application to icosahedral and dihedral groups, 14:35313 (BA;SG)
Deformation
Role of deformation mechanisms in multiaxial hardening and cyclic fatigue, 14:33828 (RA;US)
Ductility
Direct observation of the compositional disordering of Ni_3Al in the vicinity of grain boundaries using high resolution electron microscopy techniques, 14:33937 (J;US)
Microchemical analysis of intermetallic alloys using the field-ion microscope atom probe: Progress report, [July 1, 1988–December 31, 1988], 14:33847 (R;US)
Grain Boundaries
Theoretical studies of grain boundaries in Ni_3Al with boron or sulfur, 14:33923 (J;US)
Mechanical Properties
Mechanical properties of intermetallic compounds, 14:33827 (RA;US)
Microstructure
Quantitative thin film x-ray microanalysis of Nb modified Ti_3Al, 14:33903 (R;US)
Nondestructive Testing
Nondestructive detection of the T_1 phase in Al-Li alloys, 14:33921 (J;US)
Pairing Interactions
Cluster interactions and physical properties of Al–transition-metal alloys, 14:33928 (J;US)
Physical Properties
Simplified pseudopotential expansion theory for Al-Li alloys, 14:33931 (J;US)
Radiation Effects
Radiation effects in metals and semiconductors, 14:33834 (RA;US)
Solidification
Structure, properties and fracture of pulsed Nd:YAG laser welded Ti-14.8wt%Al-21.3wt%Nb titanium aluminide, 14:33934 (J;US)
Symmetry Groups
Symmetry and phase transitions in decagonal quasi-crystals, 14:35317 (BA;SG)

ALUMINIUM ARSENIDES
Carrier Mobility
Carrier transport in quantum wells-picosecond imaging, 14:33840 (RA;US)

ALUMINIUM BASE ALLOYS
Mechanical Properties
Cryogenic tensile properties of AA 2090 weldments, 14:33889 (R;US)
Microstructure
Microstructural evolution of Al-Li and Al-Li-Cu-Mg alloys, 14:33888 (R;US)
Physical Radiation Effects
Effects of high thermal and high fast fluences on the mechanical properties of type 6061 aluminum in the HFBR, 14:33808 (R;US)

ALUMINIUM CHLORIDES
Solvent Properties
Organic chemistry in ambient temperature chloroaluminate melts, 14:34093 (BA;US)

ALUMINIUM COMPOUNDS

AMMONIA
Oxidation
Late transition metal μ-oxo and μ-imido complexes: Progress report, May 15, 1988–May 14, 1989, 14:34071 (R;US)
Production
Pressurized bed peat gasification plant of Kemira Oy in Oulu, 14:33107 (RA;FI)
AMMONIUM CARBONATES
Leaching
Restoration of in situ leached uranium ores: A laboratory study of restoration reagents, 14:33221 (RA;XA)
AMORPHOUS STATE
Structural Chemical Analysis
Microstructure study of amorphous material by EXAFS method, 14:35222 (RA;CS;In Czech)
ANAEROBIC DIGESTION
Polysaccharides
Characterization of polysaccharidase activity optima in the anaerobic digestion of municipal solid waste, 14:33356 (J;GB)
ANALYTIC FUNCTIONS
On sufficient conditions for a function to be analytic, 14:35261 (R;XA)
ANGULAR MOMENTUM
See also SPIN
Binary Stars
Role of angular momentum transfer to determine the mass ratio of binaries, 14:34845 (RA;CS)
Expectation Value
Spin quenching and the SO_8 and SP_6 fermion models of collective motion, 14:35324 (BA;SG)
Mathematical Operators
Symmetries of some hypergeometric series: implications for 3j- and 6j-coefficients, 14:35342 (BA;SG)
ANHARMONIC CRYSTALS
Hamiltonians
Anharmonicities of γ vibrations in ^{168} Er, 14:35153 (R;FR)
Lattice Vibrations
Anharmonicities of γ vibrations in ^{168} Er, 14:35153 (R;FR)
ANHARMONIC OSCILLATORS
Energy Levels
Dynamical group approach to certain anharmonic oscillator and perturbed Coulomb potentials, 14:35319 (BA;SG)
Mathematical Models
SU(1,1) coherent states and squeezed light interacting with an anharmonic oscillator, 14:35335 (BA;SG)
ANILINE
Electrochemistry
Polyaniline: electrochemistry and application to rechargeable batteries. Technical report, 14:33610 (R;US)
ANIMAL CELLS

Inelastic heavy ion scattering on ^{90}Zr and ^{208}Pb at intermediate energies, 14:35072 (R;FR)

Intermediate Mass Nuclei
Intermediate-mass fragments: a probe for the mechanisms involved in H.I. collisions around E/A = 30 MeV, 14:35073 (R;FR)

Lead 208 Target
Inelastic heavy ion scattering on ^{90}Zr and ^{208}Pb at intermediate energies, 14:35072 (R;FR)

Silver 107 Target
Intermediate-mass fragments: a probe for the mechanisms involved in H.I. collisions around E/A = 30 MeV, 14:35073 (R;FR)

Silver 109 Target
Intermediate-mass fragments: a probe for the mechanisms involved in H.I. collisions around E/A = 30 MeV, 14:35073 (R;FR)

Zirconium 90 Target
Inelastic heavy ion scattering on ^{90}Zr and ^{208}Pb at intermediate energies, 14:35072 (R;FR)

ARGON ISOTOPES

Neutron-Rich Isotopes
Observation of the new neutron-rich nuclei ^{29}F, ^{35,36}Mg, ^{38,39}Al, ^{40,41}Si, ^{43,44}P, ^{45,46,47}S, ^{46,47,48,49}Cl and ^{49,50,51}Ar by means of a 55 MeV/u ^{48}Ca beam, 14:35038 (R;SU)

ARGON METHOD
See ISOTOPE DATING

ARGONNE SUPERCONDUCTING LINAC
See ATLAS SUPERCONDUCTING LINAC

ARMS CONTROL
Canada: the decision to procure nuclear-attack submarines and its significance for NATO. Master's thesis, 14:33803 (R;US)

BARIUM
Autoionization
Studies of autoionizing states relevant to dielectronic recombination: Progress report, July 1, 1988–April 1, 1989, 14:34898 (R;US)

BARIUM 133
Multi-Element Analysis
Report on the intercomparison run IAEA-083 radionuclides in simulated airfilters, 14:34055 (R;XA)

BARIUM 142
De-Excitation
Method for picosecond lifetime measurements for neutron-rich nuclei. Pt. 2. Timing study with scintillation counters, 14:34356 (J;NL)

BARIUM COMPOUNDS
See also BARIUM OXIDES
Cuprates
Composite ceramic superconducting wires for electric-motor applications. Quarterly report No. 2, 30 September-30 December 1988, 14:34116 (R;US)
Neutron Spectra
On determination of the magnetic field penetration depth in oxide superconductors by polarized neutron reflection, 14:35230 (R;SU;In Russian)
Phonon density of states of $YBa_2Cu_3O_x$ in dependence on oxygen content and temperature, 14:35229 (R;SU)
Penetration Depth
On determination of the magnetic field penetration depth in oxide superconductors by polarized neutron reflection, 14:35230 (R;SU;In Russian)
Phonons
Phonon density of states of $YBa_2Cu_3O_x$ in dependence on oxygen content and temperature, 14:35229 (R;SU)
Processing
Recent improvements in bulk properties of ceramic superconductors, 14:33945 (R;US)
Sintering
Thin film preparation and single film device fabrication in the Tl-Ca-Ba-Cu-O HTS system, 14:33963 (R;US)

BARIUM OXIDES
Superconductivity
A method for measuring optical twin spacings in the superconducting material, $YBa_2Cu_3O_x$, 14:33969 (J;US)
Y-Ba-Cu-O superconducting films produced by long-pulse laser vaporization, 14:33968 (J;US)

BARSEBAECK-1 REACTOR
Reactor Cooling Systems
Erosion corrosion in wet steam, 14:33477 (R;SE;In Swedish)

BARYON NUMBER 2 RESONANCES
See DIBARYONS

BARYONIUM
Hadronic Particle Decay
Observation of narrow baryoniums in the experiment BIS-2. 1. Strange baryoniums, 14:34952 (R;SU)
Observation of narrow baryoniums in the experiment BIS-2. 2. Baryoniums with hidden strangeness, 14:34953 (R;SU)
Particle Production
Observation of narrow baryoniums in the experiment BIS-2. 1. Strange baryoniums, 14:34952 (R;SU)
Observation of narrow baryoniums in the experiment BIS-2. 2. Baryoniums with hidden strangeness, 14:34953 (R;SU)

BASELINE ECOLOGY
Mathematical Models
Constraints on the formulation of ecological models and theories: Conservation laws and domain-specific rule bases, 14:34457 (R;US)

BATAAN PHILIPPINE POWER PLANT
See PNPP-1 REACTOR

BATTERIES (ELECTRIC)

BEAM-BEAM INTERACTIONS
Computer Codes
The physics of codes, 14:34272 (J;US)
Monitoring
Monitoring in future e^+e^- colliders, 14:34309 (R;US)
BEAM FOCUSING MAGNETS
Beam Optics
Online monitoring of dispersion functions and transfer matrices at the SLC, 14:34251 (R;US)
Voltage Regulators
Modular magnet current regulator, 14:34281 (R;US)
BEAM INJECTION
Hydrogen Ions 1 Minus
Injection of 1 GeV H^- beam into the JHF I-A ring, 14:34313 (R;JP)
Testing
First operational tests of the positive-ion injector for ATLAS, 14:34278 (R;US)
BEAM MONITORING
Colliding Beams
Monitor for gamma radiation at zero degrees from the SLC collision point, 14:34355 (J;NL)
BEAM MONITORS
Dubna Synchrocyclotron
Secondary-emission sensors of JINR phasotron proton beam, 14:34294 (R;SU;In Russian)
Proton Beams
Secondary-emission sensors of JINR phasotron proton beam, 14:34294 (R;SU;In Russian)
BEAM OPTICS
Design
Design of optics for the final focus test beam at SLAC, 14:34253 (R;US)
Jaeri Tandem Accelerator
Beam optics of a superconducting booster for the JAERI tandem accelerator, 14:34244 (R;JP;In Japanese)
Particle Boosters
Beam optics of a superconducting booster for the JAERI tandem accelerator, 14:34244 (R;JP;In Japanese)
BEAM TRANSPORT
Computer Codes
Canonical integrators as tracking codes (or how to integrate perturbation theory with tracking), 14:34273 (J;US)
Impedance
Fields, impedances, and structures, 14:34260 (J;US)
Instability
Beam observation and the nature of instabilities, 14:34258 (J;US)
Longitudinal Momentum
Fundamentals—longitudinal motion, 14:34257 (J;US)
Modifications
Raising the acceptance of the AP2-line, 14:34283 (R;US)
Transverse Momentum
Transverse motion of single particles in accelerators, 14:34256 (J;US)
BEAM-BEAM INTERACTIONS
Bremsstrahlung
A quantum treatment of bremstrahlung and its application to ribbon pulses, 14:34265 (J;US)
BEANS
Plant Breeding
Crop improvement programmes at Shambat, Sudan, 14:34645 (RA;XA)
BEAUFORT SEA
Coastal Regions
Causeways in the Alaskan Beaufort Sea. Final report, 14:33177 (R;US)
BEEF

Numerical Solution
Recent progress in atomic mass formulas and β-decay gross theory, 14:35160 (RA;JP;In Japanese)
BIMETALLIC CORROSION
See ELECTROCHEMICAL CORROSION
BINARY ALLOY SYSTEMS
Analytical Solution
New analytical approximation for the density of states of a disordered Bethe lattice, 14:35287 (RA;BR)
Comparative Evaluations
Thermodynamics of ternary systems and its application to Li-Si-based negative electrode materials, 14:33626 (BA;US)
Corrosion
Dealloying kinetics of silver-gold alloys, 14:33914 (BA;US)
Electrocatalysts
Dealloying of Pt alloy fuel cell electrocatalysts, 14:33694 (BA;US)
Electronic Structure
New analytical approximation for the density of states of a disordered Bethe lattice, 14:35287 (RA;BR)
Microstructure
Characterization of defects in materials, 14:33908 (B;US)

Order-Disorder Transformations
Direct observation of the compositional disordering of Ni_3Al in the vicinity of grain boundaries using high resolution electron microscopy techniques, 14:33937 (J;US)
X-Ray Diffraction
Characterization of defects in materials, 14:33908 (B;US)

BINARY MIXTURES
Separation Processes
Analysis and computer tools for separation processes involving nonideal mixtures: Progress report, June 1, 1986–November 30, 1989, 14:34053 (R;US)

BINARY STARS
Accretion Disks
Models of accretion disks in interacting binaries, 14:34847 (RA;CS)
Cepheids
Cepheid binaries with large mass ratios (M_1/M_2), 14:34778 (RA;FR)
Mapping of surface activity on the W UMa-type system VW Cephei, 14:34782 (RA;FR)
Cosmic X-Ray Sources
Fast variability in low-mass X-ray binaries, 14:34816 (RA;CS)
Rapid spectral variability of massive X-ray binaries and runaways, 14:34818 (RA;CS)
Electromagnetic Radiation
On the possibility of taking into account the electromagnetic radiation in the atmospheres of close binary stars, 14:34854 (RA;CS)
Emission Spectra
Luminous accretion disks and high ionization emission lines in interacting binaries, 14:34846 (RA;CS)
Helium I
On the non-LTE analysis of He I lines in the atmosphere of β Lyr, 14:34850 (RA;CS)
Least Square Fit
Light curve variabilities of close binaries, 14:34840 (RA;CS)
Lyman Lines
Rotational modulation of hydrogen Lyman alpha flux from 44i Bootis, 14:34781 (RA;FR)
Mass
Role of angular momentum transfer to determine the mass ratio of binaries, 14:34845 (RA;CS)
Mass Transfer
Matter streams in semi-detached binary systems, 14:34776 (RA;FR)
Spectral investigation of eclipsing binary stars at the stage of mass exchange, 14:34841 (RA;CS)
Orbits
Some methods for solving visual double star orbits with inclination equal to 90 degC, 14:34843 (RA;CS)
Photometry
TW Cassiopeiae - an Algol-type binary, 14:34842 (RA;CS)
Radial Velocity
Chemically peculiar binary ω UMa with elliptical orbit, 14:34853 (RA;CS)
Is Omicron Andromedae a quadruple or even quintuple system?, 14:34817 (RA;CS)
Search for rapid variability in spectrum of Alpha Andromedae. (Progress report), 14:34808 (RA;CS)
Radiation Flux
On the nature of the component stars in Beta Lyrae, 14:34849 (RA;CS)
Spectra
Searching relativistic stars among O-B runaways I: V568 Cyg = HD 197419, 14:34804 (RA;CS)
Star Evolution
Binary evolution, 14:34836 (RA;CS)
Star Models
UBV light curve solutions of TT Her, 14:34839 (RA;CS)
Starspots
Starspot proper motion in HK Lac, 14:34812 (RA;CS)
Statistics
Statistical properties of visual and eclipsing binaries, 14:34844 (RA;CS)
Stellar Activity
Mapping of surface activity on the W UMa-type system VW Cephei, 14:34782 (RA;FR)
Rapid time variability in the short-period RS CVn-type binary SV Camelopardalis, 14:34811 (RA;CS)
Stellar Atmospheres
Model atmospheres of binary components, 14:34838 (RA;CS)
Stellar Flares
Ultraviolet flares on II Peg, 14:34783 (RA;FR)
Supergiant Stars
Spectroscopic binary Xi Cygni, 14:34855 (RA;CS)
Ultraviolet Spectra
Atmospheric eclipse effects in Wolf-Rayet binaries in the small Magellanic cloud, 14:34775 (RA;FR)
Cepheid binaries with large mass ratios (M_1/M_2), 14:34778 (RA;FR)
Matter streams in semi-detached binary systems, 14:34776 (RA;FR)
Observations of galactic WC + O binary systems: HD 97152 and HD 152270, 14:34774 (RA;FR)
Search of tidal interaction in the binary system λ And, 14:34814 (RA;CS)
Ultraviolet spectra of Algol binaries, 14:34828 (RA;CS)
Variable Stars
Astrophysics. Proceedings. Vol. 5, 14:34796 (R;CS)
Introductory comments to the panel discussion on discrimination between various possible causes of rapid variability in stars, 14:34826 (RA;CS)

BIOGAS
See METHANE

BIOINTRUSION
Risk Assessment
An assessment of issues related to determination of time periods required for isolation of high level waste, 14:33254 (R;US)

BIOLOGICAL DOSEMETERS
Chromosomal Aberrations
Chromosome analysis for exposed and presumably exposed persons, 1985-1987, 14:34686 (R;DE;In German)

BIOLOGICAL HOT SPOTS
Fourier Analysis
Modeling of the angular reflectance of an artificial plant canopy near the retroreflection peak in the optical regime, 14:34458 (R;US)

BIOLOGICAL RADIATION EFFECTS
See also RADIATION INJURIES
Forecasting
Calculations of physical and chemical reactions with DNA in aqueous solution from Auger cascades, 14:34670 (R;US)

BIOMASS
Economic Analysis
Appendix to "Financial and economic analysis of bioenergy investments (Norway), 14:33644 (R;NO;In Norwegian)
Financial and economic analysis of bioenergy investments. Report no. 1/1988, 14:33643 (R;NO;In Norwegian)
Energy Source Development
Financial and economic analysis of bioenergy investments. Report no. 1/1988, 14:33643 (R;NO;In Norwegian)
Energy Yield
Biofuels and municipal waste technology a national perspective, 14:33778 (BA;US)
Production
Alternative energy in the Midwest, 14:33354 (B;US)

BIOMASS PLANTATIONS
Energy Yield
Black locust, 14:33395 (BA;US)
Machinery
Harvesting trials in a sycamore biomass energy plantation in Alabama, 14:33392 (BA;US)
Short Rotation Cultivation
Economic evaluations of multiple rotation SRIC biomass plantations, 14:33396 (BA;US)
Yields
Energy forests. An overview, 14:33388 (RA;CA)

BIOMIMETIC PROCESSES
Energy transfer and photochemistry in biomimetic solar conversion. Annual report, October 1987-September 1988, 14:33389 (R;US)
BIOTECHNOLOGY
Market
Biofuels and municipal waste technology a national perspective, 14:33778 (BA;US)
BIPHENYL
Thermodynamic Properties
Thermodynamic properties of biphenyl: Topical report, 14:33178 (R;US)
BISMUTH
Solvent Properties
Status of plutonium purification by bismuth solvent anode electrorefining, 14:33563 (BA;US)
BISMUTH COMPOUNDS
See also BISMUTH OXIDES
Processing
Recent improvements in bulk properties of ceramic superconductors, 14:33945 (R;US)
BISMUTH OXIDES
Superconductivity
Effects of compositional variations on the properties of superconducting $(Bi,Pb)_2Sr_2Ca_2Cu_3O_\delta$, 14:33972 (J;US)
BITUMENS
See also ASPHALTS
Solidification of Swiss radioactive wastes by means of bitumen, 14:33282 (R;CH;In German)
Bioconversion
Biotechnological methods for upgrading of bitumen, heavy oil, and residue. Final report for phase 2, 14:33212 (R;CA)
Chemical Composition
Identification of nitrogen functional groups in Athabasca bitumen, 14:33217 (RA;CA)
Coprocessing
HRI's DOE/multi-client co-processing research program, 14:33043 (RA;US)
Use of synthesis gas in co-processing of coal-bitumen and derivatives, 14:33348 (RA;CA)
Desulfurization
Biotechnological methods for upgrading of bitumen, heavy oil, and residue. Final report for phase 2, 14:33212 (R;CA)
Fractionation
Fractionation of oil sands bitumen and coal derived liquids, 14:34047 (RA;CA)
BITUMINOUS COAL
Alkylation
Coupled chemical and catalytic conversion a preliminary report on coal solubilization, 14:33057 (RA;US)
Biodegradation
Analysis of biodegraded coals, 14:33116 (RA;US)
Coprocessing
Bench-scale co-processing, 14:33044 (RA;US)
Co-processing of residual petroleum fractions with a UK bituminous coal, 14:33088 (RA;GB)
Economics of production of clean utility fuels and domestic oil supplies from high sulfur coals and residual oils, 14:33045 (RA;US)
Novel approaches to catalysis in coprocessing and in the direct liquefaction of coal, 14:33059 (RA;US)
Deashing
Role of ash concentration in coal hydroliquefaction, 14:33032 (RA;US)
Heat Treatments
Low severity conversion of activated coal, 14:33052 (RA;US)
Liquefaction
Comparative studies on the liquefaction and solubilization reactivity of subbituminous and bituminous coals, 14:33347 (RA;CA)
Porosity
Changes in the physical structure of coal on partial solubilization, 14:33114 (RA;CA)
Solubility
Changes in the physical structure of coal on partial solubilization, 14:33114 (RA;CA)
Solvent Extraction
Role of ash concentration in coal hydroliquefaction, 14:33032 (RA;US)
Structural Chemical Analysis
Structural characterization of non-reductively ethylated coal by ^{13}C and ^{1}H n.m.r., 14:33038 (RA;CA)
BLACKBODY RADIATION
Cosmic microwave anisotropies and large scale velocity fields in isocurvature hot dark matter models, 14:34866 (R;JP)
Gravitational lens effect on anisotropies of cosmic microwave background, 14:34868 (R;JP)

BNL
Computer Networks
[Exchange of information on computing and communication services with peer European research laboratories, Saclay and Lyon, France, Chilton, United Kingdom, May 23–June 2, 1989]: Foreign trip report, 14:34228 (R;US)
BOILER FUEL
See BOILER FUELS
BOILER FUELS
Chemical Composition
Nitrogen components in coal peat and petroleum. Literature study, 14:33124 (R;SE;In Swedish)
BOILERS
See also FLUIDIZED BED BOILERS
Fuel Substitution
Fuel peat demand and boiler conversion feasibility study. Energy demand and fuel peat conversion study Burin Peninsula, 14:33368 (RA;CA)
Wood-fired boiler project. James Paton Memorial Hospital, Gander, Newfoundland, 14:33367 (RA;CA)
Magnetite
Oxide deposition in the orifices of AGR boiler inlet ferrule assemblies, 14:33508 (R;GB)
BOILING WATER COOLED AND MODERATED REACTOR
See BWR TYPE REACTORS
BOLTZMANN-VLASOV EQUATION
Computerized Simulation
Vlasov ion zero mass electron model for plasma simulations, 14:35419 (RA;JP)
BONE JOINTS
Inflammation
Scintiscan studies as well as clinical and laboratory examinations to evaluate the therapeutic success achieved with gold salts and D-penicillamine in rheumatoid arthritis, 14:34607 (R;DE;In German)
Scintiscanning
Scintiscan studies as well as clinical and laboratory examinations to evaluate the therapeutic success achieved with gold salts and D-penicillamine in rheumatoid arthritis, 14:34607 (R;DE;In German)
BONE MARROW
Biological Radiation Effects
Hormesis - hypotheses and facts, 14:34689 (RA;AT;In German)
BONES
See SKELETON
BOOSTERS (PARTICLE)
See PARTICLE BOOSTERS
BORATES
Sound Waves
Shear waves through the glass-liquid transformation, 14:34043 (J;US)

BOREHOLES
Geophysical Surveys
Lithology and stratigraphy of drill holes completed during 1988 in LANL [Los Alamos National Laboratory] use areas of Yucca Flat, Nevada Test Site, Volume 10: Geologic report, 14:34120 (R;US)

BORON
Coupling Constants
Ab initio calculation of the hyperfine coupling constants in B_2, 14:34925 (J;US)
Ion Implantation
First time formation of continuous amorphous layers with boron at room temperature, 14:34017 (BA;US)
Metallurgical Effects
Mechanical properties of intermetallic compounds, 14:33827 (RA;US)

BORON 10 REACTIONS
Heavy Ion Fusion Reactions
Fission-like decay of ^{20}Ne: eccentric behavior in the B+B fusion processes, 14:35050 (R;BR)
Nuclear Reaction Kinetics
Fission-like decay of ^{20}Ne: eccentric behavior in the B+B fusion processes, 14:35050 (R;BR)

BORON 10 TARGET
Boron 10 Reactions
Fission-like decay of ^{20}Ne: eccentric behavior in the B+B fusion processes, 14:35050 (R;BR)
Boron 11 Reactions
Fission-like decay of ^{20}Ne: eccentric behavior in the B+B fusion processes, 14:35050 (R;BR)

BORON 11 REACTIONS
Heavy Ion Fusion Reactions
Fission-like decay of ^{20}Ne: eccentric behavior in the B+B fusion processes, 14:35050 (R;BR)
Nuclear Reaction Kinetics
Fission-like decay of ^{20}Ne: eccentric behavior in the B+B fusion processes, 14:35050 (R;BR)

BORON 11 TARGET
Boron 10 Reactions
Fission-like decay of ^{20}Ne: eccentric behavior in the B+B fusion processes, 14:35050 (R;BR)
Boron 11 Reactions
Fission-like decay of ^{20}Ne: eccentric behavior in the B+B fusion processes, 14:35050 (R;BR)

BORON ARSENIDES
Electrical Properties
Chemical vapor deposition of B_6P and B_6As films, 14:34033 (BA;US)
Thin Films
Chemical vapor deposition of B_6P and B_6As films, 14:34033 (BA;US)

BORON CARBIDES
Surface Properties
Interfacial bonding in W/C and W/B_4C multilayers, 14:33941 (J;US)

BORON NITRIDES
Microstructure
Processing and microstructure of complex ceramic systems, 14:33950 (RA;US)

BORON PHOSPHIDES
Electrical Properties
Chemical vapor deposition of B_6P and B_6As films, 14:34033 (BA;US)
Thin Films
Chemical vapor deposition of B_6P and B_6As films, 14:34033 (BA;US)

BOROPHOSPHATE GLASS
Chemical Composition
Partial least-squares calibration diagnostics applied to the FT-IR analysis of borophosphosilicate glass (BPSG) thin films, 14:34065 (R;US)

BOROPHOSPHATES
See BOROPHOSPHATE GLASS

BOROSILICATE GLASS
Chemical Composition
Partial least-squares calibration diagnostics applied to the FT-IR analysis of borophosphosilicate glass (BPSG) thin films, 14:34065 (R;US)

BOROSILICATES
See BOROSILICATE GLASS

BOSONS
See also GLUONS
MESONS
Chiral Symmetry
On the quantization of chiral bosonic particles, 14:35277 (R;BR)
Irreducible Representations
Unitary representations of diffeomorphism groups and unusual particle statistics, 14:35355 (BA;SG)
Mathematical Models
Group theoretical approach to squeezed states using generalized bose operators, 14:35337 (BA;SG)
Spin structure, projection operators, and Bose-Fermi equivalence on the 2d torus for simply laced groups, 14:35349 (BA;SG)
Mathematical Operators
Theorem on the Schwinger representations of Lie groups and its application to the algebraic Hamiltonian for diatomic molecules, 14:35326 (BA;SG)
Quantization
On the quantization of chiral bosonic particles, 14:35277 (R;BR)
String Models
Genus-2 free energy of the closed bosonic string, 14:35029 (J;US)
Symmetry
Unitary representations of diffeomorphism groups and unusual particle statistics, 14:35355 (BA;SG)

BOUNDARIES (GRAIN)
See GRAIN BOUNDARIES

BR-3 REACTOR
Fuel Rods
Fabrication and characterization of Westinghouse-design fuel rods for The Super-Ramp Project: The Studsvik Super-Ramp Project, 14:33500 (R;SE)
Westinghouse test fuel rods: Base irradiation history report: The Super-Ramp Project, 14:33501 (R;SE)

BRACKISH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS

BREAKWATERS
See DAMS

BREASTS
See MAMMARY GLANDS

BREMSSTRAHLUNG (MAGNETIC)
See SYNCHROTRON RADIATION

BRINES
Mathematical Models
Pressure-driven brine migration in a salt repository, 14:33279 (R;US)

BRITISH COLUMBIA
Surface Waters
British Columbia historical water levels summary, to 1987, 14:33373 (R;CA;In English and French)

BRONCHOGENIC CARCINOMA
See CARCINOMAS
RESPIRATORY SYSTEM DISEASES

BROOKHAVEN HIGH FLUX BEAM REACTOR
See HFBR REACTOR

BROOKHAVEN NATIONAL LABORATORY
See BNL

BTU METERS
See HEAT METERS

BUBBLES
Subcooling
Experimental study on the critical heat flux in a varying acceleration field, (1). The influence of varying acceleration on the behavior of bubble in subcool boiling, 2: behavior of bubbles under stationary acceleration field and varying acceleration field, 14:33520 (R;JP;In Japanese)

BUILDING MATERIALS
See also CONCRETES

Hazardous Materials
Health-hazard evaluation determination report No. 75-181-287, Fibreboard Corporation, Stockton, California, 14:34419 (R;US)
Health-hazard evaluation determination report No. 76-54-436, Certain-Teed Products, Inc., Richmond, California, 14:34416 (R;US)

BUILDINGS

COMMERCIAL BUILDINGS
GREENHOUSES
HOSPITALS
OFFICE BUILDINGS
RESIDENTIAL BUILDINGS
SCHOOL BUILDINGS

Air Flow
Applications of a simplified model for predicting air flows in multizone structures, 14:33725 (R;US)

Air Infiltration
Review of wind pressure distribution as input data for infiltration models, 14:33727 (R;US)

Air Quality
Indoor environment program: FY 1988 annual report, 14:33737 (R;US)

Energy Audits
Component evaluation energy performance, 14:33742 (R;CA;In English and French)

Energy Conservation
Applied Science Division annual report: Building Energy Systems Program, FY 1988, 14:33736 (R;US)
Experiences of adminstrative measures in energy conservation in buildings, 14:33653 (R;FI;In Finnish)
Expert system for selection and evaluation of heating system improvement measures, 14:33722 (R;DE;In German)

Pressurizing
Radon-222 reduction in solar buildings through pressurization, 14:33412 (BA;US)

Radon
Radon i dwellings. Testing and evaluation of constructional and buildings services engineering measures, 14:34467 (R;SE;In Swedish)
Vertical transport and distribution of radon decay products between different floors, 14:34436 (RA;AT)

Radon 222
Application of passive and active methods paralell to the measurements of local climatic parameters for the assessment of Rn-222 behaviour in selected Swiss dwellings, 14:34438 (RA;AT)
Radon in dwellings - sources and entrance paths into houses and methods of radon concentration reduction, 14:34440 (RA;AT;In German)

Retrofitting
PRISM: a tool for tracking retrofit savings, 14:33748 (J;KW)

Solar Energy
A decade of progress in the use of solar energy for buildings, 14:33411 (BA;US)

Temperature Distribution
A room air stratification model for TRNSYS, 14:33747 (BA;US)

Toxic Materials
Hazard-evaluation and technical assistance report TA 78-12, Oregon State University, Corvallis, Oregon, 14:34399 (R;US)

BUNCHING (BEAM)
See BEAM BUNCHING

BUNKER OILS
See RESIDUAL FUELS

BURNERS
See also GAS BURNERS
OIL BURNERS

Flame Propagation
The simulation of some turbulent combustion processes using an acoustically driven burner, 14:34107 (BA;US)

BUSES
Compressed Air Energy Storage
Articulated bus with pressure accumulator and two-axle drive possibility, 14:33796 (R;SE;In Swedish)

Diesel Engines
Controlling transit-bus emissions and improving management, 14:33798 (R;US)

Fuel Consumption
Articulated bus with pressure accumulator and two-axle drive possibility, 14:33796 (R;SE;In Swedish)

Maintenance
Evaluation of the spare-ratio concept in the management of transit rolling stock. Final report, 14:33750 (R;US)

Maintenance Facilities
Study of the impact of automation on productivity in bus-maintenance facilities. Final report, 14:33749 (R;US)

Methanol Fuels
Controlling transit-bus emissions and improving management, 14:33798 (R;US)

BWR TYPE REACTORS
See also BARSEBAECK-1 REACTOR

Feedwater
Calculational models for a cracked pipe elbow in a feedwater line, 14:33578 (RA;DE;In German)
Failure behaviour of a piping system with a circumferentially orientated flaw. Analytical and experimental investigations, 14:33577 (RA;DE;In German)

Fuel Pools
Regulatory analysis for the resolution of Generic Issue 82, "Beyond design basis accidents in spent fuel pools", 14:33590 (R;US)

Fuel Rods
Complementary metallography on the rods PW 3/4 and PW 5/3: The Super-Ramp Project, 14:33467 (R;SE)
Destructive examination of PW3 and PW5 rods: The Super-Ramp Project, 14:33466 (R;SE)
Destructive examinations of BG8 and BG9 rods: The Studsvik Super-Ramp Project, 14:33473 (R;SE)
Estimates of Zircaloy integrity during dry storage of spent nuclear fuel: Final report, 14:33460 (R;US)
Hot cell examinations of AA test fuel rods: The Studsvik Super-Ramp Extension Project, 14:33476 (R;SE)
Non-destructive examination of PW3 rods: The Super-Ramp Project, 14:33464 (R;SE)
Non-destructive examinations of BG8 and BG9 rods: The Super-Ramp Project, 14:33468 (R;SE)
Post-ramp examinations of KWU/CE rods at Karlstein: The Super-Ramp Project, 14:33471 (R;SE)
Power ramping of Super-Ramp test fuel rods: Final irradiation report: The Super-Ramp Project, 14:33470 (R;SE)
Power ramping of the PWR rods PK4/1, 2, 3 and PK6/1, 2, 3 irradiation report: The Studsvik Super-Ramp Project, 14:33463 (R;SE)
Power ramping of the rods PW5/1, 2 and 3: Irradiation report: The Super-Ramp Project, 14:33465 (R;SE)
Results of profilometry, E C tests and radiography of test rods supplied by Asea-Atom: The Studsvik Super-Ramp Extension Project, 14:33475 (R;SE)
The Studsvik Super-Ramp Extension Project: Progress report, January 1–September 30, 1984, 14:33506 (R;SE)
The Studsvik Super-Ramp Project: Final report, 14:33474 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, April–June 1981, 14:33502 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, April–June, 1980 and July–September, 1980, 14:33494 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March 1982, 14:33505 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March 1983 and April–June 1983 [first and second quarters], 14:33472 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March, 1981, 14:33499 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, July–September 1981, 14:33503 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, October–December 1981, 14:33504 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, October–December 1980, 14:33496 (R;SE)

The Studsvik Super-Ramp Project: Quarterly progress report, October–December, 1982, 14:33469 (R;SE)

Low-Level Radioactive Wastes
A solidification method of low level radioactive waste using fly ash, 14:33126 (R;JP;In Japanese)

Primary Coolant Circuits
Safety aspects of water chemistry in light water reactors, 14:33461 (R;XA)

Radioactive Waste Storage
Phase stability effects on the corrosion behavior of the metal barrier candidate materials for the nuclear waste management program, 14:33319 (BA;US)

Reactor Operation
Licensee Event Report (LER) compilation for month of April 1989, 14:33523 (R;US)

Reactor Safety
Sixteenth water reactor safety information meeting: Volume 1: Plenary session, Decontamination and decommissioning, License renewal, Human factors, Generic issues, Risk analysis/PRA applications, Innovative concepts for increased safety of advanced power reactors, 14:33591 (R;US)

Reviews
Nuclear power reactors, 14:33457 (R;CS;In Czech)

Spent Fuels
Regulatory analysis for the resolution of Generic Issue 82, "Beyond design basis accidents in spent fuel pools", 14:33590 (R;US)

Valves
Valve testing and development in the laboratories of Kraftwerk Union, 14:33487 (RA;DE;In German)

BYPASSES
Flow Models
Contribution at the study of by pass turbine lines of thermal or nuclear power plants, 14:33515 (R;FR;In French)

Mockup
Contribution at the study of by pass turbine lines of thermal or nuclear power plants, 14:33515 (R;FR;In French)

C

C CODES
Numerical simulation of turbulent premixed combustion and decay of turbulent swirling flow, 14:34106 (BA;US)

C-1430 RESONANCES
See MESONS

CABLES (ELECTRIC)
See ELECTRIC CABLES

CABRIOLET EVENT
Radiation Monitoring
Weather predictions and surface radiation estimates for Project CABRIOLET, 14:34374 (R;US)

CADMIUM
Bridgman Method
Heat treatment influence on the crystalline quality of Bridgman grown Hg_{1-x} Cd_x Te, 14:33849 (RA;BR)

Crystal Growth
Heat treatment influence on the crystalline quality of Bridgman grown Hg_{1-x} Cd_x Te, 14:33849 (RA;BR)

Ecological Concentration
Natural trace metal concentrations in estuarine and coastal marine sediments of the southeastern United States, 14:34502 (J;US)

Mercury
Spin-splitted phase transition in quantized hall effect of narrow-gap Hg(Cd) Te mosfet, 14:33854 (RA;BR)

Mosfet
Spin-splitted phase transition in quantized hall effect of narrow-gap Hg(Cd) Te mosfet, 14:33854 (RA;BR)

Tellurium
Spin-splitted phase transition in quantized hall effect of narrow-gap Hg(Cd) Te mosfet, 14:33854 (RA;BR)

CADMIUM SELENIDES
Carriers
Ultrafast relaxation of carriers in CdSe, 14:33857 (RA;BR)

Films
Ultrafast relaxation of carriers in CdSe, 14:33857 (RA;BR)

Relaxation Time
Ultrafast relaxation of carriers in CdSe, 14:33857 (RA;BR)

CADMIUM SULFIDES
Electrodes
Junction effects in conductive polymer-modified CdS electrodes, 14:34031 (BA;US)

CADMIUM TELLURIDES
Annealing
Optical characterization of microcrystalline CdTe thin films, 14:35211 (RA;BR)

Carrier Mobility
Photoluminesce spectra and carrier mobility in CdTe polycrystal films, 14:33853 (RA;BR;In Spanish)

Crystal Growth
Optical and structural properties of CdTe films growth on GaAs and Si substrates, 14:35210 (RA;BR)

Films
Optical and structural properties of CdTe films growth on GaAs and Si substrates, 14:35210 (RA;BR)

Photoluminescence
Photoluminesce spectra and carrier mobility in CdTe polycrystal films, 14:33853 (RA;BR;In Spanish)

Semiconductor Materials
Study of semiconductors by Moessbauer spectroscopy: a review, 14:33856 (RA;BR)

Ternary Alloy Systems
Growth and structural properties of sputtered CdXTe thin film alloys, 14:33851 (RA;BR)

Thin Films
Growth and structural properties of sputtered CdXTe thin film alloys, 14:33851 (RA;BR)
Optical characterization of microcrystalline CdTe thin films, 14:35211 (RA;BR)

CAES
See COMPRESSED AIR ENERGY STORAGE

CALCINED WASTES
Tracer Techniques
Volatility of cesium and strontium from a synthetic basalt, 14:34098 (J;US)

CALCIUM
Catalytic Effects
Fundamental studies of catalytic gasification: Quarterly report, January 1, 1989–March 31, 1989, 14:33100 (R;US)

Membrane Transport
Active and passive calcium transport systems in plant cells: Progress report, January 1986–June 1989, 14:34517 (R;US)

CALCIUM 40
Energy Levels
Finite nucleus Dirac mean field theory and random phase approximation using finite *B* splines, 14:35171 (J;US)

Giant Resonance
Giant resonance strength distribution in ^{40}Ca from inelastic scattering of 500 MeV protons, 14:35062 (J;US)

CALCIUM 40 TARGET
Breakup Reactions
Review of high excitation energy structures in heavy ion collisions: target excitations and three body processes, 14:35059 (R;FR)

Pickup Reactions
Review of high excitation energy structures in heavy ion collisions: target excitations and three body processes, 14:35059 (R;FR)

Proton Reactions
Giant resonance strength distribution in ^{40}Ca from inelastic scattering of 500 MeV protons, 14:35062 (J;US)
Pseudoscalar $\pi Ncouplingandrelativisticproton - nucleusscattering$, 14 : 35165($J;US$)

Resonance Scattering
Review of high excitation energy structures in heavy ion collisions: target excitations and three body processes, 14:35059 (R;FR)

CALCIUM CARBONATES
Ecological Concentration
History of metal pollution in the Southern California Bight: an update, 14:34501 (J;US)
CALCIUM COMPOUNDS
See also CALCIUM CARBONATES
CALCIUM HYDROXIDES
CALCIUM NITRATES
CALCIUM OXIDES
CALCIUM SILICIDES
Efficiency
5-MW Toronto HALT [Hydrate Addition at Low Temperature] pilot plant testing: Appendices: Part 1-B, 14:33438 (R;US)
Conceptual HALT [Hydrate Addition at Low Temperature] scaleup design: Capital and operating costs: Part 5 (Hydrate addition at low temperature for the removal of SOsub 2), 14:33441 (R;US)
ESP [electrostatic precipitator] tests at Toronto: Test results: Part 3 (Hydrate Addition at Low Temperature for the removal of SOsub 2), 14:33439 (R;US)
Multi-nozzle humidification tests: Test results: Part 4 (Hydrate addition at low temperature for the removal of SOsub 2), 14:33440 (R;US)
Processing
Recent improvements in bulk properties of ceramic superconductors, 14:33945 (R;US)
Production
An evaluation of the bioconversion of woody biomass to calcium acetate deicing salt, 14:33393 (BA;US)
Sintering
Thin film preparation and single film device fabrication in the Tl-Ca-Ba-Cu-O HTS system, 14:33963 (R;US)
CALCIUM HYDROXIDES
Catalytic Effects
Fundamental studies of catalytic gasification: Quarterly report, October 1, 1988–December 31, 1988, 14:33099 (R;US)
CALCIUM ISOTOPES
See also CALCIUM 40
Isotopic Exchange
Mound activities in chemical and physical research, July–December 1988, 14:34060 (R;US)
CALCIUM NITRATES
Sound Waves
Shear waves through the glass-liquid transformation, 14:34043 (J;US)
CALCIUM OXIDES
Catalytic Effects
Fundamental studies of catalytic gasification: Annual report, October 1, 1987–September 30, 1988, 14:33098 (R;US)
Superconductivity
Effects of compositional variations on the properties of superconducting $(Bi,Pb)_2Sr_2Ca_2Cu_3O_\delta$, 14:33972 (J;US)
CALCIUM SILICIDES
Phase Diagrams
Thermochemical stability diagrams for condensed phases and tabulation of volatile species over condensed phases for thirteen metal-oxygen-silicon systems at 1000 and 1250 K: Volume 2: Final report, 14:33101 (R;US)
CALCULATION METHODS
Manuals
Starting points and user manual for a heat chart model. Model development for heat technical calculations of, among other things, cogeneration options, 14:33431 (R;NL;In Dutch)
CALCULATIONS (1-DIMENSIONAL)
See ONE-DIMENSIONAL CALCULATIONS
CALIFORNIA
Water Pollution
History of metal pollution in the Southern California Bight: an update, 14:34501 (J;US)
CALIFORNIUM 252
Neutron Spectra
Prompt neutron spectra from fission of ^{233}U, ^{235}U and ^{239}Pu by thermal neutrons and from spontaneous fission of ^{252}Cf in the 0.01-12 MeV energy range, 14:35098 (RA;XA)
Spontaneous Fission
Prompt neutron spectra from fission of ^{233}U, ^{235}U and ^{239}Pu by thermal neutrons and from spontaneous fission of ^{252}Cf in the 0.01-12 MeV energy range, 14:35098 (RA;XA)
CALMODULIN
Membrane Transport
Investigations into the binding of ^{125}I-calmodulin to CA^{++} transport ATPase of human erythrocytes, 14:34518 (R;DE;In German)

GRAPHITE
Charged-Particle Transport
Charge-exchange cross sections for 445-MeV Cl ions in solid C targets, 14:35233 (J;US)
Electronic Structure
X-ray-electron spectroscopy of diamond-like carbon films, 14:33982 (RA;SU;In Russian)
Physical Radiation Effects
X-ray-electron spectroscopy of diamond-like carbon films, 14:33982 (RA;SU;In Russian)
Surface Properties
Interfacial bonding in W/C and W/B_4C multilayers, 14:33941 (J;US)
Thermodynamic Activity
Carburisation of stainless steel caused by oil in sodium, 14:33514 (R;GB)

CARBON 12 TARGET
Charge Exchange
High pressure streamer chamber serving as a target for investigating the interaction of pions with light nuclei, 14:34336 (R;SU;In Russian)
Charge States
Charge exchange processes of foil dissociation fragments of fast H^+_2 ions and H^+_n clusters, 14:35232 (R;FR)
Hydrogen Ions 2 Plus
Charge exchange processes of foil dissociation fragments of fast H^+_2 ions and H^+_n clusters, 14:35232 (R;FR)
Lithium 6 Reactions
Experimental investigation of direct elastic 156 MeV ^{6}Li breakup at large relative momenta of the fragments, 14:35053 (R;DE;In German)
Pion Reactions
High pressure streamer chamber serving as a target for investigating the interaction of pions with light nuclei, 14:34336 (R;SU;In Russian)
CARBON 13 TARGET
Proton Reactions
Parity nonconserving asymmetries in the resonance scattering and nuclear reactions induced by polarized protons, 14:35115 (R;XA)
Spin-flip cross sections for $^{13}C(\vec{p},\vec{n})^{13}N$(g.s.) at 500 MeV, 14:35167 (J;US)
CARBON 14
Radionuclide Migration
Nuclide solubilities and distribution coefficients for use in probabilistic modeling. Data for the nuclieds ^{14}C, ^{79}Se, ^{93}Zr, ^{99}Tc, ^{126}Sn, ^{129}I, ^{135}Cs, ^{237}Np and ^{239}Np, 14:34479 (R;SE)
CARBON DIOXIDE
Chemical Reactions
Carbon dioxide activation: thermodynamics of CO_2 binding and the involvement of two cobalt centers in the reduction of CO_2 by a cobalt(I) macrocycle, 14:34090 (J;US)
Concentration Ratio
Atmospheric carbon dioxide and the greenhouse effect, 14:34382 (R;US)
Detonations
Hydrogen-air-diluent detonations, 14:33343 (BA;US)
Emission
Starting points and backgrounds of calculations of the EOS-scenarios DG and GO with CO_2 emission maximum. Object subsidy project greenhouse scenarios (7002), 14:33646 (R;NL;In Dutch)
The greenhouse effect. Uncertainty dilemma between science and policy and its effect on scenario development, 14:34384 (R;NL)
CARBON DIOXIDE LASERS
Stabilization
Ultrastable carbon dioxide (CO_2) lasers, 14:34152 (BA;US)
CARBON FIBERS
Impregnation
Processing of continuous fiber composites: Final report, 14:33989 (R;US)
Raman Spectra
Raman characterization of potassium-hydrogen intercalated graphite, 14:34013 (BA;US)
Thermal Conductivity
The thermal conductivity of pristine and intercalated benzene-derived carbon fibers, 14:34007 (BA;US)
CARBON FLUORIDES
Combustion Kinetics
Role of methoxy radicals in combustion, 14:34109 (BA;US)
CARBON MONOXIDE
Chemical Reactions
Effects of low levels of CO on the performance of pem fuel cells, 14:33691 (BA;US)
Combustion Kinetics
Role of methoxy radicals in combustion, 14:34109 (BA;US)
Ecological Concentration
Macromodel for assessing residential concentrations of combustion-generated pollutants: Model development and preliminary predictions for CO, NO_2, and respirable suspended particles, 14:33732 (R;US)
Hydrogenation
Modifiers in rhodium catalysts for carbon monoxide hydrogenation: Structure-activity relationships, 14:33357 (R;US)
Indoor Air Pollution
Health-hazard evaluation determination report No. 76-43 A-F-429, Hersey Products Company, Inc., Gilbertville, Massachusetts, 14:34417 (R;US)
Methanation
Selective production of alcohols from synthesis gas, 14:33360 (RA;GB)
Occupational Exposure
Health-hazard evaluation determination report No. 76-115-425, H F E Inc., Ft. Collins, Colorado, 14:34408 (R;US)
CARBON STARS
Ultraviolet Spectra
Line formation of cool carbon star chromospheres, 14:34786 (RA;FR)
CARBON STEELS
Corrosion
Mathematical models for redox and corrosion potentials for high level nuclear waste containers in tuff environments, 14:33320 (BA;US)
CARBONATES
See also AMMONIUM CARBONATES
CALCIUM CARBONATES
Corrosive Effects
Corrosion of Fe-25Cr-20Ni alloy in molten alkali carbonates, 14:33909 (BA;US)
CARBONYLS
Catalytic Effects
Novel approaches to catalysis in coprocessing and in the direct liquefaction of coal, 14:33059 (RA;US)
CARBOXYLIC ACIDS
Chemical Reaction Yield
Biotechnology of indirect liquefaction: Progress report, April 1–June 30, 1988, 14:33068 (R;US)
Interfaces
Surface studies of boundary layer films, 14:33844 (RA;US)
CARCINOEMBRYONIC ANTIGEN
Carcinomas
Value of initial carcinoembryonic antigen in rectal cervix cancer, 14:34542 (RA;BR;In Portuguese)
Rectum
Value of initial carcinoembryonic antigen in rectal cervix cancer, 14:34542 (RA;BR;In Portuguese)
CARCINOMAS
Diagnosis
Concentrations of testosterone, luteal hormone and prolactin in the serum as well as comparisons of sensitivity between radioimmunoassays and enzyme assays for the detection of acid prostate phosphatase in the presence of carcinomas of the prostate, 14:34613 (R;DE;In German)
Radiology of comedocarcinoma of breast, 14:34540 (RA;BR;In Spanish)
Radiology of inflammatory carcinoma of breast, 14:34538 (RA;BR;In Spanish)
Radiology of mucoid carcinoma of breast, 14:34539 (RA;BR;In Spanish)
Esophagus
Association of radiotherapy and chemotherapy in treatment of epidermoide carcinoma of esophagus, 14:34596 (RA;BR;In Portuguese)
Pre-operative chemotherapy in epidermoid carcinoma of thoracic esophagies, 14:34600 (RA;BR;In Portuguese)
Large Intestine
Surgery of cancrum of colon, 14:34536 (RA;BR;In Portuguese)
Lungs
Alternated chemotherapy in lung microcytic carcinoma. Preliminary results with iphosphamide, doxorubicin, vincristine (IDV), alternated with carboplatine, cyclophosphamide, VP 16 (C-CF-VP), 14:34555 (RA;BR;In Spanish)

Carcinoma squamous-cell of lungs: results from combined treatment of cisplatine/vindesine/radiotherapy, 14:34569 (RA;BR;In Spanish)

Mammary Glands
Adriamycin + cyclephosphamide in advanced cancer of breast, 14:34601 (RA;BR;In Spanish)
Breast cancer locally advanced (T3/T4): treatment, 14:34561 (RA;BR;In Spanish)
Contralateral breast carcinoma, 14:34544 (RA;BR;In Spanish)
Diffuse hyperfixation in brainpain in bone scintigraphy in patients with breast carcinoma. Retrospective evaluation in 648 patients, 14:34584 (RA;BR;In Portuguese)
Hidden cancer of breast, our experience, 14:34563 (RA;BR;In Spanish)
Inflammatory carcinoma of breast. Analysis of a multidisciplinary treatment, 14:34595 (RA;BR;In Spanish)
Prognostic factors in advanced cancer of breast. Uni and multivariables analysis, 14:34570 (RA;BR;In Spanish)
Radiology of comedocarcinoma of breast, 14:34540 (RA;BR;In Spanish)
Radiology of inflammatory carcinoma of breast, 14:34538 (RA;BR;In Spanish)
Radiology of mucoid carcinoma of breast, 14:34539 (RA;BR;In Spanish)
Treatment of carcinoma of breast stage III in patients up to 60 years, 14:34594 (RA;BR;In Spanish)

Ovaries
Value of CA 125 in diagnosis and evaluation of clinical evolution of ovary carcinoma. Comparison with results from CA 19-9 and CEA, 14:34586 (RA;BR;In Portuguese)

Pharynx
Nasopharynx carcinoma. Revision of 79 cases treated by radiotherapy, 14:34573 (RA;BR;In Portuguese)
Radiotherapeutic treatment in carcinoma of nasopharynx in children, 14:34591 (RA;BR;In Spanish)

Prostate
Medroxyprogesterone acetate: low x high dosis in advanced cancer of prostate (previously treated), 14:34567 (RA;BR;In Spanish)

Radiotherapy
Hidden cancer of breast, our experience, 14:34563 (RA;BR;In Spanish)
Nasopharynx carcinoma. Revision of 79 cases treated by radiotherapy, 14:34573 (RA;BR;In Portuguese)
Radiotherapeutic treatment in carcinoma of nasopharynx in children, 14:34591 (RA;BR;In Spanish)
Radiotherapeutic treatment of cervix carcinoma, stage III. Results, 14:34557 (RA;BR;In Spanish)
Treatment of carcinoma of breast stage III in patients up to 60 years, 14:34594 (RA;BR;In Spanish)
Unusual complication after radiotherapy in a patient with adenocarcinoma: acute gangrene of scrotum (Fournier's gangrene), 14:34679 (RA;BR;In Spanish)

Rectum
Unusual complication after radiotherapy in a patient with adenocarcinoma: acute gangrene of scrotum (Fournier's gangrene), 14:34679 (RA;BR;In Spanish)

Therapy
Medroxyprogesterone acetate: low x high dosis in advanced cancer of prostate (previously treated), 14:34567 (RA;BR;In Spanish)

Thyroid
Diagnosis and therapeutic of 104 cases of thyroid carcinoma, 14:34541 (RA;BR;In Portuguese)

Urogenital System Diseases
Epidemiologic and clinical aspects. Follow-up of 287 cases of invasive uterine cervix carcinoma, Stage I, 14:34598 (RA;BR;In Portuguese)
Radiosurgical treatment of uterine cervix carcinoma - stage I, 14:34549 (RA;BR;In Portuguese)
Radiotherapeutic treatment of cervix carcinoma, stage III. Results, 14:34557 (RA;BR;In Spanish)

CARNATIONS
Radiation Induced Mutants
Procedures for expressing natural or induced variability in carnation (Dianthus Caryophyllus L.), 14:34672 (R;FR;In French)

CAROTENOIDS
Biosynthesis
A molecular genetic analysis of carotenoid biosynthesis and the effects of carotenoid mutations on other photosynthetic genes in Rhodobacter capsulatus, 14:33387 (R;US)

CARS SPECTROSCOPY
See RAMAN SPECTROSCOPY

CASSAVA
Cyanides
Breeding for a-cyanogenesis in cassava by mutation techniques, 14:34654 (RA;XA)
Plant Breeding
Breeding for a-cyanogenesis in cassava by mutation techniques, 14:34654 (RA;XA)
Cassava and sweet potato production constraints in Kenya, 14:34656 (RA;XA)
Root and tuber crop improvement at the University of Science and Technology, Kumasi, 14:34655 (RA;XA)
Root and tuber crops production and research in Liberia, 14:34657 (RA;XA)
Productivity
Root and tuber crops production and research in Liberia, 14:34657 (RA;XA)

CATALASE
Cross-Linking
Study of radiation immobilization of bioactive materials, 14:34520 (RA;XA)

CATALYSIS
Chemical Reaction Kinetics
[Studies of the fundamental nature of catalytic acidity, sites, and intermediates]: Progress report, 14:34070 (R;US)

CATALYST SUPPORTS
Additive effects in UV and radiation grafting and curing processes of value in immobilization of bioactive materials, 14:33351 (RA;XA)
Study of radiation immobilization of bioactive materials, 14:34520 (RA;XA)
Chemical Radiation Effects
Immobilization of biocatalysts onto copolymeric assemblies - Role of radiation induced copolymerisation, 14:33352 (RA;XA)
Copolymerization
Immobilization of biocatalysts onto copolymeric assemblies - Role of radiation induced copolymerisation, 14:33352 (RA;XA)

CATALYSTS
Chemical Preparation
Development and screening of selective catalysts for the synthesis of clean liquid fuel, 14:33361 (RA;GB)
Chemical Reaction Kinetics
Sorptive and activity behaviour of iron minerals for hydrocarbon synthesis, 14:34069 (RA;CA)
Evaluation
Development and characterization of new HDS catalysts and selection of coal liquefying operating conditions for catalysts screening, 14:33083 (RA;GB)
Fabrication
Development of hydrous metal oxide catalysts for direct coal liquefaction, 14:33061 (RA;US)
Performance Testing
Development of hydrous metal oxide catalysts for direct coal liquefaction, 14:33061 (RA;US)
Reactivity
Improved hydrotreating catalysts through optimized active phase-support interaction, 14:33081 (RA;GB)
Specificity
Selective catalysts for coal and heavy oil hydrogenation, 14:33082 (RA;GB)

CATHODES
See also PHOTOCATHODES
Electrochemical studies of novel positive electrode compounds, 14:33632 (BA;US)

Extension of the novel class of positive electrodes to systems having theoretical energy densities between 500 and 800 Whrs/Kg, 14:33631 (BA;US)
Chemical Composition
Cathodic materials for molten carbonate fuel cells, 14:33692 (BA;US)
Corrosion
$ZnCl_2$-HCl plating baths for stripping and recovery of zinc from galvanized iron scrap, 14:33701 (BA;US)
Electric Arcs
Cathode ions from microsecond aluminum vacuum arcs, 14:34940 (J;US)
Materials Testing
Intercalation reactions of monovalent and divalent cations in V_6O_{13} single crystals, 14:33619 (BA;US)
Protective Coatings
Electrodeposition of microcrystalline chromium from fused salts, 14:33919 (BA;US)

CAUSALITY
Quantum Mechanics
Retarded solutions and causality principle, 14:35291 (R;SU;In Russian)

CAUSTIC FLOODING
Computerized Simulation
Mathematical modeling of high pH chemical flooding, 14:33165 (BA;US)

CAVITY RESONATORS
Electric Impedance
Longitudinal coupling impedance of cyclic accelerator vacuum chamber with small cross-section variations. 2. Tests of method and impedance of the UNK chamber elements, 14:34288 (R;SU;In Russian)

CEA (ANTIGEN)
See CARCINOEMBRYONIC ANTIGEN

CEBAF ACCELERATOR
Beam Transport
Modular magnet current regulator, 14:34281 (R;US)

CELL GROWTH (ANIMAL)
See ANIMAL CELLS

CELLS (ANIMAL)
See ANIMAL CELLS

CELLS (BACTERIAL)
See BACTERIA

CELLS (ELECTROLYTIC)
See ELECTROLYTIC CELLS

CELLULASE
Biochemical Reaction Kinetics
Biochemistry and genetics of cellulose degradation Proceedings, 14:33383 (R;FR)
Gene Regulation
Biochemistry and genetics of cellulose degradation Proceedings, 14:33383 (R;FR)
Immobilized Enzymes
Cell immobilization and its application to biomass conversion, 14:33385 (RA;XA)
Performance Testing
Cell immobilization and its application to biomass conversion, 14:33385 (RA;XA)

CELLULASES
See CELLULASE

CELLULOSE
Biodegradation
Biochemistry and genetics of cellulose degradation Proceedings, 14:33383 (R;FR)

CEMENT INDUSTRY
Hazardous Materials
Control technology assessment of hazardous-waste-disposal operations in chemicals manufacturing: in-depth survey report of San Juan Cement Company, Dorado, Puerto Rico, November 1981, 14:34387 (R;US)

CEPHEIDS
Star Models
Binary model of HD 94033 and the physical nature of dwarf cepheid, 14:34856 (RA;CS)

CERAMIC MELTERS
Operation
Summary of campaigns SGM-9 and SGM-10 of the DWPF scale glass melter (U), 14:33263 (R;US)

CERAMICS
Institute for Materials Science and Engineering, Ceramics: technical activities, 1988, 14:33958 (R;US)
Silicon nitride ceramics and refractories. February 1987-January 1988 (Citations from the COMPENDEX data base). Report for February 1987-January 1988, 14:33959 (R;US)
Silicon nitride ceramics and refractories. February 1988-February 1989 (Citations from the COMPENDEX data base). Report for February 1988-February 1989, 14:33960 (R;US)
Corrosion Resistance
Elevated temperature sliding wear of corrosion and thermal protection coatings, 14:33965 (BA;US)
Crystal Defects
Low temperature studies of defects in solids, 14:33835 (RA;US)
Crystal Structure
Defect, diffusion, and non-equilibrium processing of materials, 14:33820 (RA;US)
Deformation
Institute for Materials Science and Engineering, Fracture and Deformation Division: technical activities, 1988, 14:33900 (R;US)
Fracture Mechanics
Fractography of glasses and ceramics, 14:33964 (B;US)
Heat Exchangers
Industrial compact ceramic finned-plate recuperator. Final report, August 1982-March 1987, 14:33765 (R;US)
Performance verification of industrial ceramic materials: environmental effects on performance. Topical report, September 1984-March 1987, 14:33766 (R;US)
Liners
A method for predicting cracking in waste glass canisters, 14:33322 (J;US)
Materials Testing
Tribology: properties of materials. January 1970-February 1989 (Citations from the COMPENDEX data base). Report for January 1970-February 1989, 14:34204 (R;US)
Mechanical Properties
Defect, diffusion, and non-equilibrium processing of materials, 14:33820 (RA;US)
High temperature toughening mechanisms in composite ceramics, 14:33951 (RA;US)
Molecular Beam Epitaxy
Growth and properties of novel structures grown by M.B.E., 14:33838 (RA;US)
Powder Metallurgy
Processing of monodisperse ceramic powders, 14:33954 (RA;US)
Research Programs
Overview of the advanced research and technology development fossil energy materials program, 14:33815 (RA;US)
Projects within the Center for Advanced Materials. Annual report, June 1, 1987-May 31, 1988, 14:33201 (R;US)
Superconducting Wires
Composite ceramic superconducting wires for electric-motor applications. Quarterly report No. 2, 30 September-30 December 1988, 14:34116 (R;US)
Superconductors
Pinning of curved flux lines on the boundary between two phases of high temperature superconductors, 14:35245 (R;XA)
Synthesis
Chemistry of new transition metal ceramic compounds synthesized by MOCVD, 14:33949 (RA;US)
Molecular building-block approaches to ceramic materials, 14:33952 (RA;US)

CEREBROSPINAL FLUID
Cytological Techniques
Autoradiographic investigations of cells from the cerebrospinal fluid, 14:34621 (R;DE;In German)

CERIUM 142
De-Excitation
Method for picosecond lifetime measurements for neutron-rich nuclei. Pt. 2. Timing study with scintillation counters, 14:34356 (J;NL)
Excited States
Parameters of neutron resonances of ^{142}Ce and ^{143}Pr ($T_{1/2}$=13.6 d) nuclides, 14:35071 (RA;SU;In Russian)
CERIUM 142 TARGET
Neutron Reactions
Parameters of neutron resonances of ^{142}Ce and ^{143}Pr ($T_{1/2}$=13.6 d) nuclides, 14:35071 (RA;SU;In Russian)
CERIUM 144
De-Excitation
Method for picosecond lifetime measurements for neutron-rich nuclei. Pt. 2. Timing study with scintillation counters, 14:34356 (J;NL)
CERIUM COMPOUNDS
Solvent Extraction
Extraction of lanthanides with 2-(dihexylphosphino)-pyridine N,P-dioxide, 14:34081 (J;DE)
CERRO PRIETO GEOTHERMAL FIELD
Flow Models
The hydrogeologic-geochemical model of Cerro Prieto revisited, 14:33426 (R;US)
CESIUM
Volatility
Volatility of cesium and strontium from a synthetic basalt, 14:34098 (J;US)
CESIUM 134
Radioecological Concentration
Monitoring of radioactivity in foodstuffs in Ireland 1987, 14:34472 (R;IE)
Sheep monitoring programme January - September 1988, 14:34471 (R;IE)
CESIUM 135
UCB-NE-107 user's manual, 14:33281 (R;US)
Radionuclide Migration
Nuclide solubilities and distribution coefficients for use in probabilistic modeling. Data for the nucliedes ^{14}C, ^{79}Se, ^{93}Zr, ^{99}Tc, ^{126}Sn, ^{129}I, ^{135}Cs, ^{237}Np and ^{239}Np, 14:34479 (R;SE)
CESIUM 137
Multi-Element Analysis
Report on the intercomparison run IAEA-083 radionuclides in simulated airfilters, 14:34055 (R;XA)
Radioecological Concentration
Cesium in perch in lakes from northern Sweden after Chernobyl. Present situation, relationships, trends, 14:34510 (R;SE;In Swedish)
Monitoring of radioactivity in foodstuffs in Ireland 1987, 14:34472 (R;IE)
Sheep monitoring programme January - September 1988, 14:34471 (R;IE)
UCB-NE-107 user's manual, 14:33281 (R;US)
CESIUM IODIDES
Krypton Ions
Fast ion desorption (Mev/u): interaction depth in secondary H+ ion emission: probe of the surface-projectile interaction, 14:35226 (R;FR;In French)
Thallium Additions
Neutrons and light nuclei detectors realization for the 4π multidetector amphora, 14:34348 (R;FR;In French)
CETANE NUMBER
See ANTIKNOCK RATINGS
CETENE NUMBER
See ANTIKNOCK RATINGS
CEYLON
See SRI LANKA
CHALKS
See LIMESTONE
CHARGE DENSITY
Mathematical Models
Discrete symmetries and selection rules in unified SU(8) for superconductivity and density waves, 14:35331 (BA;SG)
Dynamical SU(8) - a laboratory for phase coexistence, 14:35330 (BA;SG)
CHARGE EXCHANGE
Charge States
Charge exchange processes of foil dissociation fragments of fast H^+_2 ions and H^+_n clusters, 14:35232 (R;FR)
Dissociation
Charge exchange processes of foil dissociation fragments of fast H^+_2 ions and H^+_n clusters, 14:35232 (R;FR)
Heavy Ions
Excitation of swift heavy ions in foil targets IV. IV. Preequilibrium energy losses and mean charge states, 14:35065 (R;AU)
CHARGE-EXCHANGE REACTIONS
Excitation
Δ excitation by charge exchange reactions with heavy ions, 14:35041 (R;FR)
CHARGED PARTICLE DETECTION
See also PROTON DETECTION
Particle Identification
Neutrons and light nuclei detectors realization for the 4π multidetector amphora, 14:34348 (R;FR;In French)
Solid Scintillation Detectors
Neutrons and light nuclei detectors realization for the 4π multidetector amphora, 14:34348 (R;FR;In French)
CHARGED-PARTICLE TRANSPORT
E Codes
Program for calculation of electron trajectories in an infinite homogeneous medium by the Monte Carlo method, 14:35177 (RA;SU;In Russian)
Electrons
Program for calculation of electron trajectories in an infinite homogeneous medium by the Monte Carlo method, 14:35177 (RA;SU;In Russian)
CHARPAK CHAMBERS
See MULTIWIRE PROPORTIONAL CHAMBERS
CHARS
Chemistry
Fundamentals of coal-char chemistry. Final report, February 1985-April 1988, 14:33102 (R;US)
Coking
Continuous coking tests under fluid coking conditions, 14:33047 (RA;US)
Impact of bottoms coking on two-stage direct liquefaction processes, 14:33048 (RA;US)
Recycle oils from fluid coking of coal liquefaction bottoms, 14:33115 (RA;US)
Gasification
Fundamental studies of catalytic gasification: Quarterly report, October 1, 1988–December 31, 1988, 14:33099 (R;US)
Microscopy
Attrition of chars in fluidised bed combustion, 14:33140 (R;NL)
Petrography
Attrition of chars in fluidised bed combustion, 14:33140 (R;NL)
CHEMICAL ANALYSIS
See also MULTI-ELEMENT ANALYSIS
Research Programs
Analytical Chemistry Division annual progress report for period ending December 31, 1988, 14:34061 (R;US)
CHEMICAL FEEDSTOCKS
Production
Upgrading alternatives for Great Plains by-product liquids, 14:33046 (RA;US)
CHEMICAL INDUSTRY
Drugs
In-depth survey report: control technology assessment of unit operations employed in oral-contraceptive tablet-making operations at Ortho Pharmaceutical Corporation, Raritan, New Jersey, June 13-17, 1983, 14:34388 (R;US)
Hazardous Materials
Best Demonstrated and Available Technology (BDAT) background document for K016, K18, K019, K020, K030. Final report, 14:33762 (R;US)
Opportunities to assist developing countries in the proper use of agricultural and industrial chemicals. Report of the Committee

on Health and Environment. Volume 1. Research paper(Final), 14:33647 (R;US)

CHEMICAL PLANTS
Contamination
Radiological and chemical characterization report for the planned Quarry Construction Staging Area and Water Treatment Plant: Revision 1, 14:33328 (R;US)

Optimization
Strategies for optimal plant redesign in a changing environment: Annual report, 1988–1989, 14:34119 (R;US)

CHEMICAL RADIATION EFFECTS
See also RADIATION CURING

Forecasting
Calculations of physical and chemical reactions with DNA in aqueous solution from Auger cascades, 14:34670 (R;US)

CHEMICAL REACTORS
Counterflow Systems
Saarberg/GfK coal liquefaction developments, 14:33096 (RA;GB)

Heat Transfer
Heat transfer in bubble columns, 14:33752 (TJ;US)

CHEMISTRY (WATER)
See WATER CHEMISTRY

CHEMOTHERAPY
Neoplasms
Assay in fase II with iphosphamide. Results of 136 patients, 14:34568 (RA;BR;In Spanish)
Fundamental and strategy for the scientific treatment of cancer, 14:34559 (RA;BR;In Spanish)

Radiotherapy
CHOP and radiotherapy combined, 14:34548 (RA;BR;In Spanish)
Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987, 14:34523 (R;XA)

CHERNOBYLSK-4 REACTOR
Fallout
Activity levels in air and ground in the region of Bremen after the Chernobyl accident, 14:34443 (RA;AT)
After Chernobyl whole body measurements, 14:34700 (RA;AT)
Analyzes of Chernobyl fall-out made at Loviisa nps, Finland, 14:34449 (RA;AT)
Chernobyl fall-out at Delft, 14:34473 (RA;AT)
Chernobyl in the university town Muenster (FRG), 14:34478 (RA;AT;In German)
Consequences in Finland of the Chernobyl accident, 14:34445 (RA;AT)
Hot particles in the radioactive deposition in Greece after the Chernobyl accident, 14:34474 (RA;AT)
Measurement of environmental radioactivity around Mainz (FRG) after the Chernobyl reactor accident, 14:34450 (RA;AT;In German)
Natural radioactivity and Chernobyl-fallout in the granite area of Fichtelgebirge (FRG), 14:34453 (RA;AT)
Post-Chernobyl environment monitoring data of nuclear power plants in Switzerland, 14:34444 (RA;AT;In German)
Preliminary results on measurement of radioactivity deposited and washed-off, 14:34475 (RA;AT;In German)
Radiation and radioactivity levels in Hungary following the Chernobyl accident, 14:34451 (RA;AT)
Radioactive burden in soil and milk around Oldenburg (FRG) in the wake of the Chernobyl accident, 14:34476 (RA;AT;In German)
Radioactivity in the Federal Republic of Germany and in Switzerland after the Chernobyl accident. Results of data collection by the working group Environment Monitoring, 14:34442 (RA;AT;In German)
Radioactivity measurements after the reactor accident of Chernobyl, 14:34448 (RA;AT;In German)
Radioactivity measurements around Graz, Austria, 14:34477 (RA;AT;In German)
Radionuclide composition of Chernobyl fallout at Munich, 14:34447 (RA;AT)
Selected examples of the vegetation- and milk contamination as well as of spatial distribution of gamma dose rates in Bavaria, FRG, 14:34454 (RA;AT;In German)
Some measurements of air radioactivity at the Gesellschaft fuer Schwerionenforschung in Darmstadt (FRG), 14:34446 (RA;AT;In German)
Tritium activity in precipitation and in tap water of nw Yugoslavia after the Chernobyl accident, 14:34507 (RA;AT)

Fission Products
Measurement of environmental radioactivity around Mainz (FRG) after the Chernobyl reactor accident, 14:34450 (RA;AT;In German)

Reactor Accidents
Arrival of the Chernobyl cloud as detected by nation-wide monitoring network based on Geiger-Mueller counters, 14:34452 (RA;AT;In German)

CHLORINATED AROMATIC HYDROCARBONS
Air Pollution
Hazard evaluation and technical assistance report TA 77-63, United States Department of the Interior, National Park Service, Fort Stanwix National Monument, Rome, New York, 14:34423 (R;US)

Indoor Air Pollution
Acceptable levels of dioxin contamination in an office building following a transformer fire, 14:34414 (R;US)

Land Pollution
Polychlorinated biphenyls: occurrence in sediments and soils. January 1977-February 1989 (Citations from the Selected Water Resources Abstracts data base). Report for January 1977-February 1989, 14:34466 (R;US)

Water Pollution
Polychlorinated biphenyls: occurrence in sediments and soils. January 1977-February 1989 (Citations from the Selected Water Resources Abstracts data base). Report for January 1977-February 1989, 14:34466 (R;US)

CHLORINE 35 TARGET
Neutron Reactions
Investigation of angular correlations in the (n,p) reaction, 14:35058 (RA;SU;In Russian)

CHLORINE IONS
Ion Spectroscopy
Charge-exchange cross sections for 445-MeV Cl ions in solid C targets, 14:35233 (J;US)

CHLORINE ISOTOPES
Neutron-Rich Isotopes
Observation of the new neutron-rich nuclei ^{29}F, ^{35,36}Mg, ^{38,39}Al, ^{40,41}Si, ^{43,44}P, ^{45,46,47}S, ^{46,47,48,49}Cl and ^{49,50,51}Ar by means of a 55 MeV/u ^{48}Ca beam, 14:35038 (R;SU)

Alkylation
Process and analytical studies of enhanced low severity coprocessing using selective coal pretreatment: Quarterly technical progress report, December 1988–February 1989, 14:33072 (R;US)
Chars
Fundamentals of coal-char chemistry. Final report, February 1985-April 1988, 14:33102 (R;US)
Chemical Analysis
Isotopic methods in coal research, 14:33117 (RA;US)
Cocombustion
Secondary fuel feed to a pulverized coal flame to reduce NO_x emission, 14:33145 (R;SE;In Swedish)
Combustion Kinetics
Empiric model of pulverized coal combustion, 14:33143 (R;SE;In Swedish)
Comminution
Effectiveness of coal comminution by high pressure waterjet, 14:33036 (BA;US)
Compiled Data
Analyses of tipple and delivered samples of coal collected during fiscal year 1985, 14:33122 (R;US)
Annual prospects for world coal trade 1989, 14:33153 (R;US)
Conversion
Overview of the advanced research and technology development fossil energy materials program, 14:33815 (RA;US)
Coprocessing
Coal and petroleum reactions in coal/oil coprocessing, 14:33167 (R;US)

Development of analytical procedures for coprocessing: Quarterly technical progress report for the period October 1–December 31, 1988, 14:33070 (R;US)
Fundamental reaction pathways during coprocessing: Quarterly status and milestone report, 14:33071 (R;US)
Investigation of liquefaction mechanisms with molecular probes, 14:33112 (J;US)
Stable carbon isotope analysis of coal/petroleum coprocessing products, 14:33166 (R;US)

Cost Benefit Analysis
Coal fueled diesel developments, 14:33125 (B;US)

Deashing
Chemical cleaning of coal by molten caustic leaching after pretreatment by low-temperature devolatilization, 14:33110 (J;NL)

Depolymerization
Liquefaction at low severity conditions, catalysed depolymerization of coal as a pretreatment for coal liquefaction, 14:33089 (RA;GB)

Desulfurization
Use of basic nitrogen to chemically clean coal: Quarterly report no. 9 for the period March 15, 1989 to June 15, 1989, 14:33077 (R;US)

Evaluation
Characterizing fuels for utility-scale atmospheric fluidized-bed combustors: Volume 2, Appendixes, 14:33142 (R;US)
Characterizing fuels for utility-scale atmospheric fluidized-bed combustors: Volume 1, Initial development, 14:33141 (R;US)

Fluidized-Bed Combustion
Attrition of chars in fluidised bed combustion, 14:33140 (R;NL)
PFBC research and development - British experiences, 14:33148 (RA;FI)
Pressurized fluidized bed combustion and gasification systems, 14:33146 (R;FI)

Gravimelt Process
Bench-scale development of the gravimelt process for cleaning coal: Final report, 14:33066 (R;US)

Information
Coal data: A reference, 14:33133 (R;US)

Molecular Structure
Some thoughts on coal structure: Implications of coal liquids characterization, 14:33041 (R;US)

Nmr Spectra
A solid-state NMR study of condensation/retrograde reactions during coal liquefaction: Quarterly progress report, January 1, 1989–March 31, 1989, 14:33073 (R;US)

Particle Size
Particle sizing experiments with the laser Doppler velocimeter: Final report, 14:34362 (R;US)

Production
Quarterly coal report, October–December 1988, 14:33151 (R;US)

Pyrolysis
Fundamentals of coal-char chemistry. Final report, February 1985-April 1988, 14:33102 (R;US)
Influence of steam pretreatment on coal composition and devolatilization, 14:33111 (J;US)

Rail Transport
Report on the transportation of coal: baseline energy forecast, rail investment forecast, evaluation of capital requirements and availability, impacts on the Appalachian region, 14:33136 (R;US)

Solvent Extraction
Extraction of coal by hydrogenation, 14:33086 (RA;GB)

Sorptive Properties
Chemical characterization of the surface sites of coal: Technical progress report, September 15–December 14, 1988, 14:33120 (R;US)

Staged Combustion
Secondary fuel feed to a pulverized coal flame to reduce NO_x emission, 14:33145 (R;SE;In Swedish)

Supply and Demand
Annual outlook for US coal 1989 with projections to 2000, 14:33152 (R;US)
Quarterly coal report, October–December 1988, 14:33151 (R;US)

Wear
A study of coal particle shape and three-body wear: Quarterly report, January–March 1989, 14:33121 (R;US)

COAL DEPOSITS
See also COAL SEAMS

Methane
Geologic evaluation of critical production parameters for coalbed methane resources. Part 1. San Juan Basin. Annual report, August 1987-July 1988, 14:33194 (R;US)
Geologic evaluation of critical production parameters for coalbed methane resources. Part 2. Black Warrior Basin. Annual report, August 1987-July 1988, 14:33195 (R;US)

COAL EXTRACTS

Bioconversion
Serial biological conversion of coal into liquid fuels, 14:33054 (RA;US)

Hydrogenation
New CO/water conversion of coal, 14:33051 (RA;US)

Structural Chemical Analysis
Analysis of biodegraded coals, 14:33116 (RA;US)

COAL GAS

Desulfurization
Reaction kinetics and simulation models for novel high-temperature desulfurization sorbents: Final report, 14:33127 (R;US)

Yields
Continuous coking tests under fluid coking conditions, 14:33047 (RA;US)

COAL GASIFICATION

I G PROCESS

Catalysts
Fundamental studies of catalytic gasification: Annual report, October 1, 1987–September 30, 1988, 14:33098 (R;US)
Fundamental studies of catalytic gasification: Quarterly report, January 1, 1989–March 31, 1989, 14:33100 (R;US)
Fundamental studies of catalytic gasification: Quarterly report, October 1, 1988–December 31, 1988, 14:33099 (R;US)

Combustion Kinetics
Controlling mechanisms for gasification of pulverized coal, 14:33109 (BA;US)

Hot Gas Cleanup
Hot gas cleanup: the state-of-the-art and prospects in the future, 14:33108 (RA;FI)

Meetings
Pressurized fluidized bed combustion and gasification systems, 14:33146 (R;FI)

Pilot Plants
Rheinbraun HTW-gasification technology for combined cycle power generation, 14:33105 (RA;FI)

Research Programs
Pressurized fluidized bed combustion and gasification systems, 14:33146 (R;FI)

Surveys
Literature survey results: Topical report, 14:33065 (R;US)

Technology Assessment
Hydrogen from coal gasification: hope for improved economics, 14:33340 (RA;US)
Liquid fuels by indirect liquefaction of coal: process identification and assessment, 14:33095 (RA;GB)
The Krupp Koppers Prenflo process for coal gasification, 14:33097 (RA;GB)

COAL GASIFICATION PLANTS

By-Products
Upgrading alternatives for Great Plains by-product liquids, 14:33046 (RA;US)

Coal Liquids
Production of jet fuels from coal-derived liquids. Volume 3. Jet fuels potential of liquid by-products from the Great Plains Gasification Project. Interim report, September 1986-December 1987, 14:33039 (R;US)

Combined-Cycle Power Plants
Design and economics of a plant to convert eastern bituminous coal to pipeline gas or power using KRW gasifiers with in-bed

desulfurization. Topical report, November 1987-September 1988, 14:33103 (R;US)

Krw Gasification Process
Design and economics of a plant to convert eastern bituminous coal to pipeline gas or power using KRW gasifiers with in-bed desulfurization. Topical report, November 1987-September 1988, 14:33103 (R;US)

COAL INDUSTRY
Compiled Data
Quarterly coal report, October–December 1988, 14:33151 (R;US)

COAL LIQUEFACTION

PYROSOL PROCESS
TSL PROCESS
A novel concept for high conversion of coal to liquids: Progress report No. 1, September 1–November 30, 1988, 14:33075 (R;US)
A novel concept for high conversion of coal to liquids: Progress report No. 2, December 2, 1988–February 28, 1989, 14:33076 (R;US)
Co-processing of residual petroleum fractions with a UK bituminous coal, 14:33088 (RA;GB)
Coprocessing of Spanish lignites: main objectives and preliminary work, 14:33094 (RA;GB)

Activation Energy
Low severity conversion of activated coal, 14:33052 (RA;US)

Alkylation
Speculation on molecular environment of reactive hydrogen atoms in coal., 14:33345 (RA;CA)

Catalysis
Intercrystalline anion exchange, sorption, and base catalysis, 14:33058 (RA;US)

Catalysts
Deactivation of hydrotreatment catalysts used for coal liquids: Semi-annual report, November 12, 1988–May 11, 1989, 14:33067 (R;US)
Development of hydrous metal oxide catalysts for direct coal liquefaction, 14:33061 (RA;US)
New small granulometry catalysts and new methodologies to study the direct liquefaction of coal, 14:33080 (RA;GB)

Chars
Continuous coking tests under fluid coking conditions, 14:33047 (RA;US)
Recycle oils from fluid coking of coal liquefaction bottoms, 14:33115 (RA;US)

Chemical Reaction Kinetics
Coupled chemical and catalytic conversion a preliminary report on coal solubilization, 14:33057 (RA;US)
Heteroatom-containing compounds during liquefaction, 14:33060 (RA;US)
Investigation of liquefaction mechanisms with molecular probes, 14:33112 (J;US)
New small granulometry catalysts and new methodologies to study the direct liquefaction of coal, 14:33080 (RA;GB)

Chemical Reaction Yield
Liquefaction at low severity conditions, catalysed depolymerization of coal as a pretreatment for coal liquefaction, 14:33089 (RA;GB)

Chemical Reactions
Fundamental studies of retrograde reactions in direct liquefaction: Second quarterly report, January 1–March 31, 1989, 14:33074 (R;US)
Process and analytical studies of enhanced low severity coprocessing using selective coal pretreatment: Quarterly technical progress report, December 1988–February 1989, 14:33072 (R;US)

Chemical Reactors
Hydroprocessing of coal derived middle distillates and studies of coal liquefaction potential, 14:33084 (RA;GB)

Computerized Simulation
Development of computer models for the simulation of coal liquefaction processes, 14:33092 (RA;GB)

Correlations
Role of ash concentration in coal hydroliquefaction, 14:33032 (RA;US)

Economic Analysis
The development of a computer package for the calculation of direct coal liquefaction process economics, 14:33093 (RA;GB)

Filtration
The evaluation of cokes as filter aids in direct coal liquefaction, 14:33090 (RA;GB)
The evaluation of cokes as filter aids in direct coal liquefaction, 14:33091 (RA;GB)

Hydrogen Transfer
New hydrogen donors for direct liquefaction of coal, 14:33085 (RA;GB)

Parametric Analysis
Development and characterization of new HDS catalysts and selection of coal liquefying operating conditions for catalysts screening, 14:33083 (RA;GB)

Performance Testing
Low-severity liquefaction using a phenolic solvent, 14:33055 (RA;US)

Phase Studies
Apparatus to perform determination of vapor-liquid equilibria between hydrogen and oil from coal hydroliquefaction up to 20 MPa and 673K, 14:33123 (RA;GB)

Recycling
Recycle oils from fluid coking of coal liquefaction bottoms, 14:33062 (R;US)

Technology Assessment
Liquid fuels by indirect liquefaction of coal: process identification and assessment, 14:33095 (RA;GB)
Saarberg/GfK coal liquefaction developments, 14:33096 (RA;GB)
Thoughts on direct liquefaction of coal, 14:33042 (RA;US)

COAL LIQUEFACTION PLANTS
Economic Analysis
Bench-scale co-processing, 14:33044 (RA;US)

Economics
Economics of production of clean utility fuels and domestic oil supplies from high sulfur coals and residual oils, 14:33045 (RA;US)

Performance
Recent progress at Wilsonville in the direct liquefaction of a low-ash Ohio No. 6 coal and a Texas lignite, 14:33049 (RA;US)

COAL LIQUIDS
Chemical Analysis
Isotopic methods in coal research, 14:33117 (RA;US)

Fractionation
Fractionation of oil sands bitumen and coal derived liquids, 14:34047 (RA;CA)

Hydrogenation
Hydroprocessing of coal derived middle distillates and studies of coal liquefaction potential, 14:33084 (RA;GB)
Selective catalysts for coal and heavy oil hydrogenation, 14:33082 (RA;GB)

Jet Engine Fuels
Production of jet fuels from coal-derived liquids. Volume 3. Jet fuels potential of liquid by-products from the Great Plains Gasification Project. Interim report, September 1986-December 1987, 14:33039 (R;US)

Quantitative Chemical Analysis
Development of an extractive continuous monitor for hydrogen chloride (HCl) analyses of coal-derived process streams, 14:33113 (J;US)

Structural Chemical Analysis
New CO/water conversion of coal, 14:33051 (RA;US)
Use of high resolution ^{1}H and ^{13}C NMR techniques in the study of fuels and coal derived liquids, 14:33119 (RA;US)

COAL MINING
Geophysical Surveys
Determining geotechnical and hydrogeological parameters using downhole geophysics in the Canadian plains. Phase 2 report. Correlations of existing data, 14:34755 (R;CA)

Corrosion
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 8: Review of processes near a buried waste canister, 14:33269 (R;XN)
Mathematical modeling of large-scale nonuniform corrosion, 14:33323 (J;US)
Mathematical models for redox and corrosion potentials for high level nuclear waste containers in tuff environments, 14:33320 (BA;US)
Phase stability effects on the corrosion behavior of the metal barrier candidate materials for the nuclear waste management program, 14:33319 (BA;US)
Design
The effects of hydrogen on the metal barrier candidate materials for the nuclear waste management program, 14:33318 (BA;US)
Materials Testing
Mathematical models for redox and corrosion potentials for high level nuclear waste containers in tuff environments, 14:33320 (BA;US)
Phase stability effects on the corrosion behavior of the metal barrier candidate materials for the nuclear waste management program, 14:33319 (BA;US)
CONTAINMENT SHELLS
Soil-Structure Interactions
3-D soil-structure interaction analysis of Lotung containment model, 14:34749 (RA;US)
Ambient motions of quarter scale containment model in Lotung, 14:34748 (RA;US)
Analysis of large-scale containment model in Lotung, Taiwan: forced vibration and earthquake response analysis and comparison, 14:34733 (RA;US)
Dynamic characteristics of the measured seismic and structural responses data of Lotung 1/4-scale nuclear power plant containment model, 14:34752 (RA;US)
EPRI/TPC large-scale seismic experiment at Lotung, Taiwan, 14:34735 (RA;US)
Forced vibration and seismic analyses of Lotung Large Scale Experiment using the SASSI code, 14:34732 (RA;US)
Guidelines for round-robin soil-structure interaction analysis working paper preparation, 14:34739 (RA;US)
Lotung SSI analysis using a 3-D harmonic Green's function method, 14:34744 (RA;US)
NRC/ANL participation in the Lotung, Taiwan, large-scale soil-structure-interaction experiment - validation of analysis methods, 14:34738 (RA;US)
Perspectives on soil structure interaction analysis, 14:34729 (RA;US)
Pore water pressure response measurements at Lotung site, 14:34753 (RA;US)
Prediction of quarter scale model response using SIM code, 14:34741 (RA;US)
Prediction of strong ground motion for structural design, 14:34734 (RA;US)
Prediction of the forced vibration and seismic response of the Lotung (Taiwan) large-scale containment model and comparison with observations, 14:34740 (RA;US)
Predictive response computations for vibration tests and earthquake of May 20, 1986 using an axisymmetric finite element formulation based on the complex response method and comparison with measurements - a Swiss contribution, 14:34743 (RA;US)
Soil structure interaction analyses for 1/4-scale containment model using direct (finite element) method of analysis, 14:34731 (RA;US)
Soil-structure interaction analyses of EPRI field test - forced vibration test and earthquake response, 14:34747 (RA;US)
Soil-structure interaction analyses of quarter-scale containment model experiment in Lotung, Taiwan, 14:34730 (RA;US)
Soil-structure interaction analysis of quarter scale model using AXERA code, 14:34746 (RA;US)
Soil-structure interaction analysis of quarter scale model using HYBAX code, 14:34745 (RA;US)
Soil-structure interaction correlations of EPRI/TPC field test results with analytical predictions, 14:34742 (RA;US)
Summary of soil characterization program for the Lotung large-scale seismic experiment, 14:34736 (RA;US)
Validation of seismic soil-structure interaction analysis techniques using Lotung experiment data - EPRI program, 14:34737 (RA;US)
Variation and propagation of seismic strong motions across the SMART1-LSST array, 14:34750 (RA;US)
Wavetype identification and interpretation of the seismic data in SMART-1 array, 14:34751 (RA;US)
CONTAMINATION
Geologic Fractures
A new approach to tracer transport analysis: From fracture systems to strongly heterogeneous porous media, 14:34462 (R;US)
CONTENT ANALYSIS

COPPER
Corrosion
On the corrosion of copper in pure water, 14:33905 (R;SE)
Corrosion Resistance
Transport processes in localized corrosion, 14:33819 (RA;US)
Deposition
Acoustic wave electroless deposition monitor, 14:33707 (BA;US)
Ecological Concentration
History of metal pollution in the Southern California Bight: an update, 14:34501 (J;US)
Natural trace metal concentrations in estuarine and coastal marine sediments of the southeastern United States, 14:34502 (J;US)
Electrodeposition
Stability analysis of metal electrodeposition, 14:33699 (BA;US)
Physical Radiation Effects
Bound strength between gas pores and grain boundaries in copper and nickel, 14:33881 (RA;SU;In Russian)
Peculiarity radiation swelling of copper irradiated by xenon and copper ions with energy 1 MeV/a.m.u., 14:33887 (R;SU;In Russian)
Protective Coatings
Deposition of thick, adherent copper coatings on glass, 14:34008 (BA;US)
Radiation Effects
Radiation effects in metals and semiconductors, 14:33834 (RA;US)
Raman Effect
Near-infrared surface-enhanced Raman spectroscopy. Part II: Copper and gold colloids, 14:34036 (J;US)
Swelling
Peculiarity radiation swelling of copper irradiated by xenon and copper ions with energy 1 MeV/a.m.u., 14:33887 (R;SU;In Russian)
Voids
Bound strength between gas pores and grain boundaries in copper and nickel, 14:33881 (RA;SU;In Russian)
COPPER ALLOYS
Deformation
Role of deformation mechanisms in multiaxial hardening and cyclic fatigue, 14:33828 (RA;US)
Metallurgical Effects
Cryogenic tensile properties of AA 2090 weldments, 14:33889 (R;US)
Microstructure
Microstructural evolution of Al-Li and Al-Li-Cu-Mg alloys, 14:33888 (R;US)
Structure and dynamics of surfaces, interfaces and heterostructures, 14:33841 (RA;US)
Radiation Effects
Radiation effects in metals and semiconductors, 14:33834 (RA;US)
COPPER COMPOUNDS
See also COPPER OXIDES
CUPRATES
Cuprates
Composite ceramic superconducting wires for electric-motor applications. Quarterly report No. 2, 30 September-30 December 1988, 14:34116 (R;US)
Institute for Materials Science and Engineering, Ceramics: technical activities, 1988, 14:33958 (R;US)
Institute for Materials Science and Engineering, Fracture and Deformation Division: technical activities, 1988, 14:33900 (R;US)
Microstructure
Microchemistry of solids, 14:33139 (RA;US)
COPPER IONS
Ion Implantation
Refractive index of silicate glasses implanted with copper, 14:33976 (R;US)
COPPER ORES
Leaching
An economic and energy evaluation of the replacement of conventional technology with continuous chromatography in the dump leaching of copper ores, 14:33755 (R;US)
COPPER OXIDES
Processing
Recent improvements in bulk properties of ceramic superconductors, 14:33945 (R;US)
Sintering
Thin film preparation and single film device fabrication in the Tl-Ca-Ba-Cu-O HTS system, 14:33963 (R;US)
Superconductivity
A method for measuring optical twin spacings in the superconducting material, $YBa_2Cu_3O_x$, 14:33969 (J;US)
Composite VS constituent particle aspects of hole motion in the CuO_2 plane, 14:35244 (R;XA)
Effects of compositional variations on the properties of superconducting $(Bi,Pb)_2Sr_2Ca_2Cu_3O_\delta$, 14:33972 (J;US)
Reply to "Comment on 'Identification of a superoxide in superconducting $La_2CuO_{4+\delta}$ by x-ray photoelectron spectroscopy' ", 14:33975 (J;US)
Y-Ba-Cu-O superconducting films produced by long-pulse laser vaporization, 14:33968 (J;US)
COPPER VAPOR LASERS
See GAS LASERS
COPROCESSING
Chemical Reaction Kinetics
Investigation of liquefaction mechanisms with molecular probes, 14:33112 (J;US)
Chemical Reaction Yield
Co-processing of residual petroleum fractions with a UK bituminous coal, 14:33088 (RA;GB)
Use of synthesis gas in co-processing of coal-bitumen and derivatives, 14:33348 (RA;CA)
Parametric Analysis
Coprocessing of Spanish lignites: main objectives and preliminary work, 14:33094 (RA;GB)
Synthesis Gas
Use of synthesis gas in co-processing of coal-bitumen and derivatives, 14:33348 (RA;CA)
Yields
Coal and petroleum reactions in coal/oil coprocessing, 14:33167 (R;US)
Stable carbon isotope analysis of coal/petroleum coprocessing products, 14:33166 (R;US)
CORES (REACTOR)
See REACTOR CORES
CORN (MAIZE)
See MAIZE
CORN STOVER
See AGRICULTURAL WASTES
MAIZE
CORROSION
See also ELECTROCHEMICAL CORROSION
Measuring Methods
To measure and characterize metal corrosion in electrolyte solutions by exploiting the properties of superconductors. Final technical report, 14:33805 (R;US)
Meetings
Corrosion and environmental effects on materials. UKAEA conference on materials analysis by physical techniques, Northern Research Laboratories (Risley), 4-5 October 1988, 14:33807 (R;GB)

CORROSION INHIBITORS
Evaluation
Development of anodes for aluminum/air batteries: Solution phase inhibition of corrosion: Final report, 14:33614 (R;US)
CORROSION PRODUCTS
Purification
Material compatibility of the chemical cleaning of steam generators with chelating solutions, 14:33486 (RA;DE;In German)
CORTISOL
See HYDROCORTISONE
COSMIC DUST
Interactions
The role of dust particles with large gyroradii in the 2/3 fall-down process, 14:35436 (J;US)
COSMIC GAMMA BURSTS
Visible Radiation
Optical study of X-ray sources and search for optical counterparts of gamma-ray burst sources at Sonneberg Observatory, 14:34837 (RA;CS)
Search for optical flashes from gamma-ray burst sources, 14:34835 (RA;CS)
COSMIC GAMMA SOURCES
Cosmic Gamma Bursts
Search for optical flashes from gamma-ray burst sources, 14:34835 (RA;CS)
Polarization
Search for linear polarization in gamma-ray sources: possible evidence for the Vela pulsar, 14:34834 (RA;CS)
COSMIC PARTICLES
See COSMIC RADIATION
COSMIC RADIATION
Indiana University High Energy Physics Group, Task C: Technical progress report, December 1, 1988–December 31, 1989, 14:34770 (R;US)
Background Radiation
Submillimeter spectrum of the cosmic background radiation, 14:34344 (RA;JP)
Neutron Monitors
Solar-Geophysical Data Number 531, November 1988. Part 1 (prompt reports). Data for October, September 1988, and late data, 14:34865 (R;US)
Radiometers
Submillimeter spectrum of the cosmic background radiation, 14:34344 (RA;JP)
COSMIC X-RAY SOURCES
Visible Radiation
Optical study of X-ray sources and search for optical counterparts of gamma-ray burst sources at Sonneberg Observatory, 14:34837 (RA;CS)
COSMOGONY
See COSMOLOGY
COSMOLOGICAL CONSTANT
Cp Invariance
Baby universes, fine tuning problems. A theory of everything robbing the throne by killing the rivals, 14:34859 (R;JP)
Quantum Gravity
Baby universes, fine tuning problems. A theory of everything robbing the throne by killing the rivals, 14:34859 (R;JP)
Strong Interactions
Solution of strong CP problem in baby universe theory, 14:34858 (R;JP)
COSMOLOGICAL MODELS

DECOMMISSIONING
See also REACTOR DECOMMISSIONING
Meetings
Fusion process for metallic wastes slightly contaminated by radioactive substances, 14:33251 (R;FR;In French)
DEEP INELASTIC SCATTERING
String Models
Coherence effects in deep inelastic scattering, 14:34989 (R;SE)
Structure Functions
Structure functions and parton distributions, 14:34962 (R;US)
DEGRADATION (NUCLEAR)
See DECAY
DEHUMIDIFIERS
Desiccants
Integrated gas-fired desiccant dehumidification vapor-compression cooling system for residential application. Phase 1. Final report, December 1986-December 1987, 14:33741 (R;US)
DELAYED GAMMA RADIATION
Fast Fission
Measured data of delayed gamma-ray spectra from fissions of ^{232}Th, ^{233}U, ^{235}U, ^{238}U and ^{239}Pu by fast neutrons, tabular data, 14:35109 (R;JP)
Gamma Spectra
Measured data of delayed gamma-ray spectra from fissions of ^{232}Th, ^{233}U, ^{235}U, ^{238}U and ^{239}Pu by fast neutrons, tabular data, 14:35109 (R;JP)
DELAYED NEUTRONS
Group Constants
Translation of selected papers published in Nuclear Constants 2, 1988, 14:35125 (R;XA)
DELAYED RADIATION INJURIES
See RADIATION INJURIES
DELTA RESONANCES (MESON)
See MESONS
DENITRIFICATION
Oil Burners
Low NO_x burners for heavy fuel oil. A prestudy of presently available technique with emphasis on small compactboiler, 14:34428 (R;SE;In Swedish)
DENSITOMETERS
Gamma Radiation
Analysis of hydrocarbons by dual-energy gamma-ray densitometry, 14:34046 (R;CA)

Measuring Methods
Poor man's densitometry, 14:33333 (R;US)

DENSITY
Distribution
Determining the density distribution in a 7 metre coke oven. Doctoral thesis, Clausthal Technical University - 2 appendices, 14:33078 (R;XE;In German)

DENSITY (CHARGE)
See CHARGE DENSITY

DENSITY (PLASMA)
See PLASMA DENSITY

DENSITY MATRIX
Time Dependence
Algebraic approach to collision dynamics of composite projectiles, 14:35328 (BA;SG)

DERMATITIS
Nervous System Diseases
Steroid hormones and peptide hormones in atopic eczema. Radioimmunological determination of diurnal plasma level variations of testosterone, cortisol, prolactin and human growth factor in healthy volunteers and patients showing atopic eczemae, 14:34618 (R;DE;In German)

DESERTRON
See SUPERCONDUCTING SUPER COLLIDER

DESICCANTS
Integrated gas-fired desiccant dehumidification vapor-compression cooling system for residential application. Phase 1. Final report, December 1986-December 1987, 14:33741 (R;US)

DESIGN
Meetings
Deepwater technology, 14:33161 (R;NO)
Modifications
Development of a dynamic finite element computer code for the inelastic analysis of cask structures – PRONTO 3D, 14:33297 (R;US)

DESORPTION
Fission Fragments
Thickness and volume effects in MeV ion induced desorption (PDMS), 14:35224 (R;FR)
Krypton Ions
Thickness and volume effects in MeV ion induced desorption (PDMS), 14:35224 (R;FR)

DESULFURIZATION
Catalysts
Development and characterization of new HDS catalysts and selection of coal liquefying operating conditions for catalysts screening, 14:33083 (RA;GB)

DETECTORS (RADIATION)
See RADIATION DETECTORS

DEUTERIUM
Chemical Reaction Kinetics
Comparison of quasiclassical trajectory calculations to accurate quantum mechanics for state-to-state partial cross sections at low total angular momentum for the reaction $D+H_2 \rightarrow HD+H$, 14:34085 (J;US)
Diffusion
A SIMS study of the filling of traps for deuterium in krypton-implanted nickel, 14:33924 (J;US)
Isotope Separation
Hydrogen isotope separation study with the TSTA cryogenic distillation system. Two-column experiment with H-D-T, 14:35455 (R;JP)
Trapping
Trapping of deuterium by helium bubbles and defects in ion-implanted tantalum, 14:33932 (J;US)

DEUTERIUM IONS
Ion Sources
New oxide cathode assembly for a duoplasmatron, 14:34923 (J;US)

DEUTERIUM OXIDES
See HEAVY WATER

DEUTERIUM TARGET
Excitation Functions
Nucleons in nuclei (II), 14:35043 (R;FR)
Proton Reactions
Nucleons in nuclei (II), 14:35043 (R;FR)

DEUTERIUM-LITHIUM HIGH FLUX NEUTRON SOURCE FACILITY
See NEUTRON SOURCE FACILITIES

DEUTERON REACTIONS
Adiabatic Approximation
Microscopic consideration of d+t -> n+α nuclear reaction within the adiabatic representation, 14:35158 (R;SU;In Russian)
Elastic Scattering
Effects of collective excitations in the elastic scattering of vector polarized deuterons, 14:35056 (R;AU)
Nuclei form and deformation effect on angular deuteron distribution at elastic and inelastic diffraction scattering, 14:35159 (R;SU;In Russian)
Inelastic Scattering
Nuclei form and deformation effect on angular deuteron distribution at elastic and inelastic diffraction scattering, 14:35159 (R;SU;In Russian)
Spectra of protons emitted at large angles in dp->pX reaction at 3.3 GeV/c, 14:35047 (R;SU;In Russian)

DEUTERON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
DEUTERON REACTIONS

DEUTERONS
Elastic Scattering
Effects of collective excitations in the elastic scattering of vector polarized deuterons, 14:35056 (R;AU)

DEVELOPING COUNTRIES
See also ARGENTINA
INDIA
IRAN
SRI LANKA
Agriculture
Opportunities to assist developing countries in the proper use of agricultural and industrial chemicals. Report of the Committee on Health and Environment. Volume 1. Research paper(Final), 14:33647 (R;US)
Electricity
Electricity in the developing countries: Trends in supply and use since 1970, 14:33668 (R;US)
Energy Conservation
The economics of industrial energy conservation in the developing countries, 14:33656 (BA;US)
Energy Consumption
Energy demand and energy efficiency in the developing countries, 14:33677 (BA;US)
Energy Management
Overcoming barriers to improved energy efficiency, 14:33657 (BA;US)
Wood Fuels
Wood, 14:33680 (BA;US)

DEVICES
See EQUIPMENT

DIBARYON RESONANCES
See DIBARYONS

DIBARYONS
Particle Decay
On the value of isolated dibaryon resonance decay width, 14:34983 (R;SU;In Russian)
Particle Identification
Production of the *H* dibaryon in relativistic heavy-ion collisions, 14:35166 (J;US)

DIENES
Chemical Reactions
Carbon dioxide activation: thermodynamics of CO_2 binding and the involvement of two cobalt centers in the reduction of CO_2 by a cobalt(I) macrocycle, 14:34090 (J;US)

DIESEL ENGINES
Exhaust Gases
Controlling transit-bus emissions and improving management, 14:33798 (R;US)

Fuel Systems
Application for certification, 1989 model year heavy-duty diesel engines - Hino Motors, 14:33793 (R;US)
Application for certification, 1989 model year heavy-duty vehicles - Mitsubishi, 14:33792 (R;JP)
Ignition Systems
Application for certification, 1989 model year heavy-duty diesel engines - Hino Motors, 14:33793 (R;US)
Application for certification, 1989 model year heavy-duty vehicles - Mitsubishi, 14:33792 (R;JP)
Performance Testing
Combustion characteristics of dry coal-powder-fueled adiabatic diesel engine: Final report, 14:33780 (R;US)
DIESEL FUELS
Fuel Substitution
Coal fueled diesel developments, 14:33125 (B;US)
Saponified vegetable oils as substitute diesel fuels, 14:33363 (BA;US)
DIESEL OIL (FRACTION)
See DIESEL FUELS
DIFFERENTIAL EQUATIONS

Application of transmission line analysis to porous battery electrodes, 14:33618 (BA;US)

Protective Coatings
Effects of halide ions on the rate of oxygen reduction at a bare and a Nafion-coated Pt electrode, 14:33636 (BA;US)

Redox Reactions
Kinetics of the ferrous/ferric electrode reaction in the absence of chloride catalysis, 14:34092 (BA;US)

Size
Measurement of passive film growth kinetics on bare surface niobium band microelectrodes, 14:33695 (BA;US)

Surface Properties
A novel adaptation of the finite difference method for accurate description of non-orthogonal boundaries, 14:33698 (BA;US)
Effect of diffusion layer structure on the determination of corrosion rates from DC transient measurements, 14:33696 (BA;US)
Secondary current distribution and propagation of a wavy electrode, 14:33627 (BA;US)

ELECTROJETS
Computer Calculations
Overview on the equatorial electrojet theoretical grounds, 14:34881 (RA;BR)

Mathematical Models
Overview on the equatorial electrojet theoretical grounds, 14:34881 (RA;BR)

Seasons
Relationship between the current and the width of the POGO electrojet during the solstices, 14:34885 (R;XA)

ELECTROLYTES
Tubes
Fractography of glasses and ceramics, 14:33964 (B;US)

ELECTROLYTIC CELLS
Electrochemistry
In-situ infrared study of inhibitors and the solid-electrolyte interface. Final report, 1 September 1984-31 May 1988, 14:33609 (R;US)

ELECTROLYTIC CORROSION
See ELECTROCHEMICAL CORROSION

ELECTROMAGNETIC FIELDS
Computer Calculations
Analysis of rf modes in the ANL APS vacuum chamber using computer simulation, electron beam excitation, and perturbation techniques, 14:34239 (R;US)

Coupling
Algebraic method for relativistic systems - spectrum and radiative transitions, 14:35329 (BA;SG)
Gravitational nonminimally coupled electromagnetic fields: a possible solution to some idiosincrasies of Einstein-Maxwell theory, 14:35275 (R;BR)

Einstein-Maxwell Equations
Gravitational nonminimally coupled electromagnetic fields: a possible solution to some idiosincrasies of Einstein-Maxwell theory, 14:35275 (R;BR)

Frequency Mixing
Generation of higher-order squeezing of quantum electromagnetic fields by degenerate four-wave mixing and other processes, 14:35251 (R;XA)

ELECTROMAGNETIC INTERACTIONS
See also ANNIHILATION
COMPTON EFFECT
PHOTOPRODUCTION

Mathematical Models
Properties of the strong factor in dynamically generated S-matrices, 14:35339 (BA;SG)

Symmetry
Approximate global symmetries of the electroweak interactions, 14:35312 (BA;SG)

ELECTROMAGNETIC ISOTOPE SEPARATORS
Ionization
Present condition and future plan of KUR-ISOL. Efficient ionization of rare-earth elements by the oxidation technique, 14:33555 (RA;JP;In Japanese)

ELECTROMAGNETIC RADIATION

ELECTRON EMISSION
Desorption
Spontaneous desorption and plasma desorption mass spectrometry: a simple way to compare keV and MeV ion induced desorption, 14:35223 (R;FR)
ELECTRON NEUTRINOS
Mass
Binding of hydrogen and helium in silicon, the mass difference between ^{3}H and ^{3}He, and the mass of ν_e, 14:35049 (J;US)
ELECTRON PLASMA WAVES
Normal-Mode Analysis
Large Debye distance effects in a homogeneous plasma, 14:35430 (R;SE)
ELECTRON PRECIPITATION
Magnetic Storms
Energetic electron precipitation at the South Atlantic Magnetic Anomaly: a review, 14:34877 (RA;BR)
Southern Hemisphere
Energetic electron precipitation at the South Atlantic Magnetic Anomaly: a review, 14:34877 (RA;BR)
ELECTRON REACTIONS
Inelastic Scattering
Polarization response functions and the $(\vec{e},e/\vec{p})$ reaction, 14:35168 (J;US)
ELECTRON RINGS
Electron-Ring Accelerators
Investigation of ion influence on electron ring stability during its compression in the KUTI-20 adhezator, 14:34245 (R;SU;In Russian)
Instability
Investigation of ion influence on electron ring stability during its compression in the KUTI-20 adhezator, 14:34245 (R;SU;In Russian)
ELECTRON-DEUTERON INTERACTIONS
Inelastic Scattering
Inelastic lepton-deuteron scattering: Possible coherent effects, 14:34992 (J;US)
Quark Model
Inelastic lepton-deuteron scattering: Possible coherent effects, 14:34992 (J;US)
ELECTRON-ION COLLISIONS
Recombination
Projection-operator approach to the unified treatment of radiative and dielectronic recombination, 14:34914 (J;US)
ELECTRON-POSITRON INTERACTIONS
Annihilation
Modified VMD model with correct analytic properties for describing electromagnetic structure of He^4 nucleus, 14:35114 (R;XA)
ELECTRON-PROTON INTERACTIONS
Pair Production
Diquark production in ep collisions, 14:34993 (J;DE)
ELECTRONIC DATA PROCESSING
See DATA PROCESSING
ELECTRONIC STRUCTURE
Boundary Conditions
Interface boudary conditions and non parabolicity effects in quantum wells, 14:35280 (RA;BR)
Hamiltonians
Interface boudary conditions and non parabolicity effects in quantum wells, 14:35280 (RA;BR)
Interfaces
Interface boudary conditions and non parabolicity effects in quantum wells, 14:35280 (RA;BR)
Numerical Solution
Numerical Kronig - Pennel model to calculate band structure of quantum wells and semiconductor heterostructures, 14:35288 (RA;BR)
Quantum Electronics
Numerical Kronig - Pennel model to calculate band structure of quantum wells and semiconductor heterostructures, 14:35288 (RA;BR)
Semiconductor Materials
Numerical Kronig - Pennel model to calculate band structure of quantum wells and semiconductor heterostructures, 14:35288 (RA;BR)
Symmetry
Group theoretical techniques for molecular electronic spectra, 14:35327 (BA;SG)
ELECTRONICS (QUANTUM)

FLOW RATE
Evaluation
Representative elements: A step to large-scale fracture system simulation, 14:33264 (R;US)
FLUE GAS
Denitration
Staged combustion for reduced NO_x emissions from an atmospheric fluidized-bed combustor, 14:33445 (R;US)
Desulfurization
Causes of FGD [flue gas desulfurization] construction material failures: Volume 1, September 1982–July 1985: Final report, 14:33443 (R;US)
Causes of FGD [flue gas desulfurization] construction material failures: Volume 2, August 1985–December 1986: Final report, 14:33444 (R;US)
Heat Recovery Equipment
Performance verification of industrial ceramic materials: environmental effects on performance. Topical report, September 1984-March 1987, 14:33766 (R;US)
FLUID FLOW
See also GAS FLOW
INCOMPRESSIBLE FLOW
TRANSONIC FLOW
TWO-PHASE FLOW
Viscosity
Hele-Shaw scaling properties of low-contrast Saffman-Taylor flows, 14:34937 (J;US)
FLUID MECHANICS
See also MAGNETOGASDYNAMICS
Calculation Methods
Evaluation of the filtered leapfrog-trapezoidal time integration method, 14:34936 (J;US)
Measuring Methods
Effect of pressure on fluidized bed behaviour, 14:34100 (R;FI)
FLUIDIZED BED
See FLUIDIZED BEDS
FLUIDIZED BED BOILERS
Air Pollution Abatement
Staged air supply for NO_x reduction in FBC, 14:34223 (R;SE)
Heat Transfer
Bulk density and heat transfer in cirulating fluidized bed boilers, 14:33144 (R;SE)
Operation
Operating experience of fluidized-bed boilers, 14:33434 (R;SE;In Swedish)
Staged Combustion
Staged air supply for NO_x reduction in FBC, 14:34223 (R;SE)

FLUIDIZED BEDS
Bulk Density
Bulk density and heat transfer in cirulating fluidized bed boilers, 14:33144 (R;SE)
Erosion
State-of-the-art computation of dynamics and erosion in fluidized bed tube banks, 14:33137 (R;US)
Research Programs
Behaviour, dimensioning and profitability of steam fluidized bed dryer based on experiments carried out in pilot dryer, 14:33035 (R;FI;In Finnish)

FLUIDIZED-BED COMBUSTION
Combustion Products
Pressurized fluidized bed combustion of peat, 14:33149 (RA;FI)
Coordinated Research Programs
Effect of pressure on fluidized bed behaviour, 14:34100 (R;FI)
Efficiency
Attrition of chars in fluidised bed combustion, 14:33140 (R;NL)
Fluid Mechanics
Effect of pressure on fluidized bed behaviour, 14:34100 (R;FI)
Gasification
Pressurized fluidized bed combustion of peat, 14:33149 (RA;FI)
Hot Gas Cleanup
Didier hot gas filter systems, 14:33130 (RA;FI)
Particle measurements at the Otaniemi PFBC/G test rig, 14:33129 (RA;FI)
Meetings
Pressurized fluidized bed combustion and gasification systems, 14:33146 (R;FI)
Pilot Plants
Pressurized fluidized bed combustion of peat, 14:33149 (RA;FI)
Research Programs
PFBC research and development - British experiences, 14:33148 (RA;FI)
Pressurized fluidized bed combustion and gasification systems, 14:33146 (R;FI)

FLUIDIZED-BED COMBUSTORS
Characterizing fuels for utility-scale atmospheric fluidized-bed combustors: Volume 2, Appendixes, 14:33142 (R;US)
Characterizing fuels for utility-scale atmospheric fluidized-bed combustors: Volume 1, Initial development, 14:33141 (R;US)
Combustion Control
Staged combustion for reduced NO_x emissions from an atmospheric fluidized-bed combustor, 14:33445 (R;US)

FLUIDS

Destructive examinations of BG8 and BG9 rods: The Studsvik Super-Ramp Project, 14:33473 (R;SE)
Fuel-Cladding Interactions
The Studsvik Super-Ramp Project: Final report, 14:33474 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, October–December, 1982, 14:33469 (R;SE)
Nondestructive Testing
Non-destructive examination of PW3 rods: The Super-Ramp Project, 14:33464 (R;SE)
Non-destructive examinations of BG8 and BG9 rods: The Super-Ramp Project, 14:33468 (R;SE)
Results of non-destructive examinations of the fuel rods of the groups PK4 and PK6: The Studsvik Super-Ramp Project, 14:33495 (R;SE)
Results of profilometry, E C tests and radiography of test rods supplied by Asea-Atom: The Studsvik Super-Ramp Extension Project, 14:33475 (R;SE)
Post-Irradiation Examination
Hot cell examinations of AA test fuel rods: The Studsvik Super-Ramp Extension Project, 14:33476 (R;SE)
Post-ramp examinations of KWU/CE rods at Karlstein: The Super-Ramp Project, 14:33471 (R;SE)
Power ramping of Super-Ramp test fuel rods: Final irradiation report: The Super-Ramp Project, 14:33470 (R;SE)
Power ramping of the PWR rods PK4/1, 2, 3 and PK6/1, 2, 3 irradiation report: The Studsvik Super-Ramp Project, 14:33463 (R;SE)
Power ramping of the rods PW5/1, 2 and 3: Irradiation report: The Super-Ramp Project, 14:33465 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March 1983 and April–June 1983 [first and second quarters], 14:33472 (R;SE)
Reliability
Guidelines for improving fuel reliability: Final report, 14:33481 (R;US)
Research Programs
The Studsvik Super-Ramp Extension Project: Progress report, January 1–September 30, 1984, 14:33506 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, April–June 1981, 14:33502 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, April–June, 1980 and July–September, 1980, 14:33494 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March 1982, 14:33505 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March, 1981, 14:33499 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, July–September 1981, 14:33503 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, October–December 1980, 14:33496 (R;SE)

The Studsvik Super-Ramp Project: Quarterly progress report, October–December 1981, 14:33504 (R;SE)

Spent Fuel Storage
Estimates of Zircaloy integrity during dry storage of spent nuclear fuel: Final report, 14:33460 (R;US)

Very High Temperature
Modelling study for the determination of temperature distribution in a WWER-1000 type fuel element, 14:33490 (R;HU;In Hungarian)

FUEL SLUGS
See FUEL RODS

FUEL SLURRIES
Coal Preparation
Study of CWM dry preparation systems using water-air mixed jet pump, 14:33033 (R;JP;In Japanese)

FUEL SUBSTITUTION
Economic Impact
The power of alternatives. Energy from wood and peat, 14:33366 (R;CA)

Life-Cycle Cost
Fuel peat demand and boiler conversion feasibility study. Energy demand and fuel peat conversion study Burin Peninsula, 14:33368 (RA;CA)

Meetings
The power of alternatives. Energy from wood and peat, 14:33366 (R;CA)

FUEL SUSPENSIONS
See FUEL SLURRIES

FUEL SYSTEMS
See also FUEL INJECTION SYSTEMS
Design
Combustion characteristics of dry coal-powder-fueled adiabatic diesel engine: Final report, 14:33780 (R;US)

Management
Project PETROL RAM: improving the management of Air Force fuels operations and inventories. Master's thesis, 14:33662 (R;US)

FUELS

G

GADOLINIUM
Magnetization
Magnetic ordering of thin Gd overlayers, 14:33930 (J;US)

GADOLINIUM 144
Decay
Search for superdeformation in ^{144}Gd, 14:35066 (R;FR)
Nuclear Deformation
Search for superdeformation in ^{144}Gd, 14:35066 (R;FR)

GADOLINIUM 147
High Spin States
g factor of the (59/2$^-$ isomer in ^{147}Gd, 14:35080 (J;US)

GADOLINIUM 152 TARGET
Neutron Reactions
Neutron resonances of radioactive isotope gadolinium-153 ($T_{1/2}$=241.6 days), 14:35084 (RA;SU;In Russian)

GADOLINIUM 153
Excited States
Neutron resonances of radioactive isotope gadolinium-153 ($T_{1/2}$=241.6 days), 14:35084 (RA;SU;In Russian)

GALAXIES
Gamma Detection
Use of the EGRET [Energetic Gamma-Ray Experiment Telescope] instrument in studies of the origin of the cosmic radiation, 14:34871 (R;US)
Nonluminous Matter
Annihilation of heavy-neutral-fermion pairs into monochromatic γ rays and its astrophysical implications, 14:34996 (J;US)
Photometry
Photographic surface photometry of NGC 2855 and NGC 6771 galaxies, 14:34795 (R;BR;In Portuguese)
Southern Hemisphere
Photographic surface photometry of NGC 2855 and NGC 6771 galaxies, 14:34795 (R;BR;In Portuguese)
GALLIUM
Arsenic
MOCVD growth and characterization of GaInAs thick layers on InP substrates, 14:33850 (RA;BR;In Portuguese)
Indium
MOCVD growth and characterization of GaInAs thick layers on InP substrates, 14:33850 (RA;BR;In Portuguese)
Quaternary Alloy Systems
Growth and characterization of InGaAs P/Ga As with emission in 0.67 μ, 14:33852 (RA;BR;In Portuguese)
Ternary Alloy Systems
MOCVD growth and characterization of GaInAs thick layers on InP substrates, 14:33850 (RA;BR;In Portuguese)
GALLIUM ALLOYS
Grain Boundaries
Solute effects on mechanical properties of grain boundaries, 14:33825 (RA;US)
GALLIUM ARSENIDES
Annealing
Mechanism for nearly ohmic behavior in annealed Au/*n*-GaAs Schottky diodes, 14:34038 (J;US)
Carrier Mobility
Carrier transport in quantum wells-picosecond imaging, 14:33840 (RA;US)
Crystal Defects
Negative-*U* property of the *DX* center in $Al_xGa_{1-x}As$:Si, 14:34041 (J;US)
Structural anomalies in undoped gallium arsenide observed in high-resolution diffraction imaging with monochromatic synchrotron radiation, 14:34037 (J;US)
Electronic Structure
Interface boudary conditions and non parabolicity effects in quantum wells, 14:35280 (RA;BR)
Indium Arsenides
Geometry and stability of the (GaAs)n (In As)n and (GaP)n (In P)n ultrathin superlattices, 14:33858 (RA;BR)
Indium Compounds
Study of the profile of Zn diffusion in InGaAs ternary layers by C-V electrochemical technique, 14:33855 (RA;BR;In Portuguese)
Microstructure
Structure and dynamics of surfaces, interfaces and heterostructures, 14:33841 (RA;US)
Ohm Law
Mechanism for nearly ohmic behavior in annealed Au/*n*-GaAs Schottky diodes, 14:34038 (J;US)
Photoconductivity
Photoelectronic properties of low temperature GaAs grown on GaAs and silicon substrates by molecular epitaxy, 14:33990 (R;US)
Photodetectors
Study of the profile of Zn diffusion in InGaAs ternary layers by C-V electrochemical technique, 14:33855 (RA;BR;In Portuguese)
Radiation Effects
Radiation effects in metals and semiconductors, 14:33834 (RA;US)
Semiconductor Materials
Study of optical anisotropies in GA As (100) and Insb (100), 14:33859 (RA;BR)
Study of semiconductors by Moessbauer spectroscopy: a review, 14:33856 (RA;BR)
Substrates
Growth and characterization of InGaAs P/Ga As with emission in 0.67 μ, 14:33852 (RA;BR;In Portuguese)
Optical and structural properties of CdTe films growth on GaAs and Si substrates, 14:35210 (RA;BR)
Superlattices
Geometry and stability of the (GaAs)n (In As)n and (GaP)n (In P)n ultrathin superlattices, 14:33858 (RA;BR)
Surface Properties
Optical spectroscopy of surface processes in thin film deposition, 14:33843 (RA;US)
Thermodynamics
Thermodynamics of two component gaseous and solid state plasmas at any degeneracy, 14:35204 (R;XA)
Uses
Study of the profile of Zn diffusion in InGaAs ternary layers by C-V electrochemical technique, 14:33855 (RA;BR;In Portuguese)
GALLIUM COMPOUNDS
See also GALLIUM ARSENIDES
GALLIUM PHOSPHATES
GALLIUM PHOSPHIDES
Radiation Effects
Ultrasonic studies of radiation effects, 14:33833 (RA;US)
GALLIUM IONS
Ion Sources
The emittance characteristics of a gallium liquid-metal ion source, 14:34924 (J;US)
GALLIUM PHOSPHATES
Arsenic Compounds
Electronic structure of III-V semiconductors oxides, 14:35213 (RA;BR)
Semiconductor Materials
Electronic structure of III-V semiconductors oxides, 14:35213 (RA;BR)
GALLIUM PHOSPHIDES
Indium Phosphides
Geometry and stability of the (GaAs)n (In As)n and (GaP)n (In P)n ultrathin superlattices, 14:33858 (RA;BR)
Superlattices
Geometry and stability of the (GaAs)n (In As)n and (GaP)n (In P)n ultrathin superlattices, 14:33858 (RA;BR)
GALVANIC CORROSION
See ELECTROCHEMICAL CORROSION
GAMMA RADIATION
See also DELAYED GAMMA RADIATION
Buildup
Numerical algorithm and program for calculating group build up factors, 14:35176 (RA;SU;In Russian)
Radiation Transport
Numerical algorithm and program for calculating group build up factors, 14:35176 (RA;SU;In Russian)
Toxicity
Life shortening in mice exposed to fission neutrons and gamma rays. VIII. Exposures to continuous gamma radiation, 14:34704 (J;US)
GAMMA REACTIONS
See PHOTONUCLEAR REACTIONS
GAMMA SPECTRA
Delayed Gamma Radiation
Measured data of delayed gamma-ray spectra from fissions of ^{232}Th, ^{233}U, ^{235}U, ^{238}U and ^{239}Pu by fast neutrons, tabular data, 14:35109 (R;JP)
Fast Fission
Measured data of delayed gamma-ray spectra from fissions of ^{232}Th, ^{233}U, ^{235}U, ^{238}U and ^{239}Pu by fast neutrons, tabular data, 14:35109 (R;JP)
GAMMA SPECTROSCOPY
High Spin States
Gamma and e^- spectroscopic study of high spin short period isomers, using the recoil method, 14:34058 (R;FR;In French)
Isomeric Nuclei
Gamma and e^- spectroscopic study of high spin short period isomers, using the recoil method, 14:34058 (R;FR;In French)

GANIL
See GANIL CYCLOTRON
GANIL CYCLOTRON
Present and future development at Ganil, 14:34225 (R;FR)
Argon 40 Beams
Inelastic heavy ion scattering on ^{90}Zr and ^{208}Pb at intermediate energies, 14:35072 (R;FR)
Intermediate-mass fragments: a probe for the mechanisms involved in H.I. collisions around E/A = 30 MeV, 14:35073 (R;FR)
Beam Bunching
Galopr, a beam transport program, with space-charge and bunching, 14:34241 (R;FR)
Beam Position
Capacitive large-range-intensiy beam-position monitors at Ganil, 14:34286 (R;FR)
Beam Shaping
Beam foil interaction studies for the future stripper of Ganil, 14:35202 (R;FR)
Beam Strippers
Beam foil interaction studies for the future stripper of Ganil, 14:35202 (R;FR)
Beam Transport
Galopr, a beam transport program, with space-charge and bunching, 14:34241 (R;FR)
Direct Current
Ganil D.C. power converters: improvements of the response to mains fluctuations. Mains voltage harmonic filtering, 14:34287 (R;FR)
Electrostatic Probes
Capacitive large-range-intensiy beam-position monitors at Ganil, 14:34286 (R;FR)
Foils
Beam foil interaction studies for the future stripper of Ganil, 14:35202 (R;FR)
G Codes
Galopr, a beam transport program, with space-charge and bunching, 14:34241 (R;FR)
Gev Range 01-10
Inelastic heavy ion scattering on ^{90}Zr and ^{208}Pb at intermediate energies, 14:35072 (R;FR)
Intermediate-mass fragments: a probe for the mechanisms involved in H.I. collisions around E/A = 30 MeV, 14:35073 (R;FR)
Liquid Scintillation Detectors
NE-213 Liquid scintillator, neutron detector designed for lifetime measurements of very neutron-rich nuclei, 14:34323 (R;FR)
Mev Range 100-1000
Inelastic heavy ion scattering on ^{90}Zr and ^{208}Pb at intermediate energies, 14:35072 (R;FR)
Neon 20 Beams
Inelastic heavy ion scattering on ^{90}Zr and ^{208}Pb at intermediate energies, 14:35072 (R;FR)
Power Conditioning Circuits
Ganil D.C. power converters: improvements of the response to mains fluctuations. Mains voltage harmonic filtering, 14:34287 (R;FR)
Research Programs
Studies of non-nuclear physics at Ganil, 14:34910 (R;FR)
Space Charge
Galopr, a beam transport program, with space-charge and bunching, 14:34241 (R;FR)
GAS BURNERS
Air Pollution
Pollutant emission rates from a radiant fiber-matrix unvented gas space heater, 14:33735 (R;US)
GAS COOLANTS
See GASES
GAS ENGINES
See INTERNAL COMBUSTION ENGINES
GAS FLOW
See also AIR FLOW
Particle Size
Particle sizing experiments with the laser Doppler velocimeter: Final report, 14:34362 (R;US)
GAS FUELS
See also FUEL GAS
Supply and Demand
Biofuels and municipal waste technology a national perspective, 14:33778 (BA;US)
GAS HEAT PUMPS
Performance
Process-integration methodology for natural-gas-fueled heat pumps and cogeneration systems. Final report, March 1987-October 1988, 14:33190 (R;US)
Research and development opportunities for natural-gas-fueled equipment for emerging industrial processes. Final report, March 1987-March 1988, 14:33191 (R;US)
GAS HYDRATES
Stability
Geologic interrelations relative to gas hydrates within the North Slope of Alaska: Task No. 6, Final report, 14:33187 (R;US)
GAS LASERS
See also CARBON DIOXIDE LASERS
Kinetics
Kinetic processes in discharge-pumped mercury halide lasers. Final report, May 1985-July 1988, 14:34143 (R;US)
GAS TURBINE ENGINES
Wear
In-line wear monitor. Interim report, November 1985-June 1988, 14:33779 (R;US)
GAS WELLS
See NATURAL GAS WELLS
GAS-INSULATED SUBSTATIONS
Analysis of gaseous SF_6 decomposition products, 14:33448 (R;CA)
GASEOUS EFFLUENTS
See GASEOUS WASTES
GASEOUS WASTES
See also EXHAUST GASES
FLUE GAS
Production
Contribution to internal pressure and flammable gas concnetration in RAM [radioactive material] transport packages, 14:33295 (R;US)
GASES
See also AIR
COAL GAS
EXHAUST GASES

BOROSILICATE GLASS
Chemical Composition
Li - reactivity of silicate glasses, 14:33615 (BA;US)
Volatilization and mixing in glasses of some Apollo 14 regolith breccias, 14:34757 (R;US)
Cracking
A method for predicting cracking in waste glass canisters, 14:33322 (J;US)
Fracture Mechanics
Fractography of glasses and ceramics, 14:33964 (B;US)
Interactions
The influence of penetrating gamma radiation on the reaction of simulated nuclear waste glass in tuff groundwater, 14:33255 (R;US)
Ionic Conductivity
Reference electrodes/sensors using low-resistivity glass membranes, 14:33704 (BA;US)
Leaching
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 8: Review of processes near a buried waste canister, 14:33269 (R;XN)
Melting
Building 774A mini-melter restoration, 14:34138 (R;US)
Optical Properties
Electron radiation influence on glass optical properties, 14:33983 (RA;SU;In Russian)
Physical Radiation Effects
Electron radiation influence on glass optical properties, 14:33983 (RA;SU;In Russian)
Refractivity
Refractive index of silicate glasses implanted with copper, 14:33976 (R;US)
Surface Coating
Deposition of thick, adherent copper coatings on glass, 14:34008 (BA;US)
GLASS INDUSTRY
Energy Sources
Glass industry: opportunities for natural gas technologies. Topical report, February 1987-September 1988, 14:33192 (R;US)
GLASS MELTERS
See CERAMIC MELTERS
GLASSY METALS
See METALLIC GLASSES
GLIOMAS
Radiotherapy
Fase II-Combined treatment of malignant gliomas by surgery + radiotherapy + chemotherapy, 14:34565 (RA;BR;In Spanish)
GLUCOSE
Separation Processes
An economic and energy evaluation of the replacement of conventional technology with continuous chromatography in the production of high-fructose sugar, 14:33754 (R;US)
GLUEBALLS
Scalar gluonium candidates and the radiative J/PSI decays, 14:34978 (R;SU)
Mass
On the mass and width of the lower scalar glueball, 14:33902 (R;GB)
Width
On the mass and width of the lower scalar glueball, 14:33902 (R;GB)
GLUONIUM
See GLUEBALLS
GLUONS
Thermodynamic Properties
On thermodynamic properties of chromoplasma, 14:35014 (R;SU)
GLYCOLS
See also POLYETHYLENE GLYCOLS
Thermal Degradation
Degradation of glycols in heat pumps and solar heating systems. Laboratory investigation, 14:33715 (R;SE;In Swedish)
GNEISSES
Age Estimation
Geology of Pedra Verde region, Ceara, Brazil, 14:34724 (R;BR;In Portuguese)
Isotope Dating
Geology of Pedra Verde region, Ceara, Brazil, 14:34724 (R;BR;In Portuguese)
Isotopic age dating in Liverpool Land, East Greenland, 14:34720 (RA;DK)
Petrology
Geology of Pedra Verde region, Ceara, Brazil, 14:34724 (R;BR;In Portuguese)
GOBAR GAS
See INTERMEDIATE BTU GAS
METHANE
GOLD
Annealing
Mechanism for nearly ohmic behavior in annealed Au/*n*-GaAs Schottky diodes, 14:34038 (J;US)
Energy Gap
Band folding and energy-gap formation in Ag-Au superlattices, 14:33936 (J;US)
Ohm Law
Mechanism for nearly ohmic behavior in annealed Au/*n*-GaAs Schottky diodes, 14:34038 (J;US)
Physical Properties
Studies of individual nanometer-sized metallic clusters using scanning tunneling microscopy, field emission, and field ion microscopy, 14:33939 (J;US)
Raman Effect
Near-infrared surface-enhanced Raman spectroscopy. Part II: Copper and gold colloids, 14:34036 (J;US)
GOLD 187
Energy Levels
Shape coexistence in ^{187}Au, 14:35087 (J;US)
GOLD 197 TARGET
Heavy Ion Reactions
Non-equilibrium fission processes in intermediate energy nuclear collisions, 14:35094 (R;US)
Transverse energy and neutral pion spectra obtained from ^{16}O- and ^{32}S-induced reactions at 200 GeV/nucleon, 14:35090 (R;US)
Multiplicity
Impact Parameter Dependent light Particle Correlations for ^{40}Ar induced reactions on ^{197}Au at E/A=60 MeV, 14:34901 (R;FR)

Silicon 28 Reactions
Production of the *H* dibaryon in relativistic heavy-ion collisions, 14:35166 (J;US)
Results for strange particle production from BNL experiment E802, 14:35089 (R;US)

GOLD ALLOYS
Microstructure
Structure and dynamics of surfaces, interfaces and heterostructures, 14:33841 (RA;US)

GOLD COMPLEXES
Chemical Reactions
Late transition metal μ-oxo and μ-imido complexes: Progress report, May 15, 1988–May 14, 1989, 14:34071 (R;US)

GOVERNMENT POLICIES
See also ENERGY POLICY
Decision Making
Research and development of methods and tools for achieving and maintaining consensus processes in the face of change within and among government oversite agencies: First annual performance report: Research status, October 1988–September 1989, 14:33661 (R;US)

GRADED LIE GROUPS
Mathematical Operators
Representations of the Lie superalgebra G(3), 14:35364 (BA;SG)
Mathematics
Principal subalgebras of Lie superalgebras and unimodality, 14:35365 (BA;SG)

GRAFT POLYMERS
Chemical Radiation Effects
Applications of ionizing radiation and plasma gas discharge processing in medicine and biotechnology, 14:33980 (RA;XA)
Study of radiation immobilization of bioactive materials, 14:34520 (RA;XA)
Radiation Doses
Additive effects in UV and radiation grafting and curing processes of value in immobilization of bioactive materials, 14:33351 (RA;XA)

GRAIN ALCOHOL
See ETHANOL

GRAIN BOUNDARIES
Impurities
Scanning tunneling microscope and complementary microchemical investigations of hydrogen and shallow acceptors at silicon grain boundaries, 14:33397 (BA;NL)
Mechanical Properties
Solute effects on mechanical properties of grain boundaries, 14:33825 (RA;US)
Passivation
Scanning tunneling microscope and complementary microchemical investigations of hydrogen and shallow acceptors at silicon grain boundaries, 14:33397 (BA;NL)
Segregation
Loss of grain boundary segregant during ion milling, 14:33813 (R;US)
Stress Analysis
Local strain determination at interfaces in metals and semiconductors, 14:33822 (RA;US)

GRANITES
Age Estimation
Isotopic data revaluation from Cabo province, with base in Cabo granite petrographic studies, 14:34756 (R;BR;In Portuguese)
Petrology
Isotopic data revaluation from Cabo province, with base in Cabo granite petrographic studies, 14:34756 (R;BR;In Portuguese)

GRANULAR MATERIALS
Wave Propagation
Microscopic modelling of sound waves in granular material: Quarterly progress report, January 1, 1989–March 31, 1989, 14:33135 (R;US)

GRAPHITE
Electron Diffraction
C-axis layer structure of stage 1,2 Graphite-KHg, 14:34005 (BA;US)
Flexural Strength
Statistics of fracture in two grades of isotropic graphite, 14:33977 (R;US)
Neutron Diffraction
Neutron scattering studies of graphite intercalation compounds, 14:34004 (BA;US)
Pressure-induced staging transitions in potassium-graphite intercalation compounds, 14:34006 (BA;US)
Raman Spectra
Raman characterization of potassium-hydrogen intercalated graphite, 14:34013 (BA;US)
Transmission Electron Microscopy
High resolution electron microscopy studies of potassium-hydrogen intercalated graphite, 14:34012 (BA;US)
X-Ray Diffraction
High resolution x-ray investigation of stage purity and staging transitions, 14:34000 (BA;US)

GRAPHITE FIBERS
See CARBON FIBERS

GRAPHITE MODERATOR
See GRAPHITE

GRASS
Contamination
Chernobyl in the university town Muenster (FRG), 14:34478 (RA;AT;In German)
Radioactivity measurements around Graz, Austria, 14:34477 (RA;AT;In German)

GRAVIMELT PROCESS
Bench-Scale Experiments
Bench-scale development of the gravimelt process for cleaning coal: Final report, 14:33066 (R;US)

GRAVITATION
Electromagnetic Fields
Higher-dimensional black holes with realistic asymptotes in the presence of dilatons and electromagnetic fields, 14:35264 (R;XA)
General Relativity Theory
Is higher-derivative gravity a good therapy to the causal pathologies of Goedel-type universes, 14:35274 (R;BR)
Scalar Fields
Higher-dimensional black holes with realistic asymptotes in the presence of dilatons and electromagnetic fields, 14:35264 (R;XA)

GRAVITATIONAL FIELDS
Coupling
Gravitational nonminimally coupled electromagnetic fields: a possible solution to some idiosincrasies of Einstein-Maxwell theory, 14:35275 (R;BR)
Einstein-Maxwell Equations
Gravitational nonminimally coupled electromagnetic fields: a possible solution to some idiosincrasies of Einstein-Maxwell theory, 14:35275 (R;BR)
Interactions
The role of dust particles with large gyroradii in the 2/3 fall-down process, 14:35436 (J;US)

GRAY
See RADIATION DOSE UNITS

GREAT BRITAIN
See UNITED KINGDOM

GREENHOUSES
Heat Pumps
Agricultural applications of heat pumps in Ontario, 14:33760 (R;CA)

GROSS-NEVEU MODEL
See LAGRANGIAN FIELD THEORY

GROUND COVER
Evaluation
Hanford Protective Barriers Program asphalt barrier studies – FY 1988, 14:33288 (R;US)

GROUND DISPOSAL
Land Pollution
Are we cleaning up: 10 Superfund case studies; a special report of OTA's (Office of Technology Assessment's) assessment on Superfund implementation, 14:34483 (R;US)

Risk assessment models for land application of municipal sludges (RAMMS Version 3.0). Volume 1. Draft complete documentation of the system/user manual, 14:34465 (R;US)

Regulations
Land application and distribution and marketing of sewage sludge: technical support document, 14:34481 (R;US)

Sanitary Landfills
Landfilling of sewage sludge: technical support document, 14:34482 (R;US)

Water Pollution
Evaluation of control chart methodologies for RCRA (Resource Conservation and Recovery Act) waste sites, 14:34493 (R;US)

GROUND MOTION

Forecasting
Prediction of strong ground motion for structural design, 14:34734 (RA;US)

GROUND SOURCE HEAT PUMPS

Energy Conservation
Partial conversion of direct-electric heated single family residence with a small heat pump. Pilot project progress report after 2.5 month follow-up, 14:33744 (R;SE;In Swedish)

Houses
Partial conversion of direct-electric heated single family residence with a small heat pump. Pilot project progress report after 2.5 month follow-up, 14:33744 (R;SE;In Swedish)

GROUND WATER

Chemical Composition
Integrated effects on the compsitions of groundwater and surface water, 14:34486 (RA;NO)

Contamination
EPA proposes new standards for municipal solid waste disposal landfills, 14:34484 (J;US)
Radiation exposition from radionuclides in ground water, 14:34506 (RA;AT;In German)

Flow Rate
A new approach to tracer transport analysis: From fracture systems to strongly heterogeneous porous media, 14:34462 (R;US)
Flow of groundwater and transport of contaminants through saturated fractured geologic media, 14:33286 (R;US)
Release of radioactive wastes to ground, 14:33266 (R;US)

Interactions
The influence of penetrating gamma radiation on the reaction of simulated nuclear waste glass in tuff groundwater, 14:33255 (R;US)

Mathematical Models
Simulations of the near-field transport of radionuclides by liquid diffusion at Yucca Mountain: Comparisons with and without emplacement backfill, 14:33312 (R;US)

Monitoring
Knolls Atomic Power Laboratory annual environmental monitoring report: Calendar year 1988, 14:34505 (R;US)
The installation of a multiport ground-water sampling system in the 300 Area, 14:34425 (R;US)

Pollution Abatement
Groundwater restoration and stabilization at the Ruth-ISL test site in Wyoming, USA, 14:33325 (RA;XA)

Recharge
Wetland Evaluation Technique (WET). Volume 2. Methodology. Operational draft. Final report, June 1984-September 1988, 14:34500 (R;US)

Resource Management
Ground-water management under the appropriation doctrine. Technical report, 14:34512 (R;US)

Risk Assessment
An assessment of issues related to determination of time periods required for isolation of high level waste, 14:33254 (R;US)

Water Pollution
Evaluation of control chart methodologies for RCRA (Resource Conservation and Recovery Act) waste sites, 14:34493 (R;US)

Water Pollution Abatement
Cape Cod Aquifer Management Project (CCAMP): hydrogeologic papers. Report for August 1985-December 1987, 14:34498 (R;US)
Cape Cod Aquifer Management Project (CCAMP): institutionsl recommendations. Report for August 1985-December 1987, 14:34499 (R;US)

Water Pollution Control
Air Force ground-water contamination cleanup: an evaluation of the pump-and-treat method. Master's thesis, 14:34514 (R;US)
United States Air Force Installation-Restoration Program (IRP) strategies for investigating migrating contaminated groundwater. Master's thesis, 14:34515 (R;US)

GROUND-WATER RESERVES
See AQUIFERS

GROUP THEORY
Left regular bands of groups of left quotients, 14:35249 (R;XA)
Structure of the fixed point set of an involutory automorphism of PSL(2,q), q odd, $q \geq 5$, 14:35250 (R;XA)

Algebra
Extended Weyl group for Kac-Moody algebras, 14:35260 (R;XA)

Uses
3-cocycles in the monopole sector of gauge theories, 14:35382 (BA;SG)
Algebraic approach to collision dynamics of composite projectiles, 14:35328 (BA;SG)
Algebraic foundation for the triaxial rotor, 14:35323 (BA;SG)
Applications of the three-dimensional ϕ^6-model to structural phase transitions, 14:35361 (BA;SG)
Approximate global symmetries of the electroweak interactions, 14:35312 (BA;SG)
Bag formation in a chiral model, 14:35379 (BA;SG)
Covariance representation of global quantum dynamics and its symmetries, 14:35367 (BA;SG)
Differential geometry and gauge structure of maximal-acceleration invariant phase space, 14:35358 (BA;SG)
Discrete symmetries and selection rules in unified SU(8) for superconductivity and density waves, 14:35331 (BA;SG)
Generally covariant quantum field theory, 14:35366 (BA;SG)
Group contraction and the algebraic approach to scattering, 14:35341 (BA;SG)
Group deformations and dynamic symmetries in scattering systems, 14:35340 (BA;SG)
Group theory and elasticity of quasicrystals, 14:35318 (BA;SG)
Hidden symmetries and stereographic projection in rank one symmetric spaces, 14:35338 (BA;SG)
Hierarchies of symmetries and conserved functionals of the Federbush model, 14:35347 (BA;SG)
Horizontal constraints, Clebsch potentials and variational principles on principal fiber bundles, 14:35345 (BA;SG)
Isotropy subgroups for reducible representations of space groups, 14:35387 (BA;SG)
Levi-Civita, Kustaanheimo-Stiefel and other transformations, 14:35348 (BA;SG)
Non-compact symmetric spaces in current particle theories, 14:35377 (BA;SG)
Phase-space formalism for quantized fields, 14:35354 (BA;SG)
Polynomial link invariant, braid groups and the XXZ chain, 14:35383 (BA;SG)
Properties of the strong factor in dynamically generated S-matrices, 14:35339 (BA;SG)
Quasi-lattices associated with arbitrary groups: Application to icosahedral and dihedral groups, 14:35313 (BA;SG)
SU(1,1) coherent states and squeezed light interacting with an anharmonic oscillator, 14:35335 (BA;SG)
SU(n) representation theory in terms of pseudo-unitary groups, 14:35352 (BA;SG)
Superinvariant chiral fields, 14:35378 (BA;SG)
Symmetry of quasiperiodic lattices and decomposability of crystallographic point groups, 14:35315 (BA;SG)
Symmetry reduction for the Kadomtsev-Petviashvili equation and its Baecklund transformation, 14:35346 (BA;SG)
Symmetry-conserving higher-order interaction terms in the I.B.A.-model: the O(6) limit, 14:35320 (BA;SG)
Symplectic decomposition of reaction channels, 14:35336 (BA;SG)
U(6,1) model of pairing and quadrupole collectivity, 14:35325 (BA;SG)

What is new in the study of differential equations by group theoretical methods?, 14:35311 (BA;SG)

GROUPS (SPACE)
See SPACE GROUPS

GROWTH (CRYSTAL)

H-BETA LINE
See BALMER LINES

H-GAMMA LINE
See BALMER LINES

HABITAT
Optimization
Changes in habitat and populations of steelhead trout, coho salmon and chinook salmon in Fish Creek, Oregon, 1983–1987, as related to habitat improvement: Annual report, 1987, 14:33377 (R;US)

HADRON REACTIONS
Research Programs
European hadron facility, 14:34944 (R;FR)
Test Facilities
European hadron facility, 14:34944 (R;FR)

HADRON-HADRON INTERACTIONS
Research Programs
European hadron facility, 14:34944 (R;FR)
Test Facilities
European hadron facility, 14:34944 (R;FR)

HADRONS
See also MESONS
RESONANCE PARTICLES
Colliding Beams
The tevatron energy doubler, 14:34311 (BA;US)
Excited States
Quantum De Sitter structured connection and an example: the quantum relativistic rotator, 14:35368 (BA;SG)
Ground States
Quantum De Sitter structured connection and an example: the quantum relativistic rotator, 14:35368 (BA;SG)
Mass
Effective quark-diquarksupersymmetry and the splitting of the Regge trajectories, 14:35371 (BA;SG)

HAFNIUM
X-Ray Fluorescence Analysis
X-Ray fluorescence of microquantities of hafnium in zirconium by precipitation as thin film, 14:34051 (R;AR;In Spanish)
Zirconium
X-Ray fluorescence of microquantities of hafnium in zirconium by precipitation as thin film, 14:34051 (R;AR;In Spanish)

HAFNIUM 164
Beta-Plus Decay
Gamow-Teller β^+ decay of neutron-deficient deformed nuclei, 14:35157 (R;SU;In Russian)
Neutron-Deficient Isotopes
Gamow-Teller β^+ decay of neutron-deficient deformed nuclei, 14:35157 (R;SU;In Russian)

HAFNIUM 166
Beta-Plus Decay
Gamow-Teller β^+ decay of neutron-deficient deformed nuclei, 14:35157 (R;SU;In Russian)
Neutron-Deficient Isotopes
Gamow-Teller β^+ decay of neutron-deficient deformed nuclei, 14:35157 (R;SU;In Russian)

HAFNIUM OXIDES
Catalytic Effects
Solid superacids as coal liquefaction catalysts: Quarterly report, January–March 1989, 14:33069 (R;US)

HALL GENERATORS
See MHD GENERATORS

HALLEY COMET
Chemical Composition
Physical and chemical properties of Halley comet, 14:34857 (RA;CS;In Czech)

HALOGENS
Evaporation
Neutron-induced vaporization of superheated liquids, 14:33180 (BA;US)

HAM
See MEAT

HANDLING (DATA)
See DATA PROCESSING

HANDLING (WASTES)
See WASTE MANAGEMENT

HARMONIC OSCILLATORS
Computerized Simulation
Development of stochastic webs in a wave-driven linear oscillator, 14:35412 (R;JP)
Coupling
Algebraic method for relativistic systems - spectrum and radiative transitions, 14:35329 (BA;SG)
Graded Lie Groups
N=2 superconformal quantum harmonic oscillator, 14:35372 (BA;SG)

HASTELLOY C
Ultrasonic Welding
An initial investigation of the ultrasonic welding of Tophet C bridgewire to Hastelloy C-276, 14:33904 (R;US)

HAZARDOUS MATERIALS
Adhesives
Health-hazard evaluation report HETA 87-307-1917, Downing Displays, Inc., Cincinnati, Ohio, 14:34420 (R;US)
Preliminary survey report. Karastan Rug Mill, Fieldcrest Mills, Inc., Eden, North Carolina, July 14, 1981, 14:34396 (R;US)
Preliminary survey report: Steelcase, Incorporated, Grand Rapids, Michigan, September 23, 1981, 14:34401 (R;US)
Aerosols
Health-hazard evaluation determination report No. 77-47-427, Union 76 Oil Company, Nederland, Texas, 14:33170 (R;US)
Health-hazard evaluation determination report No. 77-58-428, Steiger Tractor, Inc., Fargo, Nnorth Dakota, 14:34398 (R;US)
Air Pollution Abatement
Preliminary survey report: Plating Shop, American Airlines, Maintenance and Engineering Center, Tulsa International Airport, Tulsa, Oklahoma, July 1, 1981, 14:34390 (R;US)
Preliminary survey report: Plating Shop, Braniff Airways, Love Field, Dallas, Texas, June 29, 1981, 14:34389 (R;US)
Chlorinated Aromatic Hydrocarbons
Hazard evaluation and technical assistance report TA 77-63, United States Department of the Interior, National Park Service, Fort Stanwix National Monument, Rome, New York, 14:34423 (R;US)
Disinfectants
In-depth survey report: control technology for ethylene oxide sterilization in hospitals at Bronson Methodist Hospital, Kalamazoo, Michigan. Report for 25 February-1 March 1985, 14:34391 (R;US)
Dusts
Health-hazard evaluation determination report No. 76-18-288, Syntex Fabrics, Inc., Williamsport, Pennsylvania, 14:34418 (R;US)
Health-hazard evaluation determination report No. 76-43 A-F-429, Hersey Products Company, Inc., Gilbertville, Massachusetts, 14:34417 (R;US)
Environmental Effects
Hazardous-waste constituents: health and environmental effects profiles. January 1970-January 1989 (Citations from the NTIS data base). Report for January 1970-January 1989, 14:33767 (R;US)
Ethers
Industrial-hygiene-survey report of Martin Marietta Missile and Electronics Group, Orlando, Florida, April 25-27, 1988, 14:34415 (R;US)

Exhaust Gases
Health-hazard evaluation determination report No. 77-27-437, Keller Aluminum Furniture of Indiana, Linton, Indiana, 14:34397 (R;US)

Formaldehyde
Preliminary survey report: control technology for formaldehyde emissions at Baker Furniture Company, Mocksville, North Carolina, September 2, 1982, 14:34404 (R;US)
Preliminary survey report: control technology for formaldehyde emissions at Drexel Heritage Plant 60, Morganton, North Carolina, August 31, 1982, 14:34402 (R;US)
Preliminary survey report: control technology for formaldehyde emissions at Jasper Laminates, Jasper, Indiana, October 19, 1982, 14:34405 (R;US)
Walk-through survey report: control technology for adhesives at National Veneer Plant, Broyhill Furniture Industries, Inc., Lenoir, North Carolina, September 1, 1982, 14:34403 (R;US)

Fumigants
In-depth survey report: control technology for ethylene oxide sterilization in hospitals at Bronson Methodist Hospital, Kalamazoo, Michigan. Report for 25 February-1 March 1985, 14:34391 (R;US)

Ground Disposal
Are we cleaning up: 10 Superfund case studies; a special report of OTA's (Office of Technology Assessment's) assessment on Superfund implementation, 14:34483 (R;US)
Evaluation of control chart methodologies for RCRA (Resource Conservation and Recovery Act) waste sites, 14:34493 (R;US)

Indoor Air Pollution
In-depth survey report: control technology assessment of unit operations employed in oral-contraceptive tablet-making operations at Ortho Pharmaceutical Corporation, Raritan, New Jersey, June 13-17, 1983, 14:34388 (R;US)

Lead
Health-hazard evaluation determination report No. 76-43 A-F-429, Hersey Products Company, Inc., Gilbertville, Massachusetts, 14:34417 (R;US)

Limestone
Health-hazard evaluation determination report No. 76-54-436, Certain-Teed Products, Inc., Richmond, California, 14:34416 (R;US)

Mercury
Mercury control technology assessment study: GTE Products Corporation, Chemical and Metallurgical Division, Towanda, Pennsylvania. Preliminary survey report for the site visit of June 9, 1981. Final report, 14:34393 (R;US)
Mercury control technology assessment study: General Electric Ccompany, Circleville Lamp Plant, Circleville, Ohio. Preliminary survey report for the site visit of October 6, 1981. Final report, 14:34392 (R;US)

Occupational Safety
NIOSH (National Institute for Occupational Safety and Health) testimony to DOL (Department of Labor) on the Occupational Safety and Health Administration's proposed rule on the control of hazardous energy sources (lockout/tagout) by R. W. Niemeier, September 8, 1988, 14:34631 (R;US)

Organic Solvents
Field measurements of full-scale hazardous-waste-treatment facilities - organic solvent wastes, 14:33761 (R;US)

Organic Wastes
Field measurements of full-scale hazardous-waste-treatment facilities - organic solvent wastes, 14:33761 (R;US)

Particulates
Mercury control technology assessment study: Micro Switch, a Honeywell Division, Freeport, Illinois. Preliminary survey report for the site visit of May 5, 1981. Final report, 14:34394 (R;US)

Phosphines
Health-hazard evaluation determination report No. 74-97-286, Blaw Knox Foundry and Mill Machinery, Inc., Warwood Plant, Wheeling, West Virginia, 14:34409 (R;US)

Pollution Control
Preliminary site visit report, Farmer's Valley Refinery, Bradford, PA. Control technology assessment of petroleum refinery operations, September 23, 1981, 14:33168 (R;US)

Powders
Health-hazard evaluation determination report No. 75-181-287, Fibreboard Corporation, Stockton, California, 14:34419 (R;US)

Proteins
Health-hazard evaluation report HETA 86-447-1919, Estherville Foods, Inc., Estherville, Iowa, 14:34422 (R;US)
Health-hazard evaluation report HETA 86-461-1920, Ballas Egg Products Corporation, Zanesville, Ohio, 14:34421 (R;US)

Pvc
Health-hazard evaluation determination report No. 74-24-246, Uncle Bill's Pick-N-Pay Market, No. 10, Middleburg Heights, Ohio; 74-92-246, Madsen's Valu Center, Mankato, Minnesota; 74-95-246, Kroger Company, Logan, West Virginia, 14:34400 (R;US)

Raman Spectroscopy
Fiber-optic surface-enhanced Raman system for field screening of hazardous compounds, 14:34052 (R;US)

Refuse Derived Fuels
Control technology assessment of hazardous-waste-disposal operations in chemicals manufacturing: in-depth survey report of San Juan Cement Company, Dorado, Puerto Rico, November 1981, 14:34387 (R;US)

Removal
Structure-activity relationships for the degradation of a mixture of organic chemicals in soil, 14:34463 (R;US)

Safety
Opportunities to assist developing countries in the proper use of agricultural and industrial chemicals. Report of the Committee on Health and Environment. Volume 1. Research paper(Final), 14:33647 (R;US)

Silica
Health-hazard evaluation determination report No. 74-97-286, Blaw Knox Foundry and Mill Machinery, Inc., Warwood Plant, Wheeling, West Virginia, 14:34409 (R;US)
Health-hazard evaluation determination report No. 76-43 A-F-429, Hersey Products Company, Inc., Gilbertville, Massachusetts, 14:34417 (R;US)
Health-hazard evaluation determination report No. 76-54-436, Certain-Teed Products, Inc., Richmond, California, 14:34416 (R;US)
In-depth survey report of silica flour dust during packing, transfer, and shipping at Pennsylvania Glass Sand Corporation, Berkeley Springs, West Virginia, 14:34413 (R;US)
In-depth survey report of silica flour dust during packing, transfer, and shipping at Ottawa Silica Company, Ottawa, Illinois, 14:34411 (R;US)
In-depth survey report of silica flour dust during packing, transfer, and shipping at the Central Silica Company, Glass Rock Plant, Glass Rock, Ohio, 14:34412 (R;US)

Solvents
industrial-hygiene-survey report of Martin Marietta Missile and Electronics Group, Orlando, Florida, April 25-27, 1988, 14:34415 (R;US)
Preliminary survey report: Steelcase, Incorporated, Grand Rapids, Michigan, September 23, 1981, 14:34401 (R;US)

Transport
Hazardous material shipping computer-assisted training course, 14:33315 (R;US)

Waste Disposal
Installation-restoration program. Phase 2. Confirmation/quantification Stage 1 for Minot Air Force Base, Minot, North Dakota. Volume 1. Final report, September 1985-October 1988, 14:34485 (R;US)
Superfund exposure assessment manual, 14:34480 (R;US)

Waste Processing
Amendment to the Best Demonstrated Available Technology (BDAT) background document for F001-F005 spent solvents. Volumes 1 and 2, 14:33764 (R;US)
Best Demonstrated Available Technology (BDAT) background document for K048, K049, K050, K051, K052. Final report, 14:33763 (R;US)
Best Demonstrated and Available Technology (BDAT) background document for K016, K18, K019, K020, K030. Final report, 14:33762 (R;US)

HELIOTRON
Progress Report
Heliotron E results (1981-March 1988), 14:35426 (R;JP)

HELIUM
Atom-Atom Collisions
Theoretical Penning electron-energy distributions for alkali-metal atoms: He(2 ^{1,3}S) collisions with sodium and potassium, 14:34915 (J;US)

Atom-Molecule Collisions
Probing the He–H_2 potential surface with dynamical and kinetic observables, 14:34086 (J;US)
State-to-state integral cross sections for the inelastic scattering of CH($X\ ^2\Pi$)+He: Rotational rainbow and orbital alignment, 14:34921 (J;US)
The inelastic scattering of $^2\Pi$ [case (b)] molecules and an understanding of the differing Λ doublet propensities for molecules of π vs π^3 orbital occupancy, 14:34922 (J;US)

Ion-Atom Collisions
Auger-electron emission from collisionally excited 3.4-MeV/u Na-like Ti ions, 14:34917 (J;US)

Isotope Production
Production of helium (Z=2) projectile fragments in ^{16}O-emulsion interactions from E/A=2 to 200 GeV, 14:35079 (J;US)

Muonic Molecules
Measurement of K x rays from muonic helium formed in a low-density target in an intense pulsed muon beam, 14:34916 (J;US)

Trapping
Trapping of deuterium by helium bubbles and defects in ion-implanted tantalum, 14:33932 (J;US)

HELIUM 3
Breakup Reactions
Study of the He3 breakup reaction and the triton production spectra at 283 MeV, 14:35163 (R;FR;In French)

Mass Difference
Binding of hydrogen and helium in silicon, the mass difference between ^{3}H and ^{3}He, and the mass of ν_e, 14:35049 (J;US)

Microstructure
Properties of crystalline and liquid condensed gases, 14:33978 (RA;US)

Superfluidity
Superfluid ^{3}He phases in rotation, 14:34932 (RA;CS;In Czech)

HELIUM 3 REACTIONS
Breakup Reactions
Total desintegration of helium nuclei in ^{3}Hep-interactions at 13.5 GeV/c, 14:35048 (R;SU;In Russian)

Charge-Exchange Reactions
Total desintegration of helium nuclei in ^{3}Hep-interactions at 13.5 GeV/c, 14:35048 (R;SU;In Russian)

HELIUM 4
See also HELIUM II

Electromagnetic Form Factors
Modified VMD model with correct analytic properties for describing electromagnetic structure of He^4 nucleus, 14:35114 (R;XA)

Microstructure
Properties of crystalline and liquid condensed gases, 14:33978 (RA;US)

HELIUM 4 REACTIONS
See ALPHA REACTIONS

HELIUM 4 TARGET
Charge Exchange
High pressure streamer chamber serving as a target for investigating the interaction of pions with light nuclei, 14:34336 (R;SU;In Russian)

Pion Reactions
High pressure streamer chamber serving as a target for investigating the interaction of pions with light nuclei, 14:34336 (R;SU;In Russian)

HELIUM 5
Excited States
Experimental investigations and R-matrix analysis of low-lying levels in ^{5}He and ^{5}Li, 14:35042 (R;AU)

HELIUM II
Superfluidity
Momentum distributions in liquid helium, 14:34930 (R;US)
Symmetry breaking phenomena in liquid Helium-4, 14:34931 (R;XA)
Symmetry Breaking
Symmetry breaking phenomena in liquid Helium-4, 14:34931 (R;XA)
HELIUM METHOD

HIGH-FREQUENCY DISCHARGES
Uses
Microwave energy for SO_2 and NO_x removal from flue gas: Final report, 14:33437 (R;US)
HIGH-LEVEL RADIOACTIVE WASTES
Containers
A method for predicting cracking in waste glass canisters, 14:33322 (J;US)
Mathematical models for redox and corrosion potentials for high level nuclear waste containers in tuff environments, 14:33320 (BA;US)
The effects of hydrogen on the metal barrier candidate materials for the nuclear waste management program, 14:33318 (BA;US)
Containment
The behavior of type 304L stainless steel in tuff repository conditions, 14:33912 (BA;US)
Diffusion Barriers
Phase stability effects on the corrosion behavior of the metal barrier candidate materials for the nuclear waste management program, 14:33319 (BA;US)
Radioactive Waste Disposal
US programs in the development of spent fuel and high-level waste disposal technology, 14:33324 (J;US)
Radioactive Waste Processing
CEUSP, 14:33321 (J;US)
Summary of campaigns SGM-9 and SGM-10 of the DWPF scale glass melter (U), 14:33263 (R;US)
Transport
An estimate of the contribution of "crud" to the radioactivity source term of a spent fuel transport cask, 14:33304 (R;US)
Analyses of the transportation of spent research reactor fuel in the United States, 14:34132 (R;US)
Demographic and transportation parameters in RADTRAN, 14:33300 (R;US)
Development of a dynamic finite element computer code for the inelastic analysis of cask structures – PRONTO 3D, 14:33297 (R;US)
Development of a phenomenological constitutive model for polyurethane foams, 14:34131 (R;US)
RADTRAN 4.0: Advanced computer code for transportation risk assessment, 14:33305 (R;US)
Radioactive material package seal technology experiments, 14:33302 (R;US)
StateGEN/StateNET–A structured method to perform route comparisons, 14:33299 (R;US)
TRANSNET–Access to transportation models and databases, 14:33301 (R;US)
TRUPACT I filtered pressure equalization system, 14:34133 (R;US)
Underground Disposal
1/3-scale model testing program, 14:33296 (R;US)
An assessment of issues related to determination of time periods required for isolation of high level waste, 14:33254 (R;US)
Developing a geologic and engineering properties data base with INGRES, 14:33294 (R;US)
Flow of groundwater and transport of contaminants through saturated fractured geologic media, 14:33286 (R;US)
Highway route controlled quantity shipment routing reports: An overview, 14:33303 (R;US)
Mathematical models for redox and corrosion potentials for high level nuclear waste containers in tuff environments, 14:33320 (BA;US)
On PVT-data, well treatment, and prepartion of input data for an isothermal gas-water-foam version of MULKOM, 14:33280 (R;US)
Preliminary analyses of the excavation investigation experiments proposed for the exploratory shaft at Yucca Mountain, Nevada Test Site, 14:33291 (R;US)
Preliminary design of the high-level waste canister storage system: Topical report for the period of January 1, 1987–September 30, 1987, 14:33257 (R;US)
Pressure-driven brine migration in a salt repository, 14:33279 (R;US)
Release rates in a salt repository by diffusion, 14:33278 (R;US)

Representative elements: A step to large-scale fracture system simulation, 14:33264 (R;US)
Simulations of the near-field transport of radionuclides by liquid diffusion at Yucca Mountain: Comparisons with and without emplacement backfill, 14:33312 (R;US)
Studies of electrical and electromagnetic methods for characterizing salt properties at the WIPP [Waste Isolation Pilot Project] Site, New Mexico, 14:33292 (R;US)
The influence of penetrating gamma radiation on the reaction of simulated nuclear waste glass in tuff groundwater, 14:33255 (R;US)
UCB-NE-107 user's manual, 14:33281 (R;US)
Uncertainties in sealing a nuclear waste repository in partially saturated tuff, 14:33306 (R;US)

Labelling
The old and the new: Studies of metal-catalysed exchange by sup 3H NMR spectroscopy, 14:34075 (R;US)
Stoichiometry
Analysis of hydrocarbons by dual-energy gamma-ray densitometry, 14:34046 (R;CA)

HYDROCHLORIC ACID
Voltametry
Development of an extractive continuous monitor for hydrogen chloride (HCl) analyses of coal-derived process streams, 14:33113 (J;US)

HYDROCORTISONE
Radioimmunoassay
Radioimmunological determination of plasma cortisol following application of a stomatic paste containing prednisolone (Dontisolon), 14:34611 (R;DE;In German)

HYDROFLUORIC ACID
Alkylation
Preliminary site visit report, UOP (Universal Oil Products) engineering offices: control-technology assessment of petroleum-refinery operations, Des Plains, Illinois, June 2, 1982, 14:33169 (R;US)

HYDROGEN
Adsorption
Location of hydrogen adsorbed on palladium (111) studied by low-energy electron diffraction, 14:33926 (J;US)
Atom-Molecule Collisions
Probing the He–H_2 potential surface with dynamical and kinetic observables, 14:34086 (J;US)
Chemical Reaction Kinetics
Accurate quantum thermal rate constants for the three-dimensional H+H_2 reaction, 14:34084 (J;US)
Comparison of quasiclassical trajectory calculations to accurate quantum mechanics for state-to-state partial cross sections at low total angular momentum for the reaction D+H_2→HD+H, 14:34085 (J;US)
Chemical Reactions
Reaction of chemisorbed CH and H on nickel, 14:34080 (J;US)
Chemisorption
Reaction of chemisorbed CH and H on nickel, 14:34080 (J;US)
The effects of current density and recombination poisons on electrochemical charging of deuterium into austenite, 14:33342 (BA;US)
Combustion Kinetics
Flame acceleration and transition to detonation in channels, 14:33344 (BA;US)
The influence of pressure disturbances on spontaneous ignition, 14:33205 (BA;US)
Detonations
Hydrogen-air-diluent detonations, 14:33343 (BA;US)
Diffusion
Mixed-conducting membranes for hydrogen-transporting S/L/S solid electrolyte configurations, 14:33705 (BA;US)
Resistance noise in amorphous Ni-Zr: Hydrogen diffusion and universal conductance fluctuations, 14:33927 (J;US)
Microstructure
Properties of crystalline and liquid condensed gases, 14:33978 (RA;US)
Polyatomic Molecules
Photodissociation of triatomic hydrogen, 14:34894 (R;US)
Recovery
A novel approach to hydrogen recovery, storage and transport: Final technical report, 14:33341 (R;US)
Separation Processes
Gas separations using inorganic membranes, 14:33040 (R;US)
Hydrogen from coal gasification: hope for improved economics, 14:33340 (RA;US)

HYDROGEN 1 TARGET
Alpha Reactions
Momentum distributions of nucleons flying out at large angles in ^{4}He-p-collisions, 14:35046 (R;SU;In Russian)

Deuteron Reactions
Spectra of protons emitted at large angles in dp->pX reaction at 3.3 GeV/c, 14:35047 (R;SU;In Russian)
Helium 3 Reactions
Total desintegration of helium nuclei in ^{3}Hep-interactions at 13.5 GeV/c, 14:35048 (R;SU;In Russian)
Polarized Targets
Dynamic polarization of ^{19}F in a fluorinated alcohol, 14:35236 (J;NL)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN CHLORIDES
See HYDROCHLORIC ACID

HYDROGEN COMPLEXES
Electron Diffraction
C-axis layer structure of stage 1,2 Graphite-KHg, 14:34005 (BA;US)
Raman Spectra
Raman characterization of potassium-hydrogen intercalated graphite, 14:34013 (BA;US)
Transmission Electron Microscopy
High resolution electron microscopy studies of potassium-hydrogen intercalated graphite, 14:34012 (BA;US)

HYDROGEN FLUORIDES
See HYDROFLUORIC ACID

HYDROGEN FUEL CELLS
Performance
Effects of low levels of CO on the performance of pem fuel cells, 14:33691 (BA;US)

HYDROGEN HYDROXIDES
See WATER

HYDROGEN IONS 1 MINUS
Laser Spectroscopy
H° temperature and density measurements in a Penning surface-plasma H^{minus} ion source, 14:34906 (R;US)

HYDROGEN IONS 1 PLUS
Differential Cross Sections
Field theoretical approach to proton-nucleus reactions: I - one step inelastic scattering, 14:35121 (R;BR)
Fokker-Planck Equation
Solution to the Fokker-Planck equation for proton-nucleus collisions at high energies, 14:35119 (R;BR)
Inelastic Scattering
Field theoretical approach to proton-nucleus reactions: I - one step inelastic scattering, 14:35121 (R;BR)
Ion-Atom Collisions
Field theoretical approach to proton-nucleus reactions: I - one step inelastic scattering, 14:35121 (R;BR)
Solution to the Fokker-Planck equation for proton-nucleus collisions at high energies, 14:35119 (R;BR)
Light Ions
Unusually large light-ion concentration in the ionospheric F-region at Arecibo during July 1986, 14:34880 (RA;BR)

HYDROGEN PHOSPHATES
See PHOSPHORIC ACID

HYDROGEN PRODUCTION
Coal Gasification
Hydrogen from coal gasification: hope for improved economics, 14:33340 (RA;US)

HYDROGENATION
Catalysts
Improved hydrotreating catalysts through optimized active phase-support interaction, 14:33081 (RA;GB)
Selective catalysts for coal and heavy oil hydrogenation, 14:33082 (RA;GB)

HYDROXIDES
See also CALCIUM HYDROXIDES
NICKEL HYDROXIDES
POTASSIUM HYDROXIDES
Catalytic Effects
Intercrystalline anion exchange, sorption, and base catalysis, 14:33058 (RA;US)

HYDROXYL IONS
See HYDROXIDES

HYDROXYTOLUENES
See CRESOLS

HYPERCUBE COMPUTERS
Image Processing
Non-linear surface fitting of laser range images using a hypercube concurrent computer, 14:35493 (R;US)

HYPERFRAGMENTS
See HYPERNUCLEI

HYPERNUCLEI
Nuclear Potential
ΛN–$\Sigma N coupling in _\Lambda{}^3$H, 14:35164 (J;US)
Sigma Minus Particles
Σ hypernuclear bound state observed in stopped K^- reaction on ^{4}He, 14:35045 (R;JP)
Sigma Plus Particles
Σ hypernuclear bound state observed in stopped K^- reaction on ^{4}He, 14:35045 (R;JP)
Spectrometers
Superconducting spectrometer for the study of hypernuclei via (π, K^+) reactions, 14:35036 (R;JP)
Superconducting Magnets
Superconducting spectrometer for the study of hypernuclei via (π, K^+) reactions, 14:35036 (R;JP)

HYPERTHERMIA
Necrosis
Morphometric studies of areas of tumorous necrosis produced by radiotherapy, hyperthermia and its therapeutic combination, 14:34558 (RA;BR;In Portuguese)
Radiotherapy
Implication of blood flow in sequencing hyperthermia and radiotherapy, 14:34534 (RA;XA)
Improvement of cancer therapy by the combination of conventional radiation and chemical or physical means. Final report of co-ordinated research programmes sponsored by the IAEA 1982-1987, 14:34523 (R;XA)

HYPOPHYSECTOMY
Vasopressin
Radioimmunological detection of vasopressin in urine extracts, 14:34622 (R;DE;In German)

HYPOTHALAMUS
Endorphins
Beta-endorphin in the plasma: Radioimmunological determination and findings in patients showing disorders at the level of the hypothalamus-pituitary-adrenal axis, 14:34614 (R;DE;In German)
Radioimmunoassay
Beta-endorphin in the plasma: Radioimmunological determination and findings in patients showing disorders at the level of the hypothalamus-pituitary-adrenal axis, 14:34614 (R;DE;In German)

I

I CODES
Knowledge-enhanced network simulation modeling of the nuclear power plant operator, 14:33594 (BA;US)
Numerical simulation of turbulent premixed combustion and decay of turbulent swirling flow, 14:34106 (BA;US)

I G PROCESS
Combined Cycles
Gasification combined cycle power generation - process alternatives, 14:33104 (RA;FI)

IAEA
See also SEIBERSDORF IAEA LABORATORY
Meetings
IAEA spent fuel management programme - Past and present, 14:33233 (RA;XA)

IAEA AGREEMENTS
Documentation
Information circulars, 14:35477 (R;XA)

IBR-2 REACTOR
Reactor Noise
Power noise spectrum classification in the problem of the IBR-2 reactor, 14:33552 (R;SU;In Russian)
ICE
Cold Storage
Seasonal ice storage, 14:33604 (RA;CA;In English and French)
ICE CONDENSERS
Capitalized Cost
Ice storage systems that cost less than conventional systems. A breakthrough for building owners, 14:33606 (RA;CA;In English and French)
Operating Cost
Ice storage systems that cost less than conventional systems. A breakthrough for building owners, 14:33606 (RA;CA;In English and French)
IEUS
Process-integration methodology for natural-gas-fueled heat pumps and cogeneration systems. Final report, March 1987-October 1988, 14:33190 (R;US)
Research and development opportunities for natural-gas-fueled equipment for emerging industrial processes. Final report, March 1987-March 1988, 14:33191 (R;US)
IGNITION SYSTEMS
Design
Combustion characteristics of dry coal-powder-fueled adiabatic diesel engine: Final report, 14:33780 (R;US)
ILEUM
See SMALL INTESTINE
ILLINOIS
Test Facilities
Collaborative research into the microcharacterization of materials, 14:34177 (RA;US)
Growth and properties of novel structures grown by M.B.E., 14:33838 (RA;US)
IMAGE PROCESSING
Computer Codes
Video image analysis using the Selective Video Processor development platform, 14:34213 (R;US)
Computerized Simulation
Bidirectional Reflection Distribution Functions from surface bump maps, 14:35298 (R;US)
Optimization
High speed photography, videography, and photonics V, 14:34151 (B;US)
Pattern Recognition
Analysis of binarized Hartley phase-only filter performance with respect to stochastic noise, 14:35504 (BA;US)
IMAGE SCANNERS
Computers
A high dynamic range acousto-optic image correlator for real-time pattern recognition, 14:35502 (BA;US)
Filters
Analysis of binarized Hartley phase-only filter performance with respect to stochastic noise, 14:35504 (BA;US)
IMAGES
Diagnostic Techniques
Operable breast carcinoma, mammary image techniques: sensitivity, specificity and prognostic value, 14:34580 (RA;BR;In Spanish)
Neoplasms
Operable breast carcinoma, mammary image techniques: sensitivity, specificity and prognostic value, 14:34580 (RA;BR;In Spanish)
IMIDAZOLES
See also METRONIDAZOLE
Solvent Properties
Organic chemistry in ambient temperature chloroaluminate melts, 14:34093 (BA;US)
IMMOBILIZED CELLS
Biological Radiation Effects
Radiation technology for immobilization of bioactive materials. Proceedings of the final research co-ordination meeting held in Beijing, 15-18 June 1987, 14:33350 (R;XA)
Radioinduction
Immunoadsorption of ABO antibodies: Results of in vitro, porcine in vivo and human ex vivo experimental phases, 14:34674 (RA;XA)
Radiosensitivity
Biomass conversion through radiation immobilization of enzymes and microorganisms and pre-irradiation techniques at IPEN/CNEN, Sao Paulo, 14:33386 (RA;XA)
IMMOBILIZED ENZYMES
Biomass conversion through radiation immobilization of enzymes and microorganisms and pre-irradiation techniques at IPEN/CNEN, Sao Paulo, 14:33386 (RA;XA)
Biochemical Reaction Kinetics
Immobilization of biocatalysts onto copolymeric assemblies - Role of radiation induced copolymerisation, 14:33352 (RA;XA)
Chemical Radiation Effects
Applications of ionizing radiation and plasma gas discharge processing in medicine and biotechnology, 14:33980 (RA;XA)
Cell immobilization and its application to biomass conversion, 14:33385 (RA;XA)
Immobilization of biocatalysts onto copolymeric assemblies - Role of radiation induced copolymerisation, 14:33352 (RA;XA)
Radiation technology for immobilization of bioactive materials. Proceedings of the final research co-ordination meeting held in Beijing, 15-18 June 1987, 14:33350 (R;XA)
Copolymerization
Immobilization of biocatalysts onto copolymeric assemblies - Role of radiation induced copolymerisation, 14:33352 (RA;XA)
Performance Testing
Cell immobilization and its application to biomass conversion, 14:33385 (RA;XA)
Radiation Curing
Additive effects in UV and radiation grafting and curing processes of value in immobilization of bioactive materials, 14:33351 (RA;XA)
IMMUNOGLOBULINS
Aerosols
Health-hazard evaluation report HETA 86-447-1919, Estherville Foods, Inc., Estherville, Iowa, 14:34422 (R;US)
Health-hazard evaluation report HETA 86-461-1920, Ballas Egg Products Corporation, Zanesville, Ohio, 14:34421 (R;US)
Occupational Exposure
Health-hazard evaluation report HETA 87-112-1922, E.S.I. Meats, Inc., Bristol, Indiana, 14:34410 (R;US)
IMPACT FUSION DRIVERS
Beam Emittance
2-D emittance equation with acceleration and compression, 14:35462 (R;US)
IMPACT PARAMETER
Multiplicity
Impact Parameter Dependent light Particle Correlations for ^{40}Ar induced reactions on ^{197}Au at E/A=60 MeV, 14:34901 (R;FR)
Peripheral Collisions
Impact Parameter Dependent light Particle Correlations for ^{40}Ar induced reactions on ^{197}Au at E/A=60 MeV, 14:34901 (R;FR)
IMPACT SHOCK
Crack Propagation
Characteristic experimental data for evaluating the fracture toughness of impact loaded medium-scale specimens, 14:33878 (RA;DE;In German)
IMPACT TESTS
Evaluation
Rupture testing of UF_6 transport and storage cylinders, 14:34123 (R;US)
IMPLANTS
Chemical Radiation Effects
Applications of ionizing radiation and plasma gas discharge processing in medicine and biotechnology, 14:33980 (RA;XA)
IMPURITIES
Aluminium
Scanning tunneling microscope and complementary microchemical investigations of hydrogen and shallow acceptors at silicon grain boundaries, 14:33397 (BA;NL)

Binding Energy
Effect of compensation in the energy of an electron bound to an impurity in a quantum well, 14:34905 (RA;BR)

Boron
Scanning tunneling microscope and complementary microchemical investigations of hydrogen and shallow acceptors at silicon grain boundaries, 14:33397 (BA;NL)

Gallium
Scanning tunneling microscope and complementary microchemical investigations of hydrogen and shallow acceptors at silicon grain boundaries, 14:33397 (BA;NL)

Hydrogen Additions
Scanning tunneling microscope and complementary microchemical investigations of hydrogen and shallow acceptors at silicon grain boundaries, 14:33397 (BA;NL)

Indium
Scanning tunneling microscope and complementary microchemical investigations of hydrogen and shallow acceptors at silicon grain boundaries, 14:33397 (BA;NL)

Passivation
Scanning tunneling microscope and complementary microchemical investigations of hydrogen and shallow acceptors at silicon grain boundaries, 14:33397 (BA;NL)

Quantum Electronics
Effect of compensation in the energy of an electron bound to an impurity in a quantum well, 14:34905 (RA;BR)

IN-CORE FUEL MANAGEMENT
See FUEL MANAGEMENT

IN-SERVICE INSPECTION

Acoustic Emission Testing
Acoustic emission results within the ZB2-programme, 14:34202 (RA;DE;In German)
Intermediate size vessel ZB 2 - manufacturing of the vessel, testing procedure and crack investigations, 14:34201 (RA;DE;In German)

Organizing
In-service testing of base material and welded joints in nuclear power plants, 14:34180 (RA;CS;In Czech)

Pressure Vessels
Towards a philosophy of inspection, 14:34189 (RA;DE)

Ultrasonic Testing
ALOK-application for inservice inspections, 14:34194 (RA;DE;In German)
Early detection of creep damage by ultrasonic techniques, 14:34200 (RA;DE;In German)
Evaluation of indications at long distance and underclad findings, 14:34199 (RA;DE;In German)
Phased array concept for the ultrasonic inservice inspection at the spherical bottom of BWR-pressure vessels, 14:34195 (RA;DE;In German)

IN-SITU PROCESSING

Cost Benefit Analysis
Adapting uranium in situ mining technology for new commercial operations, 14:33222 (RA;XA)

Environmental Impacts
Groundwater restoration and stabilization at the Ruth-ISL test site in Wyoming, USA, 14:33325 (RA;XA)

Leaching
In situ leaching of uranium: Technical, environmental and economic aspects. Proceedings of a technical committee meeting held in Vienna, 3-6 November 1987, 14:33218 (R;XA)

Operation
In situ venting of jet fuel-contaminated soil, 14:34461 (R;US)

INCIDENTS
See ACCIDENTS

INCINERATION
See COMBUSTION

INCLUSION COMPLEXES
See CLATHRATES

INCLUSIVE DISTRIBUTION
See INCLUSIVE INTERACTIONS

INCLUSIVE INTERACTIONS

Dwba
Faddeev and DWBA description of inclusive break-up and incomplete fusion reactions, 14:35123 (R;BR)

Faddeev Equations
Faddeev and DWBA description of inclusive break-up and incomplete fusion reactions, 14:35123 (R;BR)

Three-Body Problem
Faddeev and DWBA description of inclusive break-up and incomplete fusion reactions, 14:35123 (R;BR)

INCOLOY 800

Corrosion
Corrosion of low-nickel weldments in coal gasification atmospheres, 14:33910 (BA;US)

INCOLOY 800H

Crack Propagation
Fatigue and creep crack growth in methane reformer tubes at temperatures above 700^{0}C, 14:33867 (RA;DE;In German)

Creep
Multiaxial creep of tubes from Incoloy 800H and Inconel 617 under static and cyclic loading conditions, 14:33866 (RA;DE;In German)

Fracture Mechanics
Micromechanism of fracture, 14:33829 (RA;US)

Welded Joints
MINERVA, qualification of dissimilar welds for HTR-application, 14:33870 (RA;DE;In German)

INCOMPLETE FUSION REACTIONS

Dwba
Faddeev and DWBA description of inclusive break-up and incomplete fusion reactions, 14:35123 (R;BR)

Faddeev Equations
Faddeev and DWBA description of inclusive break-up and incomplete fusion reactions, 14:35123 (R;BR)

Three-Body Problem
Faddeev and DWBA description of inclusive break-up and incomplete fusion reactions, 14:35123 (R;BR)

INCOMPRESSIBLE FLOW

Navier-Stokes Equations
Coupled, parabolic-marching method for the prediction of three-dimensional viscous incompressible turbomachinery flows. Doctoral thesis, 14:34168 (R;US)

INCONEL 617

Creep
Experimental and theoretical investigations of creep buckling on NiCr22Co12Mo tubes at 950^{0}C, 14:33868 (RA;DE;In German)
Multiaxial creep of tubes from Incoloy 800H and Inconel 617 under static and cyclic loading conditions, 14:33866 (RA;DE;In German)

Material Buckling
Experimental and theoretical investigations of creep buckling on NiCr22Co12Mo tubes at 950^{0}C, 14:33868 (RA;DE;In German)

Welded Joints
MINERVA, qualification of dissimilar welds for HTR-application, 14:33870 (RA;DE;In German)

INCONEL ALLOYS

Fracture Mechanics
Micromechanics of deformation and fracture, 14:33826 (RA;US)

INCONEL X750

Damage
Inconel-X-750 as material for core internals and core components. Status of in-service experience and replacements, 14:33872 (RA;DE;In German)

Failures
Inconel-X-750 as material for core internals and core components. Status of in-service experience and replacements, 14:33872 (RA;DE;In German)

INDIA

Energy Management
Overcoming barriers to improved energy efficiency, 14:33657 (BA;US)

INDIAN POINT-2 REACTOR
Steam Generators
Qualification of PWR steam generator chemical cleaning for Indian Point-2: Final report, 14:33480 (R;US)

INDIUM
Arsenic
MOCVD growth and characterization of GaInAs thick layers on InP substrates, 14:33850 (RA;BR;In Portuguese)
Gallium
MOCVD growth and characterization of GaInAs thick layers on InP substrates, 14:33850 (RA;BR;In Portuguese)
Phosphorus
MOCVD growth and characterization of GaInAs thick layers on InP substrates, 14:33850 (RA;BR;In Portuguese)
Quaternary Alloy Systems
Growth and characterization of InGaAs P/Ga As with emission in 0.67 μ, 14:33852 (RA;BR;In Portuguese)
Semiconductor Materials
Study of optical anisotropies in GA As (100) and Insb (100), 14:33859 (RA;BR)
Substrates
MOCVD growth and characterization of GaInAs thick layers on InP substrates, 14:33850 (RA;BR;In Portuguese)
Ternary Alloy Systems
MOCVD growth and characterization of GaInAs thick layers on InP substrates, 14:33850 (RA;BR;In Portuguese)

INDIUM ARSENIDES
Gallium Arsenides
Geometry and stability of the (GaAs)n (In As)n and (GaP)n (In P)n ultrathin superlattices, 14:33858 (RA;BR)
Superlattices
Geometry and stability of the (GaAs)n (In As)n and (GaP)n (In P)n ultrathin superlattices, 14:33858 (RA;BR)

INDIUM COMPOUNDS
See also INDIUM ARSENIDES
INDIUM OXIDES
INDIUM PHOSPHIDES
Gallium Arsenides
Study of the profile of Zn diffusion in InGaAs ternary layers by C-V electrochemical technique, 14:33855 (RA;BR;In Portuguese)
Microstructure
Microchemistry of solids, 14:33139 (RA;US)
Photodetectors
Study of the profile of Zn diffusion in InGaAs ternary layers by C-V electrochemical technique, 14:33855 (RA;BR;In Portuguese)
Uses
Study of the profile of Zn diffusion in InGaAs ternary layers by C-V electrochemical technique, 14:33855 (RA;BR;In Portuguese)

INDIUM OXIDES
Crystal Doping
Thin films of indium oxide doped with tin by reactive coevaporation, 14:33955 (RA;BR;In Portuguese)
Performance
High-efficiency indium tin oxide/indium phosphide solar cells, 14:33400 (J;US)
Thin Films
Thin films of indium oxide doped with tin by reactive coevaporation, 14:33955 (RA;BR;In Portuguese)

INDIUM PHOSPHIDES
Gallium Phosphides
Geometry and stability of the (GaAs)n (In As)n and (GaP)n (In P)n ultrathin superlattices, 14:33858 (RA;BR)
Performance
High-efficiency indium tin oxide/indium phosphide solar cells, 14:33400 (J;US)
Semiconductor Materials
Electronic structure of III-V semiconductors oxides, 14:35213 (RA;BR)
Sulfur Compounds
Electronic structure of III-V semiconductors oxides, 14:35213 (RA;BR)
Superlattices
Geometry and stability of the (GaAs)n (In As)n and (GaP)n (In P)n ultrathin superlattices, 14:33858 (RA;BR)
X Radiation
Electronic structure of III-V semiconductors oxides, 14:35213 (RA;BR)

INDOLES
Thermodynamic Properties
Thermodynamics and the hydrodenitrogenation of indole: Part 1, Thermodynamic properties of indoline and 2-methylindole: Part 2, Gibbs energies of reaction in the hydrodenitrogenation of indole: Part 3, Thermodynamic equilibria and comparison with literature kinetic, 14:33179 (R;US)

INDOOR AIR POLLUTION
Biological Effects
Indoor environment program, FY 1987 annual report, 14:33730 (R;US)
Mathematical Models
Macromodel for assessing residential concentrations of combustion-generated pollutants: Model development and preliminary predictions for CO, NO_2, and respirable suspended particles, 14:33732 (R;US)
Sampling
Indoor air quality in commercial buildings: Volume 1, Measurement results and interpretation: Final report, December 1987, 14:33718 (R;US)
Indoor air quality in commercial buildings: Volume 2, Appendices: Final report, December 1987, 14:33719 (R;US)
Toxicity
Potential risks from exposure to organic compounds in indoor air, 14:33724 (R;US)

INDUCED RADIOACTIVITY
See RADIOACTIVITY

INDUCTORS
See SOLENOIDS

INDUSTRIAL PLANTS
See also CHEMICAL PLANTS
COAL GASIFICATION PLANTS
COAL LIQUEFACTION PLANTS
FEED MATERIALS PLANTS
OIL SHALE PROCESSING PLANTS
PETROLEUM REFINERIES
Air Pollution
Health-hazard evaluation determination report No. 76-115-425, H F E Inc., Ft. Collins, Colorado, 14:34408 (R;US)
Cogeneration
Process-integration methodology for natural-gas-fueled heat pumps and cogeneration systems. Final report, March 1987-October 1988, 14:33190 (R;US)
Research and development opportunities for natural-gas-fueled equipment for emerging industrial processes. Final report, March 1987-March 1988, 14:33191 (R;US)
Energy Conservation
An economic and energy evaluation of the replacement of conventional technology with continuous chromatography in the production of high-fructose sugar, 14:33754 (R;US)
Hazardous Materials
Health-hazard evaluation determination report No. 77-58-428, Steiger Tractor, Inc., Fargo, Nnorth Dakota, 14:34398 (R;US)
Mercury control technology assessment study: General Electric Ccompany, Circleville Lamp Plant, Circleville, Ohio. Preliminary survey report for the site visit of October 6, 1981. Final report, 14:34392 (R;US)
Mercury control technology assessment study: Micro Switch, a Honeywell Division, Freeport, Illinois. Preliminary survey report for the site visit of May 5, 1981. Final report, 14:34394 (R;US)
Process Heat
Industrial compact ceramic finned-plate recuperator. Final report, August 1982-March 1987, 14:33765 (R;US)

INDUSTRIAL RADIOGRAPHY
See also NEUTRON RADIOGRAPHY
X-RAY RADIOGRAPHY
32nd Annual conference and the 22nd annual theoretical seminar of the South African Institute of Physics, 14:35127 (R;ZA;In English, Afrikaans)

Robots
Automatic X-ray radiography of welded joints, 14:34185 (RA;CS;In Slovak)

INDUSTRIAL WASTES
See also SPENT LIQUORS

Hazardous Materials
Amendment to the Best Demonstrated Available Technology (BDAT) background document for F001-F005 spent solvents. Volumes 1 and 2, 14:33764 (R;US)
Are we cleaning up: 10 Superfund case studies; a special report of OTA's (Office of Technology Assessment's) assessment on Superfund implementation, 14:34483 (R;US)
Best Demonstrated Available Technology (BDAT) background document for K048, K049, K050, K051, K052. Final report, 14:33763 (R;US)
Best Demonstrated and Available Technology (BDAT) background document for K016, K18, K019, K020, K030. Final report, 14:33762 (R;US)
Hazardous-waste constituents: health and environmental effects profiles. January 1970-January 1989 (Citations from the NTIS data base). Report for January 1970-January 1989, 14:33767 (R;US)
Superfund exposure assessment manual, 14:34480 (R;US)

Waste Processing
Food-processing waste treatment. January 1976-January 1989 (Citations from the NTIS data base). Report for January 1976-January 1989, 14:33769 (R;US)

INELASTIC SCATTERING
See also DEEP INELASTIC SCATTERING

Calcium 40 Target
Inelastic scattering of 400 MeV polarized deuterons on ^{12}C, ^{24}Mg and ^{40}Ca, 14:35151 (R;FR)

Carbon 12 Target
Inelastic scattering of 400 MeV polarized deuterons on ^{12}C, ^{24}Mg and ^{40}Ca, 14:35151 (R;FR)

Electrons
Inelastic electron scattering from surface plasmons in a NIPI semiconductor superlattice, 14:35218 (RA;BR)

Energy-Level Transitions
Inelastic scattering of 400 MeV polarized deuterons on ^{12}C, ^{24}Mg and ^{40}Ca, 14:35151 (R;FR)

Giant Resonance
Inelastic heavy ion scattering on ^{90}Zr and ^{208}Pb at intermediate energies, 14:35072 (R;FR)

Magnesium 24 Target
Inelastic scattering of 400 MeV polarized deuterons on ^{12}C, ^{24}Mg and ^{40}Ca, 14:35151 (R;FR)

Superlattices
Inelastic electron scattering from surface plasmons in a NIPI semiconductor superlattice, 14:35218 (RA;BR)

INFANTS
Radiation Doses
Radiation exposition from radionuclides in ground water, 14:34506 (RA;AT;In German)

INFLATIONARY UNIVERSE
Stochastic approach to chaotic inflation and the distribution of universes, 14:34867 (R;JP)

Cosmological Models
Limits on reheating in inflationary cosmology models, 14:34872 (J;US)

INFORMATION
See also DATA

Technology Transfer
Advanced information technology, INF-600, 14:33587 (RA;DK;In Danish)

INFORMATION SYSTEMS
Data Base Management
Toxic Air Pollutant Emission Factors: information storage and retrieval system. User's manual. Final report, 14:34406 (R;US)

Ecn
Restricted feasibility study on conversion of the EDN system to the Cyber-computer, 14:35507 (R;NL;In Dutch)

Energy
Restricted feasibility study on conversion of the EDN system to the Cyber-computer, 14:35507 (R;NL;In Dutch)

INHIBITORS (CORROSION)

IODINE 129
Radioecological Concentration
UCB-NE-107 user's manual, 14:33281 (R;US)

Radionuclide Migration
Nuclide solubilities and distribution coefficients for use in probabilistic modeling. Data for the nuclieds ^{14}C, ^{79}Se, ^{93}Zr, ^{99}Tc, ^{126}Sn, ^{129}I, ^{135}Cs, ^{237}Np and ^{239}Np, 14:34479 (R;SE)

IODINE 131
Radionuclide Kinetics
Kinetic behaviour of radioiodines accumulating in recurrent thyroid carcinomas and their metastases and the role of substituted thyroid hormones during radioiodine treatment, 14:34617 (R;DE;In German)

Thyroid
Calibration of nuclear data WBC-6000 counter system for I-131 thyroid counting, 14:34350 (R;MY)

Thyroid Hormones
Kinetic behaviour of radioiodines accumulating in recurrent thyroid carcinomas and their metastases and the role of substituted thyroid hormones during radioiodine treatment, 14:34617 (R;DE;In German)

ION BEAMS
See also ARGON 40 BEAMS
NEON 20 BEAMS

Cesium Ions
Pulsed Cs ion gun for time of flight mass spectrometry, 14:34330 (R;FR)

Distribution Functions
Evolution of ion momentum distribution function in electrohydrodynamic emission, 14:34242 (R;SU;In Russian)

Meetings
Pulsed Cs ion gun for time of flight mass spectrometry, 14:34330 (R;FR)

Nuclear Reaction Analysis
Pulsed Cs ion gun for time of flight mass spectrometry, 14:34330 (R;FR)

Production
Hermes-III positive polarity experiment, 14:34227 (R;US)

ION EMISSION
Desorption
Spontaneous desorption and plasma desorption mass spectrometry: a simple way to compare keV and MeV ion induced desorption, 14:35223 (R;FR)

Krypton Ions
Thickness and volume effects in MeV ion induced desorption (PDMS), 14:35224 (R;FR)

Radiationless Decay
Fast ion desorption (Mev/u): interaction depth in secondary H+ ion emission: probe of the surface-projectile interaction, 14:35226 (R;FR;In French)

Secondary Emission
Fast ion desorption (Mev/u): interaction depth in secondary H+ ion emission: probe of the surface-projectile interaction, 14:35226 (R;FR;In French)
Secondary ion emission from surface and volume with high and low energy ions, 14:35225 (R;FR;In French)

Thickness
Thickness and volume effects in MeV ion induced desorption (PDMS), 14:35224 (R;FR)

ION EXCHANGE MEMBRANES
See MEMBRANES

ION MICROSCOPES
Uses
Novel applications of the field ion microscope and atom-probe, 14:34366 (R;US)

ION SOURCES
See also DUOPLASMATRONS
PENNING ION SOURCES

Computerized Simulation
Simulation of an axially symmetric ion-optical system, 14:34292 (R;SU;In Russian)

Design
Generation of lithium ions for ion sources using the 670.8 nm resonant transition of lithium, 14:34308 (R;US)
Ion sources for light-ion fusion, 14:35466 (R;US)

Electrodes
Simulation of an axially symmetric ion-optical system, 14:34292 (R;SU;In Russian)

Testing
Lithium fluoride ion source experiments on PBFA II, 14:35467 (R;US)

ION-ATOM COLLISIONS
Charge Exchange
Multiple-electron processes in fast ion-atom collisions, 14:34909 (R;US)
[Collision processes of interest in MFE plasama research]: Progress report, 14:35407 (R;US)

Differential Cross Sections
Field theoretical approach to proton-nucleus reactions: I - one step inelastic scattering, 14:35121 (R;BR)

Fokker-Planck Equation
Solution to the Fokker-Planck equation for proton-nucleus collisions at high energies, 14:35119 (R;BR)

Hydrogen Ions 1 Plus
Field theoretical approach to proton-nucleus reactions: I - one step inelastic scattering, 14:35121 (R;BR)
Solution to the Fokker-Planck equation for proton-nucleus collisions at high energies, 14:35119 (R;BR)

Inelastic Scattering
Field theoretical approach to proton-nucleus reactions: I - one step inelastic scattering, 14:35121 (R;BR)

X-Ray Spectroscopy
[First international symposium on Swift Heavy Ions in Matter (SHIM '89), Caen, France, and visits to Villigen, Zurich, and Geneva, Switzerland, May 8–19, 1989]: Foreign trip report, 14:34911 (R;US)

IONIZATION
Measuring Methods
Measurement of the time-dependent distribution of ionization states in an argon plasma from a Mach-10 jet: Final report, 14:34899 (R;US)

IONIZATION CALORIMETERS
See SHOWER COUNTERS

IONIZATION CHAMBERS
Sensitivity
Experimental determination of the influence of an ionization chamber wall material on the chamber sensitivity in high energy particle beams, 14:35193 (R;SU;In Russian)

IONIZING RADIATIONS
See also COSMIC RADIATION
GAMMA RADIATION
X RADIATION
Biological Dosemeters
Chromosome analysis for exposed and presumably exposed persons, 1985-1987, 14:34686 (R;DE;In German)
IONOSPHERE

Evaluation of E2 form factor = ^{24}Mg, 14:35120 (R;BR)
Gamma Spectra
Measurements of Γ_γ / Γ for states of ^{24}Mg in the excitation region $10 < E_x < 12$ MeV, 14:35057 (R;AU)
MAGNESIUM 24 TARGET
Deuteron Reactions
Nuclei form and deformation effect on angular deuteron distribution at elastic and inelastic diffraction scattering, 14:35159 (R;SU;In Russian)
Nuclear Deformation
Nuclei form and deformation effect on angular deuteron distribution at elastic and inelastic diffraction scattering, 14:35159 (R;SU;In Russian)
MAGNESIUM ALLOYS
Metallurgical Effects
Cryogenic tensile properties of AA 2090 weldments, 14:33889 (R;US)
MAGNESIUM ISOTOPES
See also MAGNESIUM 24
Neutron-Rich Isotopes
Observation of the new neutron-rich nuclei ^{29}F, ^{35,36}Mg, ^{38,39}Al, ^{40,41}Si, ^{43,44}P, ^{45,46,47}S, ^{46,47,48,49}Cl and ^{49,50,51}Ar by means of a 55 MeV/u ^{48}Ca beam, 14:35038 (R;SU)
MAGNESIUM OXIDES
Crystal Structure
Microwave studies of tunneling states in disordered materials, 14:33832 (RA;US)
Grain Boundaries
Solute effects on mechanical properties of grain boundaries, 14:33825 (RA;US)
MAGNETIC BREMSSTRAHLUNG
See SYNCHROTRON RADIATION
MAGNETIC DIPOLES
Design
A radiation hard dipole magnet coils using aluminum clad copper conductors, 14:34275 (R;US)
MAGNETIC ENERGY STORAGE EQUIPMENT
Economics of electricity storage technologies, 14:33625 (BA;US)
Economics
Economics of electricity storage technologies, 14:33625 (BA;US)
MAGNETIC FIELDS
See also GEOMAGNETIC FIELD
INTERPLANETARY MAGNETIC FIELDS
Computerized Simulation
About the generation of uniform magnetic field in injector part of the LIU-30 accelerator, 14:34298 (R;SU;In Russian)
Corrections
Analysis and correction of magnetic field inhomogeneities in the superconducting dipoles of the nuclotron, 14:34300 (R;SU;In Russian)
Fluctuations
Magnetic-field fluctuations from 0 to 26 Hz observed from a polar-orbiting satellite, 14:35434 (J;US)
Linear Accelerators
About the generation of uniform magnetic field in injector part of the LIU-30 accelerator, 14:34298 (R;SU;In Russian)
Superconducting Magnets
Analysis and correction of magnetic field inhomogeneities in the superconducting dipoles of the nuclotron, 14:34300 (R;SU;In Russian)
Turbulence
Magnetic turbulence versus safety factor in the Tokapole II tokamak, 14:35408 (R;US)
MAGNETIC MIRRORS
Plasma Production
Producing of an ECR plasma using 2450MHz Whistler Wave and the investigating of its parameters, 14:35415 (R;XA)
MAGNETIC MONOPOLES
Superconducting Colloid Detectors
New ideas on the detection of cold dark matter and magnetic monopoles, 14:34861 (R;FR)
MAGNETIC STARS
Stellar Magnetospheres
Discovery of a co-rotating magnetosphere in a helium weak star: HD 5737=α Scl, 14:34787 (RA;FR)
Ultraviolet Spectra
Discovery of a co-rotating magnetosphere in a helium weak star: HD 5737=α Scl, 14:34787 (RA;FR)

MAGNETIC STORMS
Solar-Geophysical Data Number 531, November 1988. Part 1 (prompt reports). Data for October, September 1988, and late data, 14:34865 (R;US)
Ionosphere
Medium frequency radiowave absorption at sunrise and sunset times in the geomagnetic anomaly region, 14:34883 (RA;BR)
Medium Wave Radiation
Medium frequency radiowave absorption at sunrise and sunset times in the geomagnetic anomaly region, 14:34883 (RA;BR)
MAGNETIC SURFACES
Plasma Disruption
Random distribution of magnetic field lines in tokamaks, 14:35441 (RA;BR)
Tokamak Devices
Random distribution of magnetic field lines in tokamaks, 14:35441 (RA;BR)
MAGNETISM
See also ANTIFERROMAGNETISM
FERROMAGNETISM
PARAMAGNETISM
Symmetry
6D-symbols for corepresentations of antiunitary magnetic groups, 14:35392 (BA;SG)
MAGNETOGASDYNAMICS
MPD (magnetoplasmadynamic) thrust-chamber flow dynamics. Annual technical report, 1 October 1987-30 September 1988, 14:34929 (R;US)
MAGNETOHYDRODYNAMIC GENERATORS

SUN
WOLF-RAYET STARS
Correlations
On the flux-period and flux-flux correlations in late type stars, 14:34779 (RA;FR)
Ultraviolet Spectra
IUE spectral atlas of two normal B stars: πCet and νCap (125-200 nm), 14:34793 (RA;FR)
MAINTENANCE
See also REACTOR MAINTENANCE
Data Processing
Maintance system of heating plants, 14:33432 (R;FI;In Finnish)
MAINTENANCE FACILITIES
Occupational Safety
Preliminary control technology assessment of TWA Maintenance Facility, Kansas City, Missouri, August 18, 1981, 14:34395 (R;US)
Productivity
Study of the impact of automation on productivity in bus-maintenance facilities. Final report, 14:33749 (R;US)
MAIZE
Plant Breeding
Maize breeding in the People's Republic of Benin, 14:34650 (RA;XA)
Maize research activities in Zambia, 14:34649 (RA;XA)
MALIGNANCIES
See NEOPLASMS
MAMMARY GLANDS
Carcinomas
Quantitative scintiscanning in the follow-up observation of carcinomas of the breast. A correlation of results thus obtained with X-ray and laboratory findings to evaluate the effects of local irradiation or cytostatics, 14:34612 (R;DE;In German)
Radiotherapy
On the prevention of cutaneous injuries caused by radiotherapy of carcinomas of the breast. Examinations in patients treated at the Robert Janker Hospital at Bonn, 14:34615 (R;DE;In German)
MAN
Biological Radiation Effects
Serum amylase as a semiquantitative indicator of an exposure to ionizing radiation, 14:34699 (RA;AT)
Gastrointestinal Tract
Metabolic models for the metabolism of plutonium and related elements, 14:34695 (RA;AT)
Lungs
Comments on the dose-effect curve at low doses of inhaled alpha-emitters, 14:34693 (RA;AT)
Radioisotopes
Reference levels for the assessment of internal contamination, 14:34697 (RA;AT)
Small Intestine
Radiation exposure of the small intestine after ingestion of iron radioisotopes, 14:34698 (RA;AT;In German)
MANGANESE
Crystal Structure
Microwave studies of tunneling states in disordered materials, 14:33832 (RA;US)
Ecological Concentration
Natural trace metal concentrations in estuarine and coastal marine sediments of the southeastern United States, 14:34502 (J;US)
MANGANESE ALLOYS
See also MANGANESE STEELS
Symmetry Groups
Symmetry and phase transitions in decagonal quasi-crystals, 14:35317 (BA;SG)
MANGANESE SILICIDES
Phase Diagrams
Thermochemical stability diagrams for condensed phases and tabulation of volatile species over condensed phases for thirteen metal-oxygen-silicon systems at 1000 and 1250 K: Volume 2: Final report, 14:33101 (R;US)
MANGANESE STEELS
Fracture Properties
Effect of high heat input on the microstructure and mechanical properties of submerged-arc welds in steels for arctic and offshore structures, 14:33848 (R;CA)
Microstructure
Effect of high heat input on the microstructure and mechanical properties of submerged-arc welds in steels for arctic and offshore structures, 14:33848 (R;CA)
MANIOC
See CASSAVA
MANITOBA
Surface Waters
Manitoba historical water levels summary, to 1987, 14:33374 (R;CA;In English and French)
MANUFACTURING FACILITIES
See INDUSTRIAL PLANTS
MAPLE REACTOR
Reactor Cores
Selecting a MAPLE research reactor core for 1-10 mW operation, 14:33549 (R;CA)
MAPPING (TOPOLOGICAL)
See TOPOLOGICAL MAPPING
MARINE DISPOSAL
Radionuclide Migration
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 5: Dispersal of radionuclides in the oceans: Models, data sets and regional descriptions, 14:33272 (R;XN)
MARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS
MARINE VEHICLE ACCIDENTS
See ACCIDENTS
MARKOV PROCESS
Dynamics
Markov processes in Hilbert space and continuous spontaneous localization of systems of identical particles, 14:35273 (R;XA)

MASERS
Augmentation
Efficiency enhancement in cyclotron autoresonance maser amplifiers by magnetic field tapering, 14:34166 (J;US)
Cyclotron Resonance
Efficiency enhancement in cyclotron autoresonance maser amplifiers by magnetic field tapering, 14:34166 (J;US)
Gain
Efficiency enhancement in cyclotron autoresonance maser amplifiers by magnetic field tapering, 14:34166 (J;US)
Southern Hemisphere
New water masers in the Southern hemisphere, 14:34765 (RA;BR)
Water Vapor
New water masers in the Southern hemisphere, 14:34765 (RA;BR)
MASS FORMULAE
Ground States
Recent progress in atomic mass formulas and β-decay gross theory, 14:35160 (RA;JP;In Japanese)
MASS SPECTROMETERS
Uses
Novel applications of the field ion microscope and atom-probe, 14:34366 (R;US)
MASS TRANSFER
See also CONVECTION
Binary Stars
Binary evolution, 14:34836 (RA;CS)
Forecasting
Release rates in a salt repository by diffusion, 14:33278 (R;US)
Mathematical Models
On PVT-data, well treatment, and prepartion of input data for an isothermal gas-water-foam version of MULKOM, 14:33280 (R;US)
UCB-NE-107 user's manual, 14:33281 (R;US)
MASS TRANSIT SYSTEMS
Maintenance Facilities
Study of the impact of automation on productivity in bus-maintenance facilities. Final report, 14:33749 (R;US)
Management
Evaluation of the spare-ratio concept in the management of transit rolling stock. Final report, 14:33750 (R;US)
MASSACHUSETTS
Water Pollution
Fish as sentinels of environmental health. Technical memo, 14:34497 (R;US)
Water Resources
Cape Cod Aquifer Management Project (CCAMP): hydrogeologic papers. Report for August 1985-December 1987, 14:34498 (R;US)

MELTDOWN
M Codes
MELPROG-POW/MOD1: A two-dimensional, mechanistic code for analysis of reactor core melt progression and vessel attack under severe accident conditions, 14:33592 (R;US)

MELTING
Shear Properties
Shear waves through the glass-liquid transformation, 14:34043 (J;US)

MEMBRANE TRANSPORT
Tracer Techniques
Investigations into the binding of ^{125}I-calmodulin to CA^{++} transport ATPase of human erythrocytes, 14:34518 (R;DE;In German)

MEMBRANES
Configuration
Mixed-conducting membranes for hydrogen-transporting S/L/S solid electrolyte configurations, 14:33705 (BA;US)

Surface Properties
Mixed-conducting membranes for hydrogen-transporting S/L/S solid electrolyte configurations, 14:33705 (BA;US)

MEMORY DEVICES
Physical Radiation Effects
Radiation characterization of a 28C256 EEPROM, 14:35494 (R;US)

MERCURY
Bridgman Method
Heat treatment influence on the crystalline quality of Bridgman grown Hg_{1-x} Cd_x Te, 14:33849 (RA;BR)

Cadmium
Spin-splitted phase transition in quantized hall effect of narrow-gap Hg(Cd) Te mosfet, 14:33854 (RA;BR)

Crystal Growth
Heat treatment influence on the crystalline quality of Bridgman grown Hg_{1-x} Cd_x Te, 14:33849 (RA;BR)

Ecological Concentration
Natural trace metal concentrations in estuarine and coastal marine sediments of the southeastern United States, 14:34502 (J;US)

Mosfet
Spin-splitted phase transition in quantized hall effect of narrow-gap Hg(Cd) Te mosfet, 14:33854 (RA;BR)

Particulates
Mercury control technology assessment study: GTE Products Corporation, Chemical and Metallurgical Division, Towanda, Pennsylvania. Preliminary survey report for the site visit of June 9, 1981. Final report, 14:34393 (R;US)
Mercury control technology assessment study: General Electric Ccompany, Circleville Lamp Plant, Circleville, Ohio. Preliminary survey report for the site visit of October 6, 1981. Final report, 14:34392 (R;US)

Switches
Mercury control technology assessment study: Micro Switch, a Honeywell Division, Freeport, Illinois. Preliminary survey report for the site visit of May 5, 1981. Final report, 14:34394 (R;US)

Tellurium
Spin-splitted phase transition in quantized hall effect of narrow-gap Hg(Cd) Te mosfet, 14:33854 (RA;BR)

MERCURY 180
Excited States
Shape co-existence in ^{180}Hg and delineation of the midshell minimum, 14:35081 (R;AU)

MERCURY 194
Nuclear Deformation
Shape coexistence in the neutron deficient Pb isotopes and the configuration-constrained shell correction approach, 14:35161 (R;SE)

MESON RESONANCES

OPEN-CYCLE MHD GENERATORS
Seed Recovery
MHD [magnetohydrodynamics] seed recovery and regeneration based on the Formate Process: Quarterly technical progress report, September 18, 1987–December 31, 1987, 14:33685 (R;US)
MHD seed recovery/regeneration, Phase 1: Quarterly report, April–June 1988, 14:33686 (R;US)

MICE
Bone Marrow
Hormesis - hypotheses and facts, 14:34689 (RA;AT;In German)
Survival Time
Life shortening in mice exposed to fission neutrons and gamma rays. VIII. Exposures to continuous gamma radiation, 14:34704 (J;US)

MICHELSON INTERFEROMETER
Design
Modern pulsed wavemeters, 14:34161 (BA;US)

MICHIGAN
Energy Management
Analysis of Michigan's demand-side electricity resources in the residential sector: Volume 1, Executive summary: Final report, 14:33674 (R;US)
Resource Development
Black locust, 14:33395 (BA;US)

MICROCHANNEL ELECTRON MULTIPLIERS
Mass Spectrometers
Ion detector on the basis of microchannel plates for a high-sensitive mass spectrometer, 14:34363 (R;SU;In Russian)

MICROCOMPUTERS
See also PERSONAL COMPUTERS
Computer Codes
Improving operational safety management through probabilistic safety assessment on personal computers. Report of a technical committee meeting held in Vienna, 16-20 March 1987, 14:33572 (R;XA)
Uses
Improving operational safety management through probabilistic safety assessment on personal computers. Report of a technical committee meeting held in Vienna, 16-20 March 1987, 14:33572 (R;XA)

MICRODOSIMETRY
Technology Assessment
[Tenth symposium on microdosimetry, Rome, Italy; Department of Energy/Commission of European Communities workshop, Rome, Italy; and visit to Neuherberg, W. Germany, May 21–June 3, 1989]: Foreign trip report, 14:35199 (R;US)

MICROSCOPY
Historical Aspects
X-ray holography: A history, 14:34365 (R;US)

MICROWAVE DISCHARGES
See HIGH-FREQUENCY DISCHARGES

MICROWAVE EQUIPMENT
See also HETERODYNE RECEIVERS
MICROWAVE TUBES
SQUID DEVICES
Measuring Methods
Photoconductor pulse generators and sampling gates for characterization of high-speed devices and transmission lines, 14:34009 (BA;US)
Uses
Microwave energy for SO_2 and NO_x removal from flue gas: Final report, 14:33437 (R;US)

MICROWAVE RADIATION
Biological Radiation Effects
Behavioral effects of chronic exposure to 0.5 mW/cm^2 of 2450-MHz microwaves. Interim report for period ending 1987, 14:34713 (R;US)
MICROWAVE TUBES
See also LASERTRONS
Ecr Heating
Cryomagnetic systems for plasma heating in tokamaks, 14:35448 (RA;CS;In Slovak)
MIDDLE DISTILLATES
See PETROLEUM DISTILLATES
MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION
MILITARY FACILITIES
Fuel Systems
Project PETROL RAM: improving the management of Air Force fuels operations and inventories. Master's thesis, 14:33662 (R;US)
Ground Water
United States Air Force Installation-Restoration Program (IRP) strategies for investigating migrating contaminated groundwater. Master's thesis, 14:34515 (R;US)
Hazardous Materials
Industrial-hygiene-survey report of Martin Marietta Missile and Electronics Group, Orlando, Florida, April 25-27, 1988, 14:34415 (R;US)
Installation-restoration program. Phase 2. Confirmation/quantification Stage 1 for Minot Air Force Base, Minot, North Dakota. Volume 1. Final report, September 1985-October 1988, 14:34485 (R;US)
Security
Review of DNA(Defense Nuclear Agency) Remote Security Station (RSS) Project. Phase 1, 14:34373 (R;US)
Water Pollution Control
Air Force ground-water contamination cleanup: an evaluation of the pump-and-treat method. Master's thesis, 14:34514 (R;US)
MILK
Contamination
Radioactive burden in soil and milk around Oldenburg (FRG) in the wake of the Chernobyl accident, 14:34476 (RA;AT;In German)
Radiation Monitoring
Monitoring of radioactivity in foodstuffs in Ireland 1987, 14:34472 (R;IE)
MINE-MOUTH GENERATING PLANTS

MOISTURE
Corrosive Effects
Causes of FGD [flue gas desulfurization] construction material failures: Volume 2, August 1985–December 1986: Final report, 14:33444 (R;US)
MOLDS
See FUNGI
MOLECULAR BEAMS
Crystal Growth
Molecular beam epitaxy of gallium arsenide on silicon substrate, 14:35209 (RA;BR;In Portuguese)
Epitaxy
Molecular beam epitaxy of gallium arsenide on silicon substrate, 14:35209 (RA;BR;In Portuguese)
Gallium Arsenides
Molecular beam epitaxy of gallium arsenide on silicon substrate, 14:35209 (RA;BR;In Portuguese)
MOLECULAR FLUORESCENCE SPECTROSCOPY
See FLUORESCENCE SPECTROSCOPY
MOLECULAR ORBITAL MODEL
See MOLECULES
MOLECULAR SIEVES
Molecular sieve films from zeolited-silica microcomposites, 14:33986 (R;US)
Neutron Diffraction
Fourier-filtering techniques for the analysis of high-resolution pulsed neutron powder diffraction data, 14:33996 (BA;US)
MOLECULAR STRUCTURE
Group Theory
Algebraic methods in medium energy scattering from nuclei and molecules, 14:35304 (BA;SG)
Hamiltonians
Theorem on the Schwinger representations of Lie groups and its application to the algebraic Hamiltonian for diatomic molecules, 14:35326 (BA;SG)
Mathematical Models
Rotational symmetry analysis for semiclassical and quantum mechanics, 14:35299 (BA;SG)
MOLECULES
See also POLYATOMIC MOLECULES
Collisions
Algebraic approach to collision dynamics of composite projectiles, 14:35328 (BA;SG)
Excited States
Algebraic approach to molecular spectra and dynamics, 14:35300 (BA;SG)
Inelastic Scattering
The inelastic scattering of $^2\Pi$ [case (b)] molecules and an understanding of the differing Λ doublet propensities for molecules of π vs π^3 orbital occupancy, 14:34922 (J;US)
Mathematical Models
Group theoretical techniques for molecular electronic spectra, 14:35327 (BA;SG)
Multi-Photon Processes
Molecules in intense laser fields, 14:34913 (R;US)
Photoionization
Resonantly enhanced multiphoton ionization of molecules, 14:34895 (R;US)
MOLTEN CARBONATE FUEL CELLS
Cathodes
Cathodic materials for molten carbonate fuel cells, 14:33692 (BA;US)
Configuration
Studies on hydrogen-permeable nickel membrane fuel cell, 14:33697 (BA;US)
MOLTEN SALT COOLANTS
See MOLTEN SALTS
MOLTEN SALTS
Corrosive Effects
Corrosion of Fe-25Cr-20Ni alloy in molten alkali carbonates, 14:33909 (BA;US)
Heat Transfer
A review of the chemical and physical properties of molten alkali nitrate salts and their effect on materials used for solar central receivers, 14:33410 (BA;US)
Solvent Properties
Applications of molten salts in plutonium processing, 14:33562 (BA;US)
MOLYBDENUM
Catalytic Effects
A novel approach to hydrogen recovery, storage and transport: Final technical report, 14:33341 (R;US)
Crystal Growth
Growth and transport at metal and semiconductor interfaces, 14:33821 (RA;US)
Deactivation
Deactivation of hydrotreatment catalysts used for coal liquids: Semi-annual report, November 12, 1988–May 11, 1989, 14:33067 (R;US)
Radiation Effects
Ultrasonic studies of radiation effects, 14:33833 (RA;US)
MOLYBDENUM 100 TARGET
Proton Reactions
Double differential cross-sections for the (p,n) reactions of 13.1 MeV protons with Mo-94,95,96,97,98,100, 14:35069 (R;XA)
MOLYBDENUM 94 TARGET
Double differential cross-sections for the (p,n) reactions of 13.1 MeV protons with Mo-94,95,96,97,98,100, 14:35069 (R;XA)
MOLYBDENUM 95 TARGET
Double differential cross-sections for the (p,n) reactions of 13.1 MeV protons with Mo-94,95,96,97,98,100, 14:35069 (R;XA)
MOLYBDENUM 96 TARGET
Double differential cross-sections for the (p,n) reactions of 13.1 MeV protons with Mo-94,95,96,97,98,100, 14:35069 (R;XA)
MOLYBDENUM 97 TARGET
Double differential cross-sections for the (p,n) reactions of 13.1 MeV protons with Mo-94,95,96,97,98,100, 14:35069 (R;XA)
MOLYBDENUM 98 TARGET
Double differential cross-sections for the (p,n) reactions of 13.1 MeV protons with Mo-94,95,96,97,98,100, 14:35069 (R;XA)
MOLYBDENUM ALLOYS
Electrodeposition
Pulsed electrodeposition of Ni-Mo alloys, 14:33806 (R;US)
MOLYBDENUM CARBIDES
Molybdenum carbide coating electrodeposited from molten fluoride bath, 14:33916 (BA;US)
MOLYBDENUM SILICIDES
Phase Diagrams
Thermochemical stability diagrams for condensed phases and tabulation of volatile species over condensed phases for thirteen metal-oxygen-silicon systems at 1000 and 1250 K: Volume 2: Final report, 14:33101 (R;US)
MOLYBDENUM SULFIDES
Catalytic Effects
Direct synthesis of alcohol fuels over molybdenum-based catalysts: Final technical report, September 25, 1985–December 24, 1988, 14:33358 (R;US)
Optimum catalytic process for alcohol fuels from syngas: Eighth quarterly technical progress report, October–December 1988, 14:33359 (R;US)

MONOCLONAL ANTIBODIES
Carcinomas
Study of image and biodistribution with a monoclonal antibody in tumors of rats with high and low metastatic capacity, 14:34543 (RA;BR;In Spanish)
Immobilized Enzymes
Radiation immobilized monoclonal antibody for radioimmunoassay of circulating schistosome antigen, 14:34521 (RA;XA)
Immunotherapy
Doses absorbed by the thyroid of patients under treatment with specific monoclonal antibodies from lymphoma of B cells and labelled with I 131, 14:34604 (RA;BR;In Portuguese)
Lymphomas
Doses absorbed by the thyroid of patients under treatment with specific monoclonal antibodies from lymphoma of B cells and labelled with I 131, 14:34604 (RA;BR;In Portuguese)
Melanomas
Immunoscintigraphy with monoclonal antibodies antimelanoma. Evaluation of initial 5 cases, 14:34585 (RA;BR;In Portuguese)
Radioimmunoassay
Study of image and biodistribution with a monoclonal antibody in tumors of rats with high and low metastatic capacity, 14:34543 (RA;BR;In Spanish)
Scintiscanning
Immunoscintigraphy with monoclonal antibodies antimelanoma. Evaluation of initial 5 cases, 14:34585 (RA;BR;In Portuguese)
MONOCRYSTALS
Refractivity
Dispersion measurements of microcrystals in the near ultraviolet and infrared, 14:34001 (BA;US)
MONOPOLES
See also MAGNETIC MONOPOLES
Mathematical Operators
3-cocycles in the monopole sector of gauge theories, 14:35382 (BA;SG)
MONTE CARLO METHOD
Supercomputers
Vector and parallel computers for quantum Monte Carlo computations, 14:34079 (BA;US)
MOS TRANSISTORS
See also MOSFET
Gettering
Extrinsic gettering for VLSI/ULSI processes, 14:34220 (BA;US)
Physical Radiation Effects
Total-dose hardness assurance for space applications of commercial CMOS devices, 14:34215 (R;US)
Radiation Hardening
1/f noise: A nondestructive technique to predict MOS radiation hardness?, 14:34360 (R;US)
Voltage Drop
Dual-transistor method to determine ΔV_{ot} and ΔV_{it} for MOS devices, 14:34216 (R;US)
MOSFET
Hall Effect
Spin-splitted phase transition in quantized hall effect of narrow-gap Hg(Cd) Te mosfet, 14:33854 (RA;BR)
Phase Transformations
Spin-splitted phase transition in quantized hall effect of narrow-gap Hg(Cd) Te mosfet, 14:33854 (RA;BR)
MOTOR VEHICLE ACCIDENTS
Spatial Distribution
Identifying roadway sections with "critical" large truck accident rates, 14:33298 (R;US)
MULTI-ELEMENT ANALYSIS
Interlaboratory Comparisons
Report on the intercomparison run SD-A-1 radionuclides in marine sediment, 14:34056 (R;XA)
MULTIPLE PRODUCTION
Nuclear Temperature
Hot nuclei and search for multifragmentation in medium-energy heavy-ion collisions, 14:35091 (R;FR)
MULTIPLE SCATTERING
Diffraction Models
Model of diffraction scattering with unitary corrections, 14:34970 (R;IT)
MULTIPROCESSING
See PARALLEL PROCESSING
MULTIPROCESSORS

Flanges
Technology of flanger and supporting elements for cylindrical multiwire chambers, 14:34334 (R;SU;In Russian)
Meetings
Light particle correlations at very small relative momenta, 14:34332 (R;FR)
Solid Scintillation Detectors
Light particle correlations at very small relative momenta, 14:34332 (R;FR)
Supports
Technology of flanger and supporting elements for cylindrical multiwire chambers, 14:34334 (R;SU;In Russian)
Testing
Modifications and tests of MWPC Mu0, 14:34322 (R;US)
X-Ray Detection
Two-dimensional position sensitive X-ray detector, 14:34345 (R;HU;In Hungarian)
MUNICIPAL WASTES
Biotechnology
Biofuels and municipal waste technology a national perspective, 14:33778 (BA;US)
Ground Disposal
EPA proposes new standards for municipal solid waste disposal landfills, 14:34484 (J;US)
Hazardous Materials
Hazardous-waste constituents: health and environmental effects profiles. January 1970-January 1989 (Citations from the NTIS data base). Report for January 1970-January 1989, 14:33767 (R;US)
Pyrolysis
Pyrolysis of municipal solid waste, 14:33355 (BA;US)
Sludges
Risk assessment models for land application of municipal sludges (RAMMS Version 3.0). Volume 1. Draft complete documentation of the system/user manual, 14:34465 (R;US)
MUON-CATALYZED FUSION
Spin Orientation
Polarization experiments in fusion reactions of light nuclei, 14:35450 (RA;CS;In Czech)
MUONIC MOLECULES
X-Ray Spectra
Measurement of *K* x rays from muonic helium formed in a low-density target in an intense pulsed muon beam, 14:34916 (J;US)
MUSEUMS
See EDUCATIONAL FACILITIES
MUTAGENESIS
Plant Breeding
Contribution of mutagenesis to the development of improved varieties in Italy, 14:34635 (RA;XA)
MWPC
See MULTIWIRE PROPORTIONAL CHAMBERS
MYCOBACTERIUM TUBERCULOSIS
Eyes
Distribution of radioactively labelled myobacterium tuberculosis (^{65}Zn, ^{35}S-BCG) after injection into the anterior chamber. Studies in rabbits with and without anterior chamber sensitisation, 14:34684 (R;DE;In German)
Radionuclide Kinetics
Distribution of radioactively labelled myobacterium tuberculosis (^{65}Zn, ^{35}S-BCG) after injection into the anterior chamber.

Studies in rabbits with and without anterior chamber sensitisation, 14:34684 (R;DE;In German)

MYOCARDIAL INFARCTION
Dynamic Function Studies
Echocardiography, ventriculography and coronary angiography in patients just recovering from acute myocardial infarction, 14:34623 (R;DE;In German)

MYOCARDIUM
Biomedical Radiography
Echocardiography, ventriculography and coronary angiography in patients just recovering from acute myocardial infarction, 14:34623 (R;DE;In German)

N

N-1440 BARYONS
Meson-Nucleon Interactions
Swelling of nucleons in nuclei and the Roper resonance, 14:35037 (R;FR)
Nucleon Reactions
Swelling of nucleons in nuclei and the Roper resonance, 14:35037 (R;FR)

Breast cancer. Indicators of untouchable mammary lesions, 14:34581 (RA;BR;In Portuguese)
Diagnosis and surgical treatment of phylode tumours, 14:34537 (RA;BR;In Portuguese)
Head
Multidisciplinary treatment in cancer of head and neck, 14:34553 (RA;BR;In Spanish)
Hyperthermia
Morphometric studies of areas of tumorous necrosis produced by radiotherapy, hyperthermia and its therapeutical combination, 14:34558 (RA;BR;In Portuguese)
Liver
Application of studies of liver perfusion in the diagnosis of secondary tumours of the liver, 14:34583 (RA;BR;In Portuguese)
Male Genitals
Our experience and results in the treatment of seminona, stages I and II, 14:34572 (RA;BR;In Spanish)
Mammary Glands
Breast cancer. Indicators of untouchable mammary lesions, 14:34581 (RA;BR;In Portuguese)
Diagnosis and surgical treatment of phylode tumours, 14:34537 (RA;BR;In Portuguese)
Operable breast carcinoma, mammary image techniques: sensitivity, specificity and prognostic value, 14:34580 (RA;BR;In Spanish)
Neck
Multidisciplinary treatment in cancer of head and neck, 14:34553 (RA;BR;In Spanish)
Nervous System Diseases
Comparative evaluation between gammagraphy with 131-I-MIBG and other auxiliary methods of diagnosis in neuroblastoma patients. Six months of experience, 14:34605 (RA;BR;In Portuguese)
Ovaries
Analysis of multidisciplinary therapeutics of advanced cancer of ovary, 14:34597 (RA;BR;In Portuguese)
Pancreas
Glucagonoma-about a case, 14:34582 (RA;BR;In Portuguese)
Radiosensitivity
Radiosensitization of hypoxic bacterial cells and animal tumors by membrane active drugs and hyperthermia, 14:34526 (RA;XA)
Radiotherapy
Association of surgery and radiotherapy in the treatment of medulloblastoma. Results, 14:34556 (RA;BR;In Spanish)
Complications of cancer treatment, 14:34681 (RA;BR;In Portuguese)
Morphometric studies of areas of tumorous necrosis produced by radiotherapy, hyperthermia and its therapeutic combination, 14:34558 (RA;BR;In Portuguese)
Our experience and results in the treatment of seminona, stages I and II, 14:34572 (RA;BR;In Spanish)
Results of 3 years of radio-chemotherapeutic treatment in advanced tumours (O.R.L.), 14:34575 (RA;BR;In Portuguese)
Treatment of first line in 43 cases of immunocytoma, 14:34593 (RA;BR;In Spanish)
Tumours of posterior fossa. Revision of 38 patients, 14:34566 (RA;BR;In Portuguese)
Response Modifying Factors
Frequency of other neoplasias in multiple myeloma (MM), 14:34602 (RA;BR;In Spanish)
Risk Assessment
Influence of time-projection models on estimates of cancer risk from radionuclides, 14:34690 (RA;AT;In German)
Radiation-induced thyroid carcinoma: is radioiodine less effective than X-rays?, 14:34691 (RA;AT)
Salivary Glands
Malignant tumours of parotid gland and therapy, 14:34574 (RA;BR;In Portuguese)
Surgery
Association of surgery and radiotherapy in the treatment of medulloblastoma. Results, 14:34556 (RA;BR;In Spanish)
Testes
Germinal tumours of testes, 14:34571 (RA;BR;In Portuguese)
Therapy
Thymus hormones in cancer. Experience hormones in cancer, 14:34564 (RA;BR;In Spanish)

NEPTUNIUM 237
Radionuclide Migration
Nuclide solubilities and distribution coefficients for use in probabilistic modeling. Data for the nucliedes ^{14}C, ^{79}Se, ^{93}Zr, ^{99}Tc, ^{126}Sn, ^{129}I, ^{135}Cs, ^{237}Np and ^{239}Np, 14:34479 (R;SE)

NEPTUNIUM 239
Nuclide solubilities and distribution coefficients for use in probabilistic modeling. Data for the nucliedes ^{14}C, ^{79}Se, ^{93}Zr, ^{99}Tc, ^{126}Sn, ^{129}I, ^{135}Cs, ^{237}Np and ^{239}Np, 14:34479 (R;SE)

NERVOUS SYSTEM DISEASES
Etiology
Hazard-evaluation and technical assistance report TA 78-12, Oregon State University, Corvallis, Oregon, 14:34399 (R;US)

NET TOKAMAK
Superconducting Coils
Conductor design for NET machine, 14:35446 (RA;IT)

NETHERLANDS
Economic Development
Using energy scenarios for policy purposes. A case study for the Netherlands, 14:33640 (R;NL)
Energy Models
Using energy scenarios for policy purposes. A case study for the Netherlands, 14:33640 (R;NL)
NEUTRAL PARTICLES
Ion Sources
Determination of neutral particle concentration at erosion laser plasma expansion into vacuum, 14:34293 (R;SU;In Russian)
Laser-Produced Plasma
Determination of neutral particle concentration at erosion laser plasma expansion into vacuum, 14:34293 (R;SU;In Russian)
NEUTRINO DETECTION
Research Programs
Analytical/experimental investigation of corpuscular radiation detectors. Final report, 1 May 1985-31 August 1987, 14:34317 (R;US)
NEUTRINO-PROTON INTERACTIONS
See also ANTINEUTRINO-PROTON INTERACTIONS
Elastic Scattering
Additional Z'-boson in ν-barN elastic and quasielastic scattering, 14:34982 (R;SU;In Russian)
NEUTRINOS
See also ELECTRON NEUTRINOS
SOLAR NEUTRINOS
Mass
Neutrino mass and double beta decay, 14:35360 (BA;SG)
Reviews
Old and new problems in the neutrino physics, 14:34971 (RA;CS;In Czech)
NEUTRON ACTIVATION ANALYSIS
See NEUTRON REACTIONS
NEUTRON BEAMS
Gamma Radiation
Comparison of the gamma component of two high energy neutron therapy beams, 14:34627 (R;ZA)
Neutron Therapy
Comparison of the gamma component of two high energy neutron therapy beams, 14:34627 (R;ZA)
Transmission
Measurement of neutron distribution in energy and in probability of interaction with matter in transmission experiment with reactor beam, 14:35180 (RA;SU;In Russian)
NEUTRON CAPTURE
See NEUTRON REACTIONS
NEUTRON CAPTURE THERAPY
Recent developments in neutron capture therapy, 14:34630 (J;DE)
NEUTRON DETECTION
Liquid Scintillation Detectors
Associated particle technique for absolute neutron counting efficiency determination, 14:34320 (R;FR)
Neutrons and light nuclei detectors realization for the 4π multidetector amphora, 14:34348 (R;FR;In French)
Proton Recoil Detectors
Neutrons and light nuclei detectors realization for the 4π multidetector amphora, 14:34348 (R;FR;In French)
NEUTRON DOSIMETRY
Belgium
Comparison of the gamma component of two high energy neutron therapy beams, 14:34627 (R;ZA)
Bragg Gray Chambers
Neutron dosimetry intercomparison study with tissue equivalent ionization chambers: National Accelerator Centre and Universite Catholique de Louvain, Belgium, 14:34626 (R;ZA)
Neutron dosimetry measurements at the MRC cyclotron unit, Clatterbridge Hospital, U.K., 14:34625 (R;ZA)
Comparative Evaluations
Neutron dosimetry intercomparison study with tissue equivalent ionization chambers: National Accelerator Centre and Universite Catholique de Louvain, Belgium, 14:34626 (R;ZA)
Neutron dosimetry measurements at the MRC cyclotron unit, Clatterbridge Hospital, U.K., 14:34625 (R;ZA)
South Africa
Comparison of the gamma component of two high energy neutron therapy beams, 14:34627 (R;ZA)
NEUTRON MATTER
See NUCLEAR MATTER
NEUTRON RADIOGRAPHY
Dimensions
Dimensional measurements from neutron radiographs, 14:34205 (R;DK)
NEUTRON REACTIONS
See also FAST FISSION
THERMAL FISSION
Neutron-nucleus reaction as a quasiclassical multistep process, 14:35145 (RA;SU;In Russian)
Capture
Application of theoretical models for prediction of neutron cross sections of poorly investigated nuclei with using ^{238}Pu as an example, 14:35131 (RA;SU;In Russian)
Calculated methods of estimation of multiple neutron interaction effects in samples with allowance for resonance structure of cross sections, 14:35148 (RA;SU;In Russian)
Cross section of thermal neutron capture by ^{152m}Eu isomer (9.3 hours), 14:35083 (RA;SU;In Russian)
Gamma-ray spectrum from the ^{50}V(n,γ)^{51}V reaction at neutron energy of 2 keV, 14:35060 (RA;SU;In Russian)
Measurement of radiative neutron capture cross section of uranium 238, 14:35102 (RA;SU;In Russian)
Measurement of self-shielding factors of neutron capture cross sections for ^{232}Th and ^{238}U in the unresolved resonance region, 14:35101 (RA;SU)
Method of averaging over resonance cross sections within R matrix theory, 14:35135 (RA;SU;In Russian)
Radiative capture cross sections of thermal neutrons for ^{236}U and ^{232}Th, 14:35106 (RA;SU;In Russian)
Radiative capture of valence neutron within the model of strong coupling of compound states with scattering channel, 14:35143 (RA;SU;In Russian)
Semiempirical determination of average cross sections for radiative neutron capture, 14:35147 (RA;SU;In Russian)
Charge-Exchange Reactions
On the contribution of direct processes to cross section of charge-exchange ^{58}Ni(n,p)^{58}Co reaction, 14:35141 (RA;SU;In Russian)
Compound Nuclei
Effects of strong coupling between compound states and scattering channel of low-energy neutrons, 14:35137 (RA;SU;In Russian)
Coupled Channel Theory
Multiphonon variant of coupled channel method and neutron strength functions, 14:35142 (RA;SU;In Russian)
On the contribution of direct processes to cross section of charge-exchange ^{58}Ni(n,p)^{58}Co reaction, 14:35141 (RA;SU;In Russian)
Cross Sections
Calculated methods of estimation of multiple neutron interaction effects in samples with allowance for resonance structure of cross sections, 14:35148 (RA;SU;In Russian)
Method of averaging over resonance cross sections within R matrix theory, 14:35135 (RA;SU;In Russian)
Doppler Broadening
Influence of atomic, molecular and solid state effects on the neutron resonance cross-section, 14:35126 (R;XA)
Elastic Scattering
Neutron scattering and the Fermi surface anomaly in ^{51}V, 14:35063 (J;NL)
Radiative capture of valence neutron within the model of strong coupling of compound states with scattering channel, 14:35143 (RA;SU;In Russian)
Role of structure effects of nucleus in fast neutron scattering on chromium 52 nucleus, 14:35139 (RA;SU;In Russian)
Statistical description of neutrino scattering in presence of direct processes, 14:35132 (RA;SU;In Russian)

Energy Absorption
Translation of selected papers published in Nuclear Constants 2, 1988, 14:35125 (R;XA)
Fission
Application of theoretical models for prediction of neutron cross sections of poorly investigated nuclei with using ^{238}Pu as an example, 14:35131 (RA;SU;In Russian)
Measurement of multiplicity and total energy of gamma radiation from the ^{235}U fission by resonance neutrons, 14:35105 (RA;SU;In Russian)
Inelastic Scattering
Neutron scattering and the Fermi surface anomaly in ^{51}V, 14:35063 (J;NL)
Role of structure effects of nucleus in fast neutron scattering on chromium 52 nucleus, 14:35139 (RA;SU;In Russian)
Statistical description of neutrino scattering in presence of direct processes, 14:35132 (RA;SU;In Russian)
Kerma
Translation of selected papers published in Nuclear Constants 2, 1988, 14:35125 (R;XA)
Nuclear Potential
Strength function of neutrons and effective optical potential within the model of strong coupling of compound states and scattering channel, 14:35144 (RA;SU;In Russian)
P Invariance
Investigation of angular correlations in the (n,p) reaction, 14:35058 (RA;SU;In Russian)
Resonance Integrals
Measurement of resonance integrals of ^{70}Ge and ^{74}Ge activation, 14:35068 (RA;SU;In Russian)
Resonance Scattering
Influence of atomic, molecular and solid state effects on the neutron resonance cross-section, 14:35126 (R;XA)
S Matrix
Effects of strong coupling between compound states and scattering channel of low-energy neutrons, 14:35137 (RA;SU;In Russian)
S States
Analysis of distributions of reduced s neutron resonance widths, 14:35032 (RA;SU;In Russian)
Self-Shielding
Measurement of self-shielding factors of neutron capture cross sections for ^{232}Th and ^{238}U in the unresolved resonance region, 14:35101 (RA;SU)
Simulation
Simulation of probability values of total neutron cross section by gamma distribution, 14:35146 (RA;SU;In Russian)
Strength Functions
Multiphonon variant of coupled channel method and neutron strength functions, 14:35142 (RA;SU;In Russian)
Strength function of neutrons and effective optical potential within the model of strong coupling of compound states and scattering channel, 14:35144 (RA;SU;In Russian)
Total Cross Sections
Measurement of total neutron cross section and neutron spectrum of reactor in the energy range of 20-90 keV by means of sulfur filter, 14:35034 (RA;SU;In Russian)
Simulation of probability values of total neutron cross section by gamma distribution, 14:35146 (RA;SU;In Russian)

NEUTRON REFLECTORS
Ibr-2 Reactor
Results of experimental and calculational studies of perspective reactivity modulator for the IBR-2 reactor, 14:33553 (R;SU;In Russian)

NEUTRON SOURCE FACILITIES
Cryostats
KEK-Mark 3000 UCN production system, 14:35185 (RA;JP;In Japanese)
Mev Range 01-10
Associated particle technique for absolute neutron counting efficiency determination, 14:34320 (R;FR)
Mev Range 10-100
Associated particle technique for absolute neutron counting efficiency determination, 14:34320 (R;FR)
Proton Beams
Associated particle technique for absolute neutron counting efficiency determination, 14:34320 (R;FR)

NEUTRON SOURCES
Experiments on D-T neutron source characteristics of an FNS high speed water cooled target, 14:35451 (R;JP;In Japanese)
Cold Neutrons
Self-regulating characteristic of KUR cold neutron source, 14:33554 (RA;JP)
Fast Neutrons
Axial distribution of absorbed doses in fast neutron field at the RB reactor, 14:35186 (RA;AT)

NEUTRON SPECTRA
Measurement of total neutron cross section and neutron spectrum of reactor in the energy range of 20-90 keV by means of sulfur filter, 14:35034 (RA;SU;In Russian)
Data Processing
New development of neutron spectral modulation data analysis, 14:35183 (RA;JP)

NEUTRON THERAPY
See also NEUTRON CAPTURE THERAPY
Neutron Beams
Field factors for the NAC p(66 MeV)/Be neutron therapy beam, 14:34628 (R;ZA)

NEUTRON TRANSPORT
Energy Dependence
Energy dependent transport problem with generalized boundary conditions, 14:35175 (R;XA)

NEUTRON TRANSPORT THEORY
Slabs
Eigenvalues of one-speed neutrons in finite slabs, 14:35174 (R;SE)

NEUTRON-NEUTRON INTERACTIONS
Effect of the particle-particle interaction on the $K^{\pi}=2^{+}$ states in deformed nuclei, 14:35156 (R;SU)

NEUTRON-RICH ISOTOPES
Delayed Neutrons
NE-213 Liquid scintillator, neutron detector designed for lifetime measurements of very neutron-rich nuclei, 14:34323 (R;FR)
Lifetime
NE-213 Liquid scintillator, neutron detector designed for lifetime measurements of very neutron-rich nuclei, 14:34323 (R;FR)

NEUTRONS
See also ANTINEUTRONS
FAST NEUTRONS
FISSION NEUTRONS
THERMAL NEUTRONS
Angular Distribution
Momentum distributions of nucleons flying out at large angles in ^{4}He-p-collisions, 14:35046 (R;SU;In Russian)
Electric Dipole Moments
DEMON and high energy theory, 14:34985 (RA;JP)
Particle Radii
Experimental determination of mean square radius of electric charge distribution in neutron, 14:35178 (RA;SU;In Russian)

NEVADA
Radioactive Waste Storage
Mathematical models for redox and corrosion potentials for high level nuclear waste containers in tuff environments, 14:33320 (BA;US)

NEWFOUNDLAND
Government Policies
Biomass fuels for industrial, commercial and instituional use. A provincial perspective, 14:33649 (RA;CA)
Peat
Biomass fuels for industrial, commercial and instituional use. A provincial perspective, 14:33649 (RA;CA)
Resource Potential
Peat land inventory. Overview, methodology and application Newfoundland, 14:33648 (RA;CA)
Wood Fuels
Biomass fuels for industrial, commercial and instituional use. A provincial perspective, 14:33649 (RA;CA)

The power of alternatives. Energy from wood and peat, 14:33366 (R;CA)

NEWTON MECHANICS

NGL
See NATURAL GAS LIQUIDS

NICKEL
Atom Transport
A SIMS study of the filling of traps for deuterium in krypton-implanted nickel, 14:33924 (J;US)
Backscattering
Combination of backscattering and translucent electron microscopy methods at the research of thin-film samples, 14:33882 (RA;SU;In Russian)
Catalytic Effects
A novel approach to hydrogen recovery, storage and transport: Final technical report, 14:33341 (R;US)
Fundamental studies of catalytic gasification: Quarterly report, January 1, 1989–March 31, 1989, 14:33100 (R;US)
The old and the new: Studies of metal-catalysed exchange by sup 3H NMR spectroscopy, 14:34075 (R;US)
Chemical Reactions
Kinetics of the solid-state amorphizing reaction in thin films studied by electrical resistivity, 14:33920 (J;US)
Corrosion
Corrosion of low-nickel weldments in coal gasification atmospheres, 14:33910 (BA;US)
Deactivation
Deactivation of hydrotreatment catalysts used for coal liquids: Semi-annual report, November 12, 1988–May 11, 1989, 14:33067 (R;US)
Diffusion
Kinetics of the solid-state amorphizing reaction in thin films studied by electrical resistivity, 14:33920 (J;US)
Ecological Concentration
Natural trace metal concentrations in estuarine and coastal marine sediments of the southeastern United States, 14:34502 (J;US)
Electrodeposition
Electroformed nickel frangible nose cone, 14:34208 (BA;US)
Electrodes
Application of transmission line analysis to porous battery electrodes, 14:33618 (BA;US)
Grain Boundaries
Solute effects on mechanical properties of grain boundaries, 14:33825 (RA;US)
Ion Implantation
A SIMS study of the filling of traps for deuterium in krypton-implanted nickel, 14:33924 (J;US)
Melting
Crystal-melt and melt-vapor interfaces of nickel, 14:33929 (J;US)
Optical Properties
Chemisorption-induced reflectivity changes in thin metal films, 14:34027 (BA;US)
Physical Radiation Effects
Bound strength between gas pores and grain boundaries in copper and nickel, 14:33881 (RA;SU;In Russian)
Combination of backscattering and translucent electron microscopy methods at the research of thin-film samples, 14:33882 (RA;SU;In Russian)
Influence of thermal displacements on the defect distribution profile calculated by the pair collision method, 14:33884 (RA;SU;In Russian)
Intensity of dislocation sinks in nickel, 14:33879 (RA;SU;In Russian)
Radiation Effects
Radiation effects in metals and semiconductors, 14:33834 (RA;US)
Sorptive Properties
Reaction of chemisorbed CH and H on nickel, 14:34080 (J;US)
Voids
Bound strength between gas pores and grain boundaries in copper and nickel, 14:33881 (RA;SU;In Russian)

NICKEL 58 TARGET
Alpha Reactions
Study of the small-angle correlations of charged particles from alpha-particle induced reactions on ^{58}Ni at 120 MeV, 14:35061 (R;DE;In German)
Neutron Reactions
On the contribution of direct processes to cross section of charge-exchange $^{58}Ni(n,p)^{58}Co$ reaction, 14:35141 (RA;SU;In Russian)

NICKEL ALLOYS
See also NICKEL BASE ALLOYS
Amorphous State
Kinetics of the solid-state amorphizing reaction in thin films studied by electrical resistivity, 14:33920 (J;US)
Atom Transport
Kinetics of the solid-state amorphizing reaction in thin films studied by electrical resistivity, 14:33920 (J;US)
Ductility
Direct observation of the compositional disordering of Ni_3Al in the vicinity of grain boundaries using high resolution electron microscopy techniques, 14:33937 (J;US)
Electric Conductivity
Kinetics of the solid-state amorphizing reaction in thin films studied by electrical resistivity, 14:33920 (J;US)
Resistance noise in amorphous Ni-Zr: Hydrogen diffusion and universal conductance fluctuations, 14:33927 (J;US)
Electrochemical Corrosion
Corrosion of Fe-25Cr-20Ni alloy in molten alkali carbonates, 14:33909 (BA;US)
Electrodeposition
Pulsed electrodeposition of Ni-Mo alloys, 14:33806 (R;US)
Grain Boundaries
Theoretical studies of grain boundaries in Ni_3Al with boron or sulfur, 14:33923 (J;US)
Mechanical Properties
Mechanical properties of intermetallic compounds, 14:33827 (RA;US)
Microstructure
Analysis of microstructural development in single crystal welds, 14:33816 (R;US)
Radiation Effects
Radiation effects in metals and semiconductors, 14:33834 (RA;US)

NICKEL BASE ALLOYS
See also INCONEL ALLOYS
TOPHET
Corrosion
Influence of Cr/W ratio on corrosion behavior of Ni-Cr-W superalloys in simulated VHTR helium environment, 14:33885 (R;JP;In Japanese)
Ductility
Microchemical analysis of intermetallic alloys using the field-ion microscope atom probe: Progress report, [July 1, 1988–December 31, 1988], 14:33847 (R;US)
Grain Boundaries
Local strain determination at interfaces in metals and semiconductors, 14:33822 (RA;US)
Microstructure
Structure and kinetics of ordering in metal alloys and silicide thin films, 14:33830 (RA;US)

NICKEL BORIDES
Grain Boundaries
Solute effects on mechanical properties of grain boundaries, 14:33825 (RA;US)

NICKEL HYDROXIDES
Absorption Spectra
X-ray absorption study of β-nickel hydroxides, 14:33966 (BA;US)

NICKEL IONS
Lifetime
Lifetimes of two-photon-emitting states in heliumlike and hydrogenlike nickel, 14:34928 (J;US)

NICKEL OXIDES
Catalytic Effects
Fundamental studies of catalytic gasification: Annual report, October 1, 1987–September 30, 1988, 14:33098 (R;US)
Electrodes
Studies on hydrogen-permeable nickel membrane fuel cell, 14:33697 (BA;US)
NICKEL SILICIDES
Phase Diagrams
Thermochemical stability diagrams for condensed phases and tabulation of volatile species over condensed phases for thirteen metal-oxygen-silicon systems at 1000 and 1250 K: Volume 2: Final report, 14:33101 (R;US)
Phase Transformations
Structure and kinetics of ordering in metal alloys and silicide thin films, 14:33830 (RA;US)
Radiation Effects
Radiation effects in metals and semiconductors, 14:33834 (RA;US)
NICKEL SULFIDES
Grain Boundaries
Solute effects on mechanical properties of grain boundaries, 14:33825 (RA;US)
NICKEL-CHROMIUM STEELS
Fracture Properties
Prediction of large specimen fracture toughness from small specimen tests, 14:33874 (RA;DE)
Hydrogen Embrittlement
Mechanisms of environmentally induced embrittlement, 14:33824 (RA;US)
NICKEL-ZINC BATTERIES
Performance
Mathematical model of the secondary Zn/NiOOH cell, 14:33616 (BA;US)
NIM
See NUCLEAR INSTRUMENT MODULES
NIOBIUM
Metallurgical Effects
Quantitative thin film x-ray microanalysis of Nb modified Ti_3Al, 14:33903 (R;US)
Radiation Effects
Ultrasonic studies of radiation effects, 14:33833 (RA;US)
NIOBIUM ALLOYS
See also NIOBIUM BASE ALLOYS
Microstructure
Quantitative thin film x-ray microanalysis of Nb modified Ti_3Al, 14:33903 (R;US)
Physical Properties
A method for generating the J_c, B, T surface for niobium-alloy superconductors, 14:33890 (R;US)
Solidification
Structure, properties and fracture of pulsed Nd:YAG laser welded Ti-14.8wt%Al-21.3wt%Nb titanium aluminide, 14:33934 (J;US)
NIOBIUM BASE ALLOYS
Stabilized Superconductors
Development of superconducting magnets using multifilament Nb_3Sn conductors, 14:33860 (RA;CS;In Slovak)
NIOBIUM SELENIDES
Nuclear Magnetic Resonance
Nuclear magnetic resonance in solids, 14:33839 (RA;US)
NIOBIUM SILICIDES
Phase Diagrams
Thermochemical stability diagrams for condensed phases and tabulation of volatile species over condensed phases for thirteen metal-oxygen-silicon systems at 1000 and 1250 K: Volume 2: Final report, 14:33101 (R;US)
NITRIC OXIDE
Environmental Effects
Formation and destruction of nitrous oxide in lean, premixed combustion, 14:34103 (BA;US)
Reduction
Late transition metal μ-oxo and μ-imido complexes: Progress report, May 15, 1988–May 14, 1989, 14:34071 (R;US)
NITRO COMPOUNDS
See also METRONIDAZOLE
Detonations
Detonation of unconfined large scale fuel spray-air clouds, 14:34371 (R;US)
Thin pulse shock initiation characterization of extrusion-cast explosives: Revision, 14:34372 (R;US)
NITROGEN
Combustion Kinetics
Role of methoxy radicals in combustion, 14:34109 (BA;US)
Ignition
Pulsed plasma jet igniters, 14:33203 (BA;US)
Photoionization
A photoion–photoelectron coincidence study of $(N_2)_2$ and $(N_2)_3$, 14:34083 (J;US)
Synthesis
Formation of polyhedral N_2 bubbles during reactive sputter deposition of epitaxial TiN(100) films, 14:33971 (J;US)
Townsend Discharge
Avalanches near a solid insulator in nitrogen gas at atmospheric pressure, 14:34939 (J;US)
NITROGEN 13
Isobaric Analogs
Spin-flip cross sections for $^{13}C(\vec{p},\vec{n})^{13}N$(g.s.) at 500 MeV, 14:35167 (J;US)
NITROGEN 14
Wave Functions
Wave function of ^{14}N, 14:35170 (J;US)
NITROGEN 14 TARGET
Neutron Reactions
Investigation of angular correlations in the (n,p) reaction, 14:35058 (RA;SU;In Russian)
Proton Reactions
Wave function of ^{14}N, 14:35170 (J;US)
NITROGEN 15 TARGET
Parity nonconserving asymmetries in the resonance scattering and nuclear reactions induced by polarized protons, 14:35115 (R;XA)
NITROGEN COMPOUNDS
See also ISOCYANIC ACID
NITROGEN OXIDES
Nitrogen components in coal peat and petroleum. Literature study, 14:33124 (R;SE;In Swedish)
Combustion Kinetics
Theoretical studies of the chemical reactions involved in the ignition of nitramines, 14:34105 (BA;US)
Structural Chemical Analysis
Identification of nitrogen functional groups in Athabasca bitumen, 14:33217 (RA;CA)
NITROGEN DIOXIDE
Ecological Concentration
Macromodel for assessing residential concentrations of combustion-generated pollutants: Model development and preliminary predictions for CO, NO_2, and respirable suspended particles, 14:33732 (R;US)
NITROGEN NITRIDES
See NITROGEN
NITROGEN OXIDES
See also NITRIC OXIDE
NITROGEN DIOXIDE
NITROUS OXIDE
Aerial Monitoring
Long-term follow-up of NO_x-emissions from the Vaesthamn plant in Helsingborg, 14:33447 (R;SE;In Swedish)
Air Pollution Abatement
Low NO_x burners for heavy fuel oil. A prestudy of presently available technique with emphasis on small compactboiler, 14:34428 (R;SE;In Swedish)
Secondary fuel feed to a pulverized coal flame to reduce NO_x emission, 14:33145 (R;SE;In Swedish)
Removal
Improved industrial catalysts: Part 1, Catalysts for NO and NO-sub x removal: Final report, 14:33957 (R;US)

Microwave energy for SO_2 and NO_x removal from flue gas: Final report, 14:33437 (R;US)

NITROUS ACID
Measuring Methods
Nitrous oxide emissions from stationary sources, 14:34385 (R;FI;In Finnish)

NITROUS OXIDE
Combustion Kinetics
Formation and destruction of nitrous oxide in lean, premixed combustion, 14:34103 (BA;US)

NMR
See NUCLEAR MAGNETIC RESONANCE

NOISE (REACTOR)
See REACTOR NOISE

NOISE POLLUTION
Environmental Impacts
Noise assessment of the rocket sled test track operation at Jolloman AFB, New Mexico. Final report, 14:34712 (R;US)

NOISE POLLUTION ABATEMENT
Recommendations
Noise assessment of the rocket sled test track operation at Jolloman AFB, New Mexico. Final report, 14:34712 (R;US)

NONDESTRUCTIVE TESTING
In-Service Inspection
In-service testing of base material and welded joints in nuclear power plants, 14:34180 (RA;CS;In Czech)

NONLINEAR OPTICS
Uses
Analytical applications of nonlinear optics including phase conjugation, 14:34158 (BA;US)

NONLUMINOUS MATTER
Solar Neutrinos
Wimps and stellar structure, 14:34863 (R;FR)
Superconducting Colloid Detectors
New ideas on the detection of cold dark matter and magnetic monopoles, 14:34861 (R;FR)

NONRADIOACTIVE WASTE DISPOSAL
See WASTE DISPOSAL

NORADRENALINE
Enzyme Immunoassay
Comparative evaluation of two radioenzymatic procedures designed to determine noradrenaline in the plasma (COMT assay and PNMT assay), 14:34619 (R;DE;In German)
Radioimmunoassay
Comparative evaluation of two radioenzymatic procedures designed to determine noradrenaline in the plasma (COMT assay and PNMT assay), 14:34619 (R;DE;In German)

NOREPINEPHRINE
See NORADRENALINE

NORTH AMERICA
See also CANADA
USA
Security
Canada: the decision to procure nuclear-attack submarines and its significance for NATO. Master's thesis, 14:33803 (R;US)

NORTH DAKOTA
Coal Gasification Plants
Upgrading alternatives for Great Plains by-product liquids, 14:33046 (RA;US)

NORTH SEA
Radionuclide Migration
Model investigations on the propagation of artificial radionuclides in the North Sea, 14:34503 (R;DE;In German)

NORTHERN IRELAND
See UNITED KINGDOM

NORWAY
Energy Consumption
Stabilizing of the energy consumption in Norway, 14:33673 (R;NO;In Norwegian)
Energy Policy
Stabilizing of the energy consumption in Norway, 14:33673 (R;NO;In Norwegian)
Offshore Drilling
Working conditions and safety in drilling (Statoil). Work organization, technology and recruiting (NTNF), 14:33162 (R;NO;In Norwegian)

NOS. 4, 5, AND 6 FUEL OILS
See RESIDUAL FUELS

NOS. 5 AND 6 BURNER OILS
See RESIDUAL FUELS

NOVAE
Ultraviolet Spectra
Cataclysmic variables, 14:34771 (RA;FR)
UV spectra of cataclysmic and symbiotic variables, 14:34851 (RA;CS)

NOZZLES
Testing
Multi-nozzle humidification tests: Test results: Part 4 (Hydrate addition at low temperature for the removal of SOsub 2), 14:33440 (R;US)

NPR REACTOR
See N-REACTOR

NSLS
X-Ray Fluorescence Analysis
An x-ray microprobe facility using synchrotron radiation, 14:34048 (R;US)

NUCLEAR ACCIDENTS
See ACCIDENTS

NUCLEAR ATTACKS

NUCLEAR CONTROVERSY
See HUMAN POPULATIONS

NUCLEAR DATA COLLECTIONS
Calibration
Calibration of nuclear data WBC-6000 counter system for I-131 thyroid counting, 14:34350 (R;MY)
Data Base Management
Proceedings of the 1988 seminar on nuclear data, 14:33531 (R;JP)
Nuclear Structure
International Evaluated Nuclear Structure Data File (ENSDF) in fundamental and applied photonuclear research, 14:35124 (R;XA)
Photonuclear Reactions
International Evaluated Nuclear Structure Data File (ENSDF) in fundamental and applied photonuclear research, 14:35124 (R;XA)

NUCLEAR DISARMAMENT
United Nations
United Nations General Assembly and Disarmament 1987, 14:33801 (R;XU)

NUCLEAR EMULSIONS
Oxygen 16 Reactions
Production of helium (Z=2) projectile fragments in ^{16}O-emulsion interactions from E/A=2 to 200 GeV, 14:35079 (J;US)

NUCLEAR ENERGY
Coordinated Research Programs
Compilation of results 1987. Nuclear power technology, 14:35479 (R;SE;In Swedish)
Economics
Nuclear power production costs, 14:33526 (R;AR;In Spanish)
Information
Compilation of results 1987. Nuclear power technology, 14:35479 (R;SE;In Swedish)

NUCLEAR ENERGY AGENCY
See NEA

NUCLEAR EXPLOSIONS
Cratering Explosions
Weather predictions and surface radiation estimates for Project SCHOONER, 14:34376 (R;US)

NUCLEAR FACILITIES
See also FEED MATERIALS PLANTS
FUEL REPROCESSING PLANTS
NUCLEAR POWER PLANTS
RADIOACTIVE WASTE FACILITIES

Advisory Committees
The Academies' review of material control and accounting, 14:33337 (J;US)
Decommissioning
Fusion process for metallic wastes slightly contaminated by radioactive substances, 14:33251 (R;FR;In French)
NEA international co-operative projects, 14:33582 (R;XN)
Inspection
Randomization of inspections, 14:33332 (R;US)
License Applications
Function of specialized organization in work safety engineering for nuclear installations, 14:33521 (R;BR;In Portuguese)
On-Line Measurement Systems
On-line diagnosis and recovery of adversary attack using logic flowgraph methodology simulation, 14:33336 (BA;US)
Personnel Monitoring
Nuclear power industry, -activity discharge, -occupational exposures. Third quater of the year 1987, 14:35200 (R;SE;In Swedish)
Radiation Doses
Nuclear power industry, -activity discharge, -occupational exposures. Third quater of the year 1987, 14:35200 (R;SE;In Swedish)
Radioactive Effluents
Nuclear power industry, -activity discharge, -occupational exposures. Third quater of the year 1987, 14:35200 (R;SE;In Swedish)
Radioactive Waste Processing
Fusion process for metallic wastes slightly contaminated by radioactive substances, 14:33251 (R;FR;In French)
Robots
HERMIES-I, 14:33596 (BA;US)
Safety Engineering
Function of specialized organization in work safety engineering for nuclear installations, 14:33521 (R;BR;In Portuguese)
Site Selection
Nuclear installations sites safety, 14:33546 (R;FR;In French)

NUCLEAR FRAGMENTS
See also FISSION FRAGMENTS
HYPERNUCLEI
Deep Inelastic Heavy Ion Reactions
Deeply inelastic collisions as a source of intermediate mass fragments at E/A = 27 MeV*, 14:35149 (R;FR)

NUCLEAR FUEL ELEMENTS
See FUEL ELEMENTS

NUCLEAR FUELS
See also LIQUID METAL FUELS
MIXED CARBIDE FUELS
SPENT FUELS
Comparative Evaluations
Summary report on the HFED [High-Uranium-Loaded Fuel Element Development] miniplate irradiations for the RERTR [Reduced Enrichment Research and Test Reactor] Program, 14:33542 (R;US)
Safety
Instructions for processing programs for transport, storage and handling of nuclear fuel and for programs of basic critical experiments on nuclear research installations, 14:33246 (R;CS;In Czech)
Verification
Near-real-time verification approaches for the process area of reprocessing plants, 14:33330 (R;US)
Near-real-time verification approaches for the process area of reprocessing plants, 14:33331 (R;US)

NUCLEAR INDUSTRY
Energy Policy
In pursuit of consensus, 14:33802 (BA;US)

NUCLEAR INSTRUMENT MODULES
Logic Circuits
Some fast logic units for high energy physics experiments, 14:34335 (R;SU;In Russian)

NUCLEAR MAGNETIC RESONANCE
Ferrimagnetism
Hyperfine interactions in substituted YIG's, 14:35220 (RA;CS;In Czech)
Performance
Analysis of biodegraded coals, 14:33116 (RA;US)
Performance Testing
Use of high resolution ^{1}H and ^{13}C NMR techniques in the study of fuels and coal derived liquids, 14:33119 (RA;US)

NUCLEAR MATERIALS MANAGEMENT
Accounting
The Academies' review of material control and accounting, 14:33337 (J;US)
Automation
Development and integration of a material monitoring/tracking system at ANL, 14:33334 (R;US)
Computerized Control Systems
On-line diagnosis and recovery of adversary attack using logic flowgraph methodology simulation, 14:33336 (BA;US)
Reviews
The Academies' review of material control and accounting, 14:33337 (J;US)

NUCLEAR MATTER
Quantum Chromodynamics
Large-N_c QCD, composite nucleons, and the Dirac sea, 14:35173 (J;US)
Walecka Model
Two-loop corrections for nuclear matter in the Walecka model, 14:35169 (J;US)

NUCLEAR MODELS
See also PARTICLE-HOLE MODEL
SHELL MODELS
SUPERFLUID MODEL
Nuclear Structure
On some recent developments in microscopic nuclear models, 14:35152 (R;FR)

NUCLEAR PHYSICS
32nd Annual conference and the 22nd annual theoretical seminar of the South African Institute of Physics, 14:35127 (R;ZA;In English, Afrikaans)
[US-Japan workshop on fusion neutronics at Osaka University, Osaka, Japan, May 25–26, and visits to Savar, Bangladesh, April 20–May 19, Beijing, China, May 21–24, and Tokai, Japan, May 29–30]: Foreign trip report, 14:35040 (R;US)
Dosimetry
Relationship between nuclear physics and ionizing radiation dosimetry, 14:34326 (RA;CS;In Czech)
Educational Facilities
Instructor kit to demonstrate basic radiation protection, 14:35198 (RA;AT)

NUCLEAR POTENTIAL
Neutron Reactions
Optical potential of neutron interaction with lead nuclei in the energy range of 0.00025-16 MeV, 14:35140 (RA;SU;In Russian)
Optical Models
Optical potential of neutron interaction with lead nuclei in the energy range of 0.00025-16 MeV, 14:35140 (RA;SU;In Russian)

NUCLEAR POWER
Forecasting
Brief analysis of the supply and demand of uranium, 14:33247 (RA;XA)

NUCLEAR POWER PHASEOUT
Philippines
Status of PNPP-1, 14:33482 (R;PH)

NUCLEAR POWER PLANTS
Construction
Construction times and the decommissioning of nuclear power plants, 14:33527 (R;AR;In Spanish)
Nuclear power plant construction activity, 1988, 14:33454 (R;US)
Decommissioning
Construction times and the decommissioning of nuclear power plants, 14:33527 (R;AR;In Spanish)

Electric Cables
Characterization of in-containment cables for nuclear plant life extension, 14:33459 (R;US)
Technical, economic, and institutional issues affecting the life extension of cables, 14:33539 (R;US)
Electrical Equipment
Seismic capacity of switchgear, 14:33566 (R;US)
Emergency Plans
Comparison of nuclear plant emergency plans of PBNCC members, 14:33597 (J;US)
Environment
Post-Chernobyl environment monitoring data of nuclear power plants in Switzerland, 14:34444 (RA;AT;In German)
Environmental Impacts
200 Radioactivity transport and the environmental effects, AKTU, 14:33547 (RA;DK;In Norwegian)
Nuclear energy and environment, 14:33573 (RA;CS;In Slovak)
Fires
Deterministic and probabilistic model for oilspill fires in nuclear power plants. A final report to the Swedish Nuclear Power Inspectorate, 14:33540 (R;SE)
Users' guide to OSFIC. A computer program for oilspill fires in compartments, 14:33541 (R;SE)
Fission Product Release
Analysis of site-specific dispersion conditions, 14:34434 (R;DE;In German)
International Cooperation
Comparison of nuclear plant emergency plans of PBNCC members, 14:33597 (J;US)
Leaks
200 Radioactivity transport and the environmental effects, AKTU, 14:33547 (RA;DK;In Norwegian)
Management
Good practices for improved nuclear power plant performance, 14:33456 (R;XA)
Nuclear Data Collections
Proceedings of the 1988 seminar on nuclear data, 14:33531 (R;JP)
Pipes
Closed form expressions for fracture mechanics analysis of cracked pipes, 14:33898 (RA;US)
Deformation plasticity failure assessment diagram approach, 14:33895 (RA;US)
Ductile piping fracture mechanics, 14:33896 (RA;US)
Elastic-plastic finite element analyses of circumferentially cracked pipe geometries, 14:33899 (RA;US)
J-integral analysis of a circumferentially cracked pipe subjected to bending loads, 14:33897 (RA;US)
Solution to the workshop problem using the CEGB fracture assessment procedure [R6], 14:33893 (RA;US)
Radioactive Effluents
Why there is no causal link between radioactivity release from nuclear power plants and damaged forests, 14:34456 (RA;AT;In German)
Reactor Licensing
Applications of license renewal evaluation methodology to identify key components for generic life assessment, 14:33524 (R;US)
Reactor Operation
Good practices for improved nuclear power plant performance, 14:33456 (R;XA)
Licensee Event Report (LER) compilation for month of April 1989, 14:33523 (R;US)
Risk Assessment
Evaluation of systems interactions in nuclear power plants: Technical findings related to Unresolved Safety Issue A-17, 14:33588 (R;US)
Safety
Improving operational safety management through probabilistic safety assessment on personal computers. Report of a technical committee meeting held in Vienna, 16-20 March 1987, 14:33572 (R;XA)
OSART results II. A summary of the results of Operational Safety Review Team Missions during the period June 1987 to May 1988, 14:33455 (R;XA)
Systems Analysis
Evaluation of systems interactions in nuclear power plants: Technical findings related to Unresolved Safety Issue A-17, 14:33588 (R;US)

ON-LINE CONTROL SYSTEMS
Jinr U-400 Cyclotron
Microprocessor control subsystem for extream control of the U-400 cyclotron beam current by variation of ion source regime, 14:34301 (R;SU;In Russian)
Neutron Spectrometers
Polarized neutron spectrometer. Distributed system for experiment automation on the base of microcomputer and CAMAC microprocessor controllers, 14:34340 (R;SU;In Russian)
Spectra Unfolding
Polarized neutron spectrometer. Distributed system for experiment automation on the base of microcomputer and CAMAC microprocessor controllers, 14:34340 (R;SU;In Russian)
ONE-DIMENSIONAL CALCULATIONS
Topological Mapping
Number of periodic windows in one-dimensional mappings, 14:35309 (BA;SG)
ONIONS
Radurization
Radiation treatment of onions, 14:34665 (R;DD;In German)
ONTARIO
Surface Waters
Ontario historical water levels summary, to 1987, 14:33375 (R;CA;In English and French)
OPEN-CYCLE MHD GENERATORS
Research Programs
MHD seed recovery and regeneration: Phase 1, Evaluation of bench-scale results: Third quarterly report, April 1–June 30, 1988, 14:33683 (R;US)
MHD seed recovery and regeneration: Phase 1, Evaluation of bench-scale results: Fourth quarterly report, July 1–September 30, 1988, 14:33684 (R;US)
MHD seed recovery and regeneration: Phase 1, Evaluation of bench-scale results: First quarterly report, September 28–December 31, 1987, 14:33681 (R;US)
MHD seed recovery and regeneration: Phase 1, Evaluation of bench-scale results: Second quarterly report, January 1–March 31, 1988, 14:33682 (R;US)
OPERATING COST
Optimization
The DYNAMICS model for measuring dynamic operating benefits, 14:33665 (R;US)
OPERATION (REACTOR)
See REACTOR OPERATION
OPERATIONAL AMPLIFIERS
Drift Chambers
Test of the Fugi MB43458 preamplifier in a CERN type drift chamber, 14:34279 (R;FR;In French)
Performance Testing
Test of the Fugi MB43458 preamplifier in a CERN type drift chamber, 14:34279 (R;FR;In French)
OPERATORS (MATHEMATICAL)
See MATHEMATICAL OPERATORS
OPTICAL EQUIPMENT
See also OPTICAL SCANNERS
Antireflection Coatings
Optical coatings. January 1983-October 1987 (Citations from the COMPENDEX data base). Report for January 1983-October 1987, 14:33961 (R;US)
Optical coatings. November 1987-February 1989 (Citations from the COMPENDEX data base). Report for November 1987-February 1989, 14:33962 (R;US)
OPTICAL FIBERS
Chemisorption
Chemisorption-induced reflectivity changes in thin metal films, 14:34027 (BA;US)
Electrical Properties
Fiber ring resonators and shock excited mechanical oscillators, 14:34026 (BA;US)
Mathematical Models
Dynamical groups in Lie optics, 14:35333 (BA;SG)
OPTICAL PROPERTIES
See also REFLECTIVITY
Films
Optical and structural properties of CdTe films growth on GaAs and Si substrates, 14:35210 (RA;BR)
OPTICAL SCANNERS
Performance
Fiber ring resonators and shock excited mechanical oscillators, 14:34026 (BA;US)
Piezoelectricity
The dependence of bulk piezoelectric crystal resonance behavior on fluid properties, 14:33708 (BA;US)
OPTICAL SYSTEMS
Light Scattering
Comparison of BRDF data from two scatterometers, 14:34219 (BA;US)
Wavelength scaling of BRDF scatter data, 14:34218 (BA;US)
Mathematical Models
Diamond solvable Lie group and fiber optical communication systems, 14:35332 (BA;SG)
ORGANIC ACIDS
See also CARBOXYLIC ACIDS
HUMIC ACIDS
PHOSPHONIC ACIDS
SULFONIC ACIDS
Biosynthesis
Serial biological conversion of coal into liquid fuels, 14:33054 (RA;US)
Phase Studies
Organic nonlinear crystals and high power frequency conversion, 14:34003 (BA;US)
ORGANIC COMPOUNDS

AROMATICS
HYDROCARBONS

ORGANIC ACIDS
ORGANIC NITROGEN COMPOUNDS
ORGANIC OXYGEN COMPOUNDS
ORGANIC POLYMERS
ORGANIC SULFUR COMPOUNDS
ORGANOMETALLIC COMPOUNDS
PROTEINS

Biological Effects
Potential risks from exposure to organic compounds in indoor air, 14:33724 (R;US)

Corrosion
Causes of FGD [flue gas desulfurization] construction material failures: Volume 1, September 1982–July 1985: Final report, 14:33443 (R;US)

Ecological Concentration
History of metal pollution in the Southern California Bight: an update, 14:34501 (J;US)

Harmonic Generation
Optical second harmonic generation from Langmuir-type molecular monolayers, 14:34002 (BA;US)

Performance Testing
Transport processes in localized corrosion, 14:33819 (RA;US)

Radiolysis
Contribution to internal pressure and flammable gas concnetration in RAM [radioactive material] transport packages, 14:33295 (R;US)

Transport
Evaluation of soil-gas transport of organic chemicals into residential buildings: Final report, 14:33733 (R;US)

Volatile Matter
Analysis of volatile organic compounds in water by dynamic stripping, thermal desorption, cryofocusing, and capillary gas chromatography (journal version), 14:34495 (R;US)
Protocols for generating unit-specific emission estimates for equipment leaks of VOC (volatile organic compounds) and VHAP (volatile hazardous air pollutants). Final report, 14:34407 (R;US)

ORGANIC FLUORINE COMPOUNDS
Chemical Analysis
Hydrocarbon precombusting catalyst survey and optimization for perfluorocarbon tracer analysis in subsurface tracer applications, 14:33155 (R;US)

Spin Orientation
Dynamic polarization of ^{19}F in a fluorinated alcohol, 14:35236 (J;NL)

ORGANIC ION EXCHANGERS
Swelling
On the swelling of ion exchange resins used in Swedish nuclear power plants, 14:33310 (R;SE)

ORGANIC NITROGEN COMPOUNDS
See also NITRO COMPOUNDS

Chemical Reactions
Use of basic nitrogen to chemically clean coal: Quarterly report no. 9 for the period March 15, 1989 to June 15, 1989, 14:33077 (R;US)

Fluorescence Spectroscopy
Laser-induced fluorescence spectroscopy of NCS in a free jet expansion, 14:34920 (J;US)

Isotopic Exchange
Mound activities in chemical and physical research, July–December 1988, 14:34060 (R;US)

ORGANIC OXYGEN COMPOUNDS
See also DIOXIN
ETHERS
HETEROCYCLIC OXYGEN COMPOUNDS

Chemical Preparation
Modifiers in rhodium catalysts for carbon monoxide hydrogenation: Structure-activity relationships, 14:33357 (R;US)

ORGANIC POLYMERS
See also GRAFT POLYMERS
PLASTIC FOAMS
POLYAMIDES
POLYESTERS
POLYETHYLENE GLYCOLS
RESINS

Chemical Radiation Effects
Studies on applications of functional organic-thin-films for lithography on semiconductor device production, 14:33339 (R;JP;In Japanese)

Semiconductor Devices
Studies on applications of functional organic-thin-films for lithography on semiconductor device production, 14:33339 (R;JP;In Japanese)

ORGANIC SOLVENTS
Deuteration
Heteroatom-containing compounds during liquefaction, 14:33060 (RA;US)

Waste Processing
Field measurements of full-scale hazardous-waste-treatment facilities - organic solvent wastes, 14:33761 (R;US)

ORGANIC SULFUR COMPOUNDS
See also PHENOTHIAZINES
SULFONIC ACIDS
THIOCYANATES
THIOPHENE

Fluorescence Spectroscopy
Laser-induced fluorescence spectroscopy of NCS in a free jet expansion, 14:34920 (J;US)

ORGANIC WASTES
See also AGRICULTURAL WASTES

Waste Processing
Field measurements of full-scale hazardous-waste-treatment facilities - organic solvent wastes, 14:33761 (R;US)

ORGANOMETALLIC COMPOUNDS
Chemical Vapor Deposition
Chemistry of new transition metal ceramic compounds synthesized by MOCVD, 14:33949 (RA;US)

Electronic Structure
Pressure tuning spectroscopy, 14:33842 (RA;US)

Photoelectron Spectroscopy
Experimental measures of the electron distribution and bonding in bis(η^5-cyclopentadienyl) osmium from He(I) and He(II) valence photoelectron spectroscopy, 14:34067 (J;US)

Polymerization
Molecular building-block approaches to ceramic materials, 14:33952 (RA;US)

Synthesis
Field responsive polymeric and organometallic materials, 14:33979 (RA;US)

ORGANS

ESOPHAGUS
HEART
LUNGS
SKELETON

Radiation Doses
New calculation methods for external radiation exposure, 14:34688 (RA;AT;In German)

ORNL
High-Level Radioactive Wastes
CEUSP, 14:33321 (J;US)

Research Programs
Analytical Chemistry Division annual progress report for period ending December 31, 1988, 14:34061 (R;US)

ORNL RESEARCH REACTOR
See ORR REACTOR

ORR REACTOR
Reactor Operation
Oak Ridge Research Reactor shutdown maintenance and surveillance quarterly report January, February, and March 1989, 14:33560 (R;US)

ORSAY SYNCHROTRON
Magnetic Spectrometers
Very low-energy conversion electron detection (VLECED) system at the isocele on-line isotope separator, Orsay, 14:34331 (R;FR)

Transition Elements
Very low-energy conversion electron detection (VLECED) system at the isocele on-line isotope separator, Orsay, 14:34331 (R;FR)

ORTHOPTERA
Radiosensitivity
Radiobiological examinations in ova of Carausius morosus (Indian stick insect) following exposurre to HZE-particles of technical origin. Results of radiation experiments performed by UNILAC (GSI, Darmstadt) and BEVALAC (Lawrence Laboratory, Berkeley, Cal./USA), 14:34683 (R;DE;In German)

ORYZA
See RICE

OSCILLATIONS (PLASMA)
See PLASMA WAVES

OSCILLATORS
See also ANHARMONIC OSCILLATORS
HARMONIC OSCILLATORS

Evaluation
Measurement of atomic oscillator strengths using pulsed single-frequency dye lasers, 14:34160 (BA;US)

Fabrication
Thin film preparation and single film device fabrication in the Tl-Ca-Ba-Cu-O HTS system, 14:33963 (R;US)

OSMIUM COMPOUNDS
Photoelectron Spectroscopy
Experimental measures of the electron distribution and bonding in bis(η^5-cyclopentadienyl) osmium from He(I) and He(II) valence photoelectron spectroscopy, 14:34067 (J;US)

OVERBURDEN
Lithology
Volatilization and mixing in glasses of some Apollo 14 regolith breccias, 14:34757 (R;US)

OXETANE
See ETHERS
HETEROCYCLIC OXYGEN COMPOUNDS

OXIDES

Microstructure
Advanced microstructures for photochemical and electrochemical energy conversion, 14:34094 (RA;US)

Photochemistry
Advanced microstructures for photochemical and electrochemical energy conversion, 14:34094 (RA;US)

Thin Films
Measurement of passive film growth kinetics on bare surface niobium band microelectrodes, 14:33695 (BA;US)

OXYGEN
Agglomeration
Study of the oxygen precipitation on p-type Czochralski silicon, 14:35214 (RA;BR;In Portuguese)

Charged-Particle Transport
Solution to the driven diffusion of a step boundary with a source term, 14:35247 (R;CA)

Combustion Kinetics
Role of methoxy radicals in combustion, 14:34109 (BA;US)

Ignition
Pulsed plasma jet igniters, 14:33203 (BA;US)

Point Defects
Study of the oxygen precipitation on p-type Czochralski silicon, 14:35214 (RA;BR;In Portuguese)

Reduction
A study of oxygen reduction in gas diffusion electrodes for an electrochemical concentrator, 14:33700 (BA;US)
Late transition metal μ-oxo and μ-imido complexes: Progress report, May 15, 1988–May 14, 1989, 14:34071 (R;US)

OXYGEN 16
Energy Levels
Finite nucleus Dirac mean field theory and random phase approximation using finite *B* splines, 14:35171 (J;US)

OXYGEN 16 REACTIONS
Carbon 12 Target
Total reaction cross section and foward glory for $^{12}C + {}^{16}O$, 14:35051 (R;BR)

Fragmentation
Production of helium (Z=2) projectile fragments in ^{16}O-emulsion interactions from E/A=2 to 200 GeV, 14:35079 (J;US)

Gev Range 01-10
Calender of high multiplicity ^{16}O induced reactions in Ag(Br) at 200A MeV, 14:35078 (R;SE)

Ion-Atom Collisions
Heavy ion experiments at BNL AGS, 14:35052 (RA;JP)

Photographic Emulsions
Calender of high multiplicity ^{16}O induced reactions in Ag(Br) at 200A MeV, 14:35078 (R;SE)

Spallation
Limiting fragmentation in oxygen-induced emulsion interactions at 14.6, 60, and 200 GeV/nucleon, 14:35054 (J;US)

Total Cross Sections
Total reaction cross section and foward glory for $^{12}C + {}^{16}O$, 14:35051 (R;BR)

OXYGEN 16 TARGET
Inelastic Scattering
Comparison of the $^{13}C + {}^{16}0$ reaction with $^{12}C + {}^{17}0$, 14:35113 (R;FR)

One-Nucleon Transfer Reactions
Comparison of the $^{13}C + {}^{16}0$ reaction with $^{12}C + {}^{17}0$, 14:35113 (R;FR)

OXYGEN 17 TARGET
Inelastic Scattering
Comparison of the $^{13}C + {}^{16}0$ reaction with $^{12}C + {}^{17}0$, 14:35113 (R;FR)

One-Nucleon Transfer Reactions
Comparison of the $^{13}C + {}^{16}0$ reaction with $^{12}C + {}^{17}0$, 14:35113 (R;FR)

PHOTOPRODUCTION

Electron-Positron Collisions
Heavy lepton production through vector boson fusion in $e^+ e^-$ collisions at high energies, 14:34967 (R;BR)

Heavy Leptons
Heavy lepton production through vector boson fusion in $e^+ e^-$ collisions at high energies, 14:34967 (R;BR)

PARTICLE SIZE
Measuring Methods
Particle sizing experiments with the laser Doppler velocimeter: Final report, 14:34362 (R;US)

PARTICLE TRACKS
Computerized Simulation
Vertex determination from coordinate information of showers in tracking detectors, 14:34339 (R;SU;In Russian)

Multiwire Proportional Chambers
Vertex determination from coordinate information of showers in tracking detectors, 14:34339 (R;SU;In Russian)

PARTICLE-HOLE MODEL
Energy Levels
Particle-particle and hole-hole RPA correlations at finite temperature and the temperature dependence of the level density parameter, 14:35013 (R;FR)

Energy-Level Transitions
Inelastic scattering of 400 MeV polarized deuterons on ^{12}C, ^{24}Mg and ^{40}Ca, 14:35151 (R;FR)

Temperature Dependence
Particle-particle and hole-hole RPA correlations at finite temperature and the temperature dependence of the level density parameter, 14:35013 (R;FR)

PARTICULATES
Ecological Concentration
Macromodel for assessing residential concentrations of combustion-generated pollutants: Model development and preliminary predictions for CO, NO_2, and respirable suspended particles, 14:33732 (R;US)

Indoor Air Pollution
Health-hazard evaluation determination report No. 76-43 A-F-429, Hersey Products Company, Inc., Gilbertville, Massachusetts, 14:34417 (R;US)
Mercury control technology assessment study: GTE Products Corporation, Chemical and Metallurgical Division, Towanda, Pennsylvania. Preliminary survey report for the site visit of June 9, 1981. Final report, 14:34393 (R;US)
Mercury control technology assessment study: General Electric Ccompany, Circleville Lamp Plant, Circleville, Ohio. Preliminary survey report for the site visit of October 6, 1981. Final report, 14:34392 (R;US)
Mercury control technology assessment study: Micro Switch, a Honeywell Division, Freeport, Illinois. Preliminary survey report for the site visit of May 5, 1981. Final report, 14:34394 (R;US)

Measuring Methods
Particle measurements at the Otaniemi PFBC/G test rig, 14:33129 (RA;FI)

Removal
5-MW Toronto HALT [Hydrate Addition at Low Temperature] pilot plant testing: Appendices: Part 1-B, 14:33438 (R;US)
Conceptual HALT [Hydrate Addition at Low Temperature] scaleup design: Capital and operating costs: Part 5 (Hydrate addition at low temperature for the removal of SOsub 2), 14:33441 (R;US)
ESP [electrostatic precipitator] tests at Toronto: Test results: Part 3 (Hydrate Addition at Low Temperature for the removal of SOsub 2), 14:33439 (R;US)
Multi-nozzle humidification tests: Test results: Part 4 (Hydrate addition at low temperature for the removal of SOsub 2), 14:33440 (R;US)

PARTITION CHROMATOGRAPHY
See CHROMATOGRAPHY

PARTITION FUNCTIONS
Analytical Solution
Spin structure, projection operators, and Bose-Fermi equivalence on the 2d torus for simply laced groups, 14:35349 (BA;SG)

PARTON MODEL
Structure functions and parton distributions, 14:34962 (R;US)

PASSIVATION
Hydrogen Additions
Scanning tunneling microscope and complementary microchemical investigations of hydrogen and shallow acceptors at silicon grain boundaries, 14:33397 (BA;NL)

PATTERN RECOGNITION
Computer Graphics
A high dynamic range acousto-optic image correlator for real-time pattern recognition, 14:35502 (BA;US)

PAVEMENTS

Hard Collision Models
Ambiguities in the estimate of hard photon production in intermediate energy nucleus-nucleus collisions, 14:34900 (R;FR)
Inelastic Scattering
Ambiguities in the estimate of hard photon production in intermediate energy nucleus-nucleus collisions, 14:34900 (R;FR)
Nucleon-Nucleon Interactions
Ambiguities in the estimate of hard photon production in intermediate energy nucleus-nucleus collisions, 14:34900 (R;FR)
PHOTON-ATOM COLLISIONS
Multi-Photon Processes
Multilevel relaxation phenomena and population trapping: [Progress report], July 1, 1988–June 30, 1989, 14:34897 (R;US)
PHOTONS
Distribution Functions
Is the number of photons conserved in an expanding universe, 14:34767 (R;BR)
Nonunitary Representations
Unitary representations of photon polarization vectors, 14:35356 (BA;SG)
Universe
Is the number of photons conserved in an expanding universe, 14:34767 (R;BR)
PHOTONUCLEAR REACTIONS
Helium 4 Target
Reaction mechanism of $^4He(\gamma, pn)X$ at E_γ = 0.17 - 0.27 GeV, 14:35044 (R;JP)
PHOTOPRODUCTION
Vector Mesons
Extraction of higher twist contribution from large P_T rho photoproduction processes, 14:34964 (R;XA)
PHOTOSYNTHESIS
Electron Transfer
Energy transfer and photochemistry in biomimetic solar conversion. Annual report, October 1987-September 1988, 14:33389 (R;US)
PHOTOVOLTAIC POWER SUPPLIES
Status of TSC hybrid solar conversion in Illinois, 14:33409 (BA;US)
Computer-Aided Design
A graphical design tool for stand-alone photovoltaic/storage systems, 14:33401 (BA;US)
Control Equipment
Two-stage electrical array reconfiguration controller for PV-powered water pump, 14:33405 (BA;US)
Energy Losses
A model for predicting the loss-of-load probability of stand-alone photovoltaic/storage systems with variable loads, 14:33402 (BA;US)
Insolation
Approaching the irradiance of the surface of the sun, 14:33406 (BA;US)
Power Conditioning Circuits
Step-up maximum power point tracker for photovoltaic arrays, 14:33407 (BA;US)
Research Programs
SERI's photovoltaic research project, 14:33404 (BA;US)
Technology Transfer
Technology transfer in action, 14:33403 (BA;US)
PHTHALIC ACID
Maximum Permissible Exposure
Health and Environmental Effects Profile for Phthalic Acids (o-, m-, p-), 14:34708 (R;US)
PHWR TYPE REACTORS
Mixed Oxide Fuels
Advanced methods for fabrication of PHWR and LMFBR fuels, 14:33226 (R;IN)
Reviews
Nuclear power reactors, 14:33457 (R;CS;In Czech)

Geologic Ages
U-Pb and Rb-Sr age determinations on Caledonian plutonic rocks in the central part of the Scoresby Sund region, East Greenland, 14:34718 (RA;DK)
Isotope Dating
Isotopic age dating in Liverpool Land, East Greenland, 14:34720 (RA;DK)
PLUTONIUM
Concentration Ratio
Poor man's densitometry, 14:33333 (R;US)
Electrorefining
Electrochemistry of plutonium in molten halides, 14:33917 (BA;US)
Isotope Ratio
Poor man's densitometry, 14:33333 (R;US)
Oxidation
Status of plutonium purification by bismuth solvent anode electrorefining, 14:33563 (BA;US)
Pyrometallurgy
Applications of molten salts in plutonium processing, 14:33562 (BA;US)
Radioecological Concentration
Accuracy of some simple models for predicting particulate interception and retention in agricultural systems, 14:34455 (J;US)

Recovery
Fluorination of incinerator ash by hydrofluorination or ammonium bifluoride fusion for plutonium recovery, 14:33316 (R;US)
Plutonium residue recovery (PuRR) project: Quarterly progress report, January–March 1989, 14:33313 (R;US)
Separation Processes
Pilot-scale production of dicesium hexachloroplutonate (Cs_2PuCl_6) and filtrate recovery, 14:34063 (R;US)
Uptake
Metabolic models for the metabolism of plutonium and related elements, 14:34695 (RA;AT)

PLUTONIUM 238 TARGET
Neutron Reactions
Application of theoretical models for prediction of neutron cross sections of poorly investigated nuclei with using ^{238}Pu as an example, 14:35131 (RA;SU;In Russian)

PLUTONIUM 239
Neutron Spectra
Prompt neutron spectra from fission of ^{233}U, ^{235}U and ^{239}Pu by thermal neutrons and from spontaneous fission of ^{252}Cf in the 0.01-12 MeV energy range, 14:35098 (RA;XA)
Thermal Fission
Prompt neutron spectra from fission of ^{233}U, ^{235}U and ^{239}Pu by thermal neutrons and from spontaneous fission of ^{252}Cf in the 0.01-12 MeV energy range, 14:35098 (RA;XA)

PLUTONIUM 239 TARGET
Neutron Reactions
Comparative analysis of evaluated ^{239}Pu cross sections in resolved resonance region, 14:35103 (RA;SU;In Russian)

PNA
See POLYCYCLIC AROMATIC HYDROCARBONS

PNPP-1 REACTOR
Maintenance
Status of PNPP-1, 14:33482 (R;PH)
Operating Cost
Status of PNPP-1, 14:33482 (R;PH)

POINCARE GROUPS
See also LORENTZ GROUPS
Analytical Solution
Non-linear representations of the Poincare group in 3 and 4 space-time dimensions, 14:35357 (BA;SG)

POINT DEFECTS
Bragg Reflection
Study of the oxygen precipitation on p-type Czochralski silicon, 14:35214 (RA;BR;In Portuguese)
Oxygen
Study of the oxygen precipitation on p-type Czochralski silicon, 14:35214 (RA;BR;In Portuguese)
X-Ray Diffraction
Study of the oxygen precipitation on p-type Czochralski silicon, 14:35214 (RA;BR;In Portuguese)

POISONS (CHEMICAL)

POTASSIUM
Atom-Atom Collisions
Theoretical Penning electron-energy distributions for alkali-metal atoms: He(2 ^{1,3}S) collisions with sodium and potassium, 14:34915 (J;US)
Catalytic Effects
Fundamental studies of catalytic gasification: Quarterly report, January 1, 1989–March 31, 1989, 14:33100 (R;US)
Decay
Jellium-model calculation for monomer and dimer decays of some potassium clusters, 14:34918 (J;DE)
Seed Recovery
MHD [magnetohydrodynamics] seed recovery and regeneration based on the Formate Process: Quarterly technical progress report, September 18, 1987–December 31, 1987, 14:33685 (R;US)
MHD seed recovery/regeneration, Phase 1: Quarterly report, April–June 1988, 14:33686 (R;US)
POTASSIUM CHLORIDES
Solvent Properties
Electrochemistry of plutonium in molten halides, 14:33917 (BA;US)
POTASSIUM COMPLEXES
Electron Diffraction
C-axis layer structure of stage 1,2 Graphite-KHg, 14:34005 (BA;US)
Neutron Diffraction
Pressure-induced staging transitions in potassium-graphite intercalation compounds, 14:34006 (BA;US)
Raman Spectra
Raman characterization of potassium-hydrogen intercalated graphite, 14:34013 (BA;US)
Transmission Electron Microscopy
High resolution electron microscopy studies of potassium-hydrogen intercalated graphite, 14:34012 (BA;US)
X-Ray Diffraction
High resolution x-ray investigation of stage purity and staging transitions, 14:34000 (BA;US)
POTASSIUM HYDROXIDES
Catalytic Effects
Fundamental studies of catalytic gasification: Annual report, October 1, 1987–September 30, 1988, 14:33098 (R;US)
Fundamental studies of catalytic gasification: Quarterly report, October 1, 1988–December 31, 1988, 14:33099 (R;US)
Corrosive Effects
An impedance study of the electrodissolution of aluminum in 4M KOH at 25^{0}C, 14:33693 (BA;US)
POTASSIUM NITRATES
Chemical Properties
A review of the chemical and physical properties of molten alkali nitrate salts and their effect on materials used for solar central receivers, 14:33410 (BA;US)
Sound Waves
Shear waves through the glass-liquid transformation, 14:34043 (J;US)
POTATO TUBERS
See POTATOES
POTATOES
Plant Breeding
Cassava and sweet potato production constraints in Kenya, 14:34656 (RA;XA)
Root and tuber crops production and research in Liberia, 14:34657 (RA;XA)
Productivity
Root and tuber crops production and research in Liberia, 14:34657 (RA;XA)
POTENTIAL BARRIERS

Analytical Solution
Relationship between supersymmetry and solvable potentials, 14:35370 (BA;SG)
Chiral Symmetry
Superinvariant chiral fields, 14:35378 (BA;SG)
Electronic Structure
Electric field effects on the electronic states of a quantum well, 14:35281 (RA;BR)
Impurities
Effect of compensation in the energy of an electron bound to an impurity in a quantum well, 14:34905 (RA;BR)
Interfaces
Electric field effects on the electronic states of a quantum well, 14:35281 (RA;BR)
Mathematical Models
Dynamical group approach to certain anharmonic oscillator and perturbed Coulomb potentials, 14:35319 (BA;SG)
Horizontal constraints, Clebsch potentials and variational principles on principal fiber bundles, 14:35345 (BA;SG)
Quantum Electronics
Density of states of impurities in quantum-well wires, 14:35285 (RA;BR)
Effect of compensation in the energy of an electron bound to an impurity in a quantum well, 14:34905 (RA;BR)
Resonant zener tunneling in quantum wells, 14:35282 (RA;BR)

Quantum Mechanics
Electric field effects on the electronic states of a quantum well, 14:35281 (RA;BR)
Supersymmetry
Relationship between supersymmetry and solvable potentials, 14:35370 (BA;SG)
Tunnel Effect
Resonant zener tunneling in quantum wells, 14:35282 (RA;BR)
Wires
Density of states of impurities in quantum-well wires, 14:35285 (RA;BR)

POWDERS
Dusts
Health-hazard evaluation determination report No. 75-181-287, Fibreboard Corporation, Stockton, California, 14:34419 (R;US)

POWER DEMAND
Planning
Meeting future electricity needs, 14:33671 (J;US)

POWER DISTRIBUTION
Comparative Evaluations
Predicting air conditioner load curves from energy audit data: A comparison of predicted and actual air conditioning data from the Athens load control experiment, 14:33451 (R;US)
Multi-Parameter Analysis
Stability analysis of spatial power distribution in RBMK-1000 reactor, 14:33507 (R;CA)

POWER DISTRIBUTION SYSTEMS
Automation
Operational aspects of distribution automation, 14:33450 (R;US)
Transients
The effects of steep-front, short-duration impulses on power distribution components, 14:33452 (R;US)

POWER GENERATION
See also COGENERATION
Cogeneration
Industrial cogeneration and coal boilers. Description of a market potential model and calculations for different cases, 14:33652 (R;NL;In Dutch)
Environmental Impacts
Changes in habitat and populations of steelhead trout, coho salmon and chinook salmon in Fish Creek, Oregon, 1983–1987, as related to habitat improvement: Annual report, 1987, 14:33377 (R;US)
Demonstration of a system for removing malachite green: Final report, 14:33379 (R;US)
Operation, maintenance and evaluation of the Bonifer and Minthorn springs juvenile release and adult collection facilities: Annual report, 1987, 14:33378 (R;US)
Operating Cost
The DYNAMICS model for measuring dynamic operating benefits, 14:33665 (R;US)

POWER PLANTS

THERMONUCLEAR POWER PLANTS
Alarm Systems
Design and operation of the communication alarm processor expert system, 14:33569 (R;US)
Retrofitting
TRW advanced slagging coal combustor utility demonstration: First quarterly project progress report, October 1988–January 1989, 14:33430 (R;US)

POWER SYSTEMS
Energy Models
Trajectory approximations for direct energy methods that use sustained faults with detailed power system models, 14:33641 (J;US)
Var Control Systems
An enhanced LQ adaptive VAR unit controller for power system damping, 14:33436 (J;US)

POWER TRANSMISSION LINES
Damping
Methods of evaluating dynamic characteristics of dampers, spacers and spacer-dampers, 14:33453 (R;CA)
Design
Theory, simulation, and experiment of a single module coax-to-parallel-plate transition for the transformer section of PBFA II, 14:35469 (R;US)
Spacers
Methods of evaluating dynamic characteristics of dampers, spacers and spacer-dampers, 14:33453 (R;CA)

PRASEODYMIUM 143
Excited States
Parameters of neutron resonances of ^{142}Ce and ^{143}Pr ($T_{1/2}$=13.6 d) nuclides, 14:35071 (RA;SU;In Russian)

PRASEODYMIUM 154
Half-Life
Present condition and future plan of KUR-ISOL. Efficient ionization of rare-earth elements by the oxidation technique, 14:33555 (RA;JP;In Japanese)

PREAMPLIFIERS
Background Noise
Study of characteristics of charge sensitive preamplifiers made on discrete and integral elements, 14:34333 (R;SU;In Russian)
Semiconductor Detectors
Study of characteristics of charge sensitive preamplifiers made on discrete and integral elements, 14:34333 (R;SU;In Russian)

PRESSURE REGULATORS
Design
TRUPACT I filtered pressure equalization system, 14:34133 (R;US)

PRESSURE TUBE REACTORS
Void Coefficient
Research on reactor physics using Deuterium Critical Assembly. Study on coolant void reactivity by substitution method, 14:33584 (RA;JP;In Japanese)

PRESSURE TUBES
Fractures
Fast fracture of a zirconium alloy pressure tube: cause and implications, 14:33510 (R;CA)

PRESSURE VESSELS
Embrittlement
Consideration of irradiation embrittlement of RPV steels in licensing rules as compared to recent results of irradiation experiments, 14:33864 (RA;DE;In German)
Fracture Mechanics
J_R-curves of wide plates and CT25 specimens. Comparison of the results of a pressure vessel, 14:33871 (RA;DE;In German)
On the transferability of fracture mechanics parameters from specimens to structures using FEM, 14:33535 (RA;DE;In German)
Verification of the analysis for fracture behaviour estimation of pressure vessels, 14:33580 (RA;DE)
Fracture Properties
B and W Owners Group Reactor Vessel Integrity Program - the first ten years, 14:33484 (RA;DE)
In-Service Inspection
Phased array concept for the ultrasonic inservice inspection at the spherical bottom of BWR-pressure vessels, 14:34195 (RA;DE;In German)
Industrial Radiography
Radiography of nozzle-to-pressure-vessel welds, 14:34184 (RA;CS;In Slovak)
Packaging
Model testing conducted to benchmark the Shippingport Reactor Pressure Vessel/Neutron Shield Tank safety analysis report for packaging, 14:33314 (R;US)
Thermal Shock
Thermal shock test PST-1 - results and theoretical analysis, 14:33574 (RA;DE)

Photochemistry
Advanced microstructures for photochemical and electrochemical energy conversion, 14:34094 (RA;US)
Radiation Curing
Immobilization of drugs and proteins by radiation polymerization and biomedical uses of this technique, 14:34522 (RA;XA)
PROTON BEAMS
Beam Extraction
Stretching of JINR phasotron beam at minimum of frequency program, 14:34297 (R;SU;In Russian)
Beam Transport
PBFA II applied B-field ion diode proton beam characteristics, 14:35468 (R;US)
Dubna Synchrocyclotron
Electrostatic focusing of the JINR phasotron beam, 14:34296 (R;SU;In Russian)
Stretching of JINR phasotron beam at minimum of frequency program, 14:34297 (R;SU;In Russian)
Fast Neutrons
Associated particle technique for absolute neutron counting efficiency determination, 14:34320 (R;FR)
Focusing
Electrostatic focusing of the JINR phasotron beam, 14:34296 (R;SU;In Russian)

Lithium 7 Target
Associated particle technique for absolute neutron counting efficiency determination, 14:34320 (R;FR)
PROTON DETECTION
Deep Inelastic Heavy Ion Reactions
Search for characteristics of preequilibrium protons emitted in Ar + Ag collisions at E/A = 27 MeV, 14:35150 (R;FR)
Silver
Search for characteristics of preequilibrium protons emitted in Ar + Ag collisions at E/A = 27 MeV, 14:35150 (R;FR)
PROTON REACTIONS
Charge-Exchange Reactions
Spin-flip cross sections for $^{13}C(\vec{p},\vec{n})^{13}N$(g.s.) at 500 MeV, 14:35167 (J;US)
Compound-Nucleus Reactions
Proton resonances at energies up to 3 MeV, 14:35130 (RA;CS;In Czech)
Elastic Scattering
Pseudoscalar $\pi Ncouplingandrelativisticproton - nucleusscattering$, 14 : 35165(J;US)
Inelastic Scattering
Different continuum approaches to giant resonances in ^{208}Pb with 400-MeV protons, 14:35095 (J;US)
Giant resonance strength distribution in ^{40}Ca from inelastic scattering of 500 MeV protons, 14:35062 (J;US)
Wave function of ^{14}N, 14:35170 (J;US)
P Invariance
Parity nonconserving asymmetries in the resonance scattering and nuclear reactions induced by polarized protons, 14:35115 (R;XA)
Polarization-Asymmetry Ratio
Parity nonconserving asymmetries in the resonance scattering and nuclear reactions induced by polarized protons, 14:35115 (R;XA)
PROTON-ANTIPROTON INTERACTIONS
Particle Production
Dijet angular distributions from $p\bar{p}$ collisions at $\sqrt{s}$= $1.8TeV$, 14 : 34957(J;US)
Parton Model
Analysis of inclusive characteristics of hadron interactions from 4 to 360 GeV/c momentum by the Lund model, 14:34981 (R;SU;In Russian)
PROTON-NEUTRON INTERACTIONS
Differential Cross Sections
Nuclear physics experiments on the electrostatic accelerator of the Nuclear Centre, 14:35031 (RA;CS;In Czech)
Elastic Scattering
Spin-correlation parameter $A_m(\theta)$ for *n-p* elastic scattering at 790 MeV, 14:34958 (J;US)
PROTON-PROTON INTERACTIONS
Effect of the particle-particle interaction on the $K^{\pi}=2^{+}$ states in deformed nuclei, 14:35156 (R;SU)
Inclusive Interactions
Production of meson resonances as leading particles in jets in proton-proton collisions at $\sqrt{s}$=62 GeV at the CERN ISR, 14:34955 (J;DE)
Parton Model
Analysis of inclusive characteristics of hadron interactions from 4 to 360 GeV/c momentum by the Lund model, 14:34981 (R;SU;In Russian)
PROTONS
Angular Distribution
Momentum distributions of nucleons flying out at large angles in ^{4}He-p-collisions, 14:35046 (R;SU;In Russian)
Range
Barkas effect with use of antiprotons and protons, 14:35188 (J;US)

Intermediate polars observed from Brazil in the last eight years, 14:34764 (RA;BR)
Star Models
Discussion of nonlinear interaction models for stellar pulsations, 14:34823 (RA;CS)
Possible explanation of the occurrence of irregularities in pulsating stars, 14:34822 (RA;CS)
Ultraviolet Spectra
MG II line profiles of the Mira S Carinae, 14:34790 (RA;FR)
PULSE AMPLIFIERS
Performance
Synchronously pumped subpicosecond dye oscillator-amplifier system, 14:34164 (BA;US)
PULSE COMBUSTION
Pulse combustion, 14:34110 (BA;US)
Chemical Reaction Kinetics
Pulse combustion, 14:34111 (J;US)
PULSE COMBUSTORS
Combustion Kinetics
Pulse combustion, 14:34110 (BA;US)
Fluid Mechanics
Pulse combustion, 14:34111 (J;US)
PULSE GENERATORS
See also HIGH-VOLTAGE PULSE GENERATORS
Design
Photoconductor pulse generators and sampling gates for characterization of high-speed devices and transmission lines, 14:34009 (BA;US)
PULVERIZED FUEL ASH
See FLY ASH

PULVERIZED FUELS
Cocombustion
Secondary fuel feed to a pulverized coal flame to reduce NO_x emission, 14:33145 (R;SE;In Swedish)
Staged Combustion
Secondary fuel feed to a pulverized coal flame to reduce NO_x emission, 14:33145 (R;SE;In Swedish)
PUMPS
See also WATER PUMPS
Failures
Empirical intensity of PWR primary coolant pumps failure and repair, 14:33534 (R;YU)
Shafts of main coolant pumps. Failure analysis and remedies, 14:33488 (RA;DE;In German)
Reliability
Empirical intensity of PWR primary coolant pumps failure and repair, 14:33534 (R;YU)
Repair
Empirical intensity of PWR primary coolant pumps failure and repair, 14:33534 (R;YU)
PURITY
See IMPURITIES
PVC
Indoor Air Pollution
Health-hazard evaluation determination report No. 74-24-246, Uncle Bill's Pick-N-Pay Market, No. 10, Middleburg Heights, Ohio; 74-92-246, Madsen's Valu Center, Mankato, Minnesota; 74-95-246, Kroger Company, Logan, West Virginia, 14:34400 (R;US)
Toxicity
Vinyl chloride and polyvinyl chloride: toxicology. January 1978-February 1989 (Citations from the Life Sciences Collection data base). Report for January 1978-February 1989, 14:34709 (R;US)
PWR TYPE REACTORS

INDIAN POINT-2 REACTOR
OBRIGHEIM REACTOR
PNPP-1 REACTOR
SHIPPINGPORT REACTOR
ZION-1 REACTOR
ZION-2 REACTOR
Fuel Assemblies
Analysis of impact phenomena between PWR fuel assemblies in earthquake situations, 14:33478 (R;FR)
Fuel Pools
Regulatory analysis for the resolution of Generic Issue 82, "Beyond design basis accidents in spent fuel pools", 14:33590 (R;US)
Fuel Rods
Complementary metallography on the rods PW 3/4 and PW 5/3: The Super-Ramp Project, 14:33467 (R;SE)
Destructive examination of PW3 and PW5 rods: The Super-Ramp Project, 14:33466 (R;SE)
Destructive examinations of BG8 and BG9 rods: The Studsvik Super-Ramp Project, 14:33473 (R;SE)
Estimates of Zircaloy integrity during dry storage of spent nuclear fuel: Final report, 14:33460 (R;US)
Guidelines for improving fuel reliability: Final report, 14:33481 (R;US)
Hot cell examinations of AA test fuel rods: The Studsvik Super-Ramp Extension Project, 14:33476 (R;SE)
Non-destructive examination of PW3 rods: The Super-Ramp Project, 14:33464 (R;SE)
Non-destructive examinations of BG8 and BG9 rods: The Super-Ramp Project, 14:33468 (R;SE)
Post-ramp examinations of KWU/CE rods at Karlstein: The Super-Ramp Project, 14:33471 (R;SE)
Power ramping of Super-Ramp test fuel rods: Final irradiation report: The Super-Ramp Project, 14:33470 (R;SE)
Power ramping of the PWR rods PK4/1, 2, 3 and PK6/1, 2, 3 irradiation report: The Studsvik Super-Ramp Project, 14:33463 (R;SE)
Power ramping of the rods PW5/1, 2 and 3: Irradiation report: The Super-Ramp Project, 14:33465 (R;SE)
Results of non-destructive examinations of the fuel rods of the groups PK4 and PK6: The Studsvik Super-Ramp Project, 14:33495 (R;SE)
The Studsvik Super-Ramp Extension Project: Progress report, January 1–September 30, 1984, 14:33506 (R;SE)
The Studsvik Super-Ramp Project: Final report, 14:33474 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, April–June 1981, 14:33502 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, April–June, 1980 and July–September, 1980, 14:33494 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March 1982, 14:33505 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March 1983 and April–June 1983 [first and second quarters], 14:33472 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, January–March, 1981, 14:33499 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, July–September 1981, 14:33503 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, October–December 1981, 14:33504 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, October–December 1980, 14:33496 (R;SE)
The Studsvik Super-Ramp Project: Quarterly progress report, October–December, 1982, 14:33469 (R;SE)
Low-Level Radioactive Wastes
A solidification method of low level radioactive waste using fly ash, 14:33126 (R;JP;In Japanese)
Meltdown
MELPROG-POW/MOD1: A two-dimensional, mechanistic code for analysis of reactor core melt progression and vessel attack under severe accident conditions, 14:33592 (R;US)
Pressure Vessels
B and W Owners Group Reactor Vessel Integrity Program - the first ten years, 14:33484 (RA;DE)
Primary Coolant Circuits
Safety aspects of water chemistry in light water reactors, 14:33461 (R;XA)
Pumps
Shafts of main coolant pumps. Failure analysis and remedies, 14:33488 (RA;DE;In German)
Radioactive Waste Storage
Phase stability effects on the corrosion behavior of the metal barrier candidate materials for the nuclear waste management program, 14:33319 (BA;US)
Reactor Cores
Analysis of impact phenomena between PWR fuel assemblies in earthquake situations, 14:33478 (R;FR)
Reactor Operation
Licensee Event Report (LER) compilation for month of April 1989, 14:33523 (R;US)
Reactor Protection Systems
Regulatory analysis for the resolution of Generic Issue 115, enhancement of the reliability of the Westinghouse Solid State Protection System, 14:33589 (R;US)
Reactor Safety
Sixteenth water reactor safety information meeting: Volume 1: Plenary session, Decontamination and decommissioning, License renewal, Human factors, Generic issues, Risk analysis/PRA applications, Innovative concepts for increased safety of advanced power reactors, 14:33591 (R;US)
Reviews
Nuclear power reactors, 14:33457 (R;CS;In Czech)
Safety Engineering
Evolution of general design requirements for french pressurized water reactors, 14:33568 (R;FR)
Spent Fuels
Regulatory analysis for the resolution of Generic Issue 82, "Beyond design basis accidents in spent fuel pools", 14:33590 (R;US)

Steam Generators
Material compatibility of the chemical cleaning of steam generators with chelating solutions, 14:33486 (RA;DE;In German)
Valves
Valve testing and development in the laboratories of Kraftwerk Union, 14:33487 (RA;DE;In German)
PYRENE
Adsorption
Adsorption and photodegradation of pyrene on magnetic, carbonaceous, and mineral subfractions of coal stack ash, 14:33131 (J;US)
Photochemical Reactions
Adsorption and photodegradation of pyrene on magnetic, carbonaceous, and mineral subfractions of coal stack ash, 14:33131 (J;US)
PYRIDINE
Raman Spectra
Near-infrared surface-enhanced Raman spectroscopy. Part II: Copper and gold colloids, 14:34036 (J;US)
PYRIDINES
See also PYRIDINE
Raman Spectra
Near-infrared surface-enhanced Raman spectroscopy. Part II: Copper and gold colloids, 14:34036 (J;US)
PYRITE
Chemical Reactions
Fundamental studies of catalytic gasification: Quarterly report, January 1, 1989–March 31, 1989, 14:33100 (R;US)
Oxidation
Microchemistry of solids, 14:33139 (RA;US)
PYRITES
See PYRITE
PYROCHEMICAL REPROCESSING
Optimization
Plutonium residue recovery (PuRR) project: Quarterly progress report, January–March 1989, 14:33313 (R;US)
PYROLYSIS
Chemical Reaction Yield
Influence of steam pretreatment on coal composition and devolatilization, 14:33111 (J;US)
PYROLYSIS PRODUCTS
See also CHARS
Saponification
Saponified vegetable oils as substitute diesel fuels, 14:33363 (BA;US)
PYROSOL PROCESS
Saarberg/GfK coal liquefaction developments, 14:33096 (RA;GB)
PZT
Electric Conductivity
Acoustic wave electroless deposition monitor, 14:33707 (BA;US)

Q

QUADRUPOLES
Design
Status of the quadrupoles for RHIC [Relativistic Heavy Ion Collider], 14:34274 (R;US)
QUALITY CONTROL
Ultrasonic Testing
Evaluation of indications at long distance and underclad findings, 14:34199 (RA;DE;In German)
QUANTUM CHROMODYNAMICS
Infrared Divergences
On infrared and mass singularities of perturbative QCD in a quark-gluon plasma, 14:35019 (R;FR)
Lattice Field Theory
On thermodynamic properties of chromoplasma, 14:35014 (R;SU)
Mass Difference
On infrared and mass singularities of perturbative QCD in a quark-gluon plasma, 14:35019 (R;FR)
Monte Carlo Method
ARIADNE - A Monte Carlo for QCD cascades in the colour dipole formulation, 14:34988 (R;SE)
ARIADNE 2. A Monte Carlo for QCD cascades in the colour dipole formulation. An update, 14:34990 (R;SE)
QUANTUM ELECTRODYNAMICS
Higgs Model
Vortices and the phase structure of the multiply-charged U(1) Higgs model, 14:35022 (R;DK)
QUANTUM ELECTRONICS
Band Theory
Optical transitions in undoped quantum wells under in-plane magnetic fields, 14:34904 (RA;BR)
Magnetic Fields
Optical transitions in undoped quantum wells under in-plane magnetic fields, 14:34904 (RA;BR)
QUANTUM FIELD THEORY
See also LAGRANGIAN FIELD THEORY
LATTICE FIELD THEORY
PHI4-FIELD THEORY
QUANTUM CHROMODYNAMICS
QUANTUM ELECTRODYNAMICS
Action Integral
General action for topological quantum field theories, 14:35008 (R;XA)
Cosmology
Quantum fields in cosmological space-times: a soluble example, 14:34768 (R;BR)
Data Covariances
Generally covariant quantum field theory, 14:35366 (BA;SG)
Mathematical Models
Phase-space formalism for quantized fields, 14:35354 (BA;SG)
Nuclear Matter
Relativistic meson-nucleon theory of nuclei, 14:35129 (RA;CS;In Slovak)
Supersymmetry
Superfiled formulation of Chern-Simons supersymmetry, 14:35007 (R;XA)
Topology
General action for topological quantum field theories, 14:35008 (R;XA)
Variational Methods
Noether's therorem for local gauge transformations, 14:35003 (R;US)
QUANTUM MECHANICS
Quantum level statistics of pseudointegrable billiards, 14:35394 (J;US)
Algorithms
Algorithms for supercomputers, 14:35321 (BA;US)
Vector and parallel computers for quantum Monte Carlo computations, 14:34079 (BA;US)
Computer Calculations
Algorithms for supercomputers, 14:35321 (BA;US)
Dynamics
Covariance representation of global quantum dynamics and its symmetries, 14:35367 (BA;SG)
Markov Process
Markov processes in Hilbert space and continuous spontaneous localization of systems of identical particles, 14:35273 (R;XA)
Probability
Announcement: the solution for the measurement problem in quantum mechanics, 14:35386 (BA;SG)
Symmetry
Covariance representation of global quantum dynamics and its symmetries, 14:35367 (BA;SG)
Rotational symmetry analysis for semiclassical and quantum mechanics, 14:35299 (BA;SG)
Unitary Symmetry
New perspective on the U(n) Wigner-Racah calculus, 14:35351 (BA;SG)
QUARK MATERIAL
See QUARK MATTER
QUARK MATTER
Searching for the quark-gluon plasma, 14:34343 (RA;JP)

Muon-Muon Interactions
On infrared and mass singularities of perturbative QCD in a quark-gluon plasma, 14:35019 (R;FR)
Pion-Kaon Interactions
Study of meson production in 200 A. GeV ion collisions using decay muons, 14:34948 (R;FR)
Quark-Gluon Interactions
On infrared and mass singularities of perturbative QCD in a quark-gluon plasma, 14:35019 (R;FR)
Study of meson production in 200 A. GeV ion collisions using decay muons, 14:34948 (R;FR)

QUARK MODEL
See also STRING MODELS
Su-3 Groups
Gentileons of the first kind, 14:34965 (R;BR)
Symmetry
Gentileons of the first kind, 14:34965 (R;BR)

QUARK PLASMA
See QUARK MATTER

QUARK SEA

RADIOACTIVE WASTE DISPOSAL
Calculation Methods
Volatility of cesium and strontium from a synthetic basalt, 14:34098 (J;US)
Computerized Simulation
Verification and validation for waste disposal models, 14:33267 (R;CA)
Concretes
Transport of gases through concrete. Annual progress report, 1988, 14:33249 (R;GB)
Cost
Analysis of the total system life cycle cost for the Civilian Radioactive Waste Management Program, 14:33262 (R;US)
Environmental Impacts
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 1: Overview of research and conclusions, 14:33276 (R;XN)
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 6: Deep-sea biology, biological processes and radiobiology, 14:33271 (R;XN)
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 8: Review of processes near a buried waste canister, 14:33269 (R;XN)
Feasibility Studies
Regulatory perspectives of concept assessment, 14:33268 (R;CA)
Geologic Models
Summary report of a seminar on geosphere modelling requirements of deep disposal of low and intermediate level radioactive wastes, 14:33260 (R;GB)
Meetings
Evaluation of the damages in rocks caused by the construction of a repository, 14:33252 (R;FR;In French)
Organic Ion Exchangers
On the swelling of ion exchange resins used in Swedish nuclear power plants, 14:33310 (R;SE)

Progress Report
Stripa project annual report 1987, 14:33309 (R;SE)

Public Information
Information services directory: An Update of 5/87, 14:33261 (R;US)

Radionuclide Migration
Capabilities and requirements for modelling radionuclide transport in the geosphere, 14:34504 (R;GB)
Evolution of minor active and toxic gases in repositories, 14:33284 (R;GB)

Research Programs
US programs in the development of spent fuel and high-level waste disposal technology, 14:33324 (J;US)

Rock Mechanics
Evaluation of the damages in rocks caused by the construction of a repository, 14:33252 (R;FR;In French)

Rocks
Hydrogeochemical assessment of crystaline rock for radioactive waste disposal: the Stripa experience, 14:33308 (R;SE)
Stripa project annual report 1987, 14:33309 (R;SE)

Sea Bed
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 5: Dispersal of radionuclides in the oceans: Models, data sets and regional descriptions, 14:33272 (R;XN)
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 4: Engineering, 14:33273 (R;XN)
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 8: Review of processes near a buried waste canister, 14:33269 (R;XN)
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 1: Overview of research and conclusions, 14:33276 (R;XN)
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 6: Deep-sea biology, biological processes and radiobiology, 14:33271 (R;XN)
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 2: Radiological assessment, 14:33275 (R;XN)
Feasibility of disposal of high-level radioactive waste into the seabed. Volume 3: Geoscience characterization studies, 14:33274 (R;XN)
Feasibility of disposal of high-level radioactive waste into the seabed. volume 7: Review of laboratory investigations of radionuclide migration through deep-sea sediments, 14:33270 (R;XN)

Underground Disposal
Stripa project annual report 1987, 14:33309 (R;SE)

RADIOACTIVE WASTE FACILITIES

Backfilling
Determination of geotechnical properties of loose ground salt as potential backfill material in an underground waste repository, 14:33265 (R;FR;In French)

Design
Preliminary design of the high-level waste canister storage system: Topical report for the period of January 1, 1987–September 30, 1987, 14:33257 (R;US)

Radiation Monitoring
Performance monitoring report for the Niagara Falls Storage Site Waste Containment Structure, Lewiston, New York: Calendar year 1987 and January–June of 1988, 14:33258 (R;US)

Radioactivity Transport
UCB-NE-101 user's manual, 14:35491 (R;US)
UCB-NE-108 user's manual, 14:35492 (R;US)

RADIOACTIVE WASTE MANAGEMENT

Environmental Policy
Waste handling and utilization in an international perspective, 14:34221 (R;SE;In Swedish)

Mathematical Models
Demographic and transportation parameters in RADTRAN, 14:33300 (R;US)

Sensitivity Analysis
ADGEN: ADjoint GENerator for computer models, 14:33287 (R;US)

Time Dependence
An assessment of issues related to determination of time periods required for isolation of high level waste, 14:33254 (R;US)

RADIOACTIVE WASTE PROCESSING

Meetings
Fusion process for metallic wastes slightly contaminated by radioactive substances, 14:33251 (R;FR;In French)

Solidification
Solidification of Swiss radioactive wastes by means of bitumen, 14:33282 (R;CH;In German)

Synthetic Rocks
Preparation of fully-active Synroc and its radiation stability. Final report, 14:33250 (R;GB)

Technology Assessment
A method for predicting cracking in waste glass canisters, 14:33322 (J;US)
CEUSP, 14:33321 (J;US)

RADIOACTIVE WASTE STORAGE

Containers
Mathematical modeling of large-scale nonuniform corrosion, 14:33323 (J;US)

Dose Rates
Examining memorandum: Ultimate store for nuclear reactor wastes - SFR-1, 14:33311 (R;SE;In Swedish)

Radiation Protection
Examining memorandum: Ultimate store for nuclear reactor wastes - SFR-1, 14:33311 (R;SE;In Swedish)

Radioactive Waste Facilities
Ultimate storage of reactor wastes. Final report on safety, 14:33283 (R;SE;In Swedish)

Safety Engineering
Ultimate storage of reactor wastes. Final report on safety, 14:33283 (R;SE;In Swedish)

RADIOACTIVE WASTES
See also ALPHA-BEARING WASTES
CALCINED WASTES
HIGH-LEVEL RADIOACTIVE WASTES
INTERMEDIATE-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS
Analysis of human factors effects on the safety of transporting radioactive waste materials: Technical report, 14:33228 (R;US)

Classification
Waste classification - history, standards, and requirements for disposal, 14:33256 (R;US)

Ground Disposal
Release of radioactive wastes to ground, 14:33266 (R;US)

Radioactive Waste Disposal
NEA international co-operative projects, 14:33582 (R;XN)

RADIOACTIVITY
See also NATURAL RADIOACTIVITY

Uptake
Experiments on radionuclide accumulation by fishes from the Angra Dos Reis region of Brazil. Final report for the period 1 May - 15 September 1988, 14:34673 (R;XA)

RADIOACTIVITY TRANSPORT

Coordinated Research Programs
Dispersion of radioactivity within the reactor radioactive effluents dispersion and environmental effects' AKTI-100 and AKTU-200, 14:35196 (RA;DK;In Swedish)

Research Programs
200 Radioactivity transport and the environmental effects, AKTU, 14:33547 (RA;DK;In Norwegian)

RADIOAPPLICATORS
See RADIATION SOURCES

RADIOBIOLOGICAL EFFECTS

Biochemical Reaction Kinetics
[Workshop on transfer of radionuclides to livestock, Christ Church College-University of Oxford, United Kingdom, September 5–8, 1988]: Foreign trip report, 14:34701 (R;US)
Contamination
Reference levels for the assessment of internal contamination, 14:34697 (RA;AT)
Excretion
Reference levels for the assessment of internal contamination, 14:34697 (RA;AT)
Ingestion
[ICRP Task Group meeting, Chiba-shi, Japan, May 22–26, 1989]: Foreign trip report, 14:34702 (R;US)
Production
Isotope production at Department of Energy sites in the United States of America, 14:33564 (J;US)
Radionuclide Migration
Excursion control at in situ uranium mines, 14:33326 (BA;US)
Retention
Reference levels for the assessment of internal contamination, 14:34697 (RA;AT)
Uses
Isotope production at Department of Energy sites in the United States of America, 14:33564 (J;US)

RADIOLOGICAL PROTECTION
See RADIATION PROTECTION

RADIOMETERS
Background Radiation
Submillimeter spectrum of the cosmic background radiation, 14:34344 (RA;JP)
Computers
Design and development of a rotating shadowband radiometer solar radiation/daylight network, 14:33382 (BA;US)
Cosmic Radiation
Submillimeter spectrum of the cosmic background radiation, 14:34344 (RA;JP)

RADIOMETRIC GAGES
In-line wear monitor. Interim report, November 1985-June 1988, 14:33779 (R;US)

RADIONUCLIDE CONCENTRATION
See RADIOACTIVITY

RADIONUCLIDE MIGRATION
Computer Codes
Geochemical computer codes. A review. Final report, 14:34508 (R;SE)
Flow Models
Capabilities and requirements for modelling radionuclide transport in the geosphere, 14:34504 (R;GB)
Summary report of a seminar on geosphere modelling requirements of deep disposal of low and intermediate level radioactive wastes, 14:33260 (R;GB)
Geologic Models
Capabilities and requirements for modelling radionuclide transport in the geosphere, 14:34504 (R;GB)
Helium
Evolution of minor active and toxic gases in repositories, 14:33284 (R;GB)
Krypton 85
Evolution of minor active and toxic gases in repositories, 14:33284 (R;GB)
Mathematical Models
Atmospheric concentration measurements of Kr-85. A tool for ecological standards, 14:34441 (RA;AT)
North Sea
Model investigations on the propagation of artificial radionuclides in the North Sea, 14:34503 (R;DE;In German)
Seawater
Report on the intercomparison run SD-A-1 radionuclides in marine sediment, 14:34056 (R;XA)

RADIONUCLIDE TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION

RADIONUCLIDES
See RADIOISOTOPES

RADIOPHARMACEUTICALS
Measuring Methods
Studies on quality assurance in the determination of activities of radiopharmaceuticals in nuclear medicine, 14:34351 (R;DE;In German)
Quality Assurance
Results of the quality assurance testing programme for radiopharmaceuticals 1984-1985, 14:34097 (R;AU)

RADIOPOLYMERIZATION
See CHEMICAL RADIATION EFFECTS

RADIOPRESERVATION
Chemical Radiation Effects
Effects of ionizing radiation on food, compared to the effects of conventional food treatment: A literature study. Pt. 1, 14:34663 (R;DE;In German)

RADIOPROTECTIVE SUBSTANCES
Comparative Evaluations
Opposite effects of WR-2721 and WR-1065 on radiation-induced hypothermia: possible correlation with oxygen uptake. Scientific report, 14:34666 (R;US)
Radiotherapy
On the prevention of cutaneous injuries caused by radiotherapy of carcinomas of the breast. Examinations in patients treated at the Robert Janker Hospital at Bonn, 14:34615 (R;DE;In German)

RADIOSURGERY
See RADIOTHERAPY
SURGERY

RADIOTHERAPY

Biological Radiation Effects
Multiple basilomas pos-roentgenotherapy, 14:34678 (RA;BR;In Portuguese)

Carcinomas
^{192}Ir interstitial radiotherapy of carcinoma of inferior lip, 14:34578 (RA;BR;In Portuguese)
^{192}Ir interstitial radiotherapy of movable part of the tongue, 14:34579 (RA;BR;In Portuguese)
Breast cancer locally advanced (T3/T4): treatment, 14:34561 (RA;BR;In Spanish)
Conservative treatment of breast cancrum, 14:34562 (RA;BR;In Portuguese)
Conservative treatment of breast neoplasm, 14:34560 (RA;BR;In Portuguese)
Exclusive radiotherapic treatment of adenocarcinoma of rectum, 14:34552 (RA;BR;In Portuguese)
Multiple basilomas pos-roentgenotherapy, 14:34678 (RA;BR;In Portuguese)

Chemotherapy
Experimental and clinical studies on hyperthermia and chemical sensitizers in radio- and chemotherapy of cancer, 14:34529 (RA;XA)

Comparative Evaluations
Radiotherapy-association of pelvic cobalt teletherapy, local endocuretherapy in stabilizer treatment of cancer of canal anal, 14:34603 (RA;BR;In Portuguese)

Drugs
Use of ornidazole as a radiosensitizer on fractionated irradiation: Results of clinical trials, 14:34532 (RA;XA)

Fractionated Irradiation
Use of ornidazole as a radiosensitizer on fractionated irradiation: Results of clinical trials, 14:34532 (RA;XA)

Hyperthermia
Clinical and experimental study of improvement of radiation therapy using hyperthermia and electron affinic compounds, 14:34535 (RA;XA)
Combined modality approach: Radiotherapy plus hyperthermia in advanced and early human tumours, 14:34533 (RA;XA)
Radiation, pepleomycin and hyperthermia in the therapy of advanced oral carcinomas, 14:34525 (RA;XA)
Sequencing, timing and doses with the combination of heat and radiation in the treatment of human tumors, 14:34527 (RA;XA)
Studies of the combined use of hypoxic cell sensitizers and hyperthermia with radiation in human cancer therapy, 14:34528 (RA;XA)

Internal Irradiation
Intersitial irradiation in brain tumours, 14:34577 (RA;BR;In Portuguese)

Irradiation Procedures
Sequencing, timing and doses with the combination of heat and radiation in the treatment of human tumors, 14:34527 (RA;XA)

Melanomas
Melanoma: evaluation of 101 cases, 14:34576 (RA;BR;In Portuguese)

Methotrexate
Treatment of carcinoma of head and neck with a combination of conventional irradiation and methotrexate as radiosensitizer, 14:34531 (RA;XA)

Metronidazole
Clinical and experimental study of improvement of radiation therapy using hyperthermia and electron affinic compounds, 14:34535 (RA;XA)

Necrosis
Morphometric studies of areas of tumorous necrosis produced by radiotherapy, hyperthermia and its therapeutic combination, 14:34558 (RA;BR;In Portuguese)

Neoplasms
Fundamental and strategy for the scientific treatment of cancer, 14:34559 (RA;BR;In Spanish)
Intersitial irradiation in brain tumours, 14:34577 (RA;BR;In Portuguese)
Multidisciplinary treatment of gastric cancer, 14:34551 (RA;BR;In Portuguese)
Radiotherapy-association of pelvic cobalt teletherapy, local endocuretherapy in stabilizer treatment of cancer of canal anal, 14:34603 (RA;BR;In Portuguese)
Tracheostomy with cutaneous cancer, 14:34554 (RA;BR;In Portuguese)
Treatment and results of 13 cases of ependymoma, 14:34546 (RA;BR;In Spanish)

Oral Cavity
^{192}Ir interstitial radiotherapy of carcinoma of inferior lip, 14:34578 (RA;BR;In Portuguese)

Radioprotective Substances
On the prevention of cutaneous injuries caused by radiotherapy of carcinomas of the breast. Examinations in patients treated at the Robert Janker Hospital at Bonn, 14:34615 (R;DE;In German)
Optimization of the use of radiosensitizers and radioprotectors in clinical radiotherapy, 14:34524 (RA;XA)

Radiosensitizers
Experimental and clinical studies on hyperthermia and chemical sensitizers in radio- and chemotherapy of cancer, 14:34529 (RA;XA)
Optimization of the use of radiosensitizers and radioprotectors in clinical radiotherapy, 14:34524 (RA;XA)
Radiation, pepleomycin and hyperthermia in the therapy of advanced oral carcinomas, 14:34525 (RA;XA)
Studies of the combined use of hypoxic cell sensitizers and hyperthermia with radiation in human cancer therapy, 14:34528 (RA;XA)

Rectum
Exclusive radiotherapic treatment of adenocarcinoma of rectum, 14:34552 (RA;BR;In Portuguese)

Stomach
Multidisciplinary treatment of gastric cancer, 14:34551 (RA;BR;In Portuguese)

Thrombosis
12500 E heparin and 12500 E of a semisynthetic heparin analogue (SSHA) in preventing thrombosis during radiotherapy of gynaecological carcinomas, 14:34616 (R;DE;In German)

Tongue
^{192}Ir interstitial radiotherapy of movable part of the tongue, 14:34579 (RA;BR;In Portuguese)

RADIOWAVE RADIATION
See also LONG WAVE RADIATION
MEDIUM WAVE RADIATION

Absorption
Radiowave absorption measurements near geomagnetic anomaly region during a magnetic storm, 14:34882 (RA;BR)

Biological Radiation Effects
Effect of radiofrequency radiation on MRNA expression in cultured rodent cells, 14:34711 (R;US)

D Region
Radiowave absorption measurements near geomagnetic anomaly region during a magnetic storm, 14:34882 (RA;BR)

Wave Propagation
Physics of the tropospheric radiopropagation, 14:34886 (R;XA)

RADIUM 226
Radioecological Concentration
Radiological and chemical characterization report for the planned Quarry Construction Staging Area and Water Treatment Plant: Revision 1, 14:33328 (R;US)

RADIUM D
See LEAD 210

RADON
Daughter Products
Comments on the dose-effect curve at low doses of inhaled alpha-emitters, 14:34693 (RA;AT)
Vertical transport and distribution of radon decay products between different floors, 14:34436 (RA;AT)

Monitoring
The impact of gas furnace operation on radon concentrations in residences: A literature survey, 14:33734 (R;US)

Remedial Action
Radon i dwellings. Testing and evaluation of constructional and buildings services engineering measures, 14:34467 (R;SE;In Swedish)

RADON 222
Daughter Products
Application of passive and active methods paralell to the measurements of local climatic parameters for the assessment of Rn-222 behaviour in selected Swiss dwellings, 14:34438 (RA;AT)
Method for direct determination of the 'working level', 14:34349 (RA;AT;In German)
Radiation Protection
Radon-222 reduction in solar buildings through pressurization, 14:33412 (BA;US)
Radioactivity
Radon in dwellings - sources and entrance paths into houses and methods of radon concentration reduction, 14:34440 (RA;AT;In German)

RADURIZATION
Sprout Inhibition
Radiation treatment of onions, 14:34665 (R;DD;In German)

RAIL TRANSPORT
Investment
Report on the transportation of coal: baseline energy forecast, rail investment forecast, evaluation of capital requirements and availability, impacts on the Appalachian region, 14:33136 (R;US)

RAIN
See also ACID RAIN
Contamination
Activity levels in air and ground in the region of Bremen after the Chernobyl accident, 14:34443 (RA;AT)
Measurement of environmental radioactivity around Mainz (FRG) after the Chernobyl reactor accident, 14:34450 (RA;AT;In German)

RAIN WATER
Radioactivity measurements around Graz, Austria, 14:34477 (RA;AT;In German)
Tritium activity in precipitation and in tap water of nw Yugoslavia after the Chernobyl accident, 14:34507 (RA;AT)

RAMAN SPECTROSCOPY
High resolution inverse Raman spectroscopy of the CO Q branch, 14:34157 (BA;US)

RARE EARTH COMPOUNDS
See also CERIUM COMPOUNDS
EUROPIUM COMPOUNDS
LANTHANUM COMPOUNDS
YTTERBIUM COMPOUNDS
Phase Transformations
High temperature toughening mechanisms in composite ceramics, 14:33951 (RA;US)

RARE EARTHS
See also GADOLINIUM
Magnetic Properties
Magnetic properties of surfaces and interfaces, 14:33845 (RA;US)

RATS
Biological Radiation Effects
Behavioral effects of chronic exposure to 0.5 mW/cm^2 of 2450-MHz microwaves. Interim report for period ending 1987, 14:34713 (R;US)
Lungs
Comments on the dose-effect curve at low doses of inhaled alpha-emitters, 14:34693 (RA;AT)

RBE
Cobalt 60
Radiobiological intercomparison: dosimetry aspects, 14:34687 (R;ZA)
Experimental Data

RESIDUAL FUELS
Hydrogenation
Selective catalysts for coal and heavy oil hydrogenation, 14:33082 (RA;GB)
RESIDUAL OILS
See PETROLEUM RESIDUES
RESIDUES (MATHEMATICAL)
See INTEGRAL CALCULUS
RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES
RESIDUUMS
See RESIDUAL FUELS
RESINS
Corrosion
Causes of FGD [flue gas desulfurization] construction material failures: Volume 2, August 1985–December 1986: Final report, 14:33444 (R;US)

Electron Spin Resonance
E.S.R. measurements on asphaltene and resin fractions from various separation methods, 14:33214 (RA;CA)
Gel Permeation Chromatography
E.S.R. measurements on asphaltene and resin fractions from various separation methods, 14:33214 (RA;CA)
Ion Exchange Chromatography
E.S.R. measurements on asphaltene and resin fractions from various separation methods, 14:33214 (RA;CA)

RESONANCE CAVITIES
See CAVITY RESONATORS

RESONANCE FLUORESCENCE
Magnetic Fields
Resonance fluorescence of atom in a strong magnetic field, 14:34903 (R;XA)

RESONANCE PARTICLES
Mathematical Models
Algebraic method for relativistic systems - spectrum and radiative transitions, 14:35329 (BA;SG)

RESOURCE CONSERVATION
Regulations
Constraints on the formulation of ecological models and theories: Conservation laws and domain-specific rule bases, 14:34457 (R;US)

RESOURCE RECOVERY ACTS
Evaluation of control chart methodologies for RCRA (Resource Conservation and Recovery Act) waste sites, 14:34493 (R;US)
Hazardous-waste constituents: health and environmental effects profiles. January 1970-January 1989 (Citations from the NTIS data base). Report for January 1970-January 1989, 14:33767 (R;US)

RESPIRABLE DUSTS
See DUSTS

RESPIRATORY SYSTEM DISEASES
Health-hazard evaluation determination report No. 74-24-246, Uncle Bill's Pick-N-Pay Market, No. 10, Middleburg Heights, Ohio; 74-92-246, Madsen's Valu Center, Mankato, Minnesota; 74-95-246, Kroger Company, Logan, West Virginia, 14:34400 (R;US)
Health-hazard evaluation determination report No. 76-115-425, H F E Inc., Ft. Collins, Colorado, 14:34408 (R;US)

RESPONSE FUNCTIONS
Semiclassical Approximation
Wigner - Kirkwood Planck constant - expansion of the linear response function, 14:35020 (R;FR)
Series Expansion
Wigner - Kirkwood Planck constant - expansion of the linear response function, 14:35020 (R;FR)

RETINA
Cones
Simulated annealing in networks for computing possible arrangements for red and green cones, 14:35505 (BA;US)

RETROFITTING
Energy Audits
PRISM: a tool for tracking retrofit savings, 14:33748 (J;KW)

REVERSE-FIELD PINCH
Plasma Diagnostics
RFP plasma experiment at INPE, 14:35398 (RA;BR)
Plasma Production
RFP plasma experiment at INPE, 14:35398 (RA;BR)

RF SYSTEMS
Current-Drive Heating
Critical power for rf current drive, 14:35396 (RA;BR)
Tokamak Devices
Critical power for rf current drive, 14:35396 (RA;BR)

RHABDOMYOSARCOMAS
Fractionated Irradiation
Radiotherapy of the RIH-tumor, 14:34682 (RA;IL)
Radiotherapy
Radiotherapy of the RIH-tumor, 14:34682 (RA;IL)

RHENIUM
Catalytic Effects
A novel approach to hydrogen recovery, storage and transport: Final technical report, 14:33341 (R;US)
Crystal Growth
Growth and transport at metal and semiconductor interfaces, 14:33821 (RA;US)

RHENIUM 182
Rotational States
Coriolis coupling in the rotational bands of deformed odd-odd nuclei, 14:35172 (J;US)

RHENIUM ALLOYS
Impurities
Local density theory of heats of formation and short-range order parameters in substitutionally disordered alloys: Final technical report, 14:33846 (R;US)

RHO-1500 RESONANCES
See MESONS

RHO-1700 RESONANCES
See MESONS

RHODANATES
See THIOCYANATES

RHODANIDES
See THIOCYANATES

RHODIUM
Catalytic Effects
Modifiers in rhodium catalysts for carbon monoxide hydrogenation: Structure-activity relationships, 14:33357 (R;US)

RHODIUM COMPLEXES
Chemical Reactions
Late transition metal μ-oxo and μ-imido complexes: Progress report, May 15, 1988–May 14, 1989, 14:34071 (R;US)

RHODOSPIRILLUM
Gene Regulation
A molecular genetic analysis of carotenoid biosynthesis and the effects of carotenoid mutations on other photosynthetic genes in Rhodobacter capsulatus, 14:33387 (R;US)

RIBONUCLEIC ACID
See RNA

RICE
Productivity
Factors limiting production of rice in the People's Republic of Benin, 14:34636 (RA;XA)
Radiation Induced Mutants
Rice varietal improvement in Sierra Leone: An experience with the use of induced mutations, 14:34637 (RA;XA)

RICHLAND FFTF REACTOR
See FFTF REACTOR

RICHLAND NPR REACTOR
See N-REACTOR

RIEMANN WAVES

RISER CRACKING
See COAL LIQUEFACTION

RISK ANALYSIS
See RISK ASSESSMENT

RISK ASSESSMENT
Mathematical Models
RADTRAN 4.0: Advanced computer code for transportation risk assessment, 14:33305 (R;US)
TRANSNET–Access to transportation models and databases, 14:33301 (R;US)

RIVERS
Sediments
Knolls Atomic Power Laboratory annual environmental monitoring report: Calendar year 1988, 14:34505 (R;US)

RNA
See also MESSENGER-RNA
Molecular Structure
RNA structure from A to Z, 14:34516 (BA;US)

ROADS
Environmental Impacts
Causeways in the Alaskan Beaufort Sea. Final report, 14:33177 (R;US)

ROBINIA PSEUDOACACIA
See LOCUST TREES

ROBOTS
Performance
HERMIES-I, 14:33596 (BA;US)
Radioactive Waste Management
Robots to support radioactive waste activities: Task analysis, conceptual design, and commercial evaluation, 14:33533 (R;US)
Research Programs
Research in autonomous robotics at ORNL using HERMIES-III, 14:34118 (R;US)
Uses
Design concepts and advanced telerobotics development for facilities in the back end of the nuclear fuel cycle, 14:33227 (J;US)
ROCK BEDS
Seasonal Thermal Energy Storage
Economic aspects of borehole heat stores in Sweden, 14:33603 (RA;CA;In English and French)
The Suncourt project, 14:33421 (RA;CA;In English and French)
Sensible Heat Storage
Thermal performance of ground heat exchangers. Analytical formulas, 14:33600 (RA;CA;In English and French)
Thermal Analysis
Thermal analysis of heat extraction boreholes, 14:33598 (RA;CA;In English and French)
ROCK SALT
See SALT DEPOSITS
ROCKS
See also SEDIMENTARY ROCKS
SYNTHETIC ROCKS
Age Estimation
Geochronological dating in polycyclic rocks: alternative interpretation to data from Serido (RN-PB) Brazil, 14:34722 (R;BR;In Portuguese)
Coatings
SEM analysis of rock varnish chemistry: A geomorphic age discriminator, 14:34762 (R;US)
Creep
Time-dependent damage and creep of brittle rock, 14:33997 (BA;US)
Fasteners
Boltometer testing of reference bolt in the Final Repository for Reactor Waste (SFR), Forsmark, 14:34134 (R;SE;In Swedish)
Ground Water
Hydrogeochemical assessment of crystaline rock for radioactive waste disposal: the Stripa experience, 14:33308 (R;SE)
Isotope Dating
Geochronological dating in polycyclic rocks: alternative interpretation to data from Serido (RN-PB) Brazil, 14:34722 (R;BR;In Portuguese)
Rock-Fluid Interactions
Hydrogeochemical assessment of crystaline rock for radioactive waste disposal: the Stripa experience, 14:33308 (R;SE)
Surfaces
Lithologic controls on rock varnish formation as determined by SEM [scanning electron microscope], 14:34761 (R;US)
ROCKY MOUNTAINS
Geologic Surveys
Geostatistical investigations of rock masses. The Sierra del Medio Case (Argentina), 14:33253 (R;AR)
RODS (FUEL)
See FUEL RODS
ROENTGEN (EXPOSURE UNIT)

ROENTGEN EQUIVALENT MAN
See DOSE EQUIVALENTS
RADIATION DOSE UNITS
ROPER RESONANCE
See N-1440 BARYONS
ROTORS
See also TIPVANE ROTORS
Mathematical Models
Quantum De Sitter structured connection and an example: the quantum relativistic rotator, 14:35368 (BA;SG)
Quantum Mechanics
Algebraic foundation for the triaxial rotor, 14:35323 (BA;SG)
ROUTING
Mathematical Models
StateGEN/StateNET–A structured method to perform route comparisons, 14:33299 (R;US)
Optimization
Identifying roadway sections with "critical" large truck accident rates, 14:33298 (R;US)
RUBBER (NATURAL)
See NATURAL RUBBER
RUBIDIUM
Isotope Dating
Isotopic data revaluation from Cabo province, with base in Cabo granite petrographic studies, 14:34756 (R;BR;In Portuguese)
RUBIDIUM ALLOYS
Surface Properties
Scanning tunneling microscopy of the intergrowth tungsten bronze $Rb_{0.05}WO_3$, 14:33940 (J;US)
RUNOFF
Simulation
Fiscal Year 1987 program report: Texas Water Resources Institute, 14:34513 (R;US)
RUTHENIUM COMPLEXES
Raman Effect
Near-infrared surface-enhanced Raman spectroscopy. Part II: Copper and gold colloids, 14:34036 (J;US)
RUTHENIUM IONS
Energy Beam Deposition
Application of ion implantation to the study of electrocatalysis, 14:33706 (BA;US)
RUTHENIUM OXIDES
Electric Conductivity
Electrical response of electrochemical capacitors based on high surface area ruthenium oxide electrodes, 14:33967 (BA;US)
Fabrication
Photoelectrochemistry of TiO_2 thin films with RuO_2 overlayers, 14:33399 (BA;US)
RUTHERFORD SCATTERING
Mathematical Models
Group theory approach to scattering, 14:35303 (BA;SG)

S

S MATRIX
Mathematical Operators
Group deformations and dynamic symmetries in scattering systems, 14:35340 (BA;SG)
Symmetry
Properties of the strong factor in dynamically generated S-matrices, 14:35339 (BA;SG)
S-1000 RESONANCES
See MESONS
SAFETY
See also OCCUPATIONAL SAFETY
REACTOR SAFETY
Iaea
OSART results II. A summary of the results of Operational Safety Review Team Missions during the period June 1987 to May 1988, 14:33455 (R;XA)
Member States
OSART results II. A summary of the results of Operational Safety Review Team Missions during the period June 1987 to May 1988, 14:33455 (R;XA)
Microcomputers
Improving operational safety management through probabilistic safety assessment on personal computers. Report of a technical committee meeting held in Vienna, 16-20 March 1987, 14:33572 (R;XA)
SAFETY (NUCLEAR)

SAFETY ENGINEERING
Reactor Accidents
Evolution of general design requirements for french pressurized water reactors, 14:33568 (R;FR)
Reactor Operation
Evolution of general design requirements for french pressurized water reactors, 14:33568 (R;FR)

SALINE ZONE
See OIL SHALES

SALMON
Diseases
Demonstration of a system for removing malachite green: Final report, 14:33379 (R;US)
Production
Operation, maintenance and evaluation of the Bonifer and Minthorn springs juvenile release and adult collection facilities: Annual report, 1987, 14:33378 (R;US)

SALT DEPOSITS
Electrical Properties
Studies of electrical and electromagnetic methods for characterizing salt properties at the WIPP [Waste Isolation Pilot Project] Site, New Mexico, 14:33292 (R;US)
Magnetic Properties
Studies of electrical and electromagnetic methods for characterizing salt properties at the WIPP [Waste Isolation Pilot Project] Site, New Mexico, 14:33292 (R;US)

SALT TRANSPORT PROCESS
See PYROCHEMICAL REPROCESSING

SALTS
See also MOLTEN SALTS
Crushing
Determination of geotechnical properties of loose ground salt as potential backfill material in an underground waste repository, 14:33265 (R;FR;In French)
Phase Studies
Organic nonlinear crystals and high power frequency conversion, 14:34003 (BA;US)

SAMARIUM 147
Excited States
^{147}Eu decay scheme and ^{147}Sm excited state structure, 14:35075 (R;SU;In Russian)

SAMARIUM 152
Isomeric Transitions
Superfluid isomers in Samarium region, 14:35117 (R;XA)
Superfluid Model
Superfluid isomers in Samarium region, 14:35117 (R;XA)

SAND
Contamination
Chernobyl in the university town Muenster (FRG), 14:34478 (RA;AT;In German)

SANDIA LABORATORIES
Research Programs
A review of the chemical and physical properties of molten alkali nitrate salts and their effect on materials used for solar central receivers, 14:33410 (BA;US)
Research Reactors
A safety overview of Sandia National Laboratories' reactor facilities, 14:33593 (R;US)

SANDSTONES
Gas Flow
Rock matrix and fracture analysis of flow in western tight gas sands (Phase IV): 1988 annual report, 14:33193 (R;US)
Geologic Surveys
Site selection for GRI (Gas Research Institute) cooperative tight-gas-field research. Volume 2. Geologic characteristics of selected low-permeability gas sandstones. Topical report, May-July 1988, 14:33196 (R;US)
Hydraulic Fracturing
In-situ stresses in low-permeability, nonmarine rocks, 14:33213 (J;US)
Two-Phase Flow
Two-phase flow in tight gas sands. Annual report, April 1987-May 1988, 14:33199 (R;US)

SANITARY LANDFILLS
Land Pollution
Installation-restoration program. Phase 2. Confirmation/quantification Stage 1 for Minot Air Force Base, Minot, North Dakota. Volume 1. Final report, September 1985-October 1988, 14:34485 (R;US)
Regulations
Landfilling of sewage sludge: technical support document, 14:34482 (R;US)
Standards
EPA proposes new standards for municipal solid waste disposal landfills, 14:34484 (J;US)
Water Pollution
Installation-restoration program. Phase 2. Confirmation/quantification Stage 1 for Minot Air Force Base, Minot, North Dakota. Volume 1. Final report, September 1985-October 1988, 14:34485 (R;US)

SARCOMAS
Eyes
Multidisciplinary treatment of orbital sarcomas in childhood, 14:34590 (RA;BR;In Portuguese)
Meninges
Irradiation extended to skull in parameningeal sarcomas in children, 14:34592 (RA;BR;In Spanish)
Radiotherapy
Ewing Sarcoma in infancy. The role of radiotherapy in the multidisciplinary treatment, 14:34589 (RA;BR;In Portuguese)
Ewing's tumour. Results of combined treatment, 14:34599 (RA;BR;In Portuguese)
Irradiation extended to skull in parameningeal sarcomas in children, 14:34592 (RA;BR;In Spanish)
Multidisciplinary treatment of orbital sarcomas in childhood, 14:34590 (RA;BR;In Portuguese)

SAVANNAH RIVER PLANT
Computer Networks
The Savannah River Site local area network, 14:35501 (R;US)

SCALAR MESONS
Nuclear Matter
Importance of the Dirac sea on the dynamical behaviour of scalar meson masses, 14:35122 (R;BR)
Walecka Model
Importance of the Dirac sea on the dynamical behaviour of scalar meson masses, 14:35122 (R;BR)

SCALE MODELS
Evaluation
1/3-scale model testing program, 14:33296 (R;US)
Impact Tests
Model testing conducted to benchmark the Shippingport Reactor Pressure Vessel/Neutron Shield Tank safety analysis report for packaging, 14:33314 (R;US)

SCANNERS (IMAGE)
See IMAGE SCANNERS

SCANNERS (OPTICAL)
See OPTICAL SCANNERS

SCATTERING
See also ELASTIC SCATTERING

Age Estimation
Chronostratigraphic recognition in Ceara northwest region, 14:34723 (R;BR;In Portuguese)
Geochemical Surveys
Delimitation of potential mineralized zones by regional geochemical prospecting - Brazilian semi-arid northeastern, 14:34759 (R;BR;In Portuguese)
Geochemical orientation in drainage in northestern Scheelitiferous province, Brazil, 14:34760 (R;BR;In Portuguese)
Isotope Dating
Chronostratigraphic recognition in Ceara northwest region, 14:34723 (R;BR;In Portuguese)
Spectroscopy
Delimitation of potential mineralized zones by regional geochemical prospecting - Brazilian semi-arid northeastern, 14:34759 (R;BR;In Portuguese)
SEDIMENTS
Chemical Composition
Natural trace metal concentrations in estuarine and coastal marine sediments of the southeastern United States, 14:34502 (J;US)
Chlorinated Aromatic Hydrocarbons
Fish as sentinels of environmental health. Technical memo, 14:34497 (R;US)
Polychlorinated biphenyls: occurrence in sediments and soils. January 1977-February 1989 (Citations from the Selected Water Resources Abstracts data base). Report for January 1977-February 1989, 14:34466 (R;US)
Leaching
Potentialities of percolation leaching of uraniferous siltstone from Wadi-Nasib, Egypt, 14:33225 (RA;XA)
Multi-Element Analysis
Report on the intercomparison run SD-A-1 radionuclides in marine sediment, 14:34056 (R;XA)

Polycyclic Aromatic Hydrocarbons
Fish as sentinels of environmental health. Technical memo, 14:34497 (R;US)
Radionuclide Migration
Feasibility of disposal of high-level radioactive waste into the seabed. volume 7: Review of laboratory investigations of radionuclide migration through deep-sea sediments, 14:33270 (R;XN)

SEIBERSDORF IAEA LABORATORY
International Atomic Energy Agency's Laboratories at Seibersdorf and in Vienna, 14:35476 (R;XA)

SEISMIC EFFECTS
Mechanical Structures
Fluid structure interaction due to fluid communications between fluid volumes. Application to seismic behaviour of F.B.R. vessels, 14:33513 (R;FR)
Reactor Cores
Analysis of impact phenomena between PWR fuel assemblies in earthquake situations, 14:33478 (R;FR)

SEISMIC EVENTS
See also EARTHQUAKES
Computerized Simulation
Large-scale, explicit wave simulations on the CRAY-2, 14:34726 (R;US)
Evaluation
Further neotectonic studies of earthquake zones in the eastern United States, 14:34754 (R;US)

SELENIUM
Ecological Concentration
Hydrological, geochemical, and ecological characterization of Kesterson Reservoir: Annual report, October 1, 1987–September 30, 1988, 14:34489 (R;US)

SELENIUM 79
Radionuclide Migration
Nuclide solubilities and distribution coefficients for use in probabilistic modeling. Data for the nuclieds ^{14}C, ^{79}Se, ^{93}Zr, ^{99}Tc, ^{126}Sn, ^{129}I, ^{135}Cs, ^{237}Np and ^{239}Np, 14:34479 (R;SE)

SELF-CONSISTENT FIELD
Electronic Structure
Electronic structure of semiconductors of group IV and III-V compounds calculated by the self consistent variational cellular method, 14:35012 (RA;BR)
Semiconductor Materials
Electronic structure of semiconductors of group IV and III-V compounds calculated by the self consistent variational cellular method, 14:35012 (RA;BR)
Variational Methods
Electronic structure of semiconductors of group IV and III-V compounds calculated by the self consistent variational cellular method, 14:35012 (RA;BR)

SEMICLASSICAL APPROXIMATION
Symmetry
Rotational symmetry analysis for semiclassical and quantum mechanics, 14:35299 (BA;SG)

SEMICONDUCTOR DEVICES
See also SEMICONDUCTOR DIODES
SEMICONDUCTOR LASERS
TRANSISTORS
Electron Beams
Studies on applications of functional organic-thin-films for lithography on semiconductor device production, 14:33339 (R;JP;In Japanese)
Fabrication
High voltage considerations for Silicon-on-Insulator devices using porous silicon, 14:33987 (R;US)
Studies on applications of functional organic-thin-films for lithography on semiconductor device production, 14:33339 (R;JP;In Japanese)

Growth and properties of novel structures grown by M.B.E., 14:33838 (RA;US)
Multiple Scattering
Electronic structure of ZnS: [Cu,V_{Zn}], 14:35216 (RA;BR)
Optical Properties
Study of optical anisotropies in GA As (100) and Insb (100), 14:33859 (RA;BR)
Photoemission
Electronic structure of III-V semiconductors oxides, 14:35213 (RA;BR)
Physical Properties
Crystal growth and physical properties of single crystal metastable semiconductors, 14:33823 (RA;US)
Quantum Electronics
Quantum architecture of novel semiconductors, 14:34034 (BA;US)
Resonance Ionization Mass Spectroscopy
Secondary neutral mass spectrometry, 14:34022 (BA;US)
Solid Clusters
Electronic structure of ZnS: [Cu,V_{Zn}], 14:35216 (RA;BR)
Superlattices
In situ characterization of heteroepitaxy by quasi-elastic light scattering, 14:34024 (BA;US)

Thin Films
Photoelectrochemical characterization of defect heterogeneities in anodic TiO_2 films, 14:34028 (BA;US)
X-Ray Diffraction
Absoption model by x-ray diffraction In semiconductors: application to germanium, 14:35217 (RA;BR)
SENSIBLE HEAT STORAGE
Short-term heat storage in excavated wells in earth. A feasibility study, 14:33713 (R;SE;In Swedish)
Economic Analysis
The economics of different types of energy storage for large and medium space heating systems, 14:33602 (RA;CA;In English and French)
Mathematical Models
Thermal performance of ground heat exchangers. Analytical formulas, 14:33600 (RA;CA;In English and French)
Optimization
The effect of cyclic thermal loading on near-surface energy storage facilities, 14:33599 (RA;CA;In English and French)
Technology Assessment
The economics of different types of energy storage for large and medium space heating systems, 14:33602 (RA;CA;In English and French)
Uses
The economics of different types of energy storage for large and medium space heating systems, 14:33602 (RA;CA;In English and French)
SENSITIVITY ANALYSIS
Mathematical Models
ADGEN: ADjoint GENerator for computer models, 14:33287 (R;US)
SEPARATION PROCESSES

DISTILLATION
LEACHING
Meetings
[Third international conference on separations technology, Davos, Switzerland, and visit to Zurich, May 12–19, 1989]: Foreign trip report, 14:34062 (R;US)
SERI
See SOLAR ENERGY RESEARCH INSTITUTE
SEWAGE SLUDGE
Ground Disposal
Land application and distribution and marketing of sewage sludge: technical support document, 14:34481 (R;US)
Landfilling of sewage sludge: technical support document, 14:34482 (R;US)
SHAFTS
Mechanical Properties
Preliminary analyses of the excavation investigation experiments proposed for the exploratory shaft at Yucca Mountain, Nevada Test Site, 14:33291 (R;US)
SHALES
Hydraulic Fracturing
In-situ stresses in low-permeability, nonmarine rocks, 14:33213 (J;US)
SHALLOW LAND BURIAL
See GROUND DISPOSAL
SHEEP
Sheep monitoring programme January - September 1988, 14:34471 (R;IE)
SHELL MODELS
See also INTERACTING BOSON MODEL
Nuclear Deformation
Shape coexistence in the neutron deficient Pb isotopes and the configuration-constrained shell correction approach, 14:35161 (R;SE)
SHELLS
Material Buckling
Dynamic plastic buckling of spherical shells during collapse, 14:34125 (R;US)
SHELLS (CONTAINMENT)
See CONTAINMENT SHELLS
SHF RADIATION
See RADIOWAVE RADIATION
SHIP PROPULSION REACTORS
Bubbles
Experimental study on the critical heat flux in a varying acceleration field, (1). The influence of varying acceleration on the behavior of bubble in subcool boiling, 2: behavior of bubbles under stationary acceleration field and varying acceleration field, 14:33520 (R;JP;In Japanese)
Critical Heat Flux
Experimental study on the critical heat flux in a varying acceleration field, (1). The influence of varying acceleration on the behavior of bubble in subcool boiling, 2: behavior of bubbles under stationary acceleration field and varying acceleration field, 14:33520 (R;JP;In Japanese)
SHIPPINGPORT PRESSURIZED WATER REACTOR
See SHIPPINGPORT REACTOR
SHIPPINGPORT REACTOR
Decommissioning
Model testing conducted to benchmark the Shippingport Reactor Pressure Vessel/Neutron Shield Tank safety analysis report for packaging, 14:33314 (R;US)
Puncture evaluation of Shippingport package, 14:34136 (R;US)
Shielding
Shippingport neutron shield tank sampling and analysis program, 14:33493 (R;US)
SHOCK (IMPACT)
See IMPACT SHOCK
SHOCK WAVES
Numerical Analysis
Numerical studies of shock wave structure sensitivity to interactions with turbulent fields, 14:34934 (R;US)
One-Dimensional Calculations
Analytical evaluation of special numerical calculations of pressure waves in the fluid. Pt. 1. One-dimensional wave propagation, 14:34121 (R;DE;In German)
SHOWER COUNTERS
Electron identification in the CDF [Collider Detector at Fermilab] central calorimeter, 14:34946 (R;US)
Design
General considerations for SSC scintillator calorimeters (For the scintillator general subgroup), 14:34318 (R;US)
Summary talk on fiber tower calorimeter for the scintillation calorimeter subgroups, 14:34319 (R;US)
Feasibility Studies
Conclusions from the Engineering Subgroup of the SSC Liquid Argon Calorimeter Working Group, 14:34353 (R;US)
SHRUBS
Combustion
Water nucleation properties of chaparral fire aerosol particles, 14:34380 (R;US)
SI SEMICONDUCTOR DETECTORS
Carrier Mobility
Material parameters in a thick hydrogenated amorphous silicon detector and their effect on signal collection, 14:34347 (R;US)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SIGMA MODEL
Gauge Invariance
Effective one-loop Lagrangian for gauged *scrH/scrK* σ models, 14:35030 (J;US)
SIGMA PLUS
See SIGMA PLUS PARTICLES
SIGMA PLUS PARTICLES
Radiative Decay
S-> dγ contribution to hyperon radiative decays: a QCD sum rule approach, 14:34969 (R;BR)
SIGMA-410 RESONANCES
See SIGMA MODEL
SILANES
Luminescence
Charge transfer luminescence in polysilanes, 14:34025 (BA;US)

SILICA
Health-hazard evaluation determination report No. 76-43 A-F-429, Hersey Products Company, Inc., Gilbertville, Massachusetts, 14:34417 (R;US)

Catalytic Effects
Direct synthesis of alcohol fuels over molybdenum-based catalysts: Final technical report, September 25, 1985–December 24, 1988, 14:33358 (R;US)
[Studies of the fundamental nature of catalytic acidity, sites, and intermediates]: Progress report, 14:34070 (R;US)

Deposition
Molecular sieve films from zeolited-silica microcomposites, 14:33986 (R;US)

Dusts
Health-hazard evaluation determination report No. 74-97-286, Blaw Knox Foundry and Mill Machinery, Inc., Warwood Plant, Wheeling, West Virginia, 14:34409 (R;US)
Health-hazard evaluation determination report No. 76-54-436, Certain-Teed Products, Inc., Richmond, California, 14:34416 (R;US)
In-depth survey report of silica flour dust during packing, transfer, and shipping at the Central Silica Company, Glass Rock Plant, Glass Rock, Ohio, 14:34412 (R;US)
In-depth survey report of silica flour dust during packing, transfer, and shipping at Ottawa Silica Company, Ottawa, Illinois, 14:34411 (R;US)
In-depth survey report of silica flour dust during packing, transfer, and shipping at Pennsylvania Glass Sand Corporation, Berkeley Springs, West Virginia, 14:34413 (R;US)

Magnetic Properties
Comparison of the magnetic properties of iron and manganese ion implanted silica, 14:33947 (R;US)

Polymerization
Origin of fractal structures in amorphous materials, 14:33998 (BA;US)

Structural Chemical Analysis
Dynamic light scattering from fractal colloidal aggregates, 14:33999 (BA;US)

SILICATES

Absorption Spectra
Optical absorption study of radiation and thermal effects in Brazilian samples of spodumene, 14:35208 (R;BR)

Heat Treatments
Optical absorption study of radiation and thermal effects in Brazilian samples of spodumene, 14:35208 (R;BR)

Physical Radiation Effects
Optical absorption study of radiation and thermal effects in Brazilian samples of spodumene, 14:35208 (R;BR)

SILICEOUS ROCK
See SANDSTONES

SILICON

Band Theory
Pressure effects on Ge and Si, A simplified tight binding approach, 14:35206 (R;XA)

Crystal Defects
Study of donors in Si-Cz monocrystals, 14:35215 (RA;BR;In Portuguese)

Crystal Doping
Characterization of diodes fabricated using the Gas Immersion Laser Doping (GILD) process in silicon, 14:33993 (BA;US)
Laser doping of semiconductors, 14:33992 (BA;US)
Measurements of melt depth limited diffusion in gas immersion laser doped silicon using an improved laser system, 14:33991 (BA;US)

Crystal Growth
Growth and transport at metal and semiconductor interfaces, 14:33821 (RA;US)
Molecular beam epitaxy of gallium arsenide on silicon substrate, 14:35209 (RA;BR;In Portuguese)

Crystal Structure
Microwave studies of tunneling states in disordered materials, 14:33832 (RA;US)

Crystal-Phase Transformations
Velocity and orientation dependence of solute trapping, 14:34019 (BA;US)

Czochralski Method
Study of the oxygen precipitation on p-type Czochralski silicon, 14:35214 (RA;BR;In Portuguese)

Electric Conductivity
Photoelectrochemistry at n-type semiconductors protected by metallized plasma coatings, 14:34030 (BA;US)

Fabrication
First time formation of continuous amorphous layers with boron at room temperature, 14:34017 (BA;US)

Hexagonal Lattices
The formation of hexagonal silicon at twin intersections, 14:34035 (J;US)

Impurities
A perspective on nitrogen in silicon, 14:33995 (BA;US)

Melting
The melting of amorphous Si, 14:34018 (BA;US)

Molecular Structure
Off-center N and O in silicon, 14:34020 (BA;US)

Monocrystals
Monocrystalline Si, Ge, ^{74}Ge filters of thermal neutrons, 14:35035 (RA;SU;In Russian)

Oxidation
Effects of thermal donor generation and annihilation upon oxygen precipitation, 14:34011 (BA;US)

P-Type Conductors
Study of the oxygen precipitation on p-type Czochralski silicon, 14:35214 (RA;BR;In Portuguese)

Point Defects
Study of the oxygen precipitation on p-type Czochralski silicon, 14:35214 (RA;BR;In Portuguese)

Polycrystals
Scanning tunneling microscope and complementary microchemical investigations of hydrogen and shallow acceptors at silicon grain boundaries, 14:33397 (BA;NL)

Refractivity
Variations in the refractive index of the near-surface region of low energy hydrogen ion bombarded silicon, 14:34021 (BA;US)

Semiconductor Materials
Study of semiconductors by Moessbauer spectroscopy: a review, 14:33856 (RA;BR)

Substrates
Molecular beam epitaxy of gallium arsenide on silicon substrate, 14:35209 (RA;BR;In Portuguese)
Optical and structural properties of CdTe films growth on GaAs and Si substrates, 14:35210 (RA;BR)

Surface Properties
Adsorption and interaction of Sb on Si(001) studied by scanning tunneling microscopy and core-level photoemission, 14:34045 (J;US)

Synthesis
Preparation, structure, dynamics, and energetics of amorphous silicon: A molecular-dynamics study, 14:34039 (J;US)

Thermal Neutrons
Monocrystalline Si, Ge, ^{74}Ge filters of thermal neutrons, 14:35035 (RA;SU;In Russian)

Thin Films
CVD tungsten for buried layer conductors, 14:34032 (BA;US)

X-Ray Diffraction
Study of donors in Si-Cz monocrystals, 14:35215 (RA;BR;In Portuguese)

SILICON 28

Separation Processes
Mound activities in chemical and physical research, July–December 1988, 14:34060 (R;US)

SILICON 28 REACTIONS

Ion-Atom Collisions
Heavy ion experiments at BNL AGS, 14:35052 (RA;JP)

Particle Production
Production of the *H* dibaryon in relativistic heavy-ion collisions, 14:35166 (J;US)

SILICON 28 TARGET
Deuteron Reactions
Nuclei form and deformation effect on angular deuteron distribution at elastic and inelastic diffraction scattering, 14:35159 (R;SU;In Russian)
Nuclear Deformation
Nuclei form and deformation effect on angular deuteron distribution at elastic and inelastic diffraction scattering, 14:35159 (R;SU;In Russian)
SILICON ADDITIONS
Crystal Defects
Negative-*U* property of the *DX* center in $Al_xGa_{1-x}As$:Si, 14:34041 (J;US)
SILICON ALLOYS
See also SILICON ADDITIONS
Electric Batteries
Thermodynamics of ternary systems and its application to Li-Si-based negative electrode materials, 14:33626 (BA;US)
Grain Boundaries
Local strain determination at interfaces in metals and semiconductors, 14:33822 (RA;US)
SILICON CARBIDES
Deformation
Role of deformation mechanisms in multiaxial hardening and cyclic fatigue, 14:33828 (RA;US)
Microstructure
Processing and microstructure of complex ceramic systems, 14:33950 (RA;US)
SILICON COMPOUNDS
See also SILANES
SILICATES
SILICON CARBIDES
SILICON NITRIDES
SILICON OXIDES
Radiation Effects
Ultrasonic studies of radiation effects, 14:33833 (RA;US)
SILICON HYDRIDES
See SILANES
SILICON ISOTOPES
See also SILICON 28
Neutron-Rich Isotopes
Observation of the new neutron-rich nuclei ^{29}F, $^{35,36}Mg$, $^{38,39}Al$, $^{40,41}Si$, $^{43,44}P$, $^{45,46,47}S$, $^{46,47,48,49}Cl$ and $^{49,50,51}Ar$ by means of a 55 MeV/u ^{48}Ca beam, 14:35038 (R;SU)
SILICON NITRIDES
Ceramics
Silicon nitride ceramics and refractories. February 1987-January 1988 (Citations from the COMPENDEX data base). Report for February 1987-January 1988, 14:33959 (R;US)
Silicon nitride ceramics and refractories. February 1988-February 1989 (Citations from the COMPENDEX data base). Report for February 1988-February 1989, 14:33960 (R;US)
Deformation
Role of deformation mechanisms in multiaxial hardening and cyclic fatigue, 14:33828 (RA;US)
Dielectric Properties
Thermal response of charge decay in silicon oxynitride films, 14:34015 (BA;US)
Fracture Properties
Fractographic study of a silicon nitride ceramic, 14:33946 (R;US)
Refractories
Silicon nitride ceramics and refractories. February 1987-January 1988 (Citations from the COMPENDEX data base). Report for February 1987-January 1988, 14:33959 (R;US)
Silicon nitride ceramics and refractories. February 1988-February 1989 (Citations from the COMPENDEX data base). Report for February 1988-February 1989, 14:33960 (R;US)
Thin Films
Issues on silicon oxynitride films, 14:34016 (BA;US)
SILICON OXIDES
See also SILICA
Deposition
Deposition of electrolyte and cathode thin films by magnetron sputtering, 14:33612 (R;US)
Dielectric Properties
Thermal response of charge decay in silicon oxynitride films, 14:34015 (BA;US)
Thin Films
Issues on silicon oxynitride films, 14:34016 (BA;US)
Voids
Microvoids at the SiO_2/Si interface, 14:34042 (J;US)
SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS
SILICON SOLAR CELLS
Calibration
Spectroradiometric analysis of silicon for photovoltaic solar energy conversion, 14:33390 (R;DE;In German)
Fabrication
Research on stable, high-efficiency, large-area, amorphous-silicon-based submodules, task B: Semiannual subcontract report, 1 September 1988–28 February 1989, 14:33391 (R;US)
Reviews
Overview of amorphous silicon photovoltaic technology, 14:33394 (BA;US)
SILICONES
Charge Transport
Charge transfer luminescence in polysilanes, 14:34025 (BA;US)
SILTSTONES
Hydraulic Fracturing
In-situ stresses in low-permeability, nonmarine rocks, 14:33213 (J;US)
SILVER
Energy Gap
Band folding and energy-gap formation in Ag-Au superlattices, 14:33936 (J;US)
Interfaces
Surface studies of boundary layer films, 14:33844 (RA;US)
Microstructure
Study of the microstructure of silver films deposited by ion assisted deposition onto aluminum oxide substrates, 14:33810 (R;US)
Optical Properties
Chemisorption-induced reflectivity changes in thin metal films, 14:34027 (BA;US)
Physical Radiation Effects
Effect of high-energy ion irradiation on the elastic moduli of Ag/Co superlattices, 14:33942 (J;US)
Stress Corrosion
Stress corrosion cracking of uranium-silver interfaces in silver-aided diffusion welds: Revision 1, 14:33906 (R;US)
SINE GENERATORS
See FUNCTION GENERATORS
SINGLE CRYSTALS
See MONOCRYSTALS
SITE SELECTION
Risk Assessment
Nuclear installations sites safety, 14:33546 (R;FR;In French)
Safety
Nuclear installations sites safety, 14:33546 (R;FR;In French)
SKELETON
See also BONE JOINTS
Metastases
Quantitative scintiscanning in the follow-up observation of carcinomas of the breast. A correlation of results thus obtained with X-ray and laboratory findings to evaluate the effects of local irradiation or cytostatics, 14:34612 (R;DE;In German)
SKY
Illuminance
Comparison of sky luminance maps with instantaneous all-sky images, 14:33381 (BA;US)
SKYRMIONS
See SOLITONS
SLC
See STANFORD LINEAR COLLIDER
SLOT OVENS
See COKE OVENS
SLUDGES

Ground Disposal
Risk assessment models for land application of municipal sludges (RAMMS Version 3.0). Volume 1. Draft complete documentation of the system/user manual, 14:34465 (R;US)

SLUGS (FUEL)
See FUEL RODS

SLURRIES
See also FUEL SLURRIES
Gamma Spectra
Chernobyl fall-out at Delft, 14:34473 (RA;AT)

SLURRIES (FUEL)
See FUEL SLURRIES

SMALL INTESTINE
Retention
Radiation exposure of the small intestine after ingestion of iron radioisotopes, 14:34698 (RA;AT;In German)

SMALL-SCALE HYDROELECTRIC POWER PLANTS
Demonstration Programs
Spokane Upriver Dam Hydro Project operation and maintenance report, April, 1989, 14:33371 (R;US)

SMOKES
Combustion Products
Chemical characterization and toxicologic evaluation of airborne mixtures: Chemical characterization of colored signal smokes: Final report, 14:34707 (R;US)

SO GROUPS
Irreducible Representations
Integral-spin fields on 3+2 de Sitter space, 14:35353 (BA;SG)

SODIUM
Atom-Atom Collisions
Theoretical Penning electron-energy distributions for alkali-metal atoms: He(2 ^{1,3}S) collisions with sodium and potassium, 14:34915 (J;US)

SODIUM IODIDES
Thallium Additions
Neutrons and light nuclei detectors realization for the 4π multidetector amphora, 14:34348 (R;FR;In French)

SODIUM NITRATES
Chemical Properties
A review of the chemical and physical properties of molten alkali nitrate salts and their effect on materials used for solar central receivers, 14:33410 (BA;US)

SODIUM-SULFUR BATTERIES
Electrolytes
Fractography of glasses and ceramics, 14:33964 (B;US)
Performance
Performance characteristics of novel, high energy density, intermediate temperature batteries, 14:33634 (BA;US)

SOIL-STRUCTURE INTERACTIONS
Evaluation
Guidelines for round-robin soil-structure interaction analysis working paper preparation, 14:34739 (RA;US)
Finite Element Method
Soil structure interaction analyses for 1/4-scale containment model using direct (finite element) method of analysis, 14:34731 (RA;US)
Forecasting
3-D soil-structure interaction analysis of Lotung containment model, 14:34749 (RA;US)
Ambient motions of quarter scale containment model in Lotung, 14:34748 (RA;US)
Analysis of large-scale containment model in Lotung, Taiwan: forced vibration and earthquake response analysis and comparison, 14:34733 (RA;US)
Dynamic characteristics of the measured seismic and structural responses data of Lotung 1/4-scale nuclear power plant containment model, 14:34752 (RA;US)
Lotung SSI analysis using a 3-D harmonic Green's function method, 14:34744 (RA;US)
Pore water pressure response measurements at Lotung site, 14:34753 (RA;US)
Prediction of quarter scale model response using SIM code, 14:34741 (RA;US)
Prediction of the forced vibration and seismic response of the Lotung (Taiwan) large-scale containment model and comparison with observations, 14:34740 (RA;US)
Predictive response computations for vibration tests and earthquake of May 20, 1986 using an axisymmetric finite element formulation based on the complex response method and comparison with measurements - a Swiss contribution, 14:34743 (RA;US)
Soil-structure interaction analyses of EPRI field test - forced vibration test and earthquake response, 14:34747 (RA;US)
Soil-structure interaction analyses of quarter-scale containment model experiment in Lotung, Taiwan, 14:34730 (RA;US)
Soil-structure interaction analysis of quarter scale model using AXERA code, 14:34746 (RA;US)
Soil-structure interaction analysis of quarter scale model using HYBAX code, 14:34745 (RA;US)
Soil-structure interaction correlations of EPRI/TPC field test results with analytical predictions, 14:34742 (RA;US)
Variation and propagation of seismic strong motions across the SMART1-LSST array, 14:34750 (RA;US)
Wavetype identification and interpretation of the seismic data in SMART-1 array, 14:34751 (RA;US)
Mathematical Models
Forced vibration and seismic analyses of Lotung Large Scale Experiment using the SASSI code, 14:34732 (RA;US)
Perspectives on soil structure interaction analysis, 14:34729 (RA;US)
Prediction of strong ground motion for structural design, 14:34734 (RA;US)
Research Programs
EPRI/TPC large-scale seismic experiment at Lotung, Taiwan, 14:34735 (RA;US)
Guidelines for round-robin soil-structure interaction analysis working paper preparation, 14:34739 (RA;US)
Perspectives on soil structure interaction analysis, 14:34729 (RA;US)
Prediction of quarter scale model response using SIM code, 14:34741 (RA;US)
Prediction of the forced vibration and seismic response of the Lotung (Taiwan) large-scale containment model and comparison with observations, 14:34740 (RA;US)
Soil-structure interaction analyses of quarter-scale containment model experiment in Lotung, Taiwan, 14:34730 (RA;US)
Summary of soil characterization program for the Lotung large-scale seismic experiment, 14:34736 (RA;US)
Soil Mechanics
Summary of soil characterization program for the Lotung large-scale seismic experiment, 14:34736 (RA;US)
Validation
NRC/ANL participation in the Lotung, Taiwan, large-scale soil-structure-interaction experiment - validation of analysis methods, 14:34738 (RA;US)
Validation of seismic soil-structure interaction analysis techniques using Lotung experiment data - EPRI program, 14:34737 (RA;US)

SOILS
Acidification
Impacts of acidic deposition: context and case studies of forest soils in the southeastern US, 14:34464 (R;US)
Chlorinated Aromatic Hydrocarbons
Polychlorinated biphenyls: occurrence in sediments and soils. January 1977-February 1989 (Citations from the Selected Water Resources Abstracts data base). Report for January 1977-February 1989, 14:34466 (R;US)
Contamination
Activity levels in air and ground in the region of Bremen after the Chernobyl accident, 14:34443 (RA;AT)
Chernobyl in the university town Muenster (FRG), 14:34478 (RA;AT;In German)
In situ venting of jet fuel-contaminated soil, 14:34461 (R;US)
Measurement of environmental radioactivity around Mainz (FRG) after the Chernobyl reactor accident, 14:34450 (RA;AT;In German)

Radioactive burden in soil and milk around Oldenburg (FRG) in the wake of the Chernobyl accident, 14:34476 (RA;AT;In German)
Structure-activity relationships for the degradation of a mixture of organic chemicals in soil, 14:34463 (R;US)

Inventories
The EML soil inventory and archive, 14:34468 (R;US)

Radioassay
Radioactivity in foods grown on Florida phosphate lands. Final report, 14:34664 (R;US)

Radioecological Concentration
Excursion control at in situ uranium mines, 14:33326 (BA;US)

Sensible Heat Storage
The effect of cyclic thermal loading on near-surface energy storage facilities, 14:33599 (RA;CA;In English and French)

Thermal Conductivity
The effect of cyclic thermal loading on near-surface energy storage facilities, 14:33599 (RA;CA;In English and French)

SOLAR RECEIVERS

Design
A review of the chemical and physical properties of molten alkali nitrate salts and their effect on materials used for solar central receivers, 14:33410 (BA;US)

SOLAR REFLECTORS
See also PARABOLIC REFLECTORS
Solid state electrochromic windows, 14:34029 (BA;US)

SOLAR SEA POWER PLANTS
See OCEAN THERMAL POWER PLANTS

SOLAR SYSTEM EVOLUTION

Halley Comet
Physical and chemical properties of Halley comet, 14:34857 (RA;CS;In Czech)

SOLAR THERMAL POWER PLANTS

Cogeneration
Status of TSC hybrid solar conversion in Illinois, 14:33409 (BA;US)

Parabolic Reflectors
Applications of nonimaging secondaries with stressed membrane primary concentrators, 14:33417 (BA;US)

SOLAR THERMAL RECEIVERS
See SOLAR RECEIVERS

SOLAR WATER HEATERS

Monitoring
Alternative methods for short-term field monitoring of active solar domestic hot water systems, 14:33414 (BA;US)

SOLENOIDS

Testing
A study of compact, lightweight, high voltage inductors with partial magnetic cores, 14:34214 (R;US)

SOLID CLUSTERS
Charge Exchange
Charge-exchange reactions in metal clusters: Role of magic numbers, 14:35237 (J;US)
SOLID FUELS
See also MIXED OXIDE FUELS
Combustion Kinetics
Diffusional/thermal coupling and intrinsic instability of solid propellant combustion, 14:34104 (BA;US)
I G Process
Gasification combined cycle power generation - process alternatives, 14:33104 (RA;FI)
SOLID SCINTILLATION DETECTORS
See also PLASTIC SCINTILLATION DETECTORS
Barium Fluorides
Neutrons and light nuclei detectors realization for the 4π multidetector amphora, 14:34348 (R;FR;In French)
Cesium Iodides
Neutrons and light nuclei detectors realization for the 4π multidetector amphora, 14:34348 (R;FR;In French)
Cosmic Gamma Bursts
Gamma-ray observations of supernovae SN1987A, 14:34763 (RA;BR)
Gamma Detection
Gamma-ray observations of supernovae SN1987A, 14:34763 (RA;BR)
Sensitivity
Gamma-ray observations of supernovae SN1987A, 14:34763 (RA;BR)
Sodium Iodides
Neutrons and light nuclei detectors realization for the 4π multidetector amphora, 14:34348 (R;FR;In French)
SOLID STATE LASERS
See also NEODYMIUM LASERS
Fracture Mechanics
Fracture of solid state lasers, 14:33994 (BA;US)
Photovoltaic Power Supplies
Approaching the irradiance of the surface of the sun, 14:33406 (BA;US)
SOLID STATE PHYSICS
32nd Annual conference and the 22nd annual theoretical seminar of the South African Institute of Physics, 14:35127 (R;ZA;In English, Afrikaans)
SOLID WASTES
See also WOOD WASTES
Chemical Properties
Solidification of Swiss radioactive wastes by means of bitumen, 14:33282 (R;CH;In German)
Physical Properties
Solidification of Swiss radioactive wastes by means of bitumen, 14:33282 (R;CH;In German)
Pyrolysis
Pyrolysis of municipal solid waste, 14:33355 (BA;US)
SOLID-STATE PLASMA
Thermodynamics
Thermodynamics of two component gaseous and solid state plasmas at any degeneracy, 14:35204 (R;XA)
SOLIDS
Crack Propagation
Steady-state propagation of a crack in a viscoelastic strip, 14:35235 (J;US)
SOLITONS
Field Equations
Classical solutions of a nonrelativistic model exhibiting spontaneous symmetry breakdown, 14:34997 (R;BR)
SOLVENT EXTRACTION
Thermodynamic Properties
Determination of thermodynamic equilibrium constants of ion exchange and solvent extraction processes, 14:34073 (R;YU)
SOLVENTS
See also ORGANIC SOLVENTS
Indoor Air Pollution
Industrial-hygiene-survey report of Martin Marietta Missile and Electronics Group, Orlando, Florida, April 25-27, 1988, 14:34415 (R;US)
Preliminary survey report: Steelcase, Incorporated, Grand Rapids, Michigan, September 23, 1981, 14:34401 (R;US)
Occupational Exposure
Health-hazard evaluation determination report No. 76-115-425, H F E Inc., Ft. Collins, Colorado, 14:34408 (R;US)
SONDES
See PROBES
SORGHUM
Plant Breeding
Crop improvement programmes at Shambat, Sudan, 14:34645 (RA;XA)
Genetic analysis of M_2 progenies derived from different doses of gamma irradiation of Malian sorghum strains and an American variety, 14:34651 (RA;XA)
SOUTHEAST REGION
See FEDERAL REGION IV
SOVIET UNION
See USSR
SOY OIL
See SOYBEAN OIL
SOYBEAN OIL
Distillation
Saponified vegetable oils as substitute diesel fuels, 14:33363 (BA;US)
SOYBEANS
Plant Breeding
Breeding soybeans for improved seed viability and promiscuous nodulation, 14:34643 (RA;XA)
Soybean improvement research strategies in Uganda, 14:34642 (RA;XA)
SP GROUPS
Analytical Solution
Representation of the generators of symplectic algebras, 14:35350 (BA;SG)
SPACE GROUPS
Irreducible Representations
Isotropy subgroups for reducible representations of space groups, 14:35387 (BA;SG)
Space groups with Q-reducible point groups, 14:35388 (BA;SG)
Various classification schemes for irreducible space group representations, 14:35390 (BA;SG)
Knowledge Base
GRAPE - Group representation and application in physics environment, 14:35393 (BA;SG)
SPACE HEATING
Comparative Evaluations
Partial conversion of direct-electric heated single family residence with a small heat pump. Pilot project progress report after 2.5 month follow-up, 14:33744 (R;SE;In Swedish)
Control Systems
Energy saving by equipment based upon microcomputers. Comparison between computerized and time control of a ventilation a heating system, 14:33711 (R;SE;In Swedish)
Demonstration Programs
Soil air as a heat source for domestic heating by heat pumps, 14:33723 (RA;CA;In English and French)
Energy Conservation
Energy saving by equipment based upon microcomputers. Comparison between computerized and time control of a ventilation a heating system, 14:33711 (R;SE;In Swedish)
Feasibility Studies
Soil air as a heat source for domestic heating by heat pumps, 14:33723 (RA;CA;In English and French)
SPACE LATTICES
See CRYSTAL LATTICES
SPACE PROPULSION REACTORS
Nuclear Fuels
Use of cermet fueled nuclear reactors for direct nuclear propulsion, 14:33565 (R;US)

SPECIAL RELATIVITY THEORY
See RELATIVITY THEORY
SPECIFIC GRAVITY
See DENSITY
SPECIFIC VOLUME
See DENSITY
SPECIFIC WEIGHT
See DENSITY
SPECTRA
See also EMISSION SPECTRA
GAMMA SPECTRA
NEUTRON SPECTRA
ULTRAVIOLET SPECTRA
Mathematical Models
Algebraic approach to molecular spectra and dynamics, 14:35300 (BA;SG)
SPECTRA (NEUTRON)
See NEUTRON SPECTRA
SPECTROMETERS
See also MASS SPECTROMETERS
TIME-OF-FLIGHT SPECTROMETERS
ULTRAVIOLET SPECTROMETERS
Construction
Technical progress report for measurement of ambipolar laser fusion targets: Bi-monthly report, April 1, 1981–May 31, 1981, 14:35445 (R;US)
Design
An instantaneous CCN [cloud condensation nucleus] spectrometer, 14:34354 (R;US)
Technical progress report for measurement of ambipolar potential of laser fusion targets: Bi-monthly report, December 1, 1980–January 31, 1981, 14:35444 (R;US)
SPECTROSCOPY
See also GAMMA SPECTROSCOPY
MESON SPECTROSCOPY
PHOTOACOUSTIC SPECTROSCOPY
X-RAY SPECTROSCOPY
Energy Levels
Dynamics and statistics of unstable quantum states, 14:35154 (R;SU;In Russian)
Energy-Level Density
Dynamics and statistics of unstable quantum states, 14:35154 (R;SU;In Russian)
Nonlinear Optics
Analytical applications of nonlinear optics including phase conjugation, 14:34158 (BA;US)
SPENT FUEL CASKS
Contamination
An estimate of the contribution of "crud" to the radioactivity source term of a spent fuel transport cask, 14:33304 (R;US)
Evaluation
SCALE-4 [Standardized Computer Analyses for Licensing Evaluation]: An improved computational system for spent-fuel cask analysis, 14:33231 (R;US)
Impact Tests
1/3-scale model testing program, 14:33296 (R;US)
Transport
Highway route controlled quantity shipment routing reports: An overview, 14:33303 (R;US)
Study of minimum-weight highway transporters for spent nuclear fuel casks: Technical report, 14:33229 (R;US)
Waste Transportation
A fuel response model for the design of spent fuel shipping casks, 14:33230 (R;US)
SPENT FUEL ELEMENTS
Spent Fuel Storage
Spent fuel management in Czechoslovak WWER-440 type reactors, 14:33236 (RA;XA)
Transport
Spent fuel management in Czechoslovak WWER-440 type reactors, 14:33236 (RA;XA)
SPENT FUELS
Evaluation
Analyses of the transportation of spent research reactor fuel in the United States, 14:34132 (R;US)
Government Policies
Spent fuel management in the United States of America, 14:33243 (RA;XA)
International Cooperation
Recent NEA activities related to spent fuel management, 14:33245 (RA;XA)
Management
Current status of spent fuel management in Japan, 14:33241 (RA;XA)
IAEA spent fuel management programme - Past and present, 14:33233 (RA;XA)
LWR spent fuel management in the Federal Republic of Germany, 14:33238 (RA;XA)
Recent NEA activities related to spent fuel management, 14:33245 (RA;XA)
Spent fuel management in Argentina, 14:33234 (RA;XA)
Spent fuel management in Canada, 14:33235 (RA;XA)
Spent fuel management in Czechoslovak WWER-440 type reactors, 14:33236 (RA;XA)
Spent fuel management in France, 14:33237 (RA;XA)
Spent fuel management in Switzerland, 14:33240 (RA;XA)
Spent fuel management in the USSR, 14:33244 (RA;XA)
Spent fuel management in the United States of America, 14:33243 (RA;XA)
Spent fuel management strategy in the United Kingdom, 14:33242 (RA;XA)
Spent fuel management: Current status and prospects. Proceedings of an advisory group meeting held in Vienna, 15-18 March 1988, 14:33232 (R;XA)
Status of the Swedish nuclear waste management programme, 14:33239 (RA;XA)
Meetings
Spent fuel management: Current status and prospects. Proceedings of an advisory group meeting held in Vienna, 15-18 March 1988, 14:33232 (R;XA)
Reprocessing
Spent fuel management in Argentina, 14:33234 (RA;XA)
Spent fuel management in France, 14:33237 (RA;XA)
Transport
Spent fuel management in Canada, 14:33235 (RA;XA)
SPENT LIQUORS
Fluid Flow
Chemical pulping spent liquor rheological properties and viscosity, 14:34077 (R;FI;In Finnish)
Viscosity
Chemical pulping spent liquor rheological properties and viscosity, 14:34077 (R;FI;In Finnish)
SPENT SEED
Regeneration
MHD seed recovery and regeneration: Phase 1, Evaluation of bench-scale results: Third quarterly report, April 1–June 30, 1988, 14:33683 (R;US)
MHD seed recovery and regeneration: Phase 1, Evaluation of bench-scale results: Second quarterly report, January 1–March 31, 1988, 14:33682 (R;US)
MHD seed recovery and regeneration: Phase 1, Evaluation of bench-scale results: Fourth quarterly report, July 1–September 30, 1988, 14:33684 (R;US)
MHD seed recovery and regeneration: Phase 1, Evaluation of bench-scale results: First quarterly report, September 28–December 31, 1987, 14:33681 (R;US)
SPHERES
Interferometry
Interferometry of full spheres, 14:34367 (BA;US)
SPIN
Electrodynamics
Spin and paramagnetism in classical stochastic electrodynamics (SED), 14:35009 (R;BR)
Irreducible Representations
Spin(8) representations and particle physics, 14:35384 (BA;SG)

Topology
Polynomial link invariant, braid groups and the XXZ chain, 14:35383 (BA;SG)

SPIN FLIP
Energy-Level Transitions
Inelastic scattering of 400 MeV polarized deuterons on ^{12}C, ^{24}Mg and ^{40}Ca, 14:35151 (R;FR)

SPRAY COATING
Hazardous Materials
Industrial-hygiene-survey report of Martin Marietta Missile and Electronics Group, Orlando, Florida, April 25-27, 1988, 14:34415 (R;US)

SQUARE-WAVE GENERATORS
See FUNCTION GENERATORS

SQUID DEVICES
To measure and characterize metal corrosion in electrolyte solutions by exploiting the properties of superconductors. Final technical report, 14:33805 (R;US)
Performance
Quantum limits of superconducting heterodyne receivers. Final report, 15 May 1986-14 May 1988, 14:34114 (R;US)

SRI LANKA
Petroleum Products
Demand elasticities for petroleum products in Sri Lanka, 14:33663 (BA;US)

STABILIZED SUPERCONDUCTORS
Meetings
Cryogenics '88, 14:34122 (R;CS;In English, Czech, Slovak, Russian)
Niobium Base Alloys
Multifilament Nb_3Sn conductor consisting of Nb tubes, 14:33862 (RA;CS;In Slovak)

STAGED COMBUSTION
Staged air supply for NO_x reduction in FBC, 14:34223 (R;SE)

STAINLESS STEEL-18-4-1
See STAINLESS STEELS

STAINLESS STEEL-19-9DL
See STAINLESS STEELS

STAINLESS STEEL-304
Corrosion Resistance
The behavior of type 304L stainless steel in tuff repository conditions, 14:33912 (BA;US)
Crack Propagation
Sensitivity analysis of flaw growth instability, 14:33894 (RA;US)
Crevice Corrosion
Transport processes in localized corrosion, 14:33819 (RA;US)
Deformation
Role of deformation mechanisms in multiaxial hardening and cyclic fatigue, 14:33828 (RA;US)
Fracture Mechanics
Micromechanics of deformation and fracture, 14:33826 (RA;US)
Fracture Properties
Deformation plasticity failure assessment diagram approach, 14:33895 (RA;US)
Solution to the workshop problem using the CEGB fracture assessment procedure [R6], 14:33893 (RA;US)
Hydrogen Embrittlement
Mechanisms of environmentally induced embrittlement, 14:33824 (RA;US)
Stress Corrosion
Stress corrosion cracking of uranium-silver interfaces in silver-aided diffusion welds: Revision 1, 14:33906 (R;US)
Stress Relaxation
Rate-sensitivity and short term relaxation behavior of AISI Type 304 stainless steel at room temperature and at 650°C; influence of prior aging, 14:33812 (R;US)

STAINLESS STEEL-305
Aging
The effect of aging at 343°C on type 308 stainless steel welds, 14:33818 (R;US)
Mechanical Properties
The use of field indentation microprobe in measuring mechanical properties of welds, 14:33817 (R;US)

STAINLESS STEEL-310
Deformation
Role of deformation mechanisms in multiaxial hardening and cyclic fatigue, 14:33828 (RA;US)
Grain Boundaries
Solute effects on mechanical properties of grain boundaries, 14:33825 (RA;US)
Hydrogen Embrittlement
Mechanisms of environmentally induced embrittlement, 14:33824 (RA;US)

STAINLESS STEEL-316L
Crack Propagation
Crack resistance properties of through-cracks in austenitic straight pipes (DN 700) under bending, 14:33865 (RA;DE;In German)
Mechanical Properties
The use of field indentation microprobe in measuring mechanical properties of welds, 14:33817 (R;US)
Stress Analysis
Recent developments and results of L.D.T.F. tests on steel and concrete specimens, 14:34191 (RA;DE)

STAINLESS STEELS
See also CHROMIUM STEELS
A method for predicting cracking in waste glass canisters, 14:33322 (J;US)
Carburization
Carburisation of stainless steel caused by oil in sodium, 14:33514 (R;GB)
Corrosion
Causes of FGD [flue gas desulfurization] construction material failures: Volume 1, September 1982–July 1985: Final report, 14:33443 (R;US)

STANDARD ELECTROWEAK MODEL
See WEINBERG-SALAM GAUGE MODEL

STANDARD MODEL
Higgs Bosons
Topical problems of the standard model, 14:34974 (RA;CS;In Czech)
High Energy Physics
Experimental results from Europhysics conference in Uppsala, 14:34950 (RA;CS;In Czech)
Lectures
Observations in particle physics from two neutrinos to the Standard Model, 14:34994 (J;US)

STANDARDS
Evaluation
Regulations and standards improve UF_6 handling and transportation practices, 14:33289 (R;US)

STANDING CROP
See BIOMASS

STANFORD LINEAR ACCELERATOR CENTER
Computer Architecture
Distributed Supervisory Protection Interlock System, 14:34235 (R;US)

STANFORD LINEAR COLLIDER
Beam Monitoring
Monitor for gamma radiation at zero degrees from the SLC collision point, 14:34355 (J;NL)
Beam Optics
Design of optics for the final focus test beam at SLAC, 14:34253 (R;US)
Beam-Beam Interactions
Beam-Beam deflection as a beam tuning tool at the SLAC Linear Collider, 14:34252 (R;US)
Design
Summary of the Linear Collider Working Group, 14:34234 (R;US)

STAR MODELS
Convection
Cosmions and Stars, 14:34862 (R;FR)
Mass Transfer
Cosmions and Stars, 14:34862 (R;FR)
Structural Models
Wimps and stellar structure, 14:34863 (R;FR)

Variable Stars
Theoretical aspects of nonradial pulsations, 14:34820 (RA;CS)
Time-scales and physical processes, 14:34797 (RA;CS)
STARS
See also BINARY STARS
DWARF STARS
GIANT STARS
MAGNETIC STARS
MAIN SEQUENCE STARS
SYMBIOTIC STARS
VARIABLE STARS
Ultraviolet Spectra
Abundance and f values needed to interpret adequately the high resolution I.U.E. spectra, 14:34792 (RA;FR)
UV-stellar spectra - some basic achievements, 14:34827 (RA;CS)
STARSPOTS
See also SUNSPOTS
Proper Motion
Starspot proper motion in HK Lac, 14:34812 (RA;CS)
STEADY-STATE CONDITIONS
Calculation Methods
Evaluation of the filtered leapfrog-trapezoidal time integration method, 14:34936 (J;US)
STEAM
Detonations
Hydrogen-air-diluent detonations, 14:33343 (BA;US)
STEAM COOLANT
See STEAM
STEAM GENERATORS
Air Pollution
Long-term follow-up of NO_x-emissions from the Vaesthamn plant in Helsingborg, 14:33447 (R;SE;In Swedish)
Cleaning
Qualification of PWR steam generator chemical cleaning for Indian Point-2: Final report, 14:33480 (R;US)
Feedwater
Material compatibility of the chemical cleaning of steam generators with chelating solutions, 14:33486 (RA;DE;In German)
Two-Phase Flow
Two-phase cross flow damping in tube arrays, 14:34169 (R;FR)
STEAM INJECTION
Borehole Linking
Identification of interwell communication in cyclic steam projects, 14:33158 (RA;CA)
Graphs
Identification of interwell communication in cyclic steam projects, 14:33158 (RA;CA)
STEAM TURBINES
Bypasses
Contribution at the study of by pass turbine lines of thermal or nuclear power plants, 14:33515 (R;FR;In French)
Turbine Blades
Steam turbine blading repair. Phase 1, 14:33429 (R;CA)

Sensitivity
Rate-sensitivity and short term relaxation behavior of AISI Type 304 stainless steel at room temperature and at 650°C; influence of prior aging, 14:33812 (R;US)

STRANGE PARTICLES
Particle Production
Results for strange particle production from BNL experiment E802, 14:35089 (R;US)

STREAK CAMERAS
Beam Dynamics
High speed photography, videography, and photonics V, 14:34151 (B;US)
Optical Properties
High speed photography, videography, and photonics V, 14:34151 (B;US)

STREAMER SPARK CHAMBERS
Pion Reactions
High pressure streamer chamber serving as a target for investigating the interaction of pions with light nuclei, 14:34336 (R;SU;In Russian)

STREETS
See ROADS

STRESS ANALYSIS
Ultrasonic Testing
Automated analysis of stress states using ultrasonic techniques, 14:34198 (RA;DE;In German)

STRING MODELS
Conformal Invariance
String field theory on the conformal plane. Pt. 1. Kinematical principles, 14:35024 (J;NL)

String field theory on the conformal plane. Pt. 2. Generalized gluing, 14:35025 (J;NL)

Field Equations
Hilbert space of closed bosonic string, 14:34991 (R;SE)

Gauge Invariance
Orthonormal gauge and affine geometry in string theory, 14:35376 (BA;SG)

Geometry
Orthonormal gauge and affine geometry in string theory, 14:35376 (BA;SG)

Light Cone
Parastring theories, 14:35374 (BA;SG)

Many-Dimensional Calculations
Superspace formulation of 10-D sugra+sym theory A La Green-Schwarz, 14:35373 (BA;SG)

Metrics
Q_{BRST} and negative norm states: an application to the bosonic string, 14:35375 (BA;SG)

Particle Structure
New ideas on space-time and particles, 14:34972 (RA;CS;In Czech)

Sigma Model
On sigma model formulation of Green-Schwarz superstring, 14:35015 (R;SU)

Supersymmetry
Conformal properties of the superstring-ghost Thirring model: Short-distance structure and bosonization, 14:35028 (J;US)

Symmetry Breaking
Hosotani model in closed string theory, 14:35000 (R;JP)

STRONG INTERACTIONS

Mathematical Models
Properties of the strong factor in dynamically generated S-matrices, 14:35339 (BA;SG)

STRONTIUM

Isotope Dating
Isotopic data revaluation from Cabo province, with base in Cabo granite petrographic studies, 14:34756 (R;BR;In Portuguese)

Volatility
Volatility of cesium and strontium from a synthetic basalt, 14:34098 (J;US)

STRONTIUM 90

Multi-Element Analysis
Report on the intercomparison run IAEA-083 radionuclides in simulated airfilters, 14:34055 (R;XA)

STRONTIUM COMPOUNDS
See also STRONTIUM OXIDES

Lattice Vibrations
Neutron scattering investigations of lattice dynamics and structure of superconducting ceramics $La_{2-x}Sr_xCuO_{4-\delta}$ at different temperatures, 14:35228 (R;SU)

Neutron Spectra
Neutron scattering investigations of lattice dynamics and structure of superconducting ceramics $La_{2-x}Sr_xCuO_{4-\delta}$ at different temperatures, 14:35228 (R;SU)

Processing
Recent improvements in bulk properties of ceramic superconductors, 14:33945 (R;US)

STRONTIUM OXIDES

Superconductivity
Effects of compositional variations on the properties of superconducting $(Bi,Pb)_2Sr_2Ca_2Cu_3O_\delta$, 14:33972 (J;US)

STRUCTURAL MATERIALS
See BUILDING MATERIALS

STRUCTURE (CRYSTAL)
See CRYSTAL STRUCTURE

STRUCTURE (MOLECULAR)
See MOLECULAR STRUCTURE

STRUCTURES (BUILDINGS)
See BUILDINGS

STRUCTURES (MECHANICS)
See MECHANICAL STRUCTURES

STUDSVIK R-2 REACTOR
See R-2 REACTOR

STYRENE POLYMERS
See POLYSTYRENE

SU GROUPS

Mathematical Operators
Representations of the Lie superalgebra G(3), 14:35364 (BA;SG)

SUBBITUMINOUS COAL

Coprocessing
HRI's DOE/multi-client co-processing research program, 14:33043 (RA;US)

Hydrogenation
Ionic hydrogenation using gaseous H_2, 14:33056 (RA;US)

Liquefaction
Comparative studies on the liquefaction and solubilization reactivity of subbituminous and bituminous coals, 14:33347 (RA;CA)
Liquefaction characteristics of Alberta subbituminous coals, 14:33346 (RA;CA)

SUBMERGED ARC WELDING

Electrochemistry
Electrochemical reactions at the electrode in submerged arc welding, 14:33918 (BA;US)

Welded Joints
Effect of high heat input on the microstructure and mechanical properties of submerged-arc welds in steels for arctic and offshore structures, 14:33848 (R;CA)

SUBSTRATES

Chemical Vapor Deposition
Metal-organic chemical vapor deposition: semiconductor crystal growth on various substrates. August 1977-February 1989 (Citations from the International Aerospace Abstracts data base). Report for August 1977-February 1989, 14:33985 (R;US)

SUBSURFACE STRUCTURES

Mapping
Further neotectonic studies of earthquake zones in the eastern United States, 14:34754 (R;US)

SUBURBS
See URBAN AREAS

SUGAR INDUSTRY

Energy Conservation
An economic and energy evaluation of the replacement of conventional technology with continuous chromatography in the production of high-fructose sugar, 14:33754 (R;US)

SULFIDATION

Reaction Kinetics
Reaction kinetics and simulation models for novel high-temperature desulfurization sorbents: Final report, 14:33127 (R;US)

SULFITE WASTE LIQUOR
See SPENT LIQUORS

SULFOCYANIDES
See THIOCYANATES

SULFONIC ACIDS

Evaluation
Electrochemical evaluation of new fluorosulfonic and fluorophosphonic acids as fuel cell electrolytes: Annual report, April 1987–April 1988, 14:33688 (R;US)

Voltametry
Electrochemical evaluation of new fluorosulfonic and fluorophosphonic acids as fuel cell electrolytes: Annual report, January 1, 1988–December 31, 1988, 14:33689 (R;US)

SULFUR

Auger Electron Spectroscopy
Study of local magnetic properties of an adsorbate by spin-polarized Auger-electron spectroscopy, 14:34044 (J;US)

Corrosive Effects
Corrosion of low-nickel weldments in coal gasification atmospheres, 14:33910 (BA;US)

Oxidation
Microchemistry of solids, 14:33139 (RA;US)

SULFUR DIOXIDE

Removal
Microwave energy for SO_2 and NO_x removal from flue gas: Final report, 14:33437 (R;US)

SULFUR FLUORIDES
Biological Effects
Biological effects of spark-decomposed SF_6, 14:33435 (BA;US)
Decomposition
Analysis of gaseous SF_6 decomposition products, 14:33448 (R;CA)
Gas Chromatography
Analysis of gaseous SF_6 decomposition products, 14:33448 (R;CA)
SULFUR ISOTOPES
Neutron-Rich Isotopes
Observation of the new neutron-rich nuclei ^{29}F, $^{35,36}Mg$, $^{38,39}Al$, $^{40,41}Si$, $^{43,44}P$, $^{45,46,47}S$, $^{46,47,48,49}Cl$ and $^{49,50,51}Ar$ by means of a 55 MeV/u ^{48}Ca beam, 14:35038 (R;SU)
SULFUR OXIDES
See also SULFUR DIOXIDE
SULFUR TRIOXIDE
Removal
5-MW Toronto HALT [Hydrate Addition at Low Temperature] pilot plant testing: Appendices: Part 1-B, 14:33438 (R;US)
Conceptual HALT [Hydrate Addition at Low Temperature] scaleup design: Capital and operating costs: Part 5 (Hydrate addition at low temperature for the removal of SOsub 2), 14:33441 (R;US)
ESP [electrostatic precipitator] tests at Toronto: Test results: Part 3 (Hydrate Addition at Low Temperature for the removal of SOsub 2), 14:33439 (R;US)
Multi-nozzle humidification tests: Test results: Part 4 (Hydrate addition at low temperature for the removal of SOsub 2), 14:33440 (R;US)
SULFUR SULFIDES
See SULFUR
SULFUR TRIOXIDE
Air Pollution Abatement
Prevention reference manual: chemical specific. Volume 15. Control of accidental releases of sulfur trioxide. Final report, June 1987-September 1988, 14:34424 (R;US)
Toxicity
Prevention reference manual: chemical specific. Volume 15. Control of accidental releases of sulfur trioxide. Final report, June 1987-September 1988, 14:34424 (R;US)
SUN
Magnetic Fields
Studies of flares and disappearing magnetic flux. Final report, 1 October 1986-31 March 1988, 14:34766 (R;US)
SUNFLOWERS
Plant Breeding
Place for mutagenesis in sunflower for the subtropical Africa, 14:34647 (RA;XA)
SUNSPOTS
Solar-Geophysical Data Number 531, November 1988. Part 1 (prompt reports). Data for October, September 1988, and late data, 14:34865 (R;US)
SUPER HIGH FREQUENCY RADIATION
See RADIOWAVE RADIATION
SUPER PHENIX REACTOR
Fluid-Structure Interactions
Fluid structure interaction due to fluid communications between fluid volumes. Application to seismic behaviour of F.B.R. vessels, 14:33513 (R;FR)
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCOMPUTERS
Parallel processing on transputer arrays for the recognition of objects in infrared images. Memorandum report, 14:35480 (R;US)
Algorithms
Algorithms for supercomputers, 14:35321 (BA;US)
Parallel Processing
Vector and parallel computers for quantum Monte Carlo computations, 14:34079 (BA;US)
SUPERCONDUCTING CABLES
Machining
An industrial cabling machine for the SSC, 14:34304 (R;US)
SUPERCONDUCTING COILS
Testing
Testing of full scale ITER OHMIC heating coil conductors, 14:35409 (R;US)
SUPERCONDUCTING COLLOID DETECTORS
Beta Detection
Recent results and prospects on superheated superconducting granules detectors, 14:34346 (R;FR)
Gamma Detection
Recent results and prospects on superheated superconducting granules detectors, 14:34346 (R;FR)
Granular Materials
Recent results and prospects on superheated superconducting granules detectors, 14:34346 (R;FR)
Meetings
Recent results and prospects on superheated superconducting granules detectors, 14:34346 (R;FR)
SUPERCONDUCTING FILMS
Bibliography of high-T_c superconducting films, 14:35246 (R;US)
Deposition
Thin film preparation and single film device fabrication in the Tl-Ca-Ba-Cu-O HTS system, 14:33963 (R;US)
Fabrication
Y-Ba-Cu-O superconducting films produced by long-pulse laser vaporization, 14:33968 (J;US)
Ion Implantation
Ion beam modification of the Y-Ba-Cu-O system with the MEVVA high current metal ion source, 14:34305 (R;US)
Sputtering
Sputtering of high-temperature superconductors: A bibliography, 14:34127 (R;US)
SUPERCONDUCTING MAGNETS
Kaons Plus
Superconducting spectrometer for the study of hypernuclei via (π, K^+) reactions, 14:35036 (R;JP)
Magnetic Fields
Measurement of the magnetic field coefficients of particle accelerator magnets, 14:34238 (R;US)
Meetings
Cryogenics '88, 14:34122 (R;CS;In English, Czech, Slovak, Russian)
Performance Testing
Development of superconducting magnets using multifilament Nb_3Sn conductors, 14:33860 (RA;CS;In Slovak)
Spectrometers
Superconducting spectrometer for the study of hypernuclei via (π, K^+) reactions, 14:35036 (R;JP)
Stabilized Superconductors
Cryogenics '88, 14:34122 (R;CS;In English, Czech, Slovak, Russian)
Development of superconducting magnets using multifilament Nb_3Sn conductors, 14:33860 (RA;CS;In Slovak)
Multifilament Nb_3Sn conductor consisting of Nb tubes, 14:33862 (RA;CS;In Slovak)
SUPERCONDUCTING QUANTUM INTERFERENCE DEVICES
See SQUID DEVICES
SUPERCONDUCTING SUPER COLLIDER
Beam Dynamics
Advanced nonlinear theory: Long-term stability at the SSC, 14:34270 (J;US)
Computerized Simulation
A unified approach to building accelerator simulation software for the SSC, 14:34231 (R;US)
SUPERCONDUCTING WIRES
Energy Losses
Losses in superconducting wires in rotating magnetic field, 14:33861 (RA;CS)
Meetings
Cryogenics '88, 14:34122 (R;CS;In English, Czech, Slovak, Russian)
Stabilized Superconductors
Cryogenics '88, 14:34122 (R;CS;In English, Czech, Slovak, Russian)

SUPERCONDUCTIVITY
Band Theory
Composite VS constituent particle aspects of hole motion in the CuO_2 plane, 14:35244 (R;XA)
Density Matrix
Off-diagonal long-range order and superconducting particle density, 14:35243 (R;XA)
Granular Materials
Recent results and prospects on superheated superconducting granules detectors, 14:34346 (R;FR)
Mathematical Models
Discrete symmetries and selection rules in unified SU(8) for superconductivity and density waves, 14:35331 (BA;SG)
Dynamical SU(8) - a laboratory for phase coexistence, 14:35330 (BA;SG)
Meetings
Recent results and prospects on superheated superconducting granules detectors, 14:34346 (R;FR)
Uses
Superconductivity: recent developments and defence applications, 14:34115 (R;CA)
SUPERCONDUCTORS
See also STABILIZED SUPERCONDUCTORS
TYPE-I SUPERCONDUCTORS
TYPE-II SUPERCONDUCTORS
Far-infrared science and technology, 14:34150 (B;US)
Institute for Materials Science and Engineering, Ceramics: technical activities, 1988, 14:33958 (R;US)
Institute for Materials Science and Engineering, Fracture and Deformation Division: technical activities, 1988, 14:33900 (R;US)
Critical Current
Clean boundary between anisotropic superconductors as a weak link, 14:33974 (J;US)
Ion Microprobe Analysis
Materials analysis with nuclear microprobes: Superconductors and buried conductors, 14:34207 (R;US)
Magnetic Flux
Pinning of curved flux lines on the boundary between two phases of high temperature superconductors, 14:35245 (R;XA)
Magnetization
Time dependence of magnetization of high temperature superconductors, 14:35241 (R;XA)
Mechanical Properties
Recent improvements in bulk properties of ceramic superconductors, 14:33945 (R;US)
Microstructure
Theory of solids, surfaces, and heterostructures, 14:33837 (RA;US)
Nuclear Magnetic Resonance
Nuclear magnetic resonance in solids, 14:33839 (RA;US)
Uses
Superconductivity: recent developments and defence applications, 14:34115 (R;CA)
SUPERFLUID MODEL
Nuclear Radii
Four-nucleon correlations and the origin of the odd-even staggering of nuclear charge RADII of isotopes of one element, 14:35116 (R;XA)
SUPERFLUIDITY
Ultracold Neutrons
What can ultra cold neutrons tell us about superfluid ^{4}He?, 14:34933 (RA;JP)
Vortex Flow
Superfluid ^{3}He phases in rotation, 14:34932 (RA;CS;In Czech)
SUPERFUND
Hazardous-waste constituents: health and environmental effects profiles. January 1970-January 1989 (Citations from the NTIS data base). Report for January 1970-January 1989, 14:33767 (R;US)
Remedial Action
Are we cleaning up: 10 Superfund case studies; a special report of OTA's (Office of Technology Assessment's) assessment on Superfund implementation, 14:34483 (R;US)
Site Surveys
Superfund exposure assessment manual, 14:34480 (R;US)
SUPERGIANT STARS
Mass Transfer
Stellar winds in A-type supergiants, 14:34831 (RA;CS)
Pulsations
Periodic modulation of the atmosphere of alpha Orionis, 14:34789 (RA;FR)
Radial Velocity
Rapid spectral variability of massive X-ray binaries and runaways, 14:34818 (RA;CS)
Spectroscopic binary Xi Cygni, 14:34855 (RA;CS)
Ultraviolet Spectra
Periodic modulation of the atmosphere of alpha Orionis, 14:34789 (RA;FR)
SUPERGRAVITY
Dynamics
Non-compact symmetric spaces in current particle theories, 14:35377 (BA;SG)
Quantization
D=3 Chern-Simons action, supergravity and quantization, 14:35268 (R;XA)
SUPERHEATING
Granular Materials
Recent results and prospects on superheated superconducting granules detectors, 14:34346 (R;FR)
SUPERHETERODYNE RECEIVERS
See HETERODYNE RECEIVERS
SUPERLATTICES
Electric Conductivity
Vertical transport in superlattices using Kubo formalism, 14:35212 (RA;BR)
Electronic Structure
Geometry and stability of the (GaAs)n (In As)n and (GaP)n (In P)n ultrathin superlattices, 14:33858 (RA;BR)
Fabrication
A structural investigation of compositionally graded $InAs_{1-x}Sb_x$ buffer layers, 14:34023 (BA;US)
Geometry
Geometry and stability of the (GaAs)n (In As)n and (GaP)n (In P)n ultrathin superlattices, 14:33858 (RA;BR)
Kubo Formula
Vertical transport in superlattices using Kubo formalism, 14:35212 (RA;BR)
Morphology
In situ characterization of heteroepitaxy by quasi-elastic light scattering, 14:34024 (BA;US)
Stability
Geometry and stability of the (GaAs)n (In As)n and (GaP)n (In P)n ultrathin superlattices, 14:33858 (RA;BR)
SUPERNOVAE
Cosmic Gamma Bursts
Gamma-ray observations of supernovae SN1987A, 14:34763 (RA;BR)
Energy Spectra
Gamma-ray observations of supernovae SN1987A, 14:34763 (RA;BR)
SUPERTANKERS
See TANKER SHIPS
SUPERVOLTAGE RADIOTHERAPY

Seismicity
3-D soil-structure interaction analysis of Lotung containment model, 14:34749 (RA;US)
Ambient motions of quarter scale containment model in Lotung, 14:34748 (RA;US)
Analysis of large-scale containment model in Lotung, Taiwan: forced vibration and earthquake response analysis and comparison, 14:34733 (RA;US)
Dynamic characteristics of the measured seismic and structural responses data of Lotung 1/4-scale nuclear power plant containment model, 14:34752 (RA;US)
EPRI/TPC large-scale seismic experiment at Lotung, Taiwan, 14:34735 (RA;US)
Forced vibration and seismic analyses of Lotung Large Scale Experiment using the SASSI code, 14:34732 (RA;US)
Guidelines for round-robin soil-structure interaction analysis working paper preparation, 14:34739 (RA;US)
Lotung SSI analysis using a 3-D harmonic Green's function method, 14:34744 (RA;US)
Pore water pressure response measurements at Lotung site, 14:34753 (RA;US)
Prediction of quarter scale model response using SIM code, 14:34741 (RA;US)
Prediction of the forced vibration and seismic response of the Lotung (Taiwan) large-scale containment model and comparison with observations, 14:34740 (RA;US)
Predictive response computations for vibration tests and earthquake of May 20, 1986 using an axisymmetric finite element formulation based on the complex response method and comparison with measurements - a Swiss contribution, 14:34743 (RA;US)
Soil structure interaction analyses for 1/4-scale containment model using direct (finite element) method of analysis, 14:34731 (RA;US)
Soil-structure interaction analyses of EPRI field test - forced vibration test and earthquake response, 14:34747 (RA;US)
Soil-structure interaction analyses of quarter-scale containment model experiment in Lotung, Taiwan, 14:34730 (RA;US)
Soil-structure interaction analysis of quarter scale model using AXERA code, 14:34746 (RA;US)
Soil-structure interaction analysis of quarter scale model using HYBAX code, 14:34745 (RA;US)
Soil-structure interaction correlations of EPRI/TPC field test results with analytical predictions, 14:34742 (RA;US)
Summary of soil characterization program for the Lotung large-scale seismic experiment, 14:34736 (RA;US)
Validation of seismic soil-structure interaction analysis techniques using Lotung experiment data - EPRI program, 14:34737 (RA;US)
Variation and propagation of seismic strong motions across the SMART1-LSST array, 14:34750 (RA;US)
Wavetype identification and interpretation of the seismic data in SMART-1 array, 14:34751 (RA;US)

TANKER SHIPS

Moorings
Proceedings of the seventh international conference on offshore mechanics and Arctic engineering, 14:33163 (B;US)

TANTALUM

Ion Implantation
Trapping of deuterium by helium bubbles and defects in ion-implanted tantalum, 14:33932 (J;US)

TANTALUM 181 TARGET

Calcium 48 Reactions
Observation of the new neutron-rich nuclei ^{29}F, ^{35,36}Mg, ^{38,39}Al, ^{40,41}Si, ^{43,44}P, ^{45,46,47}S, ^{46,47,48,49}Cl and ^{49,50,51}Ar by means of a 55 MeV/u ^{48}Ca beam, 14:35038 (R;SU)

TANTALUM 182
Rotational States
Coriolis coupling in the rotational bands of deformed odd-odd nuclei, 14:35172 (J;US)

TANTALUM SILICIDES
Phase Diagrams
Thermochemical stability diagrams for condensed phases and tabulation of volatile species over condensed phases for thirteen metal-oxygen-silicon systems at 1000 and 1250 K: Volume 2: Final report, 14:33101 (R;US)

Neutron Reactions
Translation of selected papers published in Nuclear Constants 2, 1988, 14:35125 (R;XA)

TBR TOKAMAK
High-Frequency Discharges
Sawteeth fluctuations detection, 14:35401 (RA;BR)
Plasma Disruption
Sawteeth fluctuations detection, 14:35401 (RA;BR)

TECHNETIUM 99
Ion Exchange
Determination of ^{99}Tc in environmental samples by anion exchange, 14:34064 (R;DK)
Quantitative Chemical Analysis
Determination of ^{99}Tc in environmental samples by anion exchange, 14:34064 (R;DK)
Radionuclide Migration
Nuclide solubilities and distribution coefficients for use in probabilistic modeling. Data for the nuclieds ^{14}C, ^{79}Se, ^{93}Zr, ^{99}Tc, ^{126}Sn, ^{129}I, ^{135}Cs, ^{237}Np and ^{239}Np, 14:34479 (R;SE)

TECHNETIUM OXIDES
Solubility
Thermodynamics of technetium related to nuclear waste disposal: Solubilities of Tc(IV) oxides and the electrode potential of the Tc(VII)/Tc(IV)–oxide couple, 14:33285 (R;US)

TELESCOPES
Apertures
Aperture of two-counter telescopes, 14:34126 (R;US)

TELLURIUM
Bridgman Method
Heat treatment influence on the crystalline quality of Bridgman grown Hg_{1-x} Cd_x Te, 14:33849 (RA;BR)
Cadmium
Spin-splitted phase transition in quantized hall effect of narrow-gap Hg(Cd) Te mosfet, 14:33854 (RA;BR)
Crystal Growth
Heat treatment influence on the crystalline quality of Bridgman grown Hg_{1-x} Cd_x Te, 14:33849 (RA;BR)
Mercury
Spin-splitted phase transition in quantized hall effect of narrow-gap Hg(Cd) Te mosfet, 14:33854 (RA;BR)
Mosfet
Spin-splitted phase transition in quantized hall effect of narrow-gap Hg(Cd) Te mosfet, 14:33854 (RA;BR)

TEMPERATURE (NUCLEAR)

TEMPERATURE MEASUREMENT
Earth Atmosphere
Upper atmosphere temperature measurements using an airglow photometer board a rocket, 14:34884 (RA;BR)
Photometers
Upper atmosphere temperature measurements using an airglow photometer board a rocket, 14:34884 (RA;BR)
Rockets
Upper atmosphere temperature measurements using an airglow photometer board a rocket, 14:34884 (RA;BR)

TERBIUM ALLOYS
Magnetostriction
The effect of composition and magnetic heat treatment on the magnetostriction of $Tb_xDy_{1-x}Fe_y$ twinned single crystals, 14:33925 (J;US)

TERNARY ALLOY SYSTEMS
Comparative Evaluations
Thermodynamics of ternary systems and its application to Li-Si-based negative electrode materials, 14:33626 (BA;US)
Crystal Growth
Growth and structural properties of sputtered CdXTe thin film alloys, 14:33851 (RA;BR)
MOCVD growth and characterization of GaInAs thick layers on InP substrates, 14:33850 (RA;BR;In Portuguese)
Crystal Structure
MOCVD growth and characterization of GaInAs thick layers on InP substrates, 14:33850 (RA;BR;In Portuguese)
Electrocatalysts
Dealloying of Pt alloy fuel cell electrocatalysts, 14:33694 (BA;US)
Microstructure
Characterization of defects in materials, 14:33908 (B;US)
Thermodynamics
Thermodynamics of ternary systems and its application to Li-Si-based negative electrode materials, 14:33626 (BA;US)
X-Ray Diffraction
Characterization of defects in materials, 14:33908 (B;US)

MOCVD growth and characterization of GaInAs thick layers on InP substrates, 14:33850 (RA;BR;In Portuguese)

TERRESTRIAL ECOSYSTEMS
Functional Models
Ecosystem models. May 1983-April 1986 (Citations from the NTIS data base). Report for May 1983-April 1986, 14:34459 (R;US)
Ecosystem models. May 1986-January 1989 (Citations from the NTIS data base). Report for May 1986-January 1989, 14:34460 (R;US)

TERTIARY RECOVERY
See ENHANCED RECOVERY

TESTING (MATERIALS)
See MATERIALS TESTING

TETRACYCLINES
Radionuclide Kinetics
On the organ distribution of several ^{99m}Tc-labelled tetracyclines, 14:34685 (R;DE;In German)

TEVATRON
See FERMILAB TEVATRON

TEXAS
Natural Gas Deposits
Two-phase flow in tight gas sands. Annual report, April 1987-May 1988, 14:33199 (R;US)
Water Resources
Fiscal Year 1987 program report: Texas Water Resources Institute, 14:34513 (R;US)

TEXTILE INDUSTRY
Hazardous Materials
Health-hazard evaluation determination report No. 76-18-288, Syntex Fabrics, Inc., Williamsport, Pennsylvania, 14:34418 (R;US)
Preliminary survey report. Karastan Rug Mill, Fieldcrest Mills, Inc., Eden, North Carolina, July 14, 1981, 14:34396 (R;US)

THALLIUM
Fluorescence Spectroscopy
Optogalvanic spectroscopy in flames, 14:34049 (R;FR;In French)
Laser Spectroscopy
Optogalvanic spectroscopy in flames, 14:34049 (R;FR;In French)

THALLIUM COMPOUNDS
Processing
Recent improvements in bulk properties of ceramic superconductors, 14:33945 (R;US)
Sintering
Thin film preparation and single film device fabrication in the Tl-Ca-Ba-Cu-O HTS system, 14:33963 (R;US)

THERAPEUTIC AGENTS
See DRUGS

THERMAL DECOMPOSITION
See PYROLYSIS

THERMAL DIFFUSION
Mathematical Models
Linear-eddy modeling of turbulent transport. II, 14:34113 (J;US)
Research Programs
Mound activities in chemical and physical research, July–December 1988, 14:34060 (R;US)

THERMAL ENERGY STORAGE EQUIPMENT
Cost
Waste heat storage and distribution using thermochemical energy storages, 14:33607 (R;FI;In Finnish)
Heat Sinks
Ice water basins used as a latent heatsink in the dairy industry, 14:33605 (RA;CA;In English and French)

THERMAL EQUILIBRIUM
Ion Exchange
Determination of thermodynamic equilibrium constants of ion exchange and solvent extraction processes, 14:34073 (R;YU)
Solvent Extraction
Determination of thermodynamic equilibrium constants of ion exchange and solvent extraction processes, 14:34073 (R;YU)

THERMAL FISSION
Fission Yield
Translation of selected papers published in Nuclear Constants 2, 1988, 14:35125 (R;XA)

THERMAL INSULATION
Design
Development of compressed multifoil insulation for high-temperature batteries and other applications, 14:33611 (R;US)
Plastic Foams
Foam quality by low ambient temperatures and varying tube temperatures, 14:33776 (R;SE;In Swedish)

THERMAL NEUTRONS
Monocrystals
Diffuse neutron scattering on statistical inhomogeneities in monocrystals, 14:35179 (RA;SU;In Russian)

THERMAL POLLUTION (AIR)
See AIR POLLUTION

THERMAL POLLUTION (WATER)
See WATER POLLUTION

THERMAL POWER PLANTS
See also COMBINED-CYCLE POWER PLANTS
FOSSIL-FUEL POWER PLANTS
NUCLEAR POWER PLANTS
OCEAN THERMAL POWER PLANTS
SOLAR THERMAL POWER PLANTS
Maintenance
Maintance system of heating plants, 14:33432 (R;FI;In Finnish)

THERMAL PROPERTIES
See THERMODYNAMIC PROPERTIES

THERMAL RECOVERY
Evaluation
Thermal screening criteria. Should they exist?, 14:33159 (RA;CA)

THERMOCOUPLES
Positioning
Monitoring of the functions of detectors and measurement lines, 14:33489 (R;HU;In Hungarian)

THERMODYNAMIC PROPERTIES
Measuring Methods
Apparatus to perform determination of vapor-liquid equilibria between hydrogen and oil from coal hydroliquefaction up to 20 MPa and 673K, 14:33123 (RA;GB)

THERMODYNAMICS
Fractals
Hausdorff dimension of irrational windings, 14:35308 (BA;SG)

THERMOELECTRICITY
Standardized Terminology
Thermoelectric terminology in metrology and standards, 14:33687 (R;US)

THERMONUCLEAR POWER PLANTS
Tritium
Problems in tritium handling in fusion reactors studies at CEA within the european effort, 14:35442 (R;FR)

THERMONUCLEAR REACTIONS
See also MUON-CATALYZED FUSION
Research Programs
Current benefits of fusion energy research, 14:35395 (R;US)
Tokamak Devices
Thermonuclear reactions, 14:35449 (RA;CS;In Czech)

THERMONUCLEAR REACTOR MATERIALS
Coatings
Laboratory scale development of coating for improving characteristics of candidate materials for fusion reactor. Final report for the period 1 October 1981 - 30 November 1988, 14:35447 (R;XA)
Thermonuclear Reactor Walls
Laboratory scale development of coating for improving characteristics of candidate materials for fusion reactor. Final report for the period 1 October 1981 - 30 November 1988, 14:35447 (R;XA)

THERMONUCLEAR REACTORS
See also LASER FUSION REACTORS
TOKAMAK TYPE REACTORS
Plasma Diagnostics
[Collision processes of interest in MFE plasama research]: Progress report, 14:35407 (R;US)

THERMONUCLEAR WEAPONS

THIN FILMS
Backscattering
Combination of backscattering and translucent electron microscopy methods at the research of thin-film samples, 14:33882 (RA;SU;In Russian)
Chemical Vapor Deposition
Chemical vapor deposition of B_6P and B_6As films, 14:34033 (BA;US)
Crystal Growth
Optical characterization of microcrystalline CdTe thin films, 14:35211 (RA;BR)
Electrical Properties
Issues on silicon oxynitride films, 14:34016 (BA;US)
Thin films of indium oxide doped with tin by reactive coevaporation, 14:33955 (RA;BR;In Portuguese)
Fabrication
Various stress measurement techniques for thin metal films on plastics, 14:34014 (BA;US)
Optical Properties
Optical characterization of microcrystalline CdTe thin films, 14:35211 (RA;BR)
Photochemistry
Photoelectrochemical characterization of defect heterogeneities in anodic TiO_2 films, 14:34028 (BA;US)
Quality Control
Partial least-squares calibration diagnostics applied to the FT-IR analysis of borophosphosilicate glass (BPSG) thin films, 14:34065 (R;US)
Reflectivity
Chemisorption-induced reflectivity changes in thin metal films, 14:34027 (BA;US)
Sputtering
Deposition of thick, adherent copper coatings on glass, 14:34008 (BA;US)
Growth and structural properties of sputtered CdXTe thin film alloys, 14:33851 (RA;BR)
Measurement of passive film growth kinetics on bare surface niobium band microelectrodes, 14:33695 (BA;US)
Solid state electrochromic windows, 14:34029 (BA;US)
[Magnetic properties of sputtered films]: Progress report, August 1, 1986–July 31, 1989, 14:35201 (R;US)
X-Ray Diffraction
Optical characterization of microcrystalline CdTe thin films, 14:35211 (RA;BR)

THIO COMPOUNDS
See ORGANIC SULFUR COMPOUNDS

THIOCYANATES
Fluorescence Spectroscopy
Laser-induced fluorescence spectroscopy of NCS in a free jet expansion, 14:34920 (J;US)

THIOCYANIDES
See THIOCYANATES

THIOPHENE
Chemical Reactions
Fundamental studies of catalytic gasification: Quarterly report, January 1, 1989–March 31, 1989, 14:33100 (R;US)

THIRRING MODEL
Supersymmetry
Conformal properties of the superstring-ghost Thirring model: Short-distance structure and bosonization, 14:35028 (J;US)

THOMAS-FERMI MODEL
Semiclassical Approximation
Wigner - Kirkwood Planck constant - expansion of the linear response function, 14:35020 (R;FR)
Series Expansion
Wigner - Kirkwood Planck constant - expansion of the linear response function, 14:35020 (R;FR)

THOMAS-FERMI-DIRAC MODEL
See THOMAS-FERMI MODEL

THORIUM 230
Radioecological Concentration
Radiological and chemical characterization report for the planned Quarry Construction Staging Area and Water Treatment Plant: Revision 1, 14:33328 (R;US)

THORIUM 232 TARGET
Excited States
Neutron scattering cross sections up to 2.4 MeV for the ground and first two excited states of ^{232}Th, 14:35110 (J;US)
Neutron Reactions
Inelastic neutron scattering and p-neutron strength function of thorium 232 and uranium 238, 14:35099 (RA;SU;In Russian)
Measurement of resonance parameters of ^{232}Th and their integral check through the resonance integral, 14:35100 (RA;SU)
Measurement of self-shielding factors of neutron capture cross sections for ^{232}Th and ^{238}U in the unresolved resonance region, 14:35101 (RA;SU)
Radiative capture cross sections of thermal neutrons for ^{236}U and ^{232}Th, 14:35106 (RA;SU;In Russian)
Resonance Integrals
Measurement of resonance parameters of ^{232}Th and their integral check through the resonance integral, 14:35100 (RA;SU)

THORIUM C/
See POLONIUM 212

THORIUM D
See LEAD 208

THORIUM ISOTOPES
See also THORIUM 230
Environmental Transport
Radionuclide cycling in natural waters, 14:34511 (BA;US)
Neutron Reactions
Summary results of measurements of 10-300 keV neutron transmission for thorium, 14:35108 (RA;SU;In Russian)

THREE-BODY PROBLEM
Faddeev Equations
Some exact solutions of the three-identical-particle problem with S-wave inverse square potentials, 14:35290 (R;SU)
Transfer Reactions
Three-body molecular description of the transfer reaction, 14:35294 (R;SU;In Russian)
Wave Functions
Nucleons in nuclei (II), 14:35043 (R;FR)

THROMBOSIS
Preventive Medicine
12500 E heparin and 12500 E of a semisynthetic heparin analogue (SSHA) in preventing thrombosis during radiotherapy of gynaecological carcinomas, 14:34616 (R;DE;In German)

THRUSTERS
Magnetogasdynamics
MPD (magnetoplasmadynamic) thrust-chamber flow dynamics. Annual technical report, 1 October 1987-30 September 1988, 14:34929 (R;US)

THULIUM 168
Rotational States
Coriolis coupling in the rotational bands of deformed odd-odd nuclei, 14:35172 (J;US)

THYROID
Carcinomas
Kinetic behaviour of radioiodines accumulating in recurrent thyroid carcinomas and their metastases and the role of substituted thyroid hormones during radioiodine treatment, 14:34617 (R;DE;In German)
Results achieved in the treatment of carcinomas of the thyroid gland. Case reports collected between 1951 and 1982 at the Radiological Institute of Tuebingen, 14:34610 (R;DE;In German)
Metastases
Kinetic behaviour of radioiodines accumulating in recurrent thyroid carcinomas and their metastases and the role of substituted thyroid hormones during radioiodine treatment, 14:34617 (R;DE;In German)
Neoplasms
Radiation-induced thyroid carcinoma: is radioiodine less effective than X-rays?, 14:34691 (RA;AT)

Therapy
Results achieved in the treatment of carcinomas of the thyroid gland. Case reports collected between 1951 and 1982 at the Radiological Institute of Tuebingen, 14:34610 (R;DE;In German)
Whole-Body Counting
Calibration of nuclear data WBC-6000 counter system for I-131 thyroid counting, 14:34350 (R;MY)

TIGHT SANDS
See SANDSTONES

TIME-OF-FLIGHT SPECTROMETERS
Data Acquisition Systems
Compact fast data acquisition and data analysis system for time of flight mass spectrometry. Time and S.I. intensity measurements with a new multistop TDC, 14:34329 (R;FR)
Meetings
Compact fast data acquisition and data analysis system for time of flight mass spectrometry. Time and S.I. intensity measurements with a new multistop TDC, 14:34329 (R;FR)
Neutron Spectrometers
On the possibility of measuring the cross section intermediate neutron radiative capture with high degree of capture and scattering separation, 14:34327 (RA;SU;In Russian)

TIN
Crystal Doping
Thin films of indium oxide doped with tin by reactive coevaporation, 14:33955 (RA;BR;In Portuguese)

TIN 120 TARGET
Breakup Reactions
Review of high excitation energy structures in heavy ion collisions: target excitations and three body processes, 14:35059 (R;FR)
Pickup Reactions
Review of high excitation energy structures in heavy ion collisions: target excitations and three body processes, 14:35059 (R;FR)
Resonance Scattering
Review of high excitation energy structures in heavy ion collisions: target excitations and three body processes, 14:35059 (R;FR)

TIN 126
Radionuclide Migration
Nuclide solubilities and distribution coefficients for use in probabilistic modeling. Data for the nuclides ^{14}C, ^{79}Se, ^{93}Zr, ^{99}Tc, ^{126}Sn, ^{129}I, ^{135}Cs, ^{237}Np and ^{239}Np, 14:34479 (R;SE)

TIN OXIDES
Performance
High-efficiency indium tin oxide/indium phosphide solar cells, 14:33400 (J;US)

TIPVANE ROTORS
Configuration
Analysis of the performance of the passively controlled blade tips of the Flexhat concept 'Tip control 1', 14:33428 (R;NL;In Dutch)
Performance
Analysis of the performance of the passively controlled blade tips of the Flexhat concept 'Tip control 1', 14:33428 (R;NL;In Dutch)

TITANATES
See also PZT
Sorptive Properties
Reaction kinetics and simulation models for novel high-temperature desulfurization sorbents: Final report, 14:33127 (R;US)

TITANIUM
Combustion
Combustibility of titanium powders, 14:33892 (TG;US)
Grain Boundaries
Solute effects on mechanical properties of grain boundaries, 14:33825 (RA;US)

TITANIUM ALLOYS
See also TITANIUM BASE ALLOYS
Backscattering
Application of ion implantation to the study of electrocatalysis, 14:33706 (BA;US)
Electrodes
Application of ion implantation to the study of electrocatalysis, 14:33706 (BA;US)
Solidification
Structure, properties and fracture of pulsed Nd:YAG laser welded Ti-14.8wt%Al-21.3wt%Nb titanium aluminide, 14:33934 (J;US)

TITANIUM BASE ALLOYS
Microstructure
Quantitative thin film x-ray microanalysis of Nb modified Ti_3Al, 14:33903 (R;US)

TITANIUM IONS
Ion-Atom Collisions
Auger-electron emission from collisionally excited 3.4-MeV/u Na-like Ti ions, 14:34917 (J;US)

TITANIUM NITRIDES
Epitaxy
Formation of polyhedral N_2 bubbles during reactive sputter deposition of epitaxial TiN(100) films, 14:33971 (J;US)

TITANIUM OXIDES
Catalytic Effects
Improved industrial catalysts: Part 1, Catalysts for NO and NO-sub x removal: Final report, 14:33957 (R;US)
Solid superacids as coal liquefaction catalysts: Quarterly report, January–March 1989, 14:33069 (R;US)
Electric Conductivity
Photoelectrochemistry at n-type semiconductors protected by metallized plasma coatings, 14:34030 (BA;US)
Photochemical Reactions
Photoelectrochemistry of TiO_2 thin films with RuO_2 overlayers, 14:33399 (BA;US)

TITANIUM SILICIDES
Phase Diagrams
Thermochemical stability diagrams for condensed phases and tabulation of volatile species over condensed phases for thirteen metal-oxygen-silicon systems at 1000 and 1250 K: Volume 2: Final report, 14:33101 (R;US)

TMPN
See ORGANIC OXYGEN COMPOUNDS

TOKAI-MURA FAST CRITICAL ASSEMBLY

Interferometers
Far-infrared science and technology, 14:34150 (B;US)
Lower Hybrid Heating
Effects of the wave-driven radial motion in lower-hybrid current drive tokamak, 14:35416 (R;XA)
Plasma Instability
Long-term development of elongated tokamak plasmas after failure of feedback stabilization, 14:35438 (J;US)
Risk Assessment
Safety analysis and evaluation of the next fusion device, 14:35453 (R;JP;In Japanese)
Safety
Safety analysis and evaluation of the next fusion device, 14:35453 (R;JP;In Japanese)

TOKAMAK TYPE REACTORS
See also JT-60 TOKAMAK
NET TOKAMAK
Current-Drive Heating
Fast wave current drive modeling for ITER and prospects for a near-term proof of principle experiment, 14:35404 (R;US)
Ecr Heating
Electron cyclotron emission spectra calculated from ECRF heated electron distributions obtained with a 3D Fokker-Planck code, 14:35410 (R;US)
Optimum launching of electron-cyclotron power for localized current drive in a hot tokamak, 14:35432 (R;US)
Joule Heating
Testing of full scale ITER OHMIC heating coil conductors, 14:35409 (R;US)
Lower Hybrid Heating
Modeling of LH current drive in self-consistent elongated tokamak MHD equilibria, 14:35433 (R;US)
Pulsed lower-hybrid wave penetration in reactor plasmas, 14:35431 (R;US)

Plasma Instability
Stability of elongated cross-section tokamaks to axisymmetric even poloidal mode number deformations, 14:35427 (R;US)

TOKAPOLE DEVICES
Turbulence
Magnetic turbulence versus safety factor in the Tokapole II tokamak, 14:35408 (R;US)

TOLUENE
Hydrogenation
A novel approach to hydrogen recovery, storage and transport: Final technical report, 14:33341 (R;US)
Labelling
The old and the new: Studies of metal-catalysed exchange by sup 3H NMR spectroscopy, 14:34075 (R;US)

TOMATOES
Plant Breeding
Makerere tomato improvement programme, 14:34652 (RA;XA)
Study on tolerance/resistance of tomato to attack by Pseudomonas solanacearum E.F. Smith, 14:34653 (RA;XA)
Pseudomonas
Study on tolerance/resistance of tomato to attack by Pseudomonas solanacearum E.F. Smith, 14:34653 (RA;XA)

TOP PARTICLES
Mass
Heavy top-quark mass predictions, 14:34995 (J;US)

TOPHET
Ultrasonic Welding
An initial investigation of the ultrasonic welding of Tophet C bridgewire to Hastelloy C-276, 14:33904 (R;US)

TOPOGRAPHY
Three-Dimensional Calculations
Three-dimensional computer analysis and modelling of remote sensing-structural geologic problems, 14:34716 (R;US)

TOPOLOGICAL MAPPING
Polynomials
Finding isolated zero points of complex polynomial mappings, 14:35254 (R;XA)

TOPOLOGY
Chaoticity of interval self-maps with positive entropy, 14:35253 (R;XA)

TOPONIUM
Configuration Mixing
CP violating mixings of toponium states, 14:34963 (R;DE;In German)

TOROIDAL PINCH DEVICES
Magnetic Fields
Vacuum magnetic fields in the toroidal Extrap device, 14:35429 (R;SE)
Reactor Start-Up
Timedependent pinchmodel for current and temperature in Extrap, 14:35428 (R;SE)

TOROIDAL PINCH TYPE REACTORS
See TOROIDAL PINCH DEVICES

TOTAL-ABSORPTION SPECTROMETERS
See SHOWER COUNTERS

TOXIC MATERIALS
Health and Environmental Effects Profile for Phthalic Acids (o-, m-, p-), 14:34708 (R;US)
Air Pollution
Toxic Air Pollutant Emission Factors: information storage and retrieval system. User's manual. Final report, 14:34406 (R;US)
Emergency Plans
Prevention reference manual: chemical specific. Volume 15. Control of accidental releases of sulfur trioxide. Final report, June 1987-September 1988, 14:34424 (R;US)
Immunoglobulins
Health-hazard evaluation report HETA 87-112-1922, E.S.I. Meats, Inc., Bristol, Indiana, 14:34410 (R;US)
Indoor Air Pollution
Hazard-evaluation and technical assistance report TA 78-12, Oregon State University, Corvallis, Oregon, 14:34399 (R;US)
Papain
Health-hazard evaluation report HETA 87-112-1922, E.S.I. Meats, Inc., Bristol, Indiana, 14:34410 (R;US)

TOXICITY
Chemical characterization and toxicologic evaluation of airborne mixtures: Chemical characterization of colored signal smokes: Final report, 14:34707 (R;US)
Iron
Use of induced mutation in breeding rice for iron toxicity tolerance, 14:34639 (RA;XA)
Risk Assessment
Risk assessment and toxicology data bases: Maximizing resources through data evaluation, 14:34706 (R;US)

TRACE ELEMENTS
See ELEMENTS

TRACKS
See PARTICLE TRACKS

TRAINING-RESEARCH REACTOR KYOTO
See KUR REACTOR

TRANSDUCERS
Sensitivity
Acoustic wave electroless deposition monitor, 14:33707 (BA;US)

TRANSFER (HEAT)
See HEAT TRANSFER

TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION

TRANSFER (MASS)
See MASS TRANSFER

TRANSFERASES
Genes
Negative regulatory element associated with potentially functional promoter and enhancer elements in the long terminal repeats of endogenous murine leukemia virus-related proviral sequences, 14:34519 (J;US)

TRANSFORMATIONS
See also TOPOLOGICAL MAPPING
Analytical Solution
An efficient exact algorithm for the "least squares" image registration problems, 14:35497 (R;US)
Symmetry
Levi-Civita, Kustaanheimo-Stiefel and other transformations, 14:35348 (BA;SG)

TRANSFORMATIONS (PHASE)
See PHASE TRANSFORMATIONS

TRANSFORMERS
Fires
Acceptable levels of dioxin contamination in an office building following a transformer fire, 14:34414 (R;US)

TRANSIENTS
Lightning
The effects of steep-front, short-duration impulses on power distribution components, 14:33452 (R;US)

TRANSISTORS
See also MOS TRANSISTORS
Measuring Methods
Photoconductor pulse generators and sampling gates for characterization of high-speed devices and transmission lines, 14:34009 (BA;US)

TRANSITION ELEMENT ALLOYS
Crystal Lattices
Quasi-lattices associated with arbitrary groups: Application to icosahedral and dihedral groups, 14:35313 (BA;SG)
Pairing Interactions
Cluster interactions and physical properties of Al–transition-metal alloys, 14:33928 (J;US)

TRANSITION ELEMENTS
See also CHROMIUM
COBALT
COPPER
GOLD
HAFNIUM
IRON
MANGANESE
MOLYBDENUM
NICKEL
NIOBIUM
RHENIUM

SILVER
TANTALUM
TITANIUM
TUNGSTEN
VANADIUM
ZIRCONIUM

Minutes Living Radioisotopes
Very low-energy conversion electron detection (VLECED) system at the isocele on-line isotope separator, Orsay, 14:34331 (R;FR)

Seconds Living Radioisotopes
Very low-energy conversion electron detection (VLECED) system at the isocele on-line isotope separator, Orsay, 14:34331 (R;FR)

TRANSITION METALS

TREES
See also FRUIT TREES
LOCUST TREES
SYCAMORES
WILLOWS

Combustion
Water nucleation properties of chaparral fire aerosol particles, 14:34380 (R;US)

Cultivation
Woody biomass production, 14:33370 (BA;US)

TRIBOLOGY
Bibliographies
Tribology: properties of materials. January 1970-February 1989 (Citations from the COMPENDEX data base). Report for January 1970-February 1989, 14:34204 (R;US)

TRIPLET PARTICLES
See QUARKS

TRITIUM
Corrosion
Problems in tritium handling in fusion reactors studies at CEA within the european effort, 14:35442 (R;FR)

Desorption
Desorption activation energies for tritium release from ceramic breeders, 14:35443 (R;US)

Getters
Problems in tritium handling in fusion reactors studies at CEA within the european effort, 14:35442 (R;FR)

Hypernuclei
$\Lambda N - \Sigma N coupling in {}^{3}_{\Lambda}$H, 14:35164 (J;US)

Isotope Separation
Hydrogen isotope separation study with TSTA cryogenic distillation system. Single column experimet with D-T system, 14:35454 (R;JP)
Hydrogen isotope separation study with the TSTA cryogenic distillation system. Two-column experiment with H-D-T, 14:35455 (R;JP)

Mass Difference
Binding of hydrogen and helium in silicon, the mass difference between ^{3}H and ^{3}He, and the mass of ν_e, 14:35049 (J;US)

Permeability
Problems in tritium handling in fusion reactors studies at CEA within the european effort, 14:35442 (R;FR)

Purification
Problems in tritium handling in fusion reactors studies at CEA within the european effort, 14:35442 (R;FR)

Storage
Problems in tritium handling in fusion reactors studies at CEA within the european effort, 14:35442 (R;FR)

TRITIUM TARGET
Cooling
Experiments on D-T neutron source characteristics of an FNS high speed water cooled target, 14:35451 (R;JP;In Japanese)

Deuteron Reactions
Microscopic consideration of d+t -> n+α nuclear reaction within the adiabatic representation, 14:35158 (R;SU;In Russian)

TRITONS
Breakup Reactions
Study of the He3 breakup reaction and the triton production spectra at 283 MeV, 14:35163 (R;FR;In French)

TROPOSPHERE
Radiowave Radiation
Physics of the tropospheric radiopropagation, 14:34886 (R;XA)

Wave Propagation
Physics of the tropospheric radiopropagation, 14:34886 (R;XA)

TROUT
Diseases
Demonstration of a system for removing malachite green: Final report, 14:33379 (R;US)

TRU WASTES
See ALPHA-BEARING WASTES

TRX-1
See REVERSE-FIELD PINCH

TSL PROCESS
Chemical Reaction Kinetics
Enhanced coal liquefaction by low-severity catalytic reactions, 14:33053 (RA;US)

Economics
Impact of bottoms coking on two-stage direct liquefaction processes, 14:33048 (RA;US)

Performance Testing
Recent progress at Wilsonville in the direct liquefaction of a low-ash Ohio No. 6 coal and a Texas lignite, 14:33049 (RA;US)

Technology Assessment
Evolution of the catalytic two-stage liquefaction (CTSL) process, 14:33050 (RA;US)

TUBES
See also PRESSURE TUBES

Erosion
State-of-the-art computation of dynamics and erosion in fluidized bed tube banks, 14:33137 (R;US)

Fracture Mechanics
Fractography of glasses and ceramics, 14:33964 (B;US)

Stainless Steel-316L
Crack resistance properties of through-cracks in austenitic straight pipes (DN 700) under bending, 14:33865 (RA;DE;In German)

TUBES (CONDUITS)
See PIPES

TUFF
Clinoptilolite
Clinoptilolite compositions in diagenetically-altered tuffs at a potential nuclear waste repository, Yucca Mountain, Nevada, 14:33317 (BA;US)

Diagenesis
Clinoptilolite compositions in diagenetically-altered tuffs at a potential nuclear waste repository, Yucca Mountain, Nevada, 14:33317 (BA;US)

TUMOR CELLS
Cell Proliferation
Autoradiographic investigations of cells from the cerebrospinal fluid, 14:34621 (R;DE;In German)

Radiosensitivity
Quiescence in 9L cells and correlation with radiosensitivity and PLD repair, 14:34705 (J;US)

TUMORS
See NEOPLASMS

TUNGSTEN
Chemical Vapor Deposition
CVD tungsten for buried layer conductors, 14:34032 (BA;US)
Crystal Growth
Growth and transport at metal and semiconductor interfaces, 14:33821 (RA;US)
Electric Conductivity
CVD tungsten for buried layer conductors, 14:34032 (BA;US)
Interfaces
Surface studies of boundary layer films, 14:33844 (RA;US)
Surface Properties
Interfacial bonding in W/C and W/B_4C multilayers, 14:33941 (J;US)

TUNGSTEN 182
Vibrational States
Coupling between the β and γ vibration in tungsten nuclei, 14:35086 (J;US)

TUNGSTEN 184
Coupling between the β and γ vibration in tungsten nuclei, 14:35086 (J;US)

TUNGSTEN FLUORIDES
Flow Rate
CVD tungsten for buried layer conductors, 14:34032 (BA;US)
Partial Pressure
CVD tungsten for buried layer conductors, 14:34032 (BA;US)
Reduction
CVD tungsten for buried layer conductors, 14:34032 (BA;US)

TUNGSTEN OXIDES
Surface Properties
Scanning tunneling microscopy of the intergrowth tungsten bronze $Rb_{0.05}WO_3$, 14:33940 (J;US)

TUNGSTEN SILICIDES
Phase Diagrams
Thermochemical stability diagrams for condensed phases and tabulation of volatile species over condensed phases for thirteen metal-oxygen-silicon systems at 1000 and 1250 K: Volume 2: Final report, 14:33101 (R;US)

TUNNEL EFFECT
Crystal Structure
Resonant magnetotunneling of electrons in double barrier heterostructures, 14:35284 (RA;BR)
Resonant tunneling in quantum dots under transverse electric fields, 14:35283 (RA;BR)
Electrons
Resonant magnetotunneling of electrons in double barrier heterostructures, 14:35284 (RA;BR)
Quantum Electronics
Resonant tunneling in quantum dots under transverse electric fields, 14:35283 (RA;BR)
Transfer Matrix Method
Resonant magnetotunneling of electrons in double barrier heterostructures, 14:35284 (RA;BR)
Resonant tunneling in quantum dots under transverse electric fields, 14:35283 (RA;BR)

TUNNELS
Fasteners
Boltometer testing of reference bolt in the Final Repository for Reactor Waste (SFR), Forsmark, 14:34134 (R;SE;In Swedish)

TURBINE BLADES
Bending
Analysis of the performance of the passively controlled blade tips of the Flexhat concept 'Tip control 1', 14:33428 (R;NL;In Dutch)
Friction
Analysis of the performance of the passively controlled blade tips of the Flexhat concept 'Tip control 1', 14:33428 (R;NL;In Dutch)
Repair
Steam turbine blading repair. Phase 1, 14:33429 (R;CA)

TURBOMACHINERY
Incompressible Flow
Coupled, parabolic-marching method for the prediction of three-dimensional viscous incompressible turbomachinery flows. Doctoral thesis, 14:34168 (R;US)

TWO-FLUID THEORY
See LANDAU LIQUID HELIUM THEORY

TWO-PHASE FLOW
Damping
Two-phase cross flow damping in tube arrays, 14:34169 (R;FR)
Pressure Drop
Flow pattern and pressure drop in tees, 14:34171 (R;DE)

TYPE-I SUPERCONDUCTORS
Mechanical Properties
Synthesis and properties of dielectric solids, 14:33953 (RA;US)
Microstructure
Synthesis and properties of dielectric solids, 14:33953 (RA;US)
Physical Properties
Synthesis and properties of dielectric solids, 14:33953 (RA;US)
Synthesis
Synthesis and properties of dielectric solids, 14:33953 (RA;US)

TYPE-II SUPERCONDUCTORS
Electronic Structure
Electronic properties of semiconductor surfaces and interfaces, 14:33836 (RA;US)
Mechanical Properties
Synthesis and properties of dielectric solids, 14:33953 (RA;US)
Microstructure
Structure and dynamics of surfaces, interfaces and heterostructures, 14:33841 (RA;US)
Synthesis and properties of dielectric solids, 14:33953 (RA;US)
Physical Properties
Synthesis and properties of dielectric solids, 14:33953 (RA;US)
Synthesis
Synthesis and properties of dielectric solids, 14:33953 (RA;US)

TYPE-III SUPERCONDUCTORS

ULTRASONIC TESTING
Automation
ALOK-application for inservice inspections, 14:34194 (RA;DE;In German)
Data Processing
Results by an advanced manual NDT-system, 14:34196 (RA;DE;In German)
Forging
Manual and mechanized ultrasonic inspection of large components in respect of defect estimation by fracture mechanics, 14:34197 (RA;DE;In German)
In-Service Inspection
Early detection of creep damage by ultrasonic techniques, 14:34200 (RA;DE;In German)
Evaluation of indications at long distance and underclad findings, 14:34199 (RA;DE;In German)
Phased array concept for the ultrasonic inservice inspection at the spherical bottom of BWR-pressure vessels, 14:34195 (RA;DE;In German)
Quality Control
Evaluation of indications at long distance and underclad findings, 14:34199 (RA;DE;In German)
Stress Analysis
Automated analysis of stress states using ultrasonic techniques, 14:34198 (RA;DE;In German)

ULTRAVIOLET RADIATION
Biological Radiation Effects
Absence of transient elevated UV resistance during germination of 'Bacillus subtilis' spores lacking small, acid-soluble spore proteins alpha and beta, 14:34667 (R;US)

ULTRAVIOLET SPECTRA
Element Abundance
Abundance and f values needed to interpret adequately the high resolution I.U.E. spectra, 14:34792 (RA;FR)

ULTRAVIOLET SPECTROMETERS
Astronomy
Far-ultraviolet astronomical observations with the Voyages I and 2 spacecraft, 14:34829 (RA;CS)

UNDERGROUND DISPOSAL
Geology
Description of geological data in SKBs database GEOTAB, 14:34725 (R;SE)
Performance
Effect of organic matter in clay sealing materials on the performance of a nuclear fuel waste disposal vault, 14:33248 (R;CA)

UNDERGROUND EXPLOSIONS

URANIUM
Availability
Brief analysis of the supply and demand of uranium, 14:33247 (RA;XA)
Bioassay
Catalogue of data on uranium intake, organ burden and excretion, 14:34675 (R;CA)
Chemical State
Chemical speciation modelling of the South Terras and Madeira Abyssal Plain natural analogue sites, 14:33259 (R;GB)
Meetings
In situ leaching of uranium: Technical, environmental and economic aspects. Proceedings of a technical committee meeting held in Vienna, 3-6 November 1987, 14:33218 (R;XA)
Mining
In situ leaching of uranium: Technical, environmental and economic aspects. Proceedings of a technical committee meeting held in Vienna, 3-6 November 1987, 14:33218 (R;XA)
Stress Corrosion
Stress corrosion cracking of uranium-silver interfaces in silver-aided diffusion welds: Revision 1, 14:33906 (R;US)

URANIUM 233
Mass Spectroscopy
Thermoionic emission characteristics of uranium with application to its determination by MSID technique using ^{233}U tracer, 14:34057 (R;BR;In Portuguese)
Neutron Spectra
Prompt neutron spectra from fission of ^{233}U, ^{235}U and ^{239}Pu by thermal neutrons and from spontaneous fission of ^{252}Cf in the 0.01-12 MeV energy range, 14:35098 (RA;XA)
Thermal Fission
Prompt neutron spectra from fission of ^{233}U, ^{235}U and ^{239}Pu by thermal neutrons and from spontaneous fission of ^{252}Cf in the 0.01-12 MeV energy range, 14:35098 (RA;XA)
Thermionic Emission
Thermoionic emission characteristics of uranium with application to its determination by MSID technique using ^{233}U tracer, 14:34057 (R;BR;In Portuguese)

URANIUM 235
Neutron Spectra
Prompt neutron spectra from fission of ^{233}U, ^{235}U and ^{239}Pu by thermal neutrons and from spontaneous fission of ^{252}Cf in the 0.01-12 MeV energy range, 14:35098 (RA;XA)
Thermal Fission
Prompt neutron spectra from fission of ^{233}U, ^{235}U and ^{239}Pu by thermal neutrons and from spontaneous fission of ^{252}Cf in the 0.01-12 MeV energy range, 14:35098 (RA;XA)

URANIUM 235 TARGET
Neutron Reactions
Measurement of multiplicity and total energy of gamma radiation from the ^{235}U fission by resonance neutrons, 14:35105 (RA;SU;In Russian)

URANIUM 236
Excited States
Neutron cross sections of uranium 236 for thermal and resonance neutrons, 14:35104 (RA;SU;In Russian)

URANIUM 236 TARGET
Neutron Reactions
Neutron cross sections of uranium 236 for thermal and resonance neutrons, 14:35104 (RA;SU;In Russian)
Radiative capture cross sections of thermal neutrons for ^{236}U and ^{232}Th, 14:35106 (RA;SU;In Russian)

URANIUM 238 TARGET
Average resonance parameters of ^{238}U, 14:35107 (RA;SU;In Russian)
Inelastic neutron scattering and p-neutron strength function of thorium 232 and uranium 238, 14:35099 (RA;SU;In Russian)
Measurement of radiative neutron capture cross section of uranium 238, 14:35102 (RA;SU;In Russian)
Measurement of self-shielding factors of neutron capture cross sections for ^{232}Th and ^{238}U in the unresolved resonance region, 14:35101 (RA;SU)

URANIUM ALLOYS
Density
Density and packing in uranium based metallic glasses, 14:34010 (BA;US)
Meetings
Proceedings of the JOWOG 22C (uranium) meeting, 14:33814 (R;US)

URANIUM DEPOSITS
In-Situ Processing
Adapting uranium in situ mining technology for new commercial operations, 14:33222 (RA;XA)
In situ leaching of uranium in the USSR, 14:33224 (RA;XA)
In situ leaching of uranium: Technical, environmental and economic aspects. Proceedings of a technical committee meeting held in Vienna, 3-6 November 1987, 14:33218 (R;XA)
Leaching
Introduction to in situ leaching of uranium, 14:33219 (RA;XA)
Potentialities of percolation leaching of uraniferous siltstone from Wadi-Nasib, Egypt, 14:33225 (RA;XA)
Uranium in situ mining research by the United States Bureau of Mines - A review, 14:33220 (RA;XA)

URANIUM DIOXIDE
Oxidation
Oxidation of UO_2 at 400 to 1000 degrees C in air and its relevance to fission product release, 14:33943 (R;CA)
Physical Radiation Effects
Radiation mechanism of in-grain bubble production in uranium dioxide, 14:33956 (RA;SU;In Russian)
Voids
Radiation mechanism of in-grain bubble production in uranium dioxide, 14:33956 (RA;SU;In Russian)

URANIUM FLUORIDES
See also URANIUM HEXAFLUORIDE
Molecular Structure
Micro-Raman spectroscopy of selected solid $U_xO_yF_z$ compounds, 14:33970 (J;US)

Improved industrial catalysts: Part 1, Catalysts for NO and NO-sub x removal: Final report, 14:33957 (R;US)

Cathodes
Intercalation reactions of monovalent and divalent cations in V_6O_{13} single crystals, 14:33619 (BA;US)

Deposition
Deposition of electrolyte and cathode thin films by magnetron sputtering, 14:33612 (R;US)

Electrochromism
Optical properties of electrochromic vanadium pentoxide, 14:33973 (J;US)

Electrodes
Solid state electrochromic windows, 14:34029 (BA;US)

Optical Properties
Optical properties of electrochromic vanadium pentoxide, 14:33973 (J;US)

VANADIUM SILICIDES
Phase Diagrams
Thermochemical stability diagrams for condensed phases and tabulation of volatile species over condensed phases for thirteen metal-oxygen-silicon systems at 1000 and 1250 K: Volume 2: Final report, 14:33101 (R;US)

VAPOR PHASE EPITAXY
Research Programs
Atomic-scale mechanisms of vapor-phase crystal growth, 14:33831 (RA;US)

VAPORS
See also WATER VAPOR
Detonations
Detonation of unconfined large scale fuel spray-air clouds, 14:34371 (R;US)

VARIABLE STARS
See also PULSATING VARIABLE STARS
Balmer Lines
Short-time scale variability in some Be stars, 14:34801 (RA;CS)
Binary Stars
Evidence of rapid variability in early-type stars, 14:34798 (RA;CS)
Iron
FeII level population in luminous variable stars, 14:34788 (RA;FR)
Oscillations
Theoretical aspects of nonradial pulsations, 14:34820 (RA;CS)
Photometry
13-color photometry of HD 184279, 14:34805 (RA;CS)
Radial Velocity
Duplicity of the Be-star 59 Cyg, 14:34819 (RA;CS)
Spline Functions
Smoothing the "smoothing" cubic spline functions, 14:34825 (RA;CS)
Star Models
Astrophysics. Proceedings. Vol. 5, 14:34796 (R;CS)
Introductory comments to the panel discussion on discrimination between various possible causes of rapid variability in stars, 14:34826 (RA;CS)
Time-scales and physical processes, 14:34797 (RA;CS)
Stellar Winds
Variability in the stellar wind of 68 Cygni - not "shells" or "puffs", but streams, 14:34800 (RA;CS)
Ultraviolet Spectra
FeII level population in luminous variable stars, 14:34788 (RA;FR)

VARIATIONAL METHODS
Mathematical Models
Horizontal constraints, Clebsch potentials and variational principles on principal fiber bundles, 14:35345 (BA;SG)

VASOPRESSIN
Radioimmunoassay
Radioimmunological detection of vasopressin in urine extracts, 14:34622 (R;DE;In German)

VECTOR MESONS
See also J PSI-3097 MESONS

Photoproduction
Extraction of higher twist contribution from large P_T rho photoproduction processes, 14:34964 (R;XA)

VEGETABLES
See also BEANS
ONIONS
PEAS
POTATOES
SOYBEANS

BUSES

Air Pollution Abatement
Proposed organic emission standards and test procedures for 1988 and later methanol vehicles and engines, 14:33799 (R;US)

Automation
Autonomous land navigation: A demonstration of retrotraverse, 14:34129 (R;US)

Automotive Fuels
1987 CRC (Coordinating Research Council) octane number requirement survey, 14:34714 (R;US)

Certification
Application for certification, 1989 model year heavy-duty diesel engines - Hino Motors, 14:33793 (R;US)
Application for certification, 1989 model year heavy-duty vehicles - Mitsubishi, 14:33792 (R;JP)
Application for certification, 1989 model year light-duty trucks - Range Rover, 14:33790 (R;US)
Application for certification, 1989 model year light-duty vehicles - American Honda Motor Company, 14:33783 (R;US)
Application for certification, 1989 model year light-duty vehicles - Audi, 14:33789 (R;DE)
Application for certification, 1989 model year light-duty vehicles - Ford Motor Company, 14:33782 (R;US)
Application for certification, 1989 model year light-duty vehicles - General Motors, 14:33785 (R;US)
Application for certification, 1989 model year light-duty vehicles - Mazda Motor Corporation, 14:33791 (R;US)
Application for certification, 1989 model year light-duty vehicles - Mercedes-Benz of North America, Inc, 14:33787 (R;US)
Application for certification, 1989 model year light-duty vehicles - Mitsubishi Motors Corporation, 14:33781 (R;US)
Application for certification, 1989 model year light-duty vehicles - US Technical Research Company (Peugeot), 14:33784 (R;US)
Application for certification, 1989 model year light-duty vehicles - Volkswagen, 14:33786 (R;US)
Application for certification, 1989 model year light-duty vehicles - Volvo Cars of North America, 14:33788 (R;US)

Methanol Fuels
Formaldehyde sampling from automobile exhaust: a hardware approach. Technical report, 14:33797 (R;US)

Specifications
Study of minimum-weight highway transporters for spent nuclear fuel casks: Technical report, 14:33229 (R;US)

VHTR REACTOR
Materials Testing
Influence of Cr/W ratio on corrosion behavior of Ni-Cr-W superalloys in simulated VHTR helium environment, 14:33885 (R;JP;In Japanese)

VINCA R-B REACTOR YUGOSLAVIA
See R-B REACTOR

VINYL CHLORIDE
Toxicity
Vinyl chloride and polyvinyl chloride: toxicology. January 1978-February 1989 (Citations from the Life Sciences Collection data base). Report for January 1978-February 1989, 14:34709 (R;US)

VISCOSITY
Calculation Methods
Chemical pulping spent liquor rheological properties and viscosity, 14:34077 (R;FI;In Finnish)

VLASOV EQUATION
See BOLTZMANN-VLASOV EQUATION

VLASOV INSTABILITY
See BOLTZMANN-VLASOV EQUATION

VLCC
See TANKER SHIPS

VOLATILE MATTER
Chemical Analysis
Analysis of volatile organic compounds in water by dynamic stripping, thermal desorption, cryofocusing, and capillary gas chromatography (journal version), 14:34495 (R;US)

Leaks
Protocols for generating unit-specific emission estimates for equipment leaks of VOC (volatile organic compounds) and VHAP (volatile hazardous air pollutants). Final report, 14:34407 (R;US)

VOLCANISM
Reaction Kinetics
Experimentally observed iron redox kinetics in silicic liquids: Implications for Fe^{3+}/Fe^{2+} variations in rhyolite lava: Implications for Fesup 3+/Fesup 2+ variations in rhyolite lava, 14:34727 (R;US)

VOLTAIC CELLS
See ELECTRIC BATTERIES

W

WAKEFIELD ACCELERATORS
Beam Dynamics
Experimental measurement of nonlinear plasma wake-fields, 14:34237 (R;US)

WALL EFFECTS
Compiled Data
Bibliographic data on surface processes in particle-material interactions published in Japan, 1986-1987, 14:35456 (R;JP)

WALLS
Moisture
Prediction of moisture movement in the walls of residences, 14:33721 (R;US)

WASTE BURIAL
See UNDERGROUND DISPOSAL

WASTE DISPOSAL
See also GROUND DISPOSAL
MARINE DISPOSAL
RADIOACTIVE WASTE DISPOSAL
SANITARY LANDFILLS
UNDERGROUND DISPOSAL

Sanitary Landfills
Installation-restoration program. Phase 2. Confirmation/quantification Stage 1 for Minot Air Force Base, Minot, North Dakota. Volume 1. Final report, September 1985-October 1988, 14:34485 (R;US)

Site Surveys
Superfund exposure assessment manual, 14:34480 (R;US)

WASTE FORMS
Mechanical Properties
Waste Isolation Pilot Plant simulated waste compositions and mechanical properties, 14:33293 (R;US)
WASTE HEAT
Thermochemical Heat Storage
Waste heat storage and distribution using thermochemical energy storages, 14:33607 (R;FI;In Finnish)
WASTE HEAT UTILIZATION
Industrial compact ceramic finned-plate recuperator. Final report, August 1982-March 1987, 14:33765 (R;US)
Performance verification of industrial ceramic materials: environmental effects on performance. Topical report, September 1984-March 1987, 14:33766 (R;US)
Seasonal Thermal Energy Storage
Storage of waste heat in a rock cavern and borehole heat store in Vaenersborg, 14:33751 (R;SE;In Swedish)
WASTE MANAGEMENT
See also RADIOACTIVE WASTE MANAGEMENT
WASTE DISPOSAL
WASTE RETRIEVAL
WASTE STORAGE
WASTE TRANSPORTATION
Hazardous-waste constituents: health and environmental effects profiles. January 1970-January 1989 (Citations from the NTIS data base). Report for January 1970-January 1989, 14:33767 (R;US)
WASTE OILS
Recycling
Waste oil reclamation. January 1970-January 1989 (Citations from the NTIS data base). Report for January 1970-January 1989, 14:33768 (R;US)
WASTE RETRIEVAL
Environmental Policy
Waste handling and utilization in an international perspective, 14:34221 (R;SE;In Swedish)
Market
Markets for recovered materials, 14:34222 (R;SE;In Swedish)
WASTE SOLUTIONS
See LIQUID WASTES
WASTE STORAGE
See also RADIOACTIVE WASTE STORAGE
Air Pollution Abatement
Control technology assessment of hazardous-waste-disposal operations in chemicals manufacturing: in-depth survey report of San Juan Cement Company, Dorado, Puerto Rico, November 1981, 14:34387 (R;US)
WASTE TRANSPORTATION
Human Factors
Analysis of human factors effects on the safety of transporting radioactive waste materials: Technical report, 14:33228 (R;US)
WASTE WATER
Chemical Analysis
Development and evaluation of analytical methods for the determination of trace polymers in coal and oil process waters. Final report, 14:34054 (R;CA)
Methylene Chloride
Amendment to the Best Demonstrated Available Technology (BDAT) background document for F001-F005 spent solvents. Volumes 1 and 2, 14:33764 (R;US)
Uses
Fiscal Year 1987 program report: Texas Water Resources Institute, 14:34513 (R;US)
WASTEFORMS
See WASTE FORMS
WASTES

WATER POLLUTION
Polychlorinated biphenyls: occurrence in sediments and soils. January 1977-February 1989 (Citations from the Selected Water Resources Abstracts data base). Report for January 1977-February 1989, 14:34466 (R;US)
Biological Indicators
Fish as sentinels of environmental health. Technical memo, 14:34497 (R;US)
Data Base Management
Eastern Lake Survey, Phase 1. Data base, 14:34494 (R;US)
Monitoring
Evaluation of control chart methodologies for RCRA (Resource Conservation and Recovery Act) waste sites, 14:34493 (R;US)
Hydrological, geochemical, and ecological characterization of Kesterson Reservoir: Annual report, October 1, 1987–September 30, 1988, 14:34489 (R;US)
Installation-restoration program. Phase 2. Confirmation/quantification Stage 1 for Minot Air Force Base, Minot, North Dakota. Volume 1. Final report, September 1985-October 1988, 14:34485 (R;US)
WATER POLLUTION CONTROL
Amendment to the Best Demonstrated Available Technology (BDAT) background document for F001-F005 spent solvents. Volumes 1 and 2, 14:33764 (R;US)
Best Demonstrated Available Technology (BDAT) background document for K048, K049, K050, K051, K052. Final report, 14:33763 (R;US)
Best Demonstrated and Available Technology (BDAT) background document for K016, K18, K019, K020, K030. Final report, 14:33762 (R;US)
Oil spill removal: dispersants, absorbants, booms, and skimmers. January 1978-January 1989 (Citations from the Life Sciences Collection data base). Report for January 1978-January 1989, 14:33175 (R;US)
Aeration
Analysis of volatile organic compounds in water by dynamic stripping, thermal desorption, cryofocusing, and capillary gas chromatography (journal version), 14:34495 (R;US)
Remedial Action
Air Force ground-water contamination cleanup: an evaluation of the pump-and-treat method. Master's thesis, 14:34514 (R;US)
United States Air Force Installation-Restoration Program (IRP) strategies for investigating migrating contaminated groundwater. Master's thesis, 14:34515 (R;US)

WATER PUMPS
Photovoltaic Power Supplies
Two-stage electrical array reconfiguration controller for PV-powered water pump, 14:33405 (BA;US)
WATER RESERVOIRS
Fiscal Year 1987 program report: Texas Water Resources Institute, 14:34513 (R;US)
Remedial Action
Hydrological, geochemical, and ecological characterization of Kesterson Reservoir: Annual report, October 1, 1987–September 30, 1988, 14:34489 (R;US)
WATER RESOURCES
Ground Water
Ground-water management under the appropriation doctrine. Technical report, 14:34512 (R;US)
Research Programs
Fiscal Year 1987 program report: Texas Water Resources Institute, 14:34513 (R;US)
WATER RIGHTS
Legal Aspects
Ground-water management under the appropriation doctrine. Technical report, 14:34512 (R;US)
WATER SUPPLY
Acidification
RAIN project. Annual report for 1987, 14:34490 (R;NO)
Soil Chemistry
RAIN project. Annual report for 1987, 14:34490 (R;NO)
Water Chemistry

WATERSHEDS
Water Pollution
Abstracts of publications and presentations, 1985-1986, 14:34492 (R;US)
WAVE EQUATIONS
See also DIRAC EQUATION
SCHROEDINGER EQUATION
Conformal Mapping
Recent results on group decompositions and some applications, 14:35363 (BA;SG)
WAVE PROPAGATION
One-Dimensional Calculations
Analytical evaluation of special numerical calculations of pressure waves in the fluid. Pt. 1. One-dimensional wave propagation, 14:34121 (R;DE;In German)
WAVEGUIDES
Beam Dynamics
Influence of the synchrotron radiation on particle dynamics in a rectangular undulator, 14:34248 (R;US)
Photodetectors
Integration of detectors and optical-waveguide structures. Final report, 15 March 1985-15 March 1988, 14:34361 (R;US)
WAVES (SHOCK)
See SHOCK WAVES
WAZ 16
See NICKEL BASE ALLOYS
WEAK INTERACTIONS
Symmetry
Approximate global symmetries of the electroweak interactions, 14:35312 (BA;SG)
WEAR
Measuring Instruments
In-line wear monitor. Interim report, November 1985-June 1988, 14:33779 (R;US)
WEATHER
Forecasting
Weather predictions and surface radiation estimates for Project BUGGY I, 14:34377 (R;US)
Weather predictions and surface radiation estimates for Project CABRIOLET, 14:34374 (R;US)
Weather predictions and surface radiation estimates for Project Palanquin: Final report, 14:34375 (R;US)
Weather predictions and surface radiation estimates for Project SCHOONER, 14:34376 (R;US)
WEATHERIZATION
Pacific Northwest existing home indoor air quality survey and weatherization sensitivity study: Final report, 14:33728 (R;US)
WECS
See WIND TURBINES
WEINBERG-SALAM GAUGE MODEL
Cp Invariance
Unitarity polygons and CP violation areas and phases in the standard electroweak model, 14:35002 (R;FR)
Quark Model
New heavy quark physics in the strongly Yukawa coupled standard model, 14:34951 (R;FR)
Weak-Coupling Model
New heavy quark physics in the strongly Yukawa coupled standard model, 14:34951 (R;FR)
WELDABILITY
Modifications
Effect of oxidation, sandblasting and pickling on weldability, 14:34128 (TG;US)
WELDED JOINTS
Acoustic Emission Testing
Acoustic emission used to investigate heat treatment of overlays, 14:34188 (RA;CS;In Czech)
Aging
The effect of aging at 343°C on type 308 stainless steel welds, 14:33818 (R;US)
Corrosion Fatigue
Evaluation of relative effect of natural and synthetic seawaters in corrosion fatigue of steel welded joints, 14:33891 (R;CA)
Fracture Mechanics
Assessment of welded joints by the J-integral method, 14:33873 (RA;DE;In German)
Industrial Radiography
Radiography of nozzle-to-pressure-vessel welds, 14:34184 (RA;CS;In Slovak)
Mechanical Properties
The use of field indentation microprobe in measuring mechanical properties of welds, 14:33817 (R;US)
Performance Testing
MINERVA, qualification of dissimilar welds for HTR-application, 14:33870 (RA;DE;In German)
Ultrasonic Testing
Automated ultrasonic testing of nuclear reactor welds and overlays in pre-service and in-service inspections, 14:34179 (RA;CS;In Czech)
X-Ray Radiography
Automatic X-ray radiography of welded joints, 14:34185 (RA;CS;In Slovak)
New techniques and means of X-ray radiography of welded joints, 14:34183 (RA;CS;In Slovak)
Objective size measurements of defects in welded joint radiography, 14:34181 (RA;CS;In Czech)
Processing of weld images, 14:34182 (RA;CS;In Czech)
X-ray apparatus for welded joints testing, 14:34325 (RA;CS;In Slovak)
WELDING

Gamow-Teller β^+ decay of neutron-deficient deformed nuclei, 14:35157 (R;SU;In Russian)
Neutron-Deficient Isotopes
Gamow-Teller β^+ decay of neutron-deficient deformed nuclei, 14:35157 (R;SU;In Russian)
YTTERBIUM 172 TARGET
Fluorine 19 Reactions
Shape coexistence in ^{187}Au, 14:35087 (J;US)
YTTERBIUM COMPOUNDS
Solvent Extraction
Extraction of lanthanides with 2-(dihexylphosphino)-pyridine N,P-dioxide, 14:34081 (J;DE)
YTTRIUM 96
Beta-Minus Decay
Structure studies on the nuclides ^{96}Zr and ^{98}Zr via the high-spin β^--decays of the Y fission products, 14:35077 (R;DE;In German)
YTTRIUM 98
Structure studies on the nuclides ^{96}Zr and ^{98}Zr via the high-spin β^--decays of the Y fission products, 14:35077 (R;DE;In German)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM COMPOUNDS
YTTRIUM COMPOUNDS
See also YTTRIUM OXIDES
Cuprates
Composite ceramic superconducting wires for electric-motor applications. Quarterly report No. 2, 30 September-30 December 1988, 14:34116 (R;US)
Neutron Spectra
On determination of the magnetic field penetration depth in oxide superconductors by polarized neutron reflection, 14:35230 (R;SU;In Russian)
Phonon density of states of $YBa_2Cu_3O_x$ in dependence on oxygen content and temperature, 14:35229 (R;SU)
Penetration Depth
On determination of the magnetic field penetration depth in oxide superconductors by polarized neutron reflection, 14:35230 (R;SU;In Russian)
Phonons
Phonon density of states of $YBa_2Cu_3O_x$ in dependence on oxygen content and temperature, 14:35229 (R;SU)
Processing
Recent improvements in bulk properties of ceramic superconductors, 14:33945 (R;US)
YTTRIUM OXIDES
Crystal Defects
Study of non stoichiometric pure and Zr-Doped yttria surfaces by X-Ray photoelectron spectroscopy and scanning electron microscopy, 14:33944 (R;FR)
Superconductivity
A method for measuring optical twin spacings in the superconducting material, $YBa_2Cu_3O_x$, 14:33969 (J;US)
Y-Ba-Cu-O superconducting films produced by long-pulse laser vaporization, 14:33968 (J;US)
YUCCA MOUNTAIN
Site Characterization
Preliminary analyses of the excavation investigation experiments proposed for the exploratory shaft at Yucca Mountain, Nevada Test Site, 14:33291 (R;US)
Tuff
Clinoptilolite compositions in diagenetically-altered tuffs at a potential nuclear waste repository, Yucca Mountain, Nevada, 14:33317 (BA;US)

YUGOSLAVIA R-B REACTOR VINCA
See R-B REACTOR

Z

Z NEUTRAL BOSONS
Background Noise
Background estimates and limits on compositeness at LEP Z^0->$\gamma\gamma$ γ and e^+ search, 14:34947 (R;FR)
Coherent Production
Additional Z'-boson in ν-barN elastic and quasielastic scattering, 14:34982 (R;SU;In Russian)
Extra Z'-boson in elastic and diffractive neutrino scattering, 14:34975 (R;SU)
Composite Models
Background estimates and limits on compositeness at LEP Z^0->$\gamma\gamma$ γ and e^+ search, 14:34947 (R;FR)
Electron Emission
Background estimates and limits on compositeness at LEP Z^0->$\gamma\gamma$ γ and e^+ search, 14:34947 (R;FR)
Electron Exchange
Background estimates and limits on compositeness at LEP Z^0->$\gamma\gamma$ γ and e^+ search, 14:34947 (R;FR)
Photon Emission
Background estimates and limits on compositeness at LEP Z^0->$\gamma\gamma$ γ and e^+ search, 14:34947 (R;FR)
ZEA MAYS
See MAIZE
ZEOLITES
See also CLINOPTILOLITE
Catalytic Effects
[Studies of the fundamental nature of catalytic acidity, sites, and intermediates]: Progress report, 14:34070 (R;US)
Deposition
Molecular sieve films from zeolited-silica microcomposites, 14:33986 (R;US)
ZERO POWER REACTORS
See also FCA REACTOR
KUCA REACTOR
R-B REACTOR
Reactivity
Research on reactor physics using the Tank-type Critical Assembly (TCA). Focusing on the method for reactivity determination based on buckling measurements, 14:33558 (RA;JP;In Japanese)
Reactor Physics
Research on reactor physics using the NAIG Critical Assembly (NCA), 14:33532 (RA;JP;In Japanese)
Research on reactor physics using the Very High Temperature Reactor Critical Assembly (VHTRC), 14:33509 (RA;JP;In Japanese)
Void Coefficient
Research on reactor physics using Deuterium Critical Assembly. Study on coolant void reactivity by substitution method, 14:33584 (RA;JP;In Japanese)
ZINC
Ecological Concentration
History of metal pollution in the Southern California Bight: an update, 14:34501 (J;US)
Natural trace metal concentrations in estuarine and coastal marine sediments of the southeastern United States, 14:34502 (J;US)
Removal
$ZnCl_2$-HCl plating baths for stripping and recovery of zinc from galvanized iron scrap, 14:33701 (BA;US)
ZINC COMPOUNDS
See also ZINC OXIDES
Sorptive Properties
Reaction kinetics and simulation models for novel high-temperature desulfurization sorbents: Final report, 14:33127 (R;US)
ZINC DISTILLATION PROCESS
See PYROCHEMICAL REPROCESSING
ZINC OXIDES
Dissolution
Mathematical model of the secondary Zn/NiOOH cell, 14:33616 (BA;US)
Electrodes
Mathematical model of the secondary current distribution mechanism for Zn material redistribution, 14:33617 (BA;US)
ZINC-AIR BATTERIES
Design
Zinc redox battery, 14:33637 (BA;US)
Safety
Zinc-redox battery, a technology update, 14:33623 (BA;US)
ZINC-BROMINE BATTERIES
Design
Zinc redox battery, 14:33637 (BA;US)
Pitting Corrosion
Secondary current distribution and propagation of a wavy electrode, 14:33627 (BA;US)
Safety
Zinc-redox battery, a technology update, 14:33623 (BA;US)
ZINC-CHLORINE BATTERIES
Design
Zinc redox battery, 14:33637 (BA;US)
Safety
Zinc-redox battery, a technology update, 14:33623 (BA;US)
ZINC-MANGANESE BATTERIES
Design
Zinc redox battery, 14:33637 (BA;US)
Safety
Zinc-redox battery, a technology update, 14:33623 (BA;US)
ZION STATION UNIT-1
See ZION-1 REACTOR
ZION STATION UNIT-2
See ZION-2 REACTOR
ZION-1 REACTOR
Pipes
Alternate modal combination methods in response spectrum analysis, 14:33567 (R;US)
ZION-2 REACTOR
Alternate modal combination methods in response spectrum analysis, 14:33567 (R;US)
ZIRCALOY
Evaluation
Estimates of Zircaloy integrity during dry storage of spent nuclear fuel: Final report, 14:33460 (R;US)
ZIRCON
Age Estimation
U-Pb and Rb-Sr age determinations on Caledonian plutonic rocks in the central part of the Scoresby Sund region, East Greenland, 14:34718 (RA;DK)
ZIRCONIUM
Chemical Reactions
Kinetics of the solid-state amorphizing reaction in thin films studied by electrical resistivity, 14:33920 (J;US)
ZIRCONIUM 90 TARGET
Breakup Reactions
Review of high excitation energy structures in heavy ion collisions: target excitations and three body processes, 14:35059 (R;FR)
Pickup Reactions
Review of high excitation energy structures in heavy ion collisions: target excitations and three body processes, 14:35059 (R;FR)
Resonance Scattering
Review of high excitation energy structures in heavy ion collisions: target excitations and three body processes, 14:35059 (R;FR)
ZIRCONIUM 93
Radionuclide Migration
Nuclide solubilities and distribution coefficients for use in probabilistic modeling. Data for the nuclides ^{14}C, ^{79}Se, ^{93}Zr, ^{99}Tc, ^{126}Sn, ^{129}I, ^{135}Cs, ^{237}Np and ^{239}Np, 14:34479 (R;SE)
ZIRCONIUM 96
De-Excitation
Structure studies on the nuclides ^{96}Zr and ^{98}Zr via the high-spin β^--decays of the Y fission products, 14:35077 (R;DE;In German)

Excited States
Structure studies on the nuclides ^{96}Zr and ^{98}Zr via the high-spin β^--decays of the Y fission products, 14:35077 (R;DE;In German)

ZIRCONIUM 98
De-Excitation
Structure studies on the nuclides ^{96}Zr and ^{98}Zr via the high-spin β^--decays of the Y fission products, 14:35077 (R;DE;In German)

Excited States
Structure studies on the nuclides ^{96}Zr and ^{98}Zr via the high-spin β^--decays of the Y fission products, 14:35077 (R;DE;In German)

ZIRCONIUM ALLOYS
Amorphous State
Kinetics of the solid-state amorphizing reaction in thin films studied by electrical resistivity, 14:33920 (J;US)

Atom Transport
Kinetics of the solid-state amorphizing reaction in thin films studied by electrical resistivity, 14:33920 (J;US)

Electric Conductivity
Kinetics of the solid-state amorphizing reaction in thin films studied by electrical resistivity, 14:33920 (J;US)
Resistance noise in amorphous Ni-Zr: Hydrogen diffusion and universal conductance fluctuations, 14:33927 (J;US)

ZIRCONIUM OXIDES
Catalytic Effects
Solid superacids as coal liquefaction catalysts: Quarterly report, January–March 1989, 14:33069 (R;US)

Microstructure
Processing and microstructure of complex ceramic systems, 14:33950 (RA;US)

ZIRCONIUM SILICIDES
Phase Diagrams
Thermochemical stability diagrams for condensed phases and tabulation of volatile species over condensed phases for thirteen metal-oxygen-silicon systems at 1000 and 1250 K: Volume 2: Final report, 14:33101 (R;US)

ZONES (AURORAL)
See AURORAL ZONES

Contract Number Index

Numbers assigned to DOE contracts announced in documents in this publication are listed. Contract numbers are sorted alphanumerically and list the primary corporate author of the document cited, the citation number, and the report number or other document identification.

Contract No.	Abstract No.	Report No.

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

Report Number	*Abstract Number*	*Source of Availability*	*GPO Dep.*	*Order Number*	*Distribution Category*

ORDER FORM

DOE and DOE contractors: Fill in Parts I, II, and IV. **Others:** Fill in Parts I, III, and IV. Mark appropriate blanks in Part IV to indicate quantity and form (microfiche or paper copy).

I. SHIPPING AND PAYMENT INFORMATION

Ordering Address

Name _____ Telephone _____

Address _____

City _____ State _____ ZIP _____

Shipping Address (if different from above)

Name _____

Address _____

City _____ State _____ ZIP _____

_____

SIGNATURE (Required to validate ALL orders)

II. OSTI ORDERS (DOE and DOE contractors can order from OSTI.)

☐ Charge OSTI deposit account no. _____

Mail orders to: U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831

III. NTIS ORDERS

☐ Charge NTIS deposit account no. _____

☐ Check/Money Order enclosed for $ _____

☐ Charge to my ☐ American Express ☐ VISA ☐ MasterCard

_____ _____
Account Number Card expiration date

☐ Ship & Bill (see below for restrictions)

Employer identification number (9 digits) __ __ - __ __ __ __ __ __ __

Purchase Order number _____

Phone number of billing office _____
(Required for Ship & Bill orders)

Ship & Bill service is restricted to North American business locations for an extra $7.50 per order (or per Custom Search). The business' employer identification number plus the phone number of the office paying the bill are required to process these requests. A late payment charge will be applied to billings more than 30 days overdue. Prepaying, using an NTIS Deposit Account or a charge account, speeds order processing. Be sure payment and order are sent together. Checks, payable to NTIS, must be in U.S. dollars.

Mail orders to: U.S. Department of Commerce
National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161

IF NO METHOD OF PAYMENT IS INDICATED, YOUR ORDER WILL BE RETURNED TO YOU AS A PRICE QUOTE UNPROCESSED.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
